Here, in plain language, is stated both the problem and its probable solution. If our cotton farmers want to grow cotton for export and run the risk of low export prices, they should be allowed to do so. Certainly we cannot discourage foreign competition either by eliminating production for foreign markets or by keeping the export price up along with the domestic price. No cotton grower could complain of the price he might receive from exported cotton if he took the gamble himself with a full understanding that cotton grown for export might not prove profitable. That there are a majority who are perfectly willing to take this risk, if allowed to do so by their Government, is a matter of little doubt.

At this point, Mr. Speaker, I wish to place before you in its entirety insofar as it concerns this body, House Concurrent Resolution No. 13 of the Arkansas Legislature now in session at Little Rock, Ark., requesting the Members of this Congress to support legislation to restore cotton to its former economic importance in world commerce. This resolution represents the integrated thought of leaders who are vitally concerned in the agrarian economy of the Nation and who are well qualified to speak authoritatively on the subject of cotton production.

House Concurrent Resolution 13, requesting the United States Senators and Members of Congress from Arkansas to initiate and cooperate in supporting legislation to restore cotton to its former economic importance in world commerce

Whereas by reason of legislation creating trade barriers to the cotton trade, discriminating freight rates, the tariff, and other legislation, and by reason of world economic conditions and competition from cotton growers in foreign countries with living standards below that of this country, the cotton farmers in the Southern States have been reduced to a tragic financial condition, their export markets have been almost lost, they are subject to competition which they are handicapped in meeting, and the growing of cotton made economically impossible under existing conditions; and

Whereas unless concerted action is immediately taken by the Senators and Members of Congress from the cotton States looking to the relief of the cotton farmers from the handicaps under which such conditions have come about, the growing of cotton may soon become a thing of the past in this country and the welfare and income of large sections of the United States seriously affected; be it

Resolved by the House of Representatives of the State of Arkansas (the senate concurring), That the attention of the Congress of the United States is respectfully directed to the fact that cotton is the leading product in America's commerce and international trade, and that the cotton farmer represents the world's largest primary wealth-producing group and that it is of paramount importance to the producers of this commodity, as well as to the continued life of world trade on the part of the United States, that this interest be adequately rehabilitated and fostered. To that end the Senators and Members of Congress from the State of Arkansas are respectfully urged to take immediate steps to meet with the Senators and Representatives from all other cotton States for the purpose of securing concerted action by the Congress for the relief of the cotton farmers and of the industry from the handicaps and barriers under which they and it now suffer in the marketing of cotton, domestic and foreign, and it is respectfully suggested that among the things they are called to advocate the following:

(1) Legislation for the removal of statutory trade barriers, as far as possible, against our cotton trade, such as the modification or repeal of the Johnson Act, the enactment of legislation bringing about the equalization of transportation rates, the revision of the tariff to relieve discrimination against the cotton farmers, and other legislation.

(2) The sale to and use by the Government for the manufacture of equipments and munitions of war of 6,000,000 bales of surplus cotton.

(3) Allocation to producers of cotton from the cotton being carried under Government loans a sufficient number of bales to pay them the balance due on 3 cents per pound subsidy authorized by national legislation effective on 1937 cotton crop, and on which only 1.80 cents per pound had been paid.

(4) Increase the subsidy payment to the cotton producers by the further distribution of Government-loan surplus cotton to 65 percent of parity prices on cotton during the crop years 1937, 1938, and 1939.

(5) Allocation or reapportionment of 4,000,000 bales of cotton being carried by the Commodity Credit Corporation to the cotton growers in lieu of their making an additional reduction of one-third or less in their cotton-acreage allotment for 1939, each farmer so additionally reducing his allotment for 1939, each farmer so additionally reducing his allotted cotton acreage to be allotted the amount of cotton he would have produced on this acreage, based upon his average yield as allowed by the Government, and farmers so reducing to be paid the same soil-building and other amounts they would have been paid had they planted the full cotton acreage allotted by the Government for 1939.

(6) Selling to the Post Office Department 1,000,000 bales of cotton now being carried by the Government under loans, this cotton to be used to be manufactured into twines and other materials for use of the United States Mail Service, the Post Office Department to place this cotton through bids to be manufactured for their use.

(7) To allocate or reapportion from the cotton being carried by the Government under the loans, 1,000,000 bales to be manufactured into cotton bagging to be distributed to cotton farmers as an additional subsidy without charge for baling their 1939 cotton and cotton of subsequent years.

(8) The retention of soil conservation payments as now made, pending the working out of a definite permanent plan for the future of cotton.

(9) The allocation of cotton, in point of time, to comply with the time now required under the law for the sale thereof.

(10) The pledging of the Government to a definite support of cotton production profitable to the cotton growers.

(11) The protection of cotton growers, through a subsidy payment increasing the selling price to 65 percent of the parity price of cotton, so that they may successfully compete with foreign growers and regain lost export markets.

(12) The granting to cotton growers of the privilege of planting other money crops than cotton on surplus lands resulting from reduction of cotton acreage and not needed for production of feed and food crops for home consumption without imposing a penalty against compliance payments, as now done.

(13) The immediate payment to cotton farmers of all amount due for 1938 compliance, as was promised.

(14) There is no one in the United States Department of Agriculture whose primary interest is the promotion of the welfare of the cotton farmer. To remedy this condition, create an office of cotton commissioner in the United States Department of Agriculture. It should be the commissioner's duty to develop new uses and markets for cotton and to represent producers of cotton in developing farm programs.

(15) In addition to finances otherwise available, that a sufficient fund be appropriated from the general funds of the Treasury and made available to the Secretary of Agriculture to carry into effect this program here recommended, and that funds for agriculture be raised in the same manner that funds are raised for other Government expenditures.

(16) The formation in each House of Congress a bloc to advocate measures for the protection, encouragement, and support of the cotton both now and in the future.

I think you will agree with me, Mr. Speaker, that this document contains a thorough and incisive analysis of the entire problem of cotton production and control, and I believe that this body will do well to study the suggestions contained therein with a view to formulating legislation that will restore cotton produced in this country to its former preeminence in the markets of the world.

The program for domestic consumption should provide adequate allotment for the family needs, and the Government should stabilize the price of cotton to assure the American standard of living to our cotton farmers.

The contents of this resolution and editorial, however, are worthy of our serious consideration.

The Anthony Wayne Memorial

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1939

ADDRESS BY ROSS S. LOCKRIDGE

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an address by Ross S. Lockridge, beloved Indiana historian, author, and lecturer, recently delivered in my home city of Fort Wayne, Ind.

Congress may soon be called upon to appropriate funds for the erection of a suitable memorial to that great soldier and brilliant American hero, Gen. Mad Anthony Wayne, whose glorious career was climaxed with the triumphant building of old Fort Wayne at the junction of the St. Marys, St. Joseph, and Maumee Rivers.

Pursuant to House Joint Resolution 406, adopted on June 10, 1937, a General Anthony Wayne Memorial Commission was appointed to formulate plans for designing and constructing a permanent memorial to General Wayne at the scene of his great triumph. This commission will soon report its recommendations to Congress.

Congress will have an opportunity to perform an immortal service to the Nation by authorizing the construction of a memorial to General Wayne which will instill forever in the human mind and public fancy the patriotic vision, courage, fortitude, and sacrifice of this great military hero.

Had it not been for Wayne's supreme exhibit of these commendable traits during his campaign 150 years ago, the Northwest Territory might now be in the hands of the Indians and English and possibly in the paws of Hitler.

I urge my colleagues to consider these facts well, together with the following statements by Mr. Lockridge, when the subject of the Wayne memorial comes up for action before the House:

The Anthony Wayne Memorial contemplates the erection of a historic and patriotic shrine of continental proportions, if not indeed of world-wide proportions. It will be a memorial to a great place, a great historic service, and a great personality.

First. The place:

It will be such a memorial as could not be fittingly erected at any other place on earth than in Fort Wayne, right where the old fort stood overlooking the place where the three rivers meet and where the old portage began. We are memorializing this unique spot. Here was the famous old Wabash-Maumee portage—a veritable key to the continent—one of the most noted of its kind in the Western Hemisphere. Because of this great gateway, here where the three rivers meet, this was the site of the mighty Indian capital of the Miamis, old Kekionga. The shrine that we erect here will memorialize all those intrepid souls from the earliest days—the voyageurs, the explorers, black-robed missionaries, the traders, the trappers, the scouts, and the soldiers whose feet trod this old and famous way. Likewise it will memorialize those simple children of nature, the proud Miami Indians, who lived happily here and who made this one of the most interesting and significant historic spots in all America, in the earliest days of the coming of the white man.

DEDICATED TO PATRIOTIC SERVICE

Second. The service:

Our memorial here will be a special shrine dedicated to a lofty conception of patriotic service for the establishment of American civilization and Government here, which had its origin in no less a person than George Washington. In 1785, just 2 years after the Revolution, and 2 years before the adoption of the ordinance of 1787, for the government of this great old Northwest, which had been gloriously won by the Revolution, Washington pointed unerringly to this spot as "a most important post for the Union." He wanted it fortified and maintained as a strategic American stronghold in the West. He never gave up that conception; and for 10 years pursued his dauntless purpose here sending three armies to accomplish it. His vision was finally realized in the triumphant building of Fort Wayne by Anthony Wayne as a mighty continental unit in the saving of the old Northwest.

Third. The man:

We shall build here a great and enduring memorial to a brilliant American hero, Mad Anthony Wayne. Anthony Wayne was the beau ideal of the American soldier in a day when the service of the soldier was the highest possible form of public service—a day when civilization and freedom could not survive except through the sacrifice and heroism of soldiers such as Mad Anthony Wayne. He was one of the most colorful and interesting figures in all history. Through his dramatic personality and his heroic deeds, the American mind and heart can be forever stimulated and our pride nobly nourished by contemplating the patriotic heritage of fortitude, courage, and devotion to public duty which he left us.

Wayne is the embodiment of the American Revolution—second only to Washington. And he brought the glorious aftermath of the American Revolution to Indiana soil right here; just as George Rogers Clark brought to Indiana soil at old Vincennes the glory of the American Revolution proper. In the same manner that Clark was the "conqueror" of the old Northwest, so Mad Anthony Wayne was the "savior" of the old Northwest. Wayne reached the climax of his great career right here, and he left his illustrious name forever here in the erection of the fort, which great Washington maintained as one of the most cherished objectives for almost an entire decade. Clark's achievement on Indiana soil has been immortalized by the magnificent memorial erected to him on the banks of the Wabash in old Vincennes. It remains for us to erect a similar shrine for an equally worthy cause here in Fort Wayne in the name of Mad Anthony Wayne.

NOT TIME FOR CONFUSION

It seems to me that this is not the time for confusion over the details of just how this memorial is to be constructed. The all-important thing right now is to prove to America and to the world that we deserve the memorial. Vincennes succeeded in erecting a memorial, which has no superior of its kind in the world, because Vincennes went after it in exactly the same spirit that George Rogers Clark came across Illinois in the dead of winter in February 1779 and went after the British "hair-buyer general" in Fort Sackville at old Vincennes. We shall have to go after this Anthony Wayne Memorial in the same spirit just as Mad Anthony Wayne with his heroic legion went after the confederated forces of the Indians and the British at the Battle of Fallen Timbers in order to build his great fort here. The moving spirit of Anthony Wayne has been expressed in these words—in exactly the same words many, many times in letters written from battlefields throughout the Revolution. He said:

"It is not in our power to command success but it is in our power to produce a conviction to the world that we deserve it."

Our Anthony Wayne Memorial here will be dedicated to those fundamental purposes. It will stir our memories with golden deeds of the past. It will restore our faith in American institutions and will stimulate and encourage all those lofty impulses by which we shall be inspired to make our civilization permanent. Thus our great memorial will meet the needs of America and of the world, as well as of Fort Wayne.

NOT FOR FORT WAYNE ONLY

We have no right to ask the American Congress to erect a memorial here fitted only to the wants and needs of Fort Wayne. Washington didn't send three armies here just for the benefit of the locality of Fort Wayne. Anthony Wayne didn't drill his heroic legionnaires and lead them gallantly for more than 2 years just to leave his glorious name in this spot for the benefit only of this place. He rendered a continental service for the good of all mankind for all time, and surely our Anthony Wayne Memorial should partake of that universal character.

It will be genuinely symbolical. Thus it will be viewed and shared for centuries to come by the hundreds of thousands of

appreciative human beings from all over the world who may look upon it year by year.

I congratulate most heartily this Penrose Wayne Chapter of the Daughters of the American Revolution upon your splendid opportunity and your fine service on behalf of the Anthony Wayne Memorial.

Workers' Alliance of America

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1939

LETTER AND AFFIDAVIT OF DAVID LASSER, NATIONAL PRESIDENT, WORKERS' ALLIANCE OF AMERICA

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and affidavit of David Lasser, national president of the Workers' Alliance of America:

WORKERS ALLIANCE OF AMERICA,
Washington, D. C., February 15, 1939.

Hon. VITO MARCANTONIO,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MARCANTONIO: Because we know of your keen interest in the problems of the unemployed and in the preservation of the rights of all citizens, we believe you will be interested in the facts with respect to the controversy which has arisen between the Workers' Alliance and Mr. LYLE H. BOREN, a Member of the House of Representatives, from Oklahoma.

On pages 1990-93 of the CONGRESSIONAL RECORD of February 14, Congressman BOREN, of Oklahoma, presents an alleged transcript of a conversation between the Congressman and myself on February 9.

I am enclosing herewith a notarized affidavit in which I have declared under oath that—

First, there was no one in his office but Congressman BOREN and myself during the hour that we spent together on February 9. The Congressman did not state or in any way indicate that he wished to have a stenographer present to take a transcript of our conversation. My first knowledge of such a transcript was when I received a copy from Congressman BOREN.

Secondly, the alleged transcript of Congressman BOREN is definitely not an accurate record of our conversation. There are a number of changes, both in his actual words and in my own, in a number of important places, giving an entirely different meaning to the words we spoke.

I am sending this affidavit to you in the interests of truth and common decency. As I have indicated in the affidavit, the alleged transcript could have been taken only by means of a dictaphone or some hidden device—a procedure which decent Americans find reprehensible and which we associate with dictator nations.

I have also indicated in my affidavit that if the Congressman had suggested that a stenographer be present, I would have gladly agreed to have someone make a truthful account of our actually spoken words.

It seems to me that these actions on the part of Congressman BOREN—the method by which he procured the alleged transcript of our conversation, his boldly changing the original conversation so that it does not give an accurate account of our conversation, his threat to politically control the employment on the W. P. A. program in his district in Oklahoma—a serious threat to democratic procedure is involved.

It is our opinion that Congressman BOREN's remarks in the extension are not only grossly untrue, insofar as they relate to the Workers' Alliance of America and its policies, but that they are an incitement to lynch violence. I refer, for example, to the following statement (p. 1991): "I want to urge the people of Oklahoma and other States to send these carpetbagger Communists back where they came from when they invade our States to organize."

Congressman BOREN has made clear that he reserves to himself the right to determine who is a Communist and who is entitled to civil liberties under the Constitution and the Bill of Rights. He, who so proudly proclaims that he believes in the American Constitution, wants the American Constitution to be repudiated by mob and lynch violence. In this he shows himself not only opposed to the Workers' Alliance but opposed to all labor.

In our opinion, a Member of Congress who swears to uphold the Constitution of the United States is violating his oath when he advocates illegal measures which would deprive any citizen of the United States of the rights guaranteed under the Constitution.

Let me make another thing clear. Congressman BOREN, in his extension of remarks, charges that the Workers' Alliance wants to deprive American citizens of their right to work on W. P. A. while seeking to have aliens employed. This is untrue. The Workers' Alliance of America believes that every person who has set up permanent residence in this country should become an American citizen and swear to uphold our Constitution and form of government. We believe that where people have been unable because of economic circumstances to complete their citizenship they should be given every encouragement to do so. We opposed the provision of Congressman BOREN that only American citizens be employed on the program because it would have made it necessary for the 3,000,000 people on the program to produce either birth certificates or citizenship papers. Congress was in agreement with the reason for our opposition and did later change the Boren amendment to modify its unworkable features.

We believe in making good American citizens of the aliens within our country by doing everything possible to encourage them to become citizens. We are definitely opposed to any attempt to stir up hatreds in America, as between those who were born on this soil and those who were born abroad and are willing to accept the duties and responsibilities of American citizenship. We are also concerned that the native-born children of aliens shall know that America wants of them the duties and responsibilities of citizenship and will give them in return an opportunity to share in our national life.

On the basis of decency, sportsmanship, and fair play, which is a definitely American creed, I hope you can make it possible for an accurate and truthful account of what transpired between Congressman BOREN and myself to be made available to the Members of Congress.

Sincerely yours,

DAVID LASSER, *National President.*

TATEMENT MADE BY DAVID LASSER, NATIONAL PRESIDENT OF THE WORKERS' ALLIANCE OF AMERICA, AT WASHINGTON, D. C., FEBRUARY 15, 1939

A newspaper clipping from an Oklahoma paper was called to my attention on about February 7. This clipping cited a letter written by Congressman LYLE H. BOREN, of Oklahoma, to the State W. P. A. administrator of Oklahoma, in which the Congressman declared that he believed members of the Workers' Alliance should not be given supervisory positions on W. P. A. As one reason for this, Congressman BOREN declared that the Workers' Alliance is a "communistic" organization.

On February 9 I went to see Congressman BOREN at his office in order to correct his misconceptions about our organization and to determine why he was trying to influence the W. P. A. administrator of Oklahoma as to whom he should or should not employ.

I spent about an hour in Congressman BOREN's office talking to him. During our discussion there was no one in the room but the Congressman and myself. Neither Congressman BOREN nor myself made any records of our verbatim conversation.

On February 11 I received a letter from Congressman BOREN, dated February 9, reading as follows: "I am enclosing herewith copy of our conversation as taken by one of my secretaries this morning. I thought you might want this record for your files."

At no time during our conversation did Congressman BOREN indicate that he wished to have a transcript made of our conversation. The door to his outer office was closed. Therefore it was impossible for anyone to have overheard our conversation unless a dictaphone or some similar instrument was in operation.

I wish to state that if the Congressman had indicated that he wished to have a stenographer in the room to take a verbatim transcript of our conversation, I would have been happy to agree, for, of course, I said nothing to him that I would not state publicly.

In the CONGRESSIONAL RECORD of February 14, in connection with the extension of remarks by Congressman BOREN, there appears the following: "Transcript of conversation between Hon. LYLE H. BOREN, of Oklahoma, and Mr. David Lasser, president, Workers' Alliance, February 9, 1939."

This alleged transcript is not accurate. It has obviously been rewritten, with several important parts of our conversation either deleted or changed.

I desire to give a few examples.

1. Congressman BOREN declared to me that he wanted to stop the growth of the Workers' Alliance because he was afraid it might grow to the point where it could influence his actions. This statement does not appear in Congressman BOREN's alleged transcript.

2. Congressman BOREN declared that he got most of his information about the Workers' Alliance from Mr. Walter Steele, of the National Republic, a Fascist or semi-Fascist organization. Mr. Steele has been definitely linked with the Silver Shirts. This statement does not appear, either.

3. Congressman BOREN definitely declared he would see to it that Republicans, as well as Workers' Alliance members, would not get supervisory positions on W. P. A. in his congressional district. A distorted version of his statement appears in the alleged transcript when he quotes himself as saying: "It is my personal opinion that since this is a Democrat program it should be administered by Democrats."

4. I told Congressman BOREN that the Workers' Alliance is not controlled by or dictated to or influenced by the Communist Party, or any other political party. This statement does not appear in the alleged transcript. Instead, he has me make another statement giving an entirely different meaning, as follows, "but, of course, we are no more communistic than we are Democrats."

5. Congressman BOREN has me declare, "Don't you believe in a democratic country—that a fellow is entitled to believe in communism if he wants to?" I did not make this statement. I did state that the law of the land prohibits discrimination against

people on W. P. A. because of their political beliefs; that the Workers' Alliance, also, does not discriminate against people because of their political beliefs; that we judge the members of our organization simply on the basis of their adherence to our principles, constitution, and bylaws, and that in doing this we are carrying out the spirit of the laws governing employment on relief programs.

These are a few of the inaccuracies in the so-called transcript of Congressman BOREN.

In a number of other places, statements made by both of us have been changed from their original position in the conversation so that they appear out of context.

I desire further to declare that the Workers' Alliance of America believes in our democratic form of government and in the American Constitution. We are definitely and categorically opposed to any and every attempt to destroy our democratic form of government or to take away our democratic liberties. We are definitely opposed to dictatorship. We love our country and we stand ready to defend it and its institutions from any attack which would seek to take away our freedom and democratic liberties.

DAVID LASSER,
National President, Workers' Alliance of America.

District of Columbia, ss:

Subscribed and sworn to by David Lasser in this District on this 15th day of February 1939.

Given under my hand and official seal.

W. T. KERFOOT, Jr.

TRANSCRIPT OF TELEPHONE CONVERSATION BETWEEN CONGRESSMAN MARCANTONIO AND CONGRESSMAN BOREN, OF OKLAHOMA, FEBRUARY 16, 1939

Mr. MARCANTONIO. Hello, Congressman BOREN, this is Congressman MARCANTONIO, of New York.

Mr. BOREN. Yes; how are you?

Mr. MARCANTONIO. Today I offered to put into the RECORD a letter, as well as a sworn statement from Mr. Lasser, and Congressman FADDIS objected on the ground that you were not on the floor. This is just my opinion. I think it is fair play that his version be put in the RECORD. At the same time, I would like to show it to you first. I will send it down to you by messenger, and will you get it to me before the House convenes tomorrow, so that if you have no objection you may so state, so that I may state to the Speaker that you have no objection?

Mr. BOREN. I will be glad to do that.

Mr. MARCANTONIO. I will send my boy right down.

Mr. BOREN. This is Congressman BOREN. I have written you a little note. I was going to drop it in the mails to you. Do you want me to send it up? Here's my attitude. Of course, I think the statement is utterly ridiculous, but, on the other hand, I won't object to putting it in if you don't want me to do so.

Mr. MARCANTONIO. I simply feel this man should have an opportunity to defend himself. This material which was put in the RECORD reflects on him, and he wants to defend himself. I think he should be given this opportunity. That is my attitude.

Mr. BOREN. The history of it is this: The only reason I put it in the RECORD was because he released a three-page letter in the press, which letter, you know, I also put in the RECORD, because I wanted the accurate record. But I personally would object to it if it was material on some other member, so I will not object to it since it affects me personally. I will send this material back to you if you will be in your office for a few minutes.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1939

ADDRESS BY HON. HERBERT HOOVER

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Herbert Hoover at the Lincoln Day banquet in New York:

Every year at this time Americans express gratitude for the birth of Abraham Lincoln. Recently both Mr. Roosevelt and Mr. Browder have claimed him as a founder of their faiths. I was under the impression he was a Republican.

But Abraham Lincoln towered far above political partisanship. He rests in the hearts of the American people not as a politician but as a great American who died fighting for the most precious of American possessions—the liberty of men.

During the past month those temporarily in control of the Government have expressed their views upon the state of the Union. Tonight in many assemblies over the Nation you will hear views on it from the party of Lincoln.

Eighty years ago if an observer could have looked down on this Republic from the high stratosphere he would have seen a nation sadly divided and confused. It was a Nation professing liberty yet holding millions of slaves. It was furiously debating property rights, States' rights, decisions of the courts, and secession.

But high above all this din and confusion Lincoln heard the supreme chord of all human emotions—the liberty of men. In the triumph of that deepest of all moral and spiritual issues the old discords sank away. With that renewed inspiration from Abraham Lincoln this Nation marched on to a glorious progress unparalleled in the history of mankind.

SEES THE NATION CONFUSED

Today if the observer in the high stratosphere were to look down on this Republic he would find a people more sadly divided and confused than at any time since Lincoln's time. He would see the torch of human liberty dimming on every continent.

He would find the richest and most powerful Nation in the world confused by its own inventions; disordered in its economic life; hurt by the weakening of private and public morals; arming from fear of foreign violence; discouraged by vast destitution in a land of plenty; frustrated by failure of age-old panaceas. He would find strange doctrines of class struggle, of personal power, of extravagance, of debt, and of hate. He would see our Nation still professing liberty yet pursuing ideas which limit and endanger the liberty of men.

Yet nonetheless again today above all this din and discouragement rises that same supreme chord of all human emotions—the liberty of men.

Three months ago this observer might have despaired of us. But today he would see flashes of light. He would find that Americans have by the ballot again spoken their demand that the safeguards of liberty be maintained. The people have restored much independence to the Congress. They have returned to office men who fought stanchly for the independence of the courts. They have lifted to leadership many young, vigorous Governors and backed them with high-minded legislatures. The people have proved that elections cannot be controlled by Government subsidies.

Today this observer would see another ray of light through all this confusion. He would see the people steadily forcing a clarification of national thought. Those who adhere to the traditional liberalism upon which the Republic was founded and which Lincoln sustained are crowding away from the pseudo-liberalism of the New Deal.

That philosophy of conscious or unconscious left wingers is steadily and openly unfolding itself. It becomes visible as a mixture of coercion, collectivism, and lust for personal power poured into the American system of free men. And it mortgages the next generation to pay for it. Anyway, their new system is satisfying enough to receive the illuminating support of the Communist front and their fellow travelers.

Here indeed is a paradox. The Republican Party has become the conservative party in the sense of preserving true liberalism.

The spirit of true liberalism is to create free men; it is not the coercion of men. True liberalism is found not in striving to spread bureaucracy and personal power but in striving to set bounds to it. And it is equally certain that we can no more have private economic power without checks and balances than we can have political power without checks and balances. Either one leads to coercion. True liberalism seeks freedom from both bureaucracy and private privilege in the confident belief that without such freedom the pursuit of other blessings is in vain.

NOT LINCOLN'S FORMULA

Whatever this New Deal system is, it is certain that it did not come from Abraham Lincoln.

The President in his last message on the state of the Union made a moving appeal for unity in the people. But the acerbities of the times were not much allayed when a few days later at the Jackson Day dinner he smote the to-be-purged Democrats with hints to get out of his party. That was more of a mustard plaster than an ointment of unity.

Then Mr. Roosevelt took in still more ground of combat when he observed: "Does anyone maintain that the Republican Party from 1868 to 1938 was the party of Abraham Lincoln?" He excepts possibly his own fifth cousin. He seems to wish to purge the Republican Party also. He ought to read the views of Theodore Roosevelt on such policies as his. But the President of all the people did not add to the happy chemistry of national unity with this smear on the political faith of half the people. Certainly Mr. Roosevelt's formula of appeasement does not follow Mr. Lincoln's method of "with malice toward none; with charity for all."

When the great spirit of Abraham Lincoln looks through the long corridor of time upon the party he founded he sees that from the day of his passing on the torch until the last day of the Republican Party in office it held aloft the light of inalienable liberties of men. And he knows that party never deviated from the Constitution which he fought to preserve, either in letter or in spirit. And he sees the Union he preserved under adherence to these principles grow to the greatest nation on the earth.

HOLDS HIS PARTY BEGAN REGULATION

He would witness a people constantly confronted with new human problems which were the very product of their own freedom and progress.

Mr. Lincoln would not be fooled by the notion that economic righteousness and social good burst upon the world with the New Deal.

He would see that a generation after his time, when big corporations and mass production entered national life, it was the Republican Party that first established the concept that business must be regulated by government if the freedom of men was to be preserved. Indeed, it was the Republican Party that first initiated regulation against monopoly and business abuse in the States. Over the last 50 years it created 7 out of the 10 great Federal regulating agencies of today. It was Republicans who created the income and estate taxes, that fortunes might not accumulate so as to oppress the Nation and that there might be relief of tax burdens upon the poor.

Abraham Lincoln would have watched anxiously when the growth of humanitarianism began to press upon government. And he would have seen it was Republican State administrations that first created the limitation of hours for women, that started the abolition of child labor, that initiated workmen's compensation acts, State old-age pensions, mothers' pensions, public health, and a score of other social reforms. It was Republican national administrations that first brought these problems into national scope. It was they who first proposed the Federal amendment to abolish child labor, who first restricted immigration, who first declared the right of collective bargaining through the creation of the mediation board, who first established national public-health service. It was Republicans fighting for morals in government who established and in every administration strengthened civil service.

CITES REPUBLICAN POLICIES

Mr. Lincoln would not be fooled that the New Deal first discovered conservation and public works to benefit the people. It was Republicans who first built up every single one of the great Federal policies dealing with these problems. All over this Nation are parks, forests, mineral reservations, irrigation districts, navigable rivers, harbors, great bridges and canals, all the initiative of Republican administrations. The New Deal has added a few percent to the area or totals. And they have charged them to the next generation.

It was Republicans, following Mr. Lincoln's own platform pledge, who held protection to workers from foreign standards of living by tariffs and sought to hold the home market for farmers against peasant labor abroad.

Lincoln would have seen it was a Republican administration which first announced the responsibility of government aid in time of great depression. When the Federal Reserve System, admirably added by Democrats, failed to meet the storm of 1929, it was a Republican administration which again proposed drastic banking reform. It was Republicans who, pending such reforms, created the Reconstruction Finance Corporation, the home loan banks, the agricultural credit banks, and brought the strength of the Government to protect savings and homes and insurance policies of all the people.

FIRST ORGANIZED RELIEF IN 1930

Mr. Lincoln would have witnessed a Republican administration in 1930 the first to announce the national obligation that no American through no fault of his own should go hungry or cold, and first to organize Nation-wide relief for the unemployed. And it organized relief in a fashion which excluded corruption, waste, and demoralization of community responsibility. And it is high time to return to a system that does not play politics with human misery.

And Republicans discovered one thing 80 years ago which the New Deal has not rediscovered yet. That is, the greatest gift of government to the ill fed, ill housed, and ill clothed is fidelity to government obligation, less taxes, a balanced budget, and a convertible gold currency.

And Mr. Lincoln would observe that all these years it was Republicans who held to the system of free enterprise which, while it had weaknesses, yet produced the highest standards of living known in any nation in the history of the world. And it is the New Deal destruction of that energy, enterprise, and productivity which today imperils all the humanitarian work of these 80 years.

We followers of Lincoln lay no claim that the Republican Party, or any other party, has always been perfect. It has at times sorrowed many of us by its lag in prompt action and its faulty action. And we likewise credit the Democratic Party with great service in years gone by.

One thing is sure. With the millions of Americans with faith in this party and with the task now laid upon it to restore liberty in this land, it is certain that the spirit of Abraham Lincoln has not joined the New Deal.

RISE OF YOUTH AIDS PARTY

But the high points of achievement of a political party have two values. They are proof of its fidelity to principles of this Republic. They are proof of its ability to find methods within these principles which meet the scene which changes with the progress of invention and new ideas. After all, a party is only an instrumentality for future service. The first chore of a political party out of power is corrective opposition. The oxygen of representative government is exposure of the witchery of half-truth and the curb of arrogant and extreme action. Its other great duty is to present to the country a program of reform and forward action.

With our reinforced leadership in new Governors and in Congress we are strengthened to these purposes. New vigor and courage have come to us by the rise of youth in our party.

The points of opposition and programs for the future are rising daily from county and State organizations, from our youth and women's organizations, from our Republican leaders, and our program committee. I have made it my business to study these expressions diligently. And I can say at once there has never been a time in the history of the party when in major questions there is such unity as there is today. We may differ among ourselves as to details. We may differ in expression. But we stick together in principle. We are engaged in no purges of honest men.

PEOPLE DEMAND NEW EMANCIPATION

These many statements of Republican purpose unswervingly demand that moral standards in public and private life be regenerated; that humanitarian action be sanely advanced; that economic productivity be restored; that thrift be reenthroned as a national virtue; that private enterprise be sustained and regulated to prevent abuse; that personal liberty be safeguarded; that representative government be purified; that peace be maintained.

And the methods they propose are based on sanity, common sense, and constructive action.

What the everyday people of America want is not labels or slogans, either imported or domestic. They demand emancipation from coercion and taxes and a restoration of their jobs.

Now that you have for once heard a few words favorable to the Republican Party, let me add a few words about the New Deal. The President has introduced us to the seventh New Deal since 1932. It is also the most expensive one. The new gamble with the fate of a people presents some startling features. We have need of bold debate today as never before.

I wish here to applaud the President's grasp of one hint from the election. That is the demand that the Congress be independent. The spirit of his acceptance, however, reminds me of the small boy who took the clock to pieces. When reprimanded, he suddenly turned on his dad and said, "If that is the way you feel, then you put the thing together. I want to play with my soldiers."

PASSED PERIOD OF EXPERIMENTS

We also are grateful for the President's assurance that we have passed the period of experiments and should now be free to invigorate the processes of recovery. This is comforting, and it confirms our belief that millions of our people have had to stand aside for 6 years in unemployment and destitution to make way for ill-fated experiments.

The country may therefore now take up its greatest humanitarian task—that is, to restore 10,000,000 to jobs, revive a paralyzed agriculture, and thereby really relieve 20,000,000 destitute; and that task must not be obscured by proposals of entanglement abroad.

The President's solution of this problem is that the Government spend on a still larger scale. These nine billion expenditures and a promise of fifty billion debt are the most startling Budget proposals ever laid before the American people in peacetime.

I have felt some anxiety for the punctuation points. They are living a sad and hectic life wandering around among regimented cyphers trying to find some of the old places they used to know. I fear that, like the administration, they are moving steadily to the left.

An ancient statesman advised that the art of politics was to find new names for policies that had become unpopular. Mr. Lincoln would probably have phrased this as the art of fooling part of the people a little longer. So today I suppose we ought to be more cheerful when we know that national spending and deficits have become "investing in prosperity." Extravagance with other people's money is shifted from a sin to a virtue. The President in his last message described some new schools of thought. In fact, several of them. In them all songs of economic hallucination substitute for the brutal clang of the cash register.

The first grade of this high school of economic romance teaches that we should get back to eighty billions of yearly national income, which we once enjoyed under Republican administrations. We are grateful that the New Deal adopts Republican attainments as the ideal. But the President says that inasmuch as our present income is only sixty billions, we only have to spend as if we had eighty billions in order to lift ourselves up to the Republican level. As the ancient prospector said, "There ain't no gold in them rainbows." That eighty billion national income under Republican administration was due to the people spending their own money, not in taxes but on reproductive enterprises, creating new jobs for men.

The next higher grade of this new school of budgetary magic seeks to hide these gigantic expenditures by claiming Government loans and public works are investments. On the basis of this hallucination, my administration would have shown a surplus of two billion. In fact, the Budget of all administrations for 70 years, except the war years, would have shown a surplus. We would have had such an accumulated surplus today that we would have to build a vacuum to hold it.

The recoverable loans are a relief to the taxpayer, but public works are not a monetary asset to the Government. They are the clothes the Nation wears. And they wear out. They only in small degree increase the earning power of the people. Public works and public buildings have social value. But as assets with which to relieve taxpayers they are about as useful as liabilities on a balance sheet. And I trust the time off for precinct work by the W. P. A. is not included as an offset to the national debt.

CHALLENGES NEW DEAL FIGURES

The New Deal's third grade of economic make-believe teaches that the entire debt of our national economic system, public and private together, is not larger today than it was in 1929. But that is not all the truth. Public debt is paying for a dead horse. Private debt is buying a live one.

They finally graduate from this school of high finance with the valedictory that expenses cannot be reduced. And this in the face of the fact that yearly for 10 years prior to the New Deal, on their basis of accounts and excepting loans since recovered, the expenditures were 3.5 billions instead of 9 billions. But that was Republicans.

I should like to see a new school established with some home truths for its curriculum. That school would say that to restore jobs and agriculture the fear of men of their Government and the shackles and taxes upon their energies must be removed in order that freemen may have hope and confidence in the future.

That school would say that most of the New Deal measures can be lived down, improved, cured, or reformed, but that these monetary and financial policies may defeat the Nation.

That school would say that some day all this will have to be paid for. If it be through taxes, men and women will be handing their wages to the Government instead of buying things for their own betterment.

Nor is that the most important consequence it should teach. That school would say one of the deadly causes of destruction to 20 democracies in 20 years has been Government spending and inflation. Mr. Roosevelt says "this generation has a rendezvous with destiny." The most probable spot for that rendezvous today is inflation. When this generation has gone up that alley, it will find freedom has gone and our rendezvous will be with a full-sized dictator.

CUSTODIANS OF LINCOLN'S TORCH

In conclusion, let me again say that this Republic is founded on inalienable liberties. It is dedicated to the dignity and personality of individual men and women. It is consecrated to truth, justice, tolerance, and mercy. These liberties and obligations are inseparable. If political freedom, intellectual freedom, or economic freedom are, any one of them, undermined, all the others will fall.

These high purposes of this Nation are being undermined by the policies now pursued at home and by alien theories from abroad. The first great mission of the Republican Party is the preservation of these principles.

Today economic progress is being paralyzed. That destruction is the destruction of social progress. The imperious necessity of America is to restore economic productivity and thereby jobs for men. That alone can support our humanitarian aspirations. For social progress in care of the aged, the young, the ill-fed, the ill-clad, the ill-housed there must be parallel economic strength. Economic restoration is the second great mission of the Republican Party.

We do not want to become entangled in another World War abroad. The third great mission of the Republican Party is peace for America.

We are the living custodians of the torch which fell from the hand of Abraham Lincoln. We may again rekindle the heart and mind of America with the glow of hope and promise for the future. Never since Lincoln has a political party faced such an opportunity for a service to a great people.

President George Washington's Emphasis on Religion Seems Most Pertinent Today With Our Tributes to the Dead Pontiff, Pius XI

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1939

Mr. SHANLEY. Mr. Speaker and my colleagues, it was particularly pleasing to me to have this House on both sides of the aisles give such unstinted support to the resolution of mine in memory of Pope Pius XI. Of all countries in the world this one of ours has been most tolerant toward all religions and has ever been willing to pay homage and respect to superlative leaders in all faiths.

President George Washington in his farewell address perhaps showed the way with these passages as models for all time:

Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness, these firmest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and cherish them. A volume could not trace all their connections with private and public felicity. Let it simply be asked, Where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths which are the instruments of investigation in courts of justice? And let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason, and experience both forbid us to expect that national morality can prevail in exclusion of religious principle.

It is substantially true that virtue of morality is a necessary spring of popular government. The rule, indeed, extends with more or less force to every species of free government. Who, that is a sincere friend to it, can look with indifference upon attempts to shake the foundation of the fabric? Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion, as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened.

The speech by the Father of his Country and a modern counterpart by the President of the United States in his message to Congress where he stressed the need for religion, democracy, and international good faith are evidences of the need for religion and divine guidance in the body politic.

The death of Pope Pius XI has taken a world figure of historic proportions, one whose passing means the end of a leadership that has few equals in modern annals. Fortified mentally by scholarship and diplomatic zeal and equipped physically with robust health, his love of the outdoors and especially mountain climbing must appeal to all healthy, virile Americans.

Withal, he was superbly modest and balanced. His tireless efforts with his phenomenal command of languages demanded a longer day than most men. That day began at 5:30, and into it he crowded a full life.

He exhibited Gallilean forbearance in the face of difficulties that most men could not surmount. "Love your enemies, do good to them that hate you." He lived that admonition, for his goal was the goal of the Scriptures—

If it be possible, as much as is in you, have peace with all men.

He was realistic, for he concluded pacts with countries some of which were not of his faith. He was most solicitous for protection of minorities, and from his treaties has come surest protection for the minorities of his faith scattered throughout the world.

His fight for the solemnity and dignity of a moral code in a world torn by forgetfulness and even malice has done much to temper the onward spread of educated intelligence devoid of moral principles. Certainly his great encyclicals are documents of liberalism.

No man was fairer. He exalted the principle of audi alteram partem to the highest virtue. His problems were infinite—the countless holocausts of Russia's gigantic upheaval, its twin counterparts in Mexico and Spain, the awful horror of the blood lusts of Bela Kun, the forceful movements of the rising sun of Japan, the fierce changes in Italy amid the early days of chaos, France's policy of revenge, Germany's emergence from under that heel and her subsequent days of conflict with the world and the papacy. His children had suffered the knout, the gallows, and even Siberian exile in the Union of Socialist Soviet Republics.

In world affairs perhaps nothing caught his attention and engaged his sense of the dramatic and his love of adventure as the struggles then of Marshall Josef Pilsudski triumphing over prison starvation and execution for his country, fortified by the military endorsement of General Weygand, one of France's three greatest military geniuses. The Polish hero, the incarnation of Polish nationalism, stood athwart the "red" menace from the north. The late Pope had been sent there by his superiors, and his efforts in behalf of Polish nationalism will never be forgotten.

Never in history did religious zeal, faith, and courage play so great a part in a nation's defense. The mysticism in Pilsudski summoned his own strength to impart to his followers a belief in another "miracle of the Marne." He created the inspiring belief in a new "miracle to be of the Vistula."

The "red" forces were within 6 miles of Warsaw when the inspired Pilsudski attacked them in the flank and in the rear. The tremendous onrush of his own enthusiasm and the fighting qualities of his men made the strategy superbly successful. The day was won and Pope Pius XI breathed a sigh of intense relief as well as enjoyed the breath of one

who was a witness of superlative courage under tremendous odds.

The Catholic Curia with its fount of leadership in Pope Pius fought the "red" menace because of its materialistic base, for its doctrine of class warfare; and its attack on private property went against the doctrines of the church. Certainly the Catholic viewpoint on property is that the right to own private property, including the means of production, is derived from nature and not from the state. That means that the state cannot abolish private property, though its limits may be defined, and under certain cases the state may reserve to itself greater restrictions if events are endangering the public welfare. Pope Pius firmly pushed this view with its obvious exceptions in hydroelectric power stations, public utilities, and munitions of war. But none opposed more strongly than he the nationalization of all the means of production.

Pope Pius XI superbly merits the promise of Matthew—

Blessed are the peacemakers, for they shall be called sons of God.

Why No Blimps?

EXTENSION OF REMARKS

OF

HON. DOW W. HARTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

Mr. HARTER of Ohio. Mr. Speaker, while H. R. 3791 contains a provision authorizing the Secretary of War to equip and maintain the Air Corps with such number of airships and free and captive balloons as he may determine to be necessary for training purposes, no mention of the utility and serviceability of the blimp or nonrigid airship was made during the House debate and discussion leading to the passage of the bill.

It is a matter of official record that the small nonrigid airship, commonly called the blimp, was of tremendous value for coastal defense, coastal patrol duty, mine destruction, and antisubmarine work during the World War. A nonrigid airship of this type has been seen by all of us for one flies nearly continuously over the city of Washington.

Commander T. G. W. Settle, United States Navy, is one of our great balloonists and has made several historic flights, including one into the stratosphere. His recent articles appearing in the February 1939 issue of the United States Naval Institute Proceedings, "Why No Blimps?" is most interesting and enlightening. I quote the commander's article:

[From the United States Naval Institute Proceedings of February 1939]

WHY NO BLIMPS?

(By Commander T. G. W. Settle, United States Navy)

The blimp (nonrigid airship) has the dubious honor of occupying the "forgotten ships" niche in the present-day Navy's museum of ship types. This niche has previously been tenanted by the airplane, the submarine, the torpedo boat, the ironclad, and so on back to the days of antiquity when eminent brows were lifted at the revolutionary idea of introducing sail into the oared navies. The blimp currently shares its niche with the rigid (Zeppelin) airship; but since the latter is bigger and therefore presumably better able to look out for itself, this brief plea for the "halt and the lame" is in behalf of the blimp alone.

Following are general statistics of British blimps in the latter part of the 1914–18 war, that is, from June 1917 to October 1918, inclusive:

(a) Average number of ships in service	56
(b) Total number of patrols	9,059
(c) Total number of escorts	2,210
(d) Total ship-hours under way	59,703.5
(e) Total ship-miles steamed	1,496,006
(f) Mines sighted	134
(g) Mines destroyed	73
(h) Submarines sighted	49
(i) Submarines attacked (by gunfire or bombs)	27

Of these, 21 "subs" were "turned over" to surface craft for attack.

Germany, France, and the United States operated numbers of blimps. No blimp-escorted convoy was attacked by a submarine. German Zeppelin bombing raids linger in the public mind, but these were less than 15 percent of German airship (Zeppelin and blimp) activities. Zeppelin patrolling of the North Sea and Parseval (blimp) patrolling of the German coasts on the North Sea and Baltic were of inestimable value and facilitated keeping the High Seas Fleet intact and ready for a fleet action.

Shortly after the armistice the British *NS–11*, with a gross lift of about 10 tons, carried out an endurance flight of 101 hours under way. (The NS class was slightly larger than our present K class.)

Obviously blimps were of value in 1914–18; no power would have expended the effort indicated in the above figures on a type unless worth-while results were obtained. They were utilized in convoy escort, harbor entrance, and coastal antisubmarine patrol. Our officers who served in the Queenstown and Brest destroyers remember them; some may recall twinges of envy toward the blimp pilots, who didn't have the particular brand of miserable existence at sea that was the lot of destroyer sailors. A great many of these wartime blimps cracked up from various causes, insufficiently experienced crews being a high-frequency ingredient. Of course, a lot of submarines, airplanes, and other light craft cracked up, too; and few of our destroyers, in the relatively short time we were in the war, came out without having had major casualties of one kind or another. All naval types are expendable for "just cause," i. e., if commensurate results are obtained prior to or during expenditure.

The blimp justified itself in 1914–18. Would it be of comparable value in war now? Or should it be relegated to a permanent billet in the "forgotten ships" cemetery? We should either develop and practice with this arm in peacetime, along with the other naval arms, or we should give it up at once, except for a few blimps to provide the indispensable training for rigid airship crews.

The blimp is a coastal and insular waters craft. Let's compare its performance attributes with those of other coastal types:

(a) Speed: High (0–60 knots); except low relative to airplanes.

(b) Combat: Small offensive power, and as vulnerable as other coastal types; however, it can effectively sight and depth-charge submerged submarines and is superior here to other types. Good gun platform for heavy machine guns and bombs.

(c) As observation platform: Superior to other types.

(d) Weather worthiness: Intermediate position between surface and subsurface craft and airplanes; can operate at night and in low visibility.

(e) Maneuverability: Between surface or subsurface craft and airplanes.

(f) Detectability (from other craft): High, except in low visibility or when stratus cloud is available to take cover in.

(g) Cost (construction and operation): Low compared to other coastal types except small motorboats and small planes.

Along with other types, the blimp has advanced in material and performance since 1918; improved engines, fuel, fabrics, metal empennage surfaces, lifting gas (helium, United States), and ground tackle are available. The blimp has at least retained its position relative to surface and subsurface craft. The airplane, with more intensive development, has increased its "lead" in speed and maneuverability, and this has served to make the blimp and the airplane more complementary, less overlapping, in their respective functions in coastal waters.

Several facts are clear:

(1) Enemy raider's planes can readily sink our blimps.

(2) Blimps must keep clear of enemy surface gunfire by their speed and mobility, or by "submerging" in or above clouds.

(3) Blimps are antisubmarine craft "par excellence" in coastal waters as convoy escorts and station patrols.

(4) Blimps are effective in coastal waters for mine and search operations.

With our prodigious coast lines, continental and insular, and the resultant high wartime value to us of blimps is our present neglect of this type just another example of the typically American lack of foresight in matters of national defense?

With such an impressive record of wartime performance one may well ask, Why have the British failed to carry on with blimps and why have the Japanese not developed them? The answer is that neither of these powers has the enormous coast lines in their home islands that we have on our continental shores. Furthermore the British after the war fell into a state of general apathy toward national defense similar in nature, if not in degree, to our own pacifistic "slipping." The Japanese have not since 1905 been seriously threatened by naval attack in their home waters and have expended their limited resources in directions of more immediate urgency than lighter than air. It is predicted, however, that after completion of their China campaign the Japanese will take up airships, Zeppelins, and blimps. Lack of helium has also discouraged peacetime utilization of blimps by European nations, but a recent news item reported a hurriedly uncrated and erected French blimp successfully carrying out a searching mission in the Mediterranean war zone.

What ought we to do? We should provide during the next, say, 5 years:

(A) Navy matériel: (1) Blimp bases (docks, shops) and blimp masts (intermediate) should be set up in all naval districts and in the West Indies, Aleutians, Samoa, Guam, and Philippine Islands also if political prospects warrant. (2) Blimps should be built and assigned to such bases, to provide adequate coastal and insular coverage with this type, and to serve in peacetime utility functions, such as fleet practice photography and observations. (3)

Certain development projects must be prosecuted, such as base and expeditionary ground equipment, sea-water ballast pick-up, water landings, spy basket, etc.

(B) Industrial background: Several manufacturers should be encouraged to bid on blimp construction to insure the availability of building yards to supply wartime needs.

(C) Personnel (most important): A far-sighted training program for officers, enlisted men, and reservists (cadets) must be adopted to provide blimp crews for peacetime training and development, and for wartime expansion.

In conclusion, it would appear that the answer to this article's title, "Why no blimps?", actually does lie in the peculiar quirk of American psychology which has made us, throughout our national history, rather erratic as to "kinds" and "numbers" in our fleets. It is the writer's dismal prophecy, which he hopes will not be fulfilled, that when our next war breaks upon us we will, as at present, have (practically) no blimps, will need them badly, will "run in circles, yell and shout" for someone to build them for us, and will have no crews to man them if and when built.

Trans-Pacific Air Service

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1939

STATEMENT OF HON. JOAQUIN M. ELIZALDE, RESIDENT COMMISSIONER FROM THE PHILIPPINES, BEFORE THE CIVIL AERONAUTICS AUTHORITY, FEBRUARY 17, 1939

Mr. SHANLEY. Mr. Speaker and my colleagues, there is one who is vitally concerned with the progress of our air forces in the titanic struggle that is going on for trade supremacy in the air. I am placing in the RECORD the succinct and important contribution to that service as emphasized in the brief of the Honorable J. M. ELIZALDE, Resident Commissioner from the Philippines, as presented to the Civil Aeronautics Authority in the matter of our trans-Pacific air service.

The brief is as follows:

By direction of the President of the Philippine Commonwealth I appear before your honorable Authority in connection with your inquiry relating to the trans-Pacific air service. I express my appreciation of your indulgence and for this opportunity to present my views on this vital question.

May I first read to you a cable from His Excellency, Manuel L. Quezon, President of the Philippines, which I received yesterday?

"Am informed hearings will be held on February 14 before Civil Aeronautics Authority regarding increased compensation for carrying trans-Pacific air mail. The continuance of this service is a matter of great importance to the people and business interests of the Philippines. Please convey to the Civil Aeronautics Authority my earnest hope that favorable consideration may be given to measures that will help to assure the continuance of this invaluable service between the United States and the Philippines.

"QUEZON."

In approaching the matter under consideration I am impelled to include in my remarks certain observations of a personal nature, in the belief that, aside from the economic and other practical considerations, there are certain sentimental phases which are pertinent to its discussion.

On November 29, 1935, the day the *China Clipper* arrived in Manila, completing the first commercial flight over the Pacific Ocean, I was one of those fortunate enough to participate in that memorable event. I happened to be in a choice position from which to view the flying boat as it came gliding to a perfect landing on Philippine waters. I was only a few yards from where it finally anchored. It was indeed a magnificent and unforgettable spectacle. Everyone was filled with emotion and admiration.

Just a few minutes before this the *China Clipper* came into view many miles out over the sea, and we watched it gradually and majestically approach the city. Soon it was hovering over Manila, and then in an incredibly few moments it glided down on the serene waters of Manila Bay amid the cheers and plaudits of thousands of our people. Truly it was an historic event—a moment of triumph and pride for Americans and for America as a nation. It was an achievement comparable to the great discoveries of past centuries.

The *China Clipper*, incidentally, was under the command of that hero, Capt. Edwin Musick, whose untimely death is one of the great losses to commercial aviation.

The success of the Pan-American Airways in spanning the Pacific demonstrated to the world the tremendous possibilities of transoceanic commercial aviation. It has proved that what had been considered a practical impossibility only a few years ago could be successfully accomplished through proper scientific study and thorough preparation. Moreover, it further demonstrated the great American pioneering spirit to forge ahead in the conquest of the air regardless of the cost or risks involved.

We in the Philippines were proud of that event. We had done all we could to encourage it. The clipper landed on what we are pleased to have given to the Pan-American Airways as an air-base franchise.

In discussing the service which the Pan-American Airways has rendered through its trans-Pacific airlines, may I for a moment digress to make what seems to me to be a significant point?

As is well known, Manila Bay is accustomed to merchant ships flying the flags of all nations. British, Japanese, Norwegian, and Danish ships all usually newly built, and equipped with the latest types of Diesel motors and other up-to-date machinery and appliances, are constantly in our waters. They render reasonably convenient accommodations and facilities to the public.

On the other hand, I am constrained to make the observation that, with the exception of a few steamers, most of the American ships which enter the bay are antiquated, built during the war in an emergency, and generally lacking the equipment and facilities to place them in a competitive position with the modern fleets of other nations. I am not unmindful of the strides which you are now making under the guidance of the United States Maritime Commission. We look forward to the day when your American ships will vie with the merchant fleets of the world.

But in striking contrast to the present maritime situation is the unquestionable supremacy of the United States in trans-Pacific air transportation. The United States stands unsurpassed. It is a peer in this enterprise of the air. Its accomplishment in providing excellent service for passengers, mail, and light cargo, maintaining a steady schedule for several years and an enviable record of safety and competent supervision is a matter of international discussion. It seems, therefore, inconceivable that the United States would fail to support any reasonable proposal for the improvement, development, and expansion of a project in which it has no rival.

From a practical and business standpoint the Pacific air service, such as that rendered by the Pan-American Airways, may be viewed from three angles, the humanitarian, cultural, and commercial.

As to the humanitarian service, I have in mind unforeseen national calamities, such as floods, epidemics, earthquakes, or other disaster. Immediate shipments of medical supplies, serums, and food by clipper to the distressed areas would be vital to the prevention of unnecessary suffering and loss of life and property. This is of inestimable value. Its significance will be more fully appreciated if we visualize for a moment the pitiable plight of a nation in distress, unable to obtain immediate relief through lack of speedy transportation facilities.

The cultural benefits derived from this service are no less significant. Newspapers, periodicals, motion pictures, advertising material, and other media of education and information can now be sent overseas through the air service. The result is that American cultural contacts with the Philippines and the Orient are being drawn closer together.

The commercial advantages accruing to the United States and the Philippines are too innumerable to catalog. I shall attempt to mention only a few.

Not long ago cable or radio communication was used almost exclusively by business firms at considerable expense. Now the air service is available at much less outlay. Where it was impossible to communicate detailed messages through the cable or the radio, it is now convenient and practical to convey them through the air mail. As a businessman in the Philippines, I can and do appreciate what this has meant commercially to the two countries.

Trade transactions in general are greatly facilitated by the quick delivery of shipping documents through the air mail. The consignee is thus given ample time in which to arrange for banking credits and the disposal of the merchandise.

With the facilities of trans-Pacific service, American and Philippine firms are now enjoying the same advantages as Europeans, who are favored by the fast air transportation from Hong Kong to Europe, established by the English and Dutch air lines. American commerce and trade in the Pacific, with the Philippines as the eastern air terminal, has thus received a new impetus for further development and expansion.

At this point I wish to dwell briefly upon the benefits which individual classes of business derive from the Pacific air service.

To machinery and supply houses, the saving in time accomplished is all-important, inasmuch as it makes it possible for them to secure engineering data, blueprints, advertising copy, and even spare parts, which are so essential to the servicing of such equipment. In some cases the feasibility of shipping machinery by air express has resulted in a saving of several weeks of operation.

In the textile industry the fact that samples can now be sent by air is responsible for moving American manufacturers closer to the Philippine market, making it practical for them to compete profitably with Japanese and other exporters, who had made deep inroads into the textile business in the Philippines. In the old days it was necessary for American textile manufacturers to send samples to the Philippines by surface transportation, which required approximately 4 weeks in transit.

With respect to the embroidery industry in the Philippines, air transportation is proving indispensable. Shipments of sample

embroideries may be made from New York to Manila, and the Philippine embroidery made up from those samples, and shipped to the American markets so as to be available before the swiftly changing styles have depreciated the value of these embroideries. There has been a very extensive and profitable use of the air express and air-mail service by the textile and embroidery trades in both countries.

To sum up briefly, the air-mail service has been a boon to the efficient and practical conduct of modern business in the Pacific, not only in providing for quicker transmission of business correspondence and communication but in drawing closer the cultural and social ties of these two countries. To the humanitarians, culturists, and industrialists, the air service has placed the Philippines within easy reach for the dissemination of American culture and ideas, and the expansion of American trade and commerce.

This air service has become a practical necessity to all. It is a byword for dependability. It has literally shrunk the Pacific and made the world much smaller. The tremendous advantages of bringing the peoples of these widely separated areas together in closer contact and understanding cannot be measured in terms of dollars and cents.

Gentlemen of the committee, as representative of my government, I voice the sentiments of our 15,000,000 people when I strongly endorse and support the program of development and expansion of the facilities of the trans-Pacific air service.

I cannot stress too strongly the desirability of urging the expansion of this splendid service which has proven its usefulness and which has become indispensable to our peoples. Its achievements in the past, as well as in the future, are, and will be, a source of honor and prestige to the United States. As Filipinos, we, too, are justly proud of the successful culmination of this gigantic enterprise, and bask in the reflected light of your glory.

For the General Welfare and Economic Security of Children, Mothers, and Aged

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1939

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, APRIL 16, 1935

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I include the following speech which I delivered in the House of Representatives on April 16, 1935:

Mr. DOUGHTON. Mr. Chairman, I yield 45 minutes to the gentleman from New York [Mr. SIROVICH].

Mr. SIROVICH. Mr. Chairman, life is a journey upon the road to death. Some of us quickly end our pilgrimage at the station marked "infancy." Shortly thereafter others complete their mission upon the course named "childhood." Many fall by the wayside on the grave marked "adolescence." Countless numbers falter on the highway called "young age." Innumerable throngs collapse upon the main road marked "middle age." Eventually all the rest who have escaped the perils along this mysterious road conclude their journey to eternity when they pass from the station "old age," through the gates of death, to that bourn from whence no traveler ever returns.

The present bill before the House of Representatives is one that provides for and attempts to take care of every victim of social and economic insecurity from the time of birth until death. This humane legislation begins with the queen and the angel of the home, the mother. Since God could not be everywhere, He created mothers to take His place. This bill makes it possible to look after the welfare of every expectant mother in the villages and rural sections of our country during the critical periods of her life's existence, which are childbirth and the preceding prenatal care. In the past millions of mothers have made the supreme sacrifice and died on the altar of childbirth, caused by the disease known as puerperal sepsis, or blood poisoning.

It was in the year 1843 when the distinguished New England doctor, surgeon, and literary genius, Oliver Wendell Holmes, then a practicing physician, announced to the people of our country that puerperal sepsis, commonly known as blood poisoning, from which thousands of mothers in his time had died after childbirth, was due to nothing else but dirt. This disease was caused by the introduction of dirt into the generative tract by unclean hands and unsanitary material used during the period of obstetric delivery. Oliver Wendell Holmes was laughed at, jeered at, humiliated, and humbled, as are all men and women who are pioneers and crusaders in a new line of thought or endeavor.

Several years later Professor Semmelweiss, an obstetric professor in the University of Budapest, Hungary, from 1850 to 1865, unfamiliar with Dr. Holmes' views, announced to the physicians of Austria and Hungary his belief that puerperal sepsis was caused by unclean methods of delivery that spread infection through dirt. His fellow physicians and the midwives of his time excoriated and pilloried him. They denounced his views. They laughed at him. They literally spat at him. His delicate mind and his sensitive soul could not resist nor withstand the ravages of this ridicule. He lost his reason and in 1866 died in an insane institution in Budapest.

Two years ago when I was in Budapest I stood in reverence in front of a beautiful monument that Hungary had belatedly erected to commemorate the memory, the name, and the fame of its illustrious pioneer and crusader, Professor Semmelweiss. Here was a scholar and a scientist who was driven to his death because he had given the world the principles that other physicians and surgeons today believe in, that puerperal sepsis or blood poisoning, caused in childbirth, is due to a dirt infection at the time of delivery.

Mr. Chairman, a few millions spent each year to nurses, midwives, and doctors to help them bring children into the world cleanly and healthily would not only save the lives of thousands of mothers but would also usher the young into the world in healthier, more sanitary, and more decent conditions.

In the rural sections of the United States and in the smaller villages we have very few nurses, midwives, or doctors. A kindly friend, male or female, may be the only one to help to bring the child into the world. This humane and constructive legislation, embodied in this bill, would save the lives of millions of our mothers in the future, and help to perpetuate the home and the angel of the home—the mother.

Mr. Chairman, previously this maternal legislation was known as the Shepherd-Towner Act or the Shepherd-Bankhead Act. This legislation was only put into operation for a few years and died because no appropriations were made to perpetuate its work. In the past its work was only of a temporary nature. The present legislation will be permanent and a living monument to Franklin Delano Roosevelt.

This bill makes its tenure permanent in character and lasting in its results. It will be an ideal worthy to be emulated by every civilized government of the world. [Applause.]

Mr. Chairman, another section of this humane and constructive bill provides for child welfare. This section would take care of infancy and childhood until the age of puberty. The weakest links in the chain of home life everywhere are the two extremes of life, young age and old age. A generation ago one out of every four young that were brought into the world died during the stage of infancy. They had no opportunity to develop into childhood or adolescence. Today, through the medium of science and medicine, through serum and antitoxin, and the countless contributions of prophylactic treatments, coupled with hygienic regulations and legal restrictions placed upon the exploitation of childhood, we are enabled to raise children, with the result that the mortality tables today show only one out of eight dying before they have had a chance to develop into young adult life.

The laws of our country and society have aided the young children of the present generation by prolonging legal childhood to the age of 16, which ends the compulsory educational period required by law.

A soldier fighting in the trenches of France, with bullets passing and bombs exploding over him, with poison gas about him, has a better chance to escape with his life, than has a child coming into the world to live and to reach young adult life.

Mr. Chairman, the mother may be the queen of the home, but the father is the breadwinner, the provider, who keeps the home intact. The home is the foundation of all society. Upon it the superstructure of all government must rise. Destroy the home and you destroy the most sacred human institution devised by mankind.

Death, through the loss of the breadwinner, has broken many a home. For centuries the widows, orphans, and dependent children have cried aloud for help and assistance in their tragic periods of economic insecurity. In the past the only recourse for orphaned children was the poorhouse, almshouse, and the orphan asylum.

The twentieth century of civilization has awakened our citizens to the duty and obligations they owe to these unfortunate orphans. Forty States in our Union have thus far enacted widows' pensions or child-welfare laws, to protect these innocent orphaned victims of previous inhuman capitalistic and legislative indifference. [Applause.]

Widows' pensions and child-welfare laws have had the spirit of humanity breathed into them by permitting the mother to have the custody of her own brood in her own home, by having the State give to the mother the money it formerly gave to an institution to take care of these orphans. In this way the State has preserved the integrity of the home. In its own home the child becomes the beneficiary of the tender love, the gentle solicitude, and the gracious care of its own mother. In an institution a child becomes a mechanical automaton. In its own home it is treated as a human being. Children reared in an orphan asylum lose their affection for those they should love. In the home the ties that bind the child to its mother are firm, unyielding, and enduring.

This bill, so carefully conceived, further protects the home because millions of dollars are granted by the Federal Government to the States, that will eliminate the orphan asylums and restore the orphaned child to the custody of its own mother, who is the proper and noblest guardian of childhood.

Mr. Chairman, if people who are physically and mentally perfect in every way cannot find work to guarantee their economic security, what is to be the fate of those children who have been

handicapped by nature by being crippled, maimed, deformed, disfigured, blind, and deaf through congenital causes or diseases of childhood?

"A sound mind in a healthy body" was the slogan, or dictum, enunciated by a famous seventeenth-century English philosopher, psychologist, and educational thinker, John Locke, in his famous work, Some Thoughts Concerning Education. The fact that he was himself a physician of great repute, coupled with the thought that nature had endowed him with a delicate physical constitution, made him realize the vital importance and value of having a healthy body.

Our great humane President, Franklin Delano Roosevelt, a father, a victim of infantile paralysis himself, knows what a long, hard fight has to be made to recover from the ravaging infirmities of infantile paralysis and other diseases that have pitifully crippled and maimed some of the youth of our country.

This constructive legislation and appropriation amounting to $2,850,000 in this bill offers to every crippled, deformed, and paralyzed child, whose parents cannot afford to pay for treatment, every scientific, medical, mechanical, and physiological relief to restore them to health. It assuages the grief, the anguish, and the suffering that accompanies the complications of childhood diseases which afflict its unfortunate victims with chronic infirmities.

This result is accomplished in this legislative bill through rehabilitation and vocational guidance and constructive and corrective devices that are designed to restore a sound mind in an otherwise afflicted and paralyzed body, so that these children may ultimately become useful citizens of our Republic, capable of being self-supporting and self-respecting.

Mr. Chairman, the period of adolescence is the critical and trying time in young adult life. The physiological changes that take place in puberty are responsible for the mental aberrations so common and prevalent in youth. Scientific medicine contends that juvenile delinquency, incorrigibility, changes of disposition, temperament, and character are attributable to the endocrinological disturbance caused by puberty.

This humane bill appropriates millions of dollars to aid these unfortunate victims of adolescence, through scientific medical supervision controlled in the Bureau of Child Hygiene, thus contributing to the normal restoration of these young people as useful citizens of our Republic, instead of filling our penal institutions with juvenile delinquents. [Applause.]

Mr. Chairman, between the ages of 20 to 60 is the great productive period of human existence. Through labor, commerce, industry, agriculture, science, art and literature, and all collateral forms of human endeavor, the progress of mankind throughout the civilized world has been accomplished.

The one sublime and great ideal for which all those people who work through brain and brawn would eternally be grateful for is economic and job security. Mankind the world over is profoundly interested in one fundamental concept; that is the privilege to work and to support loved ones who are dependent on that work for the amenities and decencies of life. The chronic deterrent that has prevented mankind throughout the world, between the ages of 20 to 60, from being blessed with happiness, contentment, and social and economic security is the tragic economic disease called unemployment.

The problem of unemployment is today not a problem of any locality nor any country, nor of any political party, but is worldwide and universal in its proportions. Nothing affects the average individual so closely as the question of the preservation of life with economic security. It is only after these necessities are satisfied that an individual can turn his thoughts to problems of politics, society, education, science, art, philosophy, or even religion. Society as it is constituted today, and has been constituted throughout all the ages, has taught humanity the fact that the necessities of life can be obtained only by the "sweat of one's brow." It has ever been the rule that those unwilling to work do not deserve to share the material goods of the world. The tragedy of unemployment today, however, is that men are willing to work, but can find no work for their hands or brains.

In order that the remedies for the relief of unemployment, particularly unemployment in the United States, may be properly understood, it is necessary that we have some conception of the historical aspects of this difficulty. Unemployment has plagued mankind from time immemorial. It has been with us from the time that society became organized and humanity gave up its nomadic existence and the freedom which such a life implies for the greater protection which an individual receives in group organization.

The annals of ancient history give many examples of the problems of unemployment and how it was successfully temporarily solved. In the Bible there is the story of Joseph who was called in as an expert by the Egyptian Pharoah of his day to solve a problem which was then appearing on the horizon, namely, unemployment for an appreciable number of years. Joseph suggested that a sufficient store of materials be set up during the years of plenty to supply the needs of the 7 lean years that were in the offing. The Phoenicians were the commercial group of the Semitic nation. They settled in Africa and founded the ancient civilization known as Carthage. They explored the mining districts of the British Isles, and brought back iron, tin, and copper to Phoenicia, there to be converted into bronze. For the Phoenicians, therefore, the solution of their problem of unemployment lay in expansion or colonization in other parts of the world.

The Greeks had a similar cure for this problem, for when in the small country of Greece the press of increased population made employment difficult, settlers were sent to what is now Sicily, and there established a center of commerce at Syracuse. They also sent their legions to Asia Minor and established settlers' colonies there. In Sparta the problem was met in another manner. This communistic country, which rigorously supervised the life of all the members of its community, decreed the extreme penalty of killing the weak so that only the strong might survive. This, of course, tended to keep down any rapid increase in population, and eventually Sparta perished as a result of the very remedy she thought would help her in her survival.

Rome, the first great empire of history, was confronted with the problem of unemployment early in its career. Following the conflict between Rome and Carthage the problem was relieved by the subjugation of the latter country. The natural growth of population of Rome, nevertheless, soon presented again the problem of unemployment. To solve it Rome resorted to the methods of Phoenicia, namely, colonization. Consequently, Roman soldiers planted their flag in Spain, in Britain, in the Balkan States—which are now known as Rumania, Bulgaria, and Yugoslavia—in Hungary, in Asia Minor, and on the northern coast of Africa. Always following the flag went the civil population, anxious to leave overcrowded Rome and Italy. They would rather be, first, in any place where they could find employment, economic security, and profitable labor than, second, where they would constantly be on the brink of starvation. The influx of barbarians and slaves deprived the native Romans of labor and employment. This was one of the conditions that finally caused the great empire to collapse in the year 476 A. D.

Following the collapse of the Roman Empire the organization of society entered into the feudal system, which was the political, social, and economic set-up of the Middle Ages. The feudal system, while it destroyed or curbed the individual liberty and freedom of men and women, narrowing them to a confining locality, nevertheless gave a fair guaranty of employment to the workers, thus assuring economic security. The feudal lord unquestionably was master of the soul and body of the toiler. The laborer was bound to the soil by a process akin to involuntary slavery. While he served his master he had bread to eat, a roof to shelter him, and clothing to wear. Did the peasant prefer to surrender his liberty and freedom in return for a guaranty of economic security? The doglike fidelity of the medieval serf to his lord, the loyalty of generations of apparently willing peasants to generations of overlords of the same family, showed that the feudal serf of medieval times did prefer the benefits of economic security to liberty itself.

Not all people were happy, however, with this compulsory service to their overlords, and among those were many who were obsessed by a desire for liberty and individual freedom. These people, together with others who were unemployed, or rather who refused employment under feudal conditions, left their native lands in search of adventure and constituted a part of the personnel of the great religious armies known as the Crusaders, who also were merchants and traders.

Self-sufficient as the economic society of the Middles Ages was, its people were, nevertheless, dependent upon the outer world for some essentials of good living. The serf could grow his own food supply, spin his own wool, make his own agricultural implements, design all of his own clothes; but for the spices of life he had to look to the Orient, to the far romantic East. The medieval person knew of no ice as a means of preservation of food. He was far from the day of electrical or gas refrigeration. The spices of the East were absolutely essential for him in preserving his food over a length of time and to keep it from decaying in the heat of the Tropics.

The spread of Mohammedanism and the victorious armies of the Turks barred western Europe from direct communication with the Far East, particularly after the capture of Constantinople by Saracens in 1453. To prevent their overland caravans and maritime cargo ships loaded with rich merchandise from falling into the hands of the Mohammedans the people who inhabited the continent of Europe were of necessity compelled to look for other routes to India and the Far East, such as the expeditions of Vasco da Gama and Columbus. While the Americas were being colonized they remained for many centuries too remote for the bulk of European population to migrate. In the sixteenth and seventeenth centuries we find widespread unemployment worse than that of today. So prevalent, indeed, was unemployment that the manpower of the world was only too happy to be employed as professional soldiers in the frequent wars that characterized this period. Slowly but surely the Colonies of the New World began to absorb the unemployed of the Old. Since the inception of the industrial revolution and the war for American independence, colonization in other continents has progressed so rapidly as to relieve temporarily the economic pressure in European countries.

For the modern age, the latter part of the eighteenth century witnessed the development of the industrial revolution in England. The invention of machinery transferred many farmers to the factory and thousands of farms were deserted. Commercial cities sprung up, new captains of wealth were created, and capitalists accumulated tremendous fortunes.

The workers shared very slightly in this era of industrial prosperity. Instead, they suffered from the evils of this new system which brought about low wages, child labor, long hours, industrial accidents, and industrial diseases. Summarizing the results of this industrial revolution in England, we find 12 percent of its population rich and comfortable, while 88 percent of its inhabitants were in abject poverty and destitute circumstances. However, the great redeeming feature of the industrial revolution was that it brought about the destruction of the feudal system of agriculture by the vast

movements of men and women from small isolated farms to the factories of urban communities.

From the Franco-Prussian War of 1870 to the inception of the World War in 1914 an economic era was ushered in which reached the highest peak of prosperity the world has ever known. The full fruits of the factory system were being gathered by all civilized nations of the world. European powers extended themselves into the distant continents of Africa, Asia, and Australia. There they founded colonies, not only for political purposes to satisfy national pride but primarily to furnish raw material for the use of the factories in England and other European nations, which materials were there converted into finished products, to be shipped back to the colonies for their consumption.

That is why England did not permit America to manufacture in the early history of our career, but compelled the Colonies to send the raw material to England, where they converted it into manufactured goods, and sent the goods back to be sold to the Colonies.

That is the reason America, at the inception of our Government, was 98 percent agricultural and 2 percent industrial.

During the World War the problem of unemployment disappeared. The armies absorbed the unemployed, and the tremendous increase in consumption of war materials stimulated the demand for supplies which taxed the resources of both machine and man powers throughout the world. Following the termination of the war, however, the reaction set in, and a condition exactly opposite to that which prevailed during the war period was ushered in, resulting in widespread unemployment.

What is the reason for unemployment in modern days? The primary cause is overproduction of material goods, bringing about a decline in price, with a lessened production and consequent unemployment. What are the factors which contribute to overproduction? These are: First, lack of economic markets, because practically every habitable portion of the globe has already been populated and has been, or is, on the verge of being industrialized. Second, the invention and use of labor-saving machinery has displaced thousands of men and women. Third, the instance of seasonal trades, characteristic of highly civilized communities, in which styles change frequently and producers are afraid to anticipate future requirements. Another great factor in the production of unemployment is the unfortunate bankrupt financial condition of most of our country's 40,000,000 farmers who are potential buyers. However, because of their lowered income, this great buying power is lost, with the resulting unemployment of the thousands who would otherwise be required to supply the farmer's needs.

Mergers and combinations of big business also create widespread unemployment. They throw the middle classes out of business and force them down to the level of employees; thus they create a large class of individuals seeking employment without increasing the opportunities for finding work. Other significant causes of unemployment, particularly in our country, were the great tidal waves of immigration, which began in the end of the eighteenth century and until 20 years ago brought into our country millions of people seeking employment.

Serious as the condition of unemployment in our country is today, it is not hopeless if we have the courage to face the facts and apply the proper remedies. What are these remedies? They are, first, political; second, economic; and third, social.

Politically we can aid in alleviating the conditions of unemployment by promoting international peace, so as to render wars improbable if not impossible. Post-bellum reconstruction always brings unemployment in its wake through the return of the soldier to industry. Let us, therefore, war on war. Peace should be our ideal, our hope, our aspiration. [Applause.]

Economically the solution may be of two characters. First, by lessening the overproduction, by agreement in various industries; and, second, by increasing consumption of commodities by encouragement of liberal terms, such as credit to debtors, particularly in periods of economic stress.

Socially the solution of unemployment concerns itself to the attitude of the Federal Government toward the individual. How can the Nation aid? The Government can assist business, industry, and labor in the following manner:

First. The national abolition of child labor in interstate commerce, now accomplished through the wage and hour bill.

Second. The limitation of the labor of women in hazardous industries.

Third. The establishment of a national system of old-age pensions to take care of all workers past the age of 60.

Fourth. The perfection of unemployment insurance in times of prosperity to provide for the unemployed in time of distress.

Fifth. The institution of a vigorous, scientific, and practical program of farm relief to rehabilitate agriculture, the basis of all industry. [Applause.]

Sixth. Governmental supervision of any trust or mergers that are in their nature monopolies and which threaten the well-being of the Nation.

Seventh. The liberal extension of credits by banks in cooperation with the Federal Reserve System to every deserving business organization engaged in commerce, industry, and agriculture.

Eighth. The rapid construction of public works to aid in absorbing the number of unemployed.

Ninth. By solving the problem of the distribution by the middleman, who adds to the cost of distribution a tremendous overhead, which is responsible for many evils now inherent in our method of distribution.

Tenth. By stabilizing our currency and arranging for the disposition of exportable surplus and by an adjustment of the gold to silver ratio, which may stimulate trade with silver-standard countries.

Eleventh. By increasing consumption. It is easily conceivable that if the 15,000,000 unemployed were given the means, through employment, of purchasing consumable goods, that factories would soon get busy again. Therefore the purchasing power of the unemployed must be increased by adequate help from the W. P. A.

This is the social program our Government must adopt to combat the ravages and tragedies of unemployment. Unemployment is the cancer of our body politic, eating at the vitals of our Nation and crumbling the economic structure upon which our entire western civilization rests.

The ability of our Government to check unemployment in our country will be the barometer of the civilization of our time. Our Government must ultimately stand or fall by its ability to solve this problem. [Applause.]

It is upon the economic security of its man power that society must rest. To combine individual liberty with economic security of labor is the paramount and great problem of our age.

The extraordinary fact about this splendid bill is that in the future it will provide unemployment insurance to those who are the unwilling derelicts and driftwood of our social, commercial, and capitalistic system.

Mr. Chairman, so long as the extreme profit motive is the animating and fundamental concept of capitalistic rugged individualism, so long will the few, at the expense of the many, control the wealth of our Nation, and unemployment must always prevail. [Applause.] This bill seeks to minimize unemployment by cushioning with unemployment insurance any critical period of unemployment that might afflict us in the future.

Mr. Chairman, despite the sunshine which floods the road upon the highway of life, the path of human progress toward peace on earth and good will to mankind has been lined with rocks, thorns, and thistles.

Among the great assets of human progress may be listed the tremendous achievement of the arts and the sciences, particularly the strides made in medicine toward the conquest of nature. The annihilation of distance both in transportation and communication, the victory over man's visible foes in animal and vegetable life, and the compelling of nature to yield of its stores in greater profusion than ever before, are some of the assets to be credited to modern civilization.

On the other hand we must not blind ourselves to the liabilities which are present in our midst. These seem to spring from the very progress which ought to annihilate them. The destructiveness of modern warfare, the unfair and unjust distribution of wealth to labor, the viciousness of modern propaganda, and the evils attendant upon our highly agricultural and industrialized age, are some of the outstanding dangers which mankind still has to conquer. Of all these complex problems none perhaps is greater or affects more people than does the hazard of old age.

I do not speak of the dangerous disease of old age, but of the economic insecurity which today affects those of our population who have reached the age of 60 or 65. This is a problem which is terrifying to those whom it affects and which strikes at the very soul of their existence. In this so-called twentieth century of civilization, in this, the richest country in the world, we find men and women past the age of 60 compelled to surrender their self-respect and become dependent as charitable wards, either on the community or on relatives or friends who in many instances are as badly off as those who depend upon them.

Old-age dependency is definitely and positively one of the great tragedies of modern economic progress. Scientific medicine has made it possible for mankind to live longer than formerly. Two generations ago the average age of man would be about 40; today the average man lives until he is 58, and the same scientific appliances that have been utilized for children to grow and develop have been placed around the old father and the mother, so that old age and longevity have been increased. Formerly, out of a total of 100,000 people, 41,000 would reach the age of 65. Today 52,000 of such an original number will live to be 65. Because of the increased expectancy of life, the number of persons 65 years of age and over in the United States has been steadily increasing, and the consequences are that, while those fathers and mothers are living longer than before, the economic and industrial conditions that confront them in our Nation has made it impossible for them to find work, and the only way they can subsist and save themselves from penury, hunger, and want, is for them to join the great caravan that finally wends its way over the hill to the poorhouse.

Only 6 percent of all the old people employed in private industries can expect pensions in their old age, while the balance, or 94 percent of them, can expect nothing, depending only upon their savings. If, unfortunately, their income did not permit them to save for old age, or they lose their money through unfortunate investments, then modern industry throws them back upon the community as human driftwood and wreckage that is useless because of life's wear and tear. Thus we behold our wage earners transformed from a group of hopeful, independent citizens into a class of helpless poor. In some States of the Union it is a crime to turn out old horses to starve; still society lets its old men and women starve in their old, unemployed age unless they take the last pilgrimage upon the road that leads them pathetically to the almshouse and poorhouse. [Applause.]

How many old men and women have we? There are today over seven and a half million people past 65 years of age in the United States. Four and one-half millions are between the ages of 65 and 70, a million and a half between the ages of 70 and 75, and a million

between 75 and 80, and there are three-quarters of a million people 80 and over, until life finally terminates. The number of old people in our country is now twice greater than the original population of the entire Thirteen Colonies.

Statistics of all the money spent in the almshouses and the old-age homes of our country show that 32 percent went as administrative expense, 38 percent for operation of the plan, while 30 percent went for inmates' maintenance. In other words, out of every dollar contribution to the almshouse, 70 cents went for administrative and operative expense, the so-called overhead, while 30 cents went directly for the old fathers and mothers.

Every State of the Union, with the exception of New Mexico, has almshouses for the poor. In 40 of our States the almshouses are county institutions. Here in these almshouses are huddled together the feeble-minded and the epileptic, the crippled and the maimed, the idiot and the imbecile, the abandoned child of the prostitute, the broken-down criminal, the chronic drunkard, the victim of loathsome and contagious diseases, and venereal infections, and last but not least, the superannuated toilers of labor and industry, our fathers and mothers. Veterans of dissipation and veterans of peace and industry living together under one roof. Is it fair? Is it just? Is it humane?

To me it is a pitiful and tragic indictment of the civilization of our times. [Applause.]

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. SIROVICH. Mr. Chairman, I ask unanimous consent to proceed for 15 more minutes.

Mr. DOUGHTON. Mr. Chairman, I yield the gentleman 15 additional minutes.

The CHAIRMAN. The gentleman from New York is recognized for 15 additional minutes.

Mr. SIROVICH. Mr. Chairman, what are the causes of old-age dependency? First and foremost is the impairment of health. Sickness and disease exact a terrible toll. In old age the resistance of a person is diminished and he becomes susceptible very easily to the ravages that come in the wake of vocational and industrial pursuits. Tuberculosis among the miners; pneumonia amongst the steel and mill and factory workers; rheumatism and heart lesions from working in damp and wet occupations; asthma, bronchitis, and skin lesions amongst fur workers; lead poisoning amongst painters, and countless other maladies too numerous to mention. Unfortunate business investments, alluring advertisements, high-pressure salesmen have ruined many an old father and mother. Bank failures have sent many an elderly couple to the almshouse when the savings of a lifetime were lost. When the waning earning power of old age in competition with young age and machinery manifests itself, ambition collapses, hope is transformed into despair, and, with relatives and friends gone, death or the almshouse is welcomed as the final relief. The greatest curse of old age, however, is unemployment, which has lately increased through the productivity of machinery. Everywhere discrimination is practiced against the older employee in favor of youth. In modern industry today we see the exemplification of the vicious principle "Equal opportunity for all, except those past the age of 45."

Another factor driving older men and women toward pauperism is the lack of family connections. One-third of the almshouse paupers throughout the United States have never been married, another third are widowed, and one-third are still married. The great majority of aged dependents in almshouses and infirmaries are childless.

Other causes for dependency are the victims of the ingratitude of children who have forgotten the divine injunction given to Moses upon Mount Sinai, when God gave him the great commandment which says: "Honor thy father and thy mother, that thy days may be long upon the land which the Lord thy God giveth thee."

Loss of wife, husband, or children very quickly brings about the transition from independence to dependence.

Scientific medicine has increased the span of life in less than a century from 39 years in 1840 to 58 years, which it is today. So that today we have 7,500,000 people over 65 in a population of 125,000,000.

Last but not least, the greatest cause of dependency in old age is the terrible toll that industrial accidents take in human and economic values.

During the period from 1910 to 1920, a period of 10 years, there were more men and women maimed and crippled in the industries of the United States than were lost in all the wars of our Nation from the time of the American Revolution down to the World War. In the years 1917 and 1918, when our expeditionary forces went across the ocean to fight to make the world safe for democracy, there were more men and women killed in the industries of our country than there were American soldiers and sailors killed and wounded by the hostile forces fighting in Europe. In the year 1919, according to the report of the Federation of American Engineers, in this country 23,000 people were killed in our industries and 3,570,000 workers were crippled and injured in the performance of their duties so that they had to stay off for 4 weeks or more from their employment. If the prevailing rate of wages, according to the National Employers' Association, amounted to $27.25 per week for the year 1927, it would mean $4 a day for 300,000,000 days, or a loss to labor and industry of $1,200,000,000 a year.

It was these frightful conditions, ladies and gentlemen, that prompted the people of the country of ours to interest themselves in the subject of old-age pensions. In 10 years the principle of old-age pensions has been approved in 29 States and 2 Territories of the Union.

Social-service workers and authorities on old age have agreed that any individual who has reached the age of 65 or over and possesses no property, or whose income is less than $300 a year, must become a dependent upon his family or his community. In 1930, 3,000,000 people were supported wholly or in part by others. Think of it, one person out of every two past 65 years old is supported by your community. What are the factors which are responsible for this very serious situation?

1. First is the increased span of life. Accompanying this increase in the individual's life is the elimination of opportunty in industrial occupations. All of us are familiar with advertisements for help wanted. Applicants must be under 40 and sometimes even under 30 years. Some restaurants will not accept waiters over 25 years. Thus the aged worker is progressively eliminated from industry. The chance to obtain a job seems to vary in inverse proportion to the age of the men after 30 or 40. In this great machine age, where mass production reigns supreme, we behold the tragic formula of equal opportunity for all with the exception of those past the age of 45. [Applause.]

2. The second factor in old-age dependency is that of family relations and the mode of living. Before the intense centralization of industry arrived in large cities, homesteads were kept and there was always room for grandpa or grandma at the fireside. Today, with apartment-house living, no room for the aged exists, and they, of course, become dependent upon the charity of the community, or inmates of almshouses.

3. The number of old-age dependents are four times as great among men as they are in women. For sentimental reasons mothers more often will find a home with their children than will the father of the family. At the same time it is interesting to note that there are four times as many single men dependent upon charitable assistance as married men.

4. The collapse of over 8,000 banks, carrying the life savings of hundreds of thousands of old people, has destroyed their hope of providing for the future. High-pressure salesmanship, selling worthless securities to these old people, has robbed them of millions that would have provided for them in their old age. Ill health, of course, is a factor in old-age dependency.

5. Perhaps the most important factor of all that constitutes old-age dependency, is the low wages paid to unskilled labor during the productive years of life. By low wages, I mean a salary which allows only body and soul to be kept together, but which makes no provision for old-age saving or insurance. That this is definitely true is shown by an authentic report by the State of Pennsylvania in 1925, to the effect that the male-almshouse population is recruited largely from the ranks of unskilled labor. Another study, made in 1910, showed that out of 58,000 males admitted to various almshouses in the United States, 37½ percent were common laborers. In New York State, a study of 1,700 men receiving old-age pensions, showed that 50 percent were unskilled and semiskilled laborers.

To summarize, therefore, it must be evident to us that the factors which make for old-age dependency are not within the control of the individual himself. It seems definitely certain that social and economic forces which no single person can guide or control are in the main responsible for the appalling condition of old-age dependency in the United States.

To my mind, old-age security must be solved and the terror of old age removed if the United States of America is to fulfill its destiny. [Applause.]

We physicians constantly urge care of the body in infancy, youth, and maturity in order that physical perfection may be at its highest throughout life. Of what use is such urging by doctors—and care of the body by the average person if, at 40 or even 50 years of age, that body is to be scrapped as old metal and thrown away as human junk?

In some States of the Union, as I stated before, it is a crime to turn out old horses to starve. They must be fed or destroyed. Shall we feed, clothe, and house our aged, or shall we destroy them as old horses are destroyed? The very thought of it is a tragic indictment of the civilization of our days. [Applause.]

We have been dodging the problems of old-age pensions by expedients of various kinds. But no expedient ever solved a problem. The only solution of this condition is by thorough consideration of all the facts that will honestly solve this matter.

For many years on the floor of Congress and elsewhere I have advocated pension for the aged—old-age pensions—and have made studies of the conditions covering the subject that have run over a long time. I have fought steadily and consistently for this ideal of humanity for years and shall continue to battle until it is won for every old man and woman. Economic security must be assured to all citizens in their old, declining age.

Let me repeat, gentlemen of the House, no society can survive that allows its men and women to starve in their old and unemployed age, and forces them, to avoid hunger and want, to take the last pilgrimage of their lives on the road that pathetically and tragically leads over the hill to the poorhouse.

Old-age dependency is but one of the terrible social risks to which man is subject today. What are some of the other risks? They are industrial accidents and occupational diseases; temporary or prolonged sickness; permanent invalidity; old age; maternity; unemployment; death of the breadwinner, involving dependency of widow, orphans, or other dependents; sickness of members of family; burial.

What is the remedy? Let us look at what foreign countries are doing. Of all the civilized nations of the world, 42 have adopted the principles of old-age pensions. There are three forms of old-age pensions operating throughout Europe, South Africa, South America, Canada, Australia, and New Zealand. The first is called the compulsory, contributory form of old-age pensions. This system consists of compelling each workingman from 16 to 65 to contribute a part of his income to a general national fund, the amount to be contributed being anywhere from 2 to 5 percent. The employers contribute a like amount, and the Government contributes a third portion. This amount stays in the coffers of the nation until the man becomes old and enfeebled and arrives at the age of 65, when he becomes the beneficiary of his labor and efforts. Twenty-eight nations of Europe have adopted the principle of the compulsory, contributory form of insurance, and amongst them are the three great nations—England, France, and Germany.

Germany was the first to start this movement, under the influence of the Iron Chancellor, Bismarck, in 1881. Today there are 20,000,000 workers enrolled who, when their time comes, will be the recipients of an old-age pension which will make them love and respect their fatherland and make them realize that they are receiving the kind of protection and security which it is the duty of every civilized government to provide for its citizens.

Germany also provides its citizens with invalidity insurance, widows' and orphans' pensions, as well as sickness and unemployment insurance.

In 1908 that conservative and great nation, England, under the leadership of Lord Asquith and Lloyd George, introduced the noncontributory form of insurance. In 1925 greater modifications were made in the bill to conform with Germany's system, so that England today stands upon the same pedestal in old-age security legislation as Germany. It adopted in toto the entire theory of compulsory contributory insurance. Out of 17,000,000 workers in England, 16,000,000 have subscribed to the principle of old-age pensions.

France has 7,500,000 of its working people enrolled under the roster of the compulsory contributory form of old-age pensions.

The second system, under which 10 nations operate, is called the "noncontributory form" of old-age pensions and is colloquially known as the "straight pension system." This system provides for no contribution by any toiler, but when a workingman arrives at the age of 65 he receives his pension as an evidence of the interest which his government maintains in him. Industry cannot throw him away as a wreck upon the ocean of life.

The nations which have adopted this noncontributory form of old-age pensions, or straight pensions, are such countries as Denmark, Canada, New Zealand, Australia, Iceland, and Russia.

The third form of old-age pensions is the kind known as the "voluntary savings" type, under which an individual puts away every week in one of the postal savings of the government a certain amount of money from his allowance and the government contributes a subsidy to equal it. The individual, however, cannot use it until he arrives at the age of 65. The nation which started this principle was Spain, and today Japan is operating under that system.

There are 1,900,000,000 men and women in this world and 600,000,000 of them have subscribed to the different forms of old-age pensions. They will be the beneficiaries of an old-age pension system in the declining years of their life. So we have the wholesome spectacle of 42 nations of the world interested in the preservation of human life. The only three nations of the whole world that have not adopted the principle of old-age pensions are China, India, and the United States. I am making the plea to have our country withdraw from the company it is keeping with China and India and march onward with the civilized nations of the world [Applause.]

Mr. Chairman, the true patriots of our country are not only the men who bared their breasts to shot and shell and were ready to give their lives upon the battlefields of our country so that our Nation should be preserved, but there are also the veterans of peace, men who have worked in the quarries of life, in season and out of season, and have contributed everything that they hold near and dear in life to the peace and prosperity of our country in times of peace.

Just as we pension the veteran for his patriotism in time of war we should pension through the principle of old-age security the old father and mother who have battled for our happiness and our success in time of peace.

I want to see America marching with England and with France, not only on the basis of an agreement for naval and military disarmament but on the basis of humanitarian disarmament, that would make the world safe for humanity to live in peace, tranquillity, and happiness until divine Providence calls them to rest in eternal sleep. [Applause.]

Mr. Chairman, often have I sat in the House and listened to resolutions put through by some of the distinguished men of this historic forum. A few years ago a bill was passed appropriating $50,000 to determine why fishes do not enter the harbors of certain sections of our country. Recently another appropriation passed the House spending thousands of dollars to determine the cause of death of old trees in the forests of our Nation. At the last session of Congress thousands of dollars were appropriated to determine the cause of disease among cattle. I have seen thousands of dollars spent to conserve our oil resources. Millions have been spent to eradicate the corn borer, the boll weevil, the Spanish fly, and the Japanese beetle.

Mr. Chairman, the present bill under debate and discussion is an American bill. It is a humanitarian bill. It is in consonance and in conformity with the teachings and the preachment of the great Saviour. It is in harmony with the greatest commandment of all commandments. Mr. Chairman, the time has come, the hour has struck, and the moment has arrived when the United States has to declare whether it shall fall behind the cultured and civilized nations of the world or is willing to march side by side with those nations that have put human rights on the same parity as property rights. [Applause.]

Mr. Chairman, we have had 74 Congresses of the United States since the inception of our Government. What man in Congress here can state to me which Congress stands out preeminent? What Member can tell me the Congress that has done the greatest good?

All I know is that the Twelfth Congress was the Congress that declared war against England. The Twenty-ninth Congress was the Congress that declared war against Mexico because of Texas. The Thirty-seventh Congress was the Congress that brought about the Civil War and gave freedom to the Negro. The Fifty-fifth Congress was the Congress that brought about the freedom of Cuba, which involved us in the Spanish-American War. The Sixty-fifth Congress was the Congress that declared war against the Central Powers of Europe, and the Sixty-third Congress was the Congress that brought about the Federal Reserve System that protected the rights of money in banks against financial collapse so that our material wealth would be protected as the years go by.

I would like to see the Seventy-fourth Congress of the United States, ere we make our exodus from this historic forum, declare war against the inhuman treatment of our elders, so that they may continue to live in their own homes that have been hallowed with sweet memories, tender with pleasant reminiscences. Home, where the prattle of children has been music to the ears of the parents. Home, that has always been dedicated to God and consecrated to the love of family life.

In the name of humanity I appeal to the membership of this House for the preservation of the home and all that it means, so that the gracious prayers of our older generation will pray for the life and happiness of the membership of the Seventy-fourth Congress of the United States for having given of their today that others might have their tomorrow. [Applause.]

Mr. Chairman, every manufacturer is permitted to deduct from his income tax certain sums for obsolescent machinery—for property that is wearing out. How about providing sums for the obsolescent men and women, and the obsolete men and women who have been worn out in their labor in the quarries of life? Are they not entitled to security in their human obsolescence? Are human beings less than machines? Is a human soul of less value than a contraption of iron, steel, and brass? Is property more sacred in this great Republic than human beings and human rights? Did the fighting founders of the Republic free the American Colonies from Great Britain in order that later generations might immure them in economic slavery, and let their old carcasses waste away in hunger and poverty, or be put away in poorhouses with criminals, insane, and deseased others? God forbid.

Why should not employers of the labor on human minds and hands be compelled to provide obsolescent security in the form of old-age pensions for those who have worn away the best years of their lives in service to the machine age? The cost is only 3 percent of the weekly pay roll for the benefits that will come. For unemployment insurance the employee bears an equal tax of 3 percent with the employer, who pays 3 percent.

In my career as physician, surgeon, author, banker, and social worker, I have done everything in my power to further the ends of social justice. As one of the original members of the widows' pension board in the State of New York 23 years ago, I have helped in the passage of many welfare bills, particularly those relating to the widows and orphans as exemplified in the widows' pensions and child-welfare laws, which have served as a model in 41 States of the Union and communities throughout the world. In my broader field of national legislation, I have centralized my efforts for the relief of old age through economic-security insurance and old-age pensions. These efforts have resulted in the repeated introduction of the Sirovich bill for old-age pensions during the past 10 years. In the Doughton bill, the solution of these social problems is the securing of old-age pensions through the compulsory contributory form of social insurance for every working person in the United States, the cost of which shall be distributed between workers and the employers.

Mr. Chairman, this is not socialism. This is not radicalism. This is not communism. This is humanitarianism. It proclaims to the people of our Republic that, since it is patriotic to pension our soldiers who bare their breasts to shot and shell in order that our Republic may live, it is just as humane and patriotic to pension our old fathers and mothers who have toiled in the quarries of labor to make our country prosperous and glorious in time of peace. This is simple justice and the honorable discharge of a debt which society and our Republic owe those who labor in their behalf to make our Nation the richest in all the world. Every civilized nation on the face of the world has some form of old-age pensions with the exception of China, India, and the United States. Shall the United States, the richest, the greatest, and the most prosperous Nation in the world, march arm in arm with medieval China or India, or shall it take its rightful place in the forefront of the great nations of the world battling for social justice to our forgotten old fathers and mothers. [Applause.]

Mr. Chairman, sooner or later the curtain of life will fall upon our earthly career. A little shaft will commemorate our humble

memories. Let me sincerely hope and trust that in the far distant future, when that time comes, that somewhere in Alleghany County, N. C., on such a modest shaft will be inscribed the sentiment:

"Here lies ROBERT DOUGHTON, chairman of the Ways and Means Committee of the Seventy-fourth Congress. Father and sponsor of Federal old-age pensions, unemployment security, child welfare, and health and maternity protection for the people of the United States." [Applause.]

BOB DOUGHTON—may the prayers of a grateful American public bring to you and your loved ones happiness in your heart, contentment in your mind, for having fathered and sponsored such inspiring and humane legislation, that will be an inspiration to others while you live, and a monument to your memory as well as our great humane President, Franklin Delano Roosevelt, long after the rest of your colleagues shall be forgotten in the ashes of time. [Applause.]

Mr. COLDEN. Mr. Chairman, will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. COLDEN. First I wish to express my very deep appreciation for this marvelous contribution to the discussion of this subject. * * *

Mr. SAMUEL B. HILL. Mr. Chairman, I yield such time to the gentleman from Oklahoma [Mr. JOHNSON] as he may desire.

Mr. JOHNSON of Oklahoma. Mr. Chairman, for almost a week we have listened to the debate on this important social-security bill. This afternoon we listened to the matchless address delivered by my personal friend, Dr. SIROVICH, of New York. In my opinion, it is one of the greatest speeches delivered on the floor of this House in many a day. * * *

Hon. Harry Hopkins, Secretary of Commerce

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1939

ARTICLE FROM NEW YORK HERALD TRIBUNE OF FEBRUARY 20, 1939

Mr. BRIDGES. Mr. President, recently, when the nomination of Mr. Hopkins was under consideration by the Senate, I made a statement that putting him in the office of Secretary of Commerce was the first step toward promoting him to the Democratic nomination for President in 1940. I therefore ask to have inserted in the RECORD an article from this morning's New York Herald Tribune entitled "Hopkins' Bid for 1940 Due on Iowa Trip—State Chairman Admits Talks With Aspirant on Lining Up Delegates." The article seems to bear out the statement I made here that the appointment of Mr. Hopkins as Secretary of Commerce was a preliminary step to building him up for the Presidency in 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of February 20, 1939]

HOPKINS' BID FOR 1940 DUE ON IOWA TRIP—SECRETARY WILL BE THRUST INTO OPEN AS NEW DEALER CANDIDATE THIS WEEK—SPEECH TO PROPOSE RECOVERY PROGRAM—STATE CHAIRMAN ADMITS TALKS WITH ASPIRANTS ON LINING UP DELEGATES

(By Geoffrey Parsons, Jr.)

DES MOINES, February 19.—Harry Hopkins, Secretary of Commerce, will be thrust out into the open as a 1940 Presidential candidate of the New Deal wing of the Democratic party during his 4-day visit this week to Iowa, the State where he was born.

His decision to make his anticipated announcement of a major recovery program from the capital of his native State was motivated, at least in part, by his Presidential aspirations, according to local Democratic politicians.

Mr. Hopkins is not expected to announce his availability as a Democratic candidate in so many words, but recent political maneuverings in this State and in Washington make it difficult not to interpret his Iowa visit as a broad, public hint to that effect.

Edward Birmingham, Democratic State chairman, admitted frankly that he has talked with Mr. Hopkins about lining up delegates for the Secretary for the Democratic National Convention in 1940. Mr. Birmingham said that Mr. Hopkins realizes that if he is to have any hope of winning the Democratic nomination he must begin by winning the delegation of his native State—even if he hast not lived in it for many years.

Several gestures toward that end have already been made. The position of Director of the United States Bureau of Fisheries, which will be open after March 1, and which is under the jurisdiction and at the disposal of the Secretary of Commerce, has been dangled before Mr. Birmingham, who said he would like the job and be glad to work for Mr. Hopkins in Iowa.

Mr. Birmingham expects to get definite word one way or another about the job very soon, perhaps during Mr. Hopkins' visit here. Mr. Birmingham admits that his knowledge of fish is that of an amateur angler and a connoisseur of sea food from the point of view of gastronomy. He has never passed much time near salt water, but he said he believes if he is given a policy to follow he could follow it as well as the next man.

"It's a good job—$9,000 a year," he said. "You get a nice boat and you know where the best fishing is."

Mr. Birmingham's home is in Sioux City, Iowa, and he has lived there for 52 years. Mr. Hopkins was born in Sioux City, but Mr. Birmingham said he never heard the name of Harry Hopkins until President Roosevelt put Mr. Hopkins in charge of Federal relief early in the first New Deal.

There is piquancy in the situation that brings Mr. Hopkins out to Iowa seeking the support of the Democratic State organization. Last April Mr. Hopkins, together with Thomas Corcoran, Presidential adviser, and James Roosevelt, the President's eldest son, was trying to purge Senator GUY M. GILLETTE, who was up for renomination with the solid support of the State organization. Senator GILLETTE won the nomination by a wide margin over the Hopkins-Corcoran-Roosevelt candidate, Representative Otha D. Wearin, and then last November managed to win reelection, while the Democrats were losing the major State offices to Republicans.

THE HATCHET IS BURIED

Last April Mr. Birmingham, Senator GILLETTE, and other leading Iowa Democrats were calling Mr. Hopkins nasty names. Now, Mr. Birmingham reported he has been able to patch up relations between Mr. Hopkins and Senator GILLETTE.

"I was in Washington recently," Mr. Birmingham said, "and I took GUY GILLETTE in to see Secretary Hopkins. It was all very friendly, and they buried the hatchet. It's all fixed up."

To what extent the New Deal attitude toward Senator GILLETTE has softened should be revealed soon by the best of political tests, the reception accorded the Senator's requests for patronage. Senator GILLETTE and his colleague, Senator L. HERRING, divide patronage between them, GILLETTE taking the northern half of the State, HERRING the southern.

The position of United States marshal, northern Iowa, is open, and Senator GILLETTE is reported to be on verge of recommending former Representative Fred Biermann for the job. There is a United States district attorneyship open in the southern half of the State, and Senator HERRING is waiting to see how his candidate, former Lt. Gov. John K. Valentine, makes out.

Des Moines was crowded with more New Dealers on Friday and yesterday than this city has seen since the New Deal came to power. Henry Wallace, Secretary of Agriculture; Miss Frances Perkins, Secretary of Labor; Leon Henderson, executive secretary of the National Economic Council and close adviser of the President; Mordecai Ezekiel; and numerous lesser lights, most of them from the Department of Agriculture, were all in town for the National Farm Institute.

HELD PRESIDENT'S FAVORITE

Some of these New Dealers were questioned about the Hopkins candidacy, and among those who were willing to talk it was agreed that there was no doubt that Secretary Hopkins is President Roosevelt's current favorite to succeed him in the White House. Thus, New Deal patronage might reasonably be expected to be disposed in a manner which would not injure Mr. Hopkins' chances.

In the particular cases of the marshalship and district attorneyship that are open in Iowa, the situation is complicated by the fact that these are Department of Justice jobs, under Attorney General Frank Murphy, who, in addition to being under some suspicion of having White House ambitions of his own, is currently waging a campaign against corruption and politics in his Department. The local Democrats, nevertheless, are betting that the Senators' nominees will get the jobs.

Even these anticipated gestures to appease the State organization are not likely to get Mr. Hopkins very far toward a convention delegation pledge to him. Senator HERRING is reported to be seeking a delegation controlled by Senator HERRING. Though friendly on the surface, Senators GILLETTE and HERRING are said by friends of both men really to be at odds, particularly in matters of Statewide patronage.

The Democrats say that President Roosevelt and Postmaster General James A. Farley are both still very popular in the State, considerably more so than Mr. Hopkins. Corn Belt farmers generally have been critical of the W. P. A. and consequently have never regarded Mr. Hopkins with affection.

In Iowa, Mr. Hopkins has not been regarded generally as an Iowan, as has Secretary Wallace, for example, although Mr. Hopkins was born and educated in the State. At Grinnell College, Grinnell, Iowa, he first became interested in social work, but he left the State soon after graduation and has never been back for long.

Mr. Birmingham says "there'll be an awful fight getting the Iowa delegation lined up for Mr. Hopkins, but I think it can be done." Most Iowa Democrats, at this stage, will agree with the first half of Mr. Birmingham's statement and disagree with the second half.

Mr. Hopkins is expected to arrive at Grinnell on Tuesday. He will stay there until Friday, when he is to address the Economic

Club of Des Moines at the Fort Des Moines Hotel. He will renew old friendships in Grinnell and possibly confer with Iowa Democrats in the hope of making new ones.

Iowa has another entry in the Presidential sweepstakes in Secretary Wallace. If there has been the slightest overt political act by Secretary Wallace in the direction of the Democratic nomination, it has not been detected by leading Iowa Democrats. His closest advisers swear he has never allowed them to engage in any Presidential campaigning in his behalf, although they have suggested it to him from time to time.

Herbert Hoover, Republican President from 1928 to 1932, is the only native of Iowa among the 32 Presidents of the United States.

Fordham University Alumni Association

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1939

ADDRESS BY WILLIAM O. DOUGLAS, FEBRUARY 9, 1939

Mr. MALONEY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an address delivered by William O. Douglas, Chairman of the Securities and Exchange Commission, before the annual dinner of the Fordham University Alumni Association at New York City, February 9, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Dooley once said, "Historyans is like doctors. They are always lookin' f'r symptoms. Those iv them that writes about their own times examines th' tongue an' feels th' pulse an' makes a wrong dygnosis. Th' other kind iv histhry is a post mortem examination. It tells ye what a counthry died iv. But I'd like to know what it lived iv."

Mr. Dooley typifies the right of every American to express himself profoundly on broad questions of which he has no expert knowledge. When I leave my own field of law and government, I too avail myself of this privilege.

I think we all share Mr. Dooley's belief that the important thing for us to know about our country is "what it lived of." To know what makes our country live is to have the key to the immortality of its democratic ideal. That, perhaps, is what President Roosevelt had in mind when he said that this generation had a real "rendezvous with destiny." It is our generation's destiny, in a time of great distress, to make democracy live, to make the democratic ideal survive the many assaults that beset it.

Unwittingly, I fear, we have in various ways slowly slipped away from that ideal. Over the years we have been preoccupied with materialistic and mechanistic matters. We have been incessantly employed in serving the physical wants and needs of man. The main current of our modern times has been a sweeping advance of technology and too often it has overshadowed all else. The problems of research, of production, of distribution, of finance have quite properly occupied a high place in our thought and activity. But the underlying values have been largely materialistic. Our material progress has often failed to reckon with the deep, spiritual factors of the democratic faith.

One aspect of modern life which has gone far to stifle men is the rapid growth of tremendous corporations. Enormous spiritual sacrifices are made in the transformation of shopkeepers into employees. The materialistic god of efficiency may dictate it in certain cases. But the extent to which it has been carried has been ruthless in its loss of human values. The disappearance of free enterprise has led to a submergence of the individual in the impersonal corporation in much the same manner as he has been submerged in the state in other lands. As a corollary the growth of the corporation has impersonalized and made materialistic many of our most important social and personal relationships. As a most gracious and polite lady in the drawing room may be transformed into a most impolite person behind a steering wheel of an automobile, so gentlemen may be propelled into ruthless raiding of other people's money once they take the corporate veil. The convenient and impersonalized use of the corporate device has unquestionably contributed to moral decadence. That has especially been true with the growth of bigness. Empires so vast as to defy the intimate understanding of any one man tend to become playthings for manipulation. The fact that railroads, or banks, or operating utilities lie somewhere deep underneath the corporate maze becomes incidental. Values become translated. Service to human beings becomes subordinate to profits to manipulators. The stage setting is perfect for the disappearance of moral values. Individual responsibility before God has no counterpart in the corporate system.

In some countries this flood of materialism has risen so high as to drown out the spirit. Communism places complete reliance upon the satisfaction of physical needs, making of man a wholly economic creature. Fascism goes so far as to deify the corporate state, making man responsible to the state instead of to God. Both of these systems have suppressed the spiritual values which are the essence of democracy. Neither recognizes the principle that men are "endowed by their Creator with certain inalienable rights." Those alien systems have expurgated the words of the philosopher who said, "Pride not yourself in this, that you love your country, but rather in this, that you love mankind."

Fortunately in America the ideal of democracy is still alive and vigorous. This ideal includes both equality of economic opportunity and equality of political opportunity. It is broader and more embracing than either. It recognizes that man is not simply a biological organism or merely the product of economic forces. It gives preeminent recognition to the principle that man is also a spiritual and ethical being. The ingredients of that faith are not solely materialistic; they are spiritual and ethical as well. They recognize the importance of the inward satisfaction of confidence in one's self; the deep desire for the respect of one's fellow man; the longing to be identified with some cause dedicated to the interests of humanity. Basically this is the democratic ideal. In practice even in this country it has at times seemed to lose some of its vitality. To revitalize it is the first order of our day.

I have often wondered what would happen if for a generation we had no new patents, no new discoveries, no new technological advances, no new mergers. If the wheels of invention were stopped and the processes of discovery were stilled, we would, I am sure, continue to live in comfort. Known skills and devices could go on servicing the physical needs of man interminably. They might not be as efficient as scientists could make them. But I have no doubt that the needs and desires of man could be met on the physical side.

I do not mean for a moment to suggest this as a proper course for us to take. Nor do I mean to minimize the importance of filling abundantly the basic physical needs of our whole people. I recognize fully that man physically impoverished is a poor cornerstone for a free democracy. A strong, efficient, well-balanced national economy will ever be one of our indispensable assets. But without the meaning and guidance of a vigorous set of spiritual values, I doubt that the other will alone enable us to meet successfully our "rendezvous with destiny."

One great source of strength to which all of us look in keeping alive the democratic ideal is the university. It may be that in the years immediately ahead our universities will again be called upon to play that great role in the protection of civilization which has been theirs for centuries. This responsibility has been recognized by more than one distinguished educator. President Conant, of Harvard, in his recent annual report, made the following statement:

"Today we all realize that democracy is not a self-perpetuating virus adapted to any body politic—that was the assumption of a previous generation. Democracy we now know to be a special type of organism requiring specific nutrient materials—some economic, some social and cultural. Among the latter the emotional stability and intelligence of the electorate are obviously of importance; these are intimately connected with the type of education we give our children. Another requisite for a flourishing democracy would appear to be the existence of a ladder of opportunity; again the educational process is involved. From these and many similar considerations it is evident that if we wish the present type of society in this country to survive and to improve along thoroughly democratic lines we must, as a people, pay due attention to our schools."

Yet even colleges and universities are not impervious to the dominant and engulfing materialistic influences of our time. Excessive trends toward purely technical training have been continuously observed by experts in education. At certain times and places it was a close question as to whether or not the main efforts and resources of some institutions of learning would not be devoted to simple trade-school curricula.

This I know has been evident in legal education where purely professional training has been too often the dominant note. This has been true to such an extent in the past that legal education at times resembled a course of instruction in contract bridge. And I have often thought that the medical profession has been so busy dividing man into neat little compartments and placing him in so many separate test tubes that man as a total organism has often been little comprehended. Emphasis on the purely biological aspects of man has too often led to diagnosis of disease in terms of outward physical manifestations rather than of inward spiritual and emotional maladjustments.

The foregoing are merely small examples of a larger trend in the universities today. There is demand for a reawakening of the ancient concept of the university as the custodian of the things of the mind and the values of the spirit. The rise of materialism is today the greatest single challenge to the universities, not for the purpose of resisting technological advance but of attuning that advance to the spiritual need of man. All of us, and particularly the universities, can well heed the recent words of President Roosevelt:

"Democracy, the practice of self-government, is a covenant among free men to respect the rights and liberties of their fellows.

"International good faith, a sister of democracy, springs from the will of civilized nations of men to respect the rights and liberties of other nations of men.

"In a modern civilization, all three—religion, democracy, and international good faith—complement each other.

"Where freedom of religion has been attacked, the attack has come from sources opposed to democracy. Where democracy has been overthrown, the spirit of free worship has disappeared. And where religion and democracy have vanished, good faith and reason in international affairs have given way to strident ambition and brute force.

"An ordering of society which relegates religion, democracy, and good faith among nations to the background can find no place within it for the ideals of the Prince of Peace. The United States rejects such an ordering, and retains its ancient faith." It is that spiritual ingredient which is necessary for great strength and vitality of nations as well as of individuals. That spiritual ingredient is itself the solvent of many social ills, and perhaps even economic ills. It is also the preventive of planetary disintegration. Of equal significance, it is the cohesive element which mystically binds men together in a common cause, and makes strong and united groups torn by dissension and turmoil.

Faith alone will not solve all problems. Basic economic and social issues will persist. But give us faith and we will have the driving force necessary to solve the other problems. With that faith our economic system can be revitalized. With that faith and with that revitalization, foreign ideology need breed no fear here. Such ideology, like a germ, can gain a foothold only in a diseased system. Spiritual well-being as well as physical health are both necessary preventives against such disease.

Such a renaissance constitutes the principal responsibility and opportunity of all of us—including universities and government—who are interested in the preservation of the American democratic ideal. Universities train the men that government needs. Men trained in the democratic faith are indispensable on the governmental front. Men with technical competence, men with humility, men with the quality of selflessness, men with a sense of responsibility—these are the needs and demands of democracy. Training of such men is a task of education and of stimulation. With such men, government in its strong position of leadership, can make a continuous contribution toward a revitalization of the democratic ideal. With such a program our whole national life can be continuously enriched by the influx into government, business, and the professions of men basically conditioned in the democratic faith. But technical training will not alone suffice. We must reorient much of our materialistic philosophy in terms of humanitarian principles.

We have observed enough on our contemporary scene to know that a supreme spiritual effort must go hand in hand with an economic and social program. We have seen enough to convince us that dilution of ethical principles weakens rather than invigorates our present system. Therefore, we know that on the basis of sheer self-interest such a renaissance is a prerequisite to a strengthening and invigoration of both capitalism and democracy.

Fortification of Guam

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1939

EDITORIAL FROM WASHINGTON DAILY NEWS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial appearing in the Daily News, of Washington, D. C., under date of February 16, 1939, in relation to our program for national defense now under consideration, the editorial being entitled "Congress and Guam."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Washington Daily News of February 16, 1939]

CONGRESS AND GUAM

In a special message to Congress on March 2, 1934, President Roosevelt urged the abandonment of all military bases in the Philippines.

Three weeks later Congress passed by an overwhelming majority the Tydings-McDuffie Independence Act, containing that provision. Thus we gave the lie to Far Eastern charges that we harbored imperialistic ambitions in that quarter of the globe.

Yesterday, by a vote of 14 to 5, the House Committee on Naval Affairs approved an expenditure of $5,000,000 for the so-called fortification of Guam, a flyspeck of an island 5,400 miles west of San Francisco and more than 3,300 miles west of Hawaii, our nearest naval base.

These things simply don't jibe. With one hand Congress yanks us out of the Far East partly, at least, because Army and Navy officers say we could not successfully defend the Philippines in case of war with Japan, while with the other it shoves us right back. Only, in doing so it leaves us incomparably weaker out there than we were to begin with.

The same committee voted favorably on other national-defense items, which in our judgment it should have done. As long as the rest of the world insists upon arming itself at the present pace, we have no option but to arm ourselves. Not to provide adequate defense for a rich and envied country like ours would be to invite trouble. This newspaper, therefore, stands squarely behind the fundamentals of the President's national-defense program. But, for defense purposes, Guam is a liability, not an asset.

The principle involved in fortifying a base in the Far East has nothing to do with costs. Congress has voted to withdraw from the Orient as far as Hawaii. To reverse itself now would raise or renew serious doubts as to our intentions, and that would be just as true over a $5,000,000 expenditure as over a $50,000,000 expenditure.

We do or we don't need a fortified base in the Far East. If we do, then by all means let us have one. But if we do $5,000,000 is not enough and Guam is not the place.

If we do not need such a base, then we should not put ourselves in a false light, especially with neighboring Japan. She controls a maze of islands stretching two-thirds of the way from Hawaii to the Philippines and extending from the Tropic of Cancer to the Equator. And one of her 30-cent yens will buy as much fortification as one of our 100-cent dollars.

If a fortified base in that vicinity is vital to our national defense, then we should have the best. But if we are pulling a bluff the insignificant white chip called Guam won't work.

Federal Reclamation in Nebraska

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1939

ADDRESS BY HON. JOHN C. PAGE, COMMISSIONER OF THE RECLAMATION BUREAU

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. John C. Page, Commissioner of the Reclamation Bureau, on the subject of Federal reclamation in Nebraska.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A keener and more inquiring interest in the Federal Reclamation program has been the natural result of the growing consciousness on the part of the whole Nation of the problems that make a broad conservation program essential.

Recurring droughts and floods especially have served to emphasize the tempering benefits of this work in the arid and semiarid third of our country—this work which was undertaken more than 36 years ago as a major part of the first national drive toward conservation and more intelligent use of our resources.

The record which has been made by Federal Reclamation is clear and the benefits of this work cannot be doubted nor minimized. It provides a good example of what may be expected from a well-planned conservation program, honestly executed.

When, in 1902, President Theodore Roosevelt proposed Federal Reclamation to the Congress, he predicted that it would "enrich every portion of our country just as the settlement of the Ohio and the Mississippi Valleys brought prosperity to the Atlantic States." The record made since June 17 of that year, when the act creating the Bureau of Reclamation was signed, shows accomplishment of what he predicted.

If the members of the Nebraska State Irrigation Association, among whom are included many irrigation farmers and others familiar with the program, will indulge me a moment, I would like to review briefly what the program has meant to the United States.

First, it has meant, through the construction and settlement of 34 projects comprising a little more than 3,000,000 acres of land, creation of homes for almost 900,000 persons on irrigated farms and in cities and towns which have grown up among those farms.

Second, it has meant the establishment of substantial, permanent communities in these big Western States, where without irrigation even an approach to close settlement is impossible. In these communties are 850 schools, almost 1,000 churches, and banks which had deposits last year of about $225,000,000. The manner in which

a contribution of this sort bolsters State and National Governments does not need to be spelled out syllable by syllable to be understood.

Third, these projects produce each year about $100,000,000 of wealth, most of which goes into the channels of trade, principally those leading to the industrial centers of the East.

These results have been obtained from operating projects which were built at a cost of about $250,000,000 and which have repaid, under contracts that are expected eventually to return the whole investment, nearly $50,000,000 of the total.

This is the record upon which, under the leadership of Franklin D. Roosevelt, another conservation-minded President, and Secretary Ickes, a still greater reclamation program is being carried forward today. Projects, several of them combining multiple conservation purposes, such as aid to navigation, flood control, river regulation, and power development with irrigation are being constructed to provide water for 2,500,000 additional acres and to provide a reliable supplemental water supply for another 2,500,000 acres of western irrigated lands now short of water.

Nebraska, one of the 16 States originally embraced by the Reclamation Act, from the outset has been closely associated with the Federal Reclamation program, participating in its benefits and sharing in the hopes and aspirations for the future.

This State is so situated, extending from the arid to the humid belts and across that uncertain zone between, that its associated water and land use problems are very complicated. Here, in Scottsbluff in western Nebraska, you live in an area unquestionably arid, where irrigation and farming are Siamese twins. The problem here has been met by the construction of the North Platte Federal Reclamation project and other development privately financed. Uncertainties introduced by variable seasonal rainfall, sometimes sufficient, sometimes insufficient, always unpredictable, a little farther east have served to make the problem there more difficult to meet.

State and local efforts in other sections of the State are attempting to meet the different situations. The University of Nebraska is to be complimented, for example, for the work it has done in gathering data on ground-water supplies. Where the streams are so few and their flow so largely appropriated and used, availability of ground water assumes a major importance.

Development of these resources, however, must not proceed blindly or without careful weighing of economic and social considerations. The history of irrigation by pumping from wells in some sections of the West is so tragically eloquent that its lessons must not be overlooked.

The long period of deficient rainfall over the Great Plains, beginning in 1930, has provided a new point for the old argument that water in this area must be used prudently. It has provided for all a new significance for the responsibilities of the individual to his community. Wasteful overirrigation by water users in one locality may deprive others elsewhere of the opportunity to produce crops and maintain homes. Ownership of a prior water right is a simple fact, but possession of water is not an excuse for unnecessary and wasteful use.

Turning to the North Platte project, the only Federal project in the State, I should like for a moment to discuss its significance.

This project was approved by the Secretary of the Interior conditionally in 1903, construction was begun in 1905, and the first water was delivered in 1908. With the completion of the Northport division in 1923 the area for which the Bureau of Reclamation was prepared to supply water within the project limits was 183,296 acres, while supplemental supplies were provided under contract for an additional 104,779 acres. These areas combined are twice as large as the total of all irrigation projects in Nebraska prior to the enactment of the reclamation law, and at present they represent half of all the lands irrigated in the State.

While farther east than most, the North Platte project is illustrative of the many factors entering the development of projects under the Bureau of Reclamation. With the storage facilities located in another Commonwealth, the interstate character of the stream was a factor. Development of water power and utilization of the surplus was another.

On the edge of the drought area some project lands have felt the effects of conditions that have been disastrous to vast sections less favorably situated.

From both an economic and a social standpoint reclamation's contribution to the development of western Nebraska is notable. In Scotts Bluff County in 1909 the assessed value of all types of property was $1,459,000. In 1936, after 25 years of irrigation, it was $23,936,000—roughly an increase of 16 times.

Irrigated lands in Scotts Bluff County are assessed as high as $80 an acre as compared with maximum assessments of $9 an acre on dry farm lands and $3.60 on pasture lands.

While only 193,000 of the 432,000 acres in this county are irrigated, it is estimated that 80 percent of the population derives its incomes from irrigated agriculture. In Box Butte County, where only 1.5 percent is irrigated of an area 50 percent larger than that of Scotts Bluff County, the population is less than half as large and the assessed valuation less than one-third.

The average value of improved land with a paid-up water right in the Pathfinder irrigation district, for example, is $85 an acre as compared with $3 an acre for land without water. A conservative estimate of the increase in value of lands irrigated in Nebraska as a result of this project is $20,000,000. Related industrial and urban development would greatly increase this remarkable total.

The 2,119 irrigated farms on the project in Nebraska have a population of 7,000, and there are in the area 11 cities and towns with 18,000 inhabitants who are in a large measure dependent on irrigation operation for a livelihood. Including those in the Goshen division in Wyoming there are 70 schools, 54 churches, and 9 banks with more than $7,000,000 in deposits.

Like other projects in the reclamation States, the North Platte project contributes to the purchasing power of the area with a national distribution of the benefits. In 1937 the value of the crops produced on lands served or dependent on the project works in Nebraska exceeded $5,500,000. The Federal investment in the works serving this area totaled $17,000,000, all of which is repayable.

In any development of this type, with the passage of decades, some adjustments become necessary. The major project works have stood the test of time and years of operation.

The construction record of the Bureau of Reclamation is good all down the line. The Bureau has never had a dam which failed, for example, and it has built 147 dams, 4 of which were the highest in the world when they were completed. There has been no serious trouble with any major structure on Federal reclamation projects. Years of engineering experience and research lie back of each.

The Bureau of Reclamation, however, pioneered in the development of irrigation projects in many areas. It is undoubtedly true that some lands were included within project boundaries which, for one reason or another which later became apparent, should not have been classified as irrigable. The Repayment Commission, after an investigation last year, recommended that authority be granted to reclassify project lands. This should be done in justice to the water users and in justice to the reclamation program. I believe that adjustments which result will not be great.

On the North Platte project two problems are faced. The difficulties of the Northport division, as the Repayment Commission pointed out, can best be solved by a special plan covered by special legislation.

Already, with the aid of the Civilian Conservation Corps, we have attacked the other problem, that of straightening and improving the canals and laterals so as to decrease the loss of water in transit. The first Civilian Conservation Corps camp established under the jurisdiction of the Bureau was opened on the North Platte project 5 years ago. Soon a second camp was placed here, and since that time two have operated on the project continuously. The canal-improvement program conducted by these camps has been of major importance. In addition, the C. C. C. enrollees have planted more than half a million trees for windbreaks, and also have provided a recreational area at Guernsey Reservoir.

It is my opinion that we can look forward to additional cooperation from the States in anticipating and meeting the special problems of the projects as their settlement and operation bring these new problems into prominence. In some instances the States have not given the attention to the projects which is warranted by their very great importance to the States. On several projects additional facilities for guidance in the agricultural development, in the control of weeds, in the best use of water on the land, and in marketing are needed and can best be provided by the States and their agricultural colleges.

Organizations such as the Nebraska State Irrigation Association could render outstanding service by developing in their States intelligent and aggressive programs for the cooperative efforts needed.

Secretary Ickes recently said that the people of the country have little conception of what is being done in the way of significant public works through the reclamation program in the West.

The healthy general interest in reclamation springing from an awakening to the importance of broad conservation programs inevitably will lead to a better understanding. This will mean much to the West and to reclamation through broadening the support for a worthwhile program.

Returning Men to Work

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1939

RADIO ADDRESS BY HON. FRANCIS T. MALONEY, OF CONNECTICUT, FEBRUARY 14, 1939

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech recently delivered over the radio by the senior Senator from

Connecticut [Mr. MALONEY] entitled "Returning men to work."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In accepting this evening's invitation to speak for 15 minutes, and in choosing the subject "Returning Men to Work," I am entirely aware of the fact that in so limited a period of time it is not possible to treat the subject with any degree of thoroughness.

I have selected this subject because it seems to me that almost all of the troubles of our country, and the world, arise from the fact that millions of men are unemployed, and denied any degree of economic security. In some places the world is torn by a war madness, and while our country has been kept free from the terrors that other nations have known, lately our fears have been much excited lest we be drawn into the vortex of world strife. While international affairs is not my subject, I believe that we can avoid the chaos suffered in foreign countries by avoiding entangling alliances, minding and properly protecting our own business, and realizing that while we are social and economic kinsmen of other people, the relationship is distant, and that we can best serve the world by establishing an economic and social balance in the United States.

It is my opinion that the rush toward war, or war-like conditions, in other countries, is due to the fact that the people of those places were without employment—without a feeling of security—and so distressed that they were easily led by promises that seemed to them a means of attaining economic security—or steady work. Had they been employed, and had there not been economic unbalance, it seems to me that they might have minded their own business, and would not have followed into strange and dangerous practices and provinces.

For a number of years many millions of men in the United States, most of them heads of families, have been without steady employment. Among the masses of unemployed are young men and women, fortified with a splendid education, who have yet to get their first job. Also among the group to which I have referred are men who have passed the "dangerous age" of 40, and feel that their place in the industrial world has been taken away.

The Federal Government has assumed the task of trying to find the answer to the unemployment problem, which problem is a continuing threat to our governmental system. The Government was compelled to do it because industry seemed to have lost control.

I do not blame industry, because self-preservation is pretty much regarded as a natural law, and men engaged in business are primarily concerned with a profit, and in most cases with an immediate, and perhaps a necessarily immediate profit. Throwing men and women out of work became a necessity to meet maddening competition, and the inventive genius intensified by the war was no restraining influence on the matter of cutting down pay rolls and overhead costs. Instead of dividing the rewards of that inventive genius among working men, there was an almost unlimited effort to capture it for those who financed industry. Perhaps this was natural, but too little account was taken of the plight and problem of the individual and his family, and so long as manufacturers and stockholders were able to make money or keep their heads above water, they were not so much concerned with the individual workman as they would like to be.

Time does not now permit me to review the history of the effort to regulate the hours of labor, so I will but mention the fact that we have enacted a so-called wage and hour law. That law is not sufficient. We partially defeated the purpose of the law by permitting industry to work men for exceptionally long hours if they would pay those men a special premium or so-called time-and-a-half wages for so-called overtime work. Because industry prefers to keep its regular employees at work, rather than add new men to its rolls, it has paid a wage premium that in my opinion results in a penalty. In effect the existing law is not a wage and hour law but only a wage law. Since it was designed to return men to work by shortening the hours of labor, it seems to me that we have missed the point and the purpose.

It is not my thought that we need a regulation for any other purpose than as a means of economic protection—not protection for the workmen alone, but for his employer and the country.

It seems harsh to tell a man how long he can work, or an employer how long he can keep his men at work; and if business were good it would be idiotic to severely regulate the hours of labor. It is not idiotic, however, when the alternative of a rigid regulation is a continuing unbalanced Budget, which brings danger and a tax burden that the Nation cannot continue to support.

I have tried to find a way within the Constitution whereby we could divide available work among those able-bodied men who were anxious and willing to work. I am certain of our duty to those people, because the Government in part belongs to them, and I am certain that our duty to ourselves requires that we give them work under private auspices if our Government is to endure. Everyone knows that a continuation of existing circumstances will ultimately lead to chaos. No one can say that we have made progress toward a correction of the distress of unemployment. Take the Government relief program away from the country—abandon the policy which we have practiced—and we are right back where we were in 1932 insofar as unemployment is concerned. We have not been wrong in what we did—because the expenditure made necessary by the relief program saved us from ruin—but we did not take the second and necessary step.

The fact that some industries are doing well means very little excepting to the people who are still doing good business. But they are not immune. The heavy tides of unemployment are daily washing on their shores, and at the banks of other institutions still seemingly secure. Eventually these will be caught if we do not find a way to return men to work. With the distress which accompanies unemployment our other problems will continue to increase and multiply. Men will be tempted to follow false prophets and new philosophies.

For the past few years I have had before Congress a bill which would rigidly regulate the hours of labor. It is a simple proposal and is now known as S. 480. It first provides for the creation of a board composed of five members, appointed by the President, and the first duty of the board would be to take a census of the unemployed. Through such a census we would learn who was unemployed, where unemployment existed and what kind of work each individual was competent to undertake.

All unemployed persons would be required to register with a local agency, and the census could be completed in one day.

The bill provides that thereafter persons remaining unemployed would register every three months at the nearest office of the United States Employment Service, which office is already in existence. Failure to register would, in effect, mean that the individual had secured employment. Consequently we would know almost exactly every day how many people were unemployed, where they were located, and what they could do.

People failing to register would not be eligible for relief, or work relief, and we might thereby be afforded considerable protection against governmental expenditure.

My proposal further provides that if more than 8,000,000 people are found to be unemployed, there be established a 30-hour working week. It provides that if more than 6,000,000 but not more than 8,000,000 persons are found to be unemployed, there would be established a 32-hour working week. If the unemployment rolls disclosed that more than 4,000,000 but less than 6,000,000 such persons were found to be unemployed, there would be established a 34-hour working week. The bill further provides that if more than 2,000,000 but not more than 4,000,000 such persons were found to be unemployed, there would be established a 36-hour working week. If 2,000,000 such persons or less were found to be unemployed, there would be established a 40-hour working week.

The bill insists upon the regulated week, excepting in such instance that an employer submit satisfactory proof of the existence of specific conditions in any industry which make it necessary for certain persons to be employed for a longer period of time than that provided in the existing working week. Exempted from the bill are agricultural or farm products processed for first sale by the original producer.

I have not here attempted to set forth other important details of my proposal because time does not permit. All that I am attempting to do is to outline the principal features of the proposal.

I would not object to a 40- or a 44-hour week if about all of our able-bodied and willing-to-work men and women could obtain employment. I want to give labor an economic force and a reasonable guarantee of a job. It seems to me that this is not asking too much under our form of government. We must admit that our system is a failure if we cannot within a reasonable length of time find a method of distribution which will change existing conditions. Distasteful as it sounds and is, existing conditions mean that approximately one-third of our population is without employment, or at least without employment in private industry.

Men should be employed in private industry. The eventual alternative is the terrorizing kind of situation that we find in totalitarian states. Men and women in those states seem to enjoy economic security, but I doubt that it is a lasting economic security, and even for the time that it does last it is economic security without liberty. Liberty is the most precious of our American treasures. I want to preserve it at any cost.

There will be considerable objection to this proposal. Industrialists will say that it can't be done. I ask them to ask themselves if, under the existing situation, we can long endure. I ask them to ask themselves that if this is a gamble, whether it is as great a gamble as they are taking under existing pressure.

It seems to me that this proposal might be accepted on the age-old claim that business operates on the basis of supply and demand. When business gets bad the manufacturer regulates the hours of industry and shortens the working period of employees or lays them off. I want to regulate it the other way, so that there will be some sort of a guaranty of protection for the individual.

This proposal is not a condemnation of any industrialist. I know that he cannot operate without a profit, and I know as well that the workman is helpless unless the manufacturer does have a profit. I want a real partnership between industry and labor and a division of work and opportunity. I insist that such a plan will bring about a proper distribution of everything else, as well as jobs. I insist that it will bring relief to the distressed farmer, because the industrial worker, given an economic force, will have a sufficient income to buy the produce of the farm.

Some day, and in the not too distant future, we will come to a realization that unless we adopt some such program and policy, the last danger signals will be hoisted. I do not insist that my proposal is correct or complete, but I do maintain that it is a sensible

approach to the problem, despite the criticism that it has received in many places. I only ask that that criticism be weighed against the criticism which is made against existing conditions, against the unbalanced Budget, against the heavy tax burden, against unemployment, and against the pitiful plight of millions of able-bodied and willing Americans who are pleading for employment and are entitled to it. The true test of a nation is its care of the weak, and I defy anyone to say that this problem is not the responsibility of the Federal Government, which was created by all of the American people.

Appraisal of Washington by Jefferson

EXTENSION OF REMARKS

OF

HON. WILLIAM E. BORAH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1939

ARTICLE FROM NEW YORK TIMES MAGAZINE OF FEBRUARY 19, 1939

Mr. BORAH. Mr. President, there appeared yesterday in the New York Times Magazine excerpts from a letter written by Thomas Jefferson upon the life and character of George Washington. It is a letter that is very rarely found in the literature either of Washington or Jefferson, and I should like to have these excerpts printed in the CONGRESSIONAL RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

AN APPRAISAL OF WASHINGTON: BY JEFFERSON—EXCERPTS FROM A LETTER DATED AT MONTICELLO, JANUARY 2, 1814, AND WRITTEN TO DR. WALTER JONES

I think I knew General Washington intimately and thoroughly; and were I called on to delineate his character, it should be in terms like these:

His mind was great and powerful, without being of the very first order; his penetration strong, though not so acute as that of a Newton, Bacon, or Locke; and as far as he saw, no judgment was ever sounder. It was slow in operation, being little aided by invention or imagination, but sure in conclusion. Hence the common remark of his officers, of the advantage he derived from councils of war, where hearing all suggestions, he selected whatever was best; and certainly no general ever planned his battles more judiciously. But if deranged during the course of the action, if any member of his plan was dislocated by sudden circumstances, he was slow in readjustment. The consequence was, that he often failed in the field, and rarely against an enemy in station, as at Boston and York. He was incapable of fear, meeting personal dangers with the calmest unconcern.

Perhaps the strongest feature in his character was prudence—never acting until every circumstance, every consideration, was maturely weighed; refraining, if he saw a doubt, but, when once decided, going through with his purpose, whatever obstacles opposed. His integrity was most pure, his justice the most inflexible I have ever known, no motives of interest or consanguinity, of friendship or hatred, being able to bias his decision. He was, in every sense of the word, a wise, a good, and a great man. His temper was naturally high-toned, but reflection and resolution had obtained a firm and habitual ascendency over it. If ever, however, it broke its bonds, he was most tremendous in his wrath.

In his expenses he was honorable, but exact; liberal in contributions to whatever promised utility; but frowning and unyielding on all visionary projects and all unworthy calls on his charity. His heart was not warm in its affections, but he exactly calculated every man's value and give him a solid esteem proportioned to it. His person, you know, was fine, his stature exactly what one would wish, his deportment easy, erect, and noble; the best horseman of his age and the most graceful figure that could be seen on horseback.

Although in the circle of his friends, where he might be unreserved with safety, he took a free share in conversation, his colloquial talents were not above mediocrity, possessing neither copiousness of ideas nor fluency of words. In public, when called on for a sudden opinion, he was unready, short, and embarrassed. Yet he wrote readily, rather diffusely, in an easy and correct style. This he had acquired by conversation with the world, for his education was merely reading, writing, and common arithmetic, to which he added surveying at a later day. His time was employed in action chiefly, reading little, and that only in agriculture and English history. His correspondence became necessarily extensive, and, with journalizing, his agricultural proceedings occupied most of his leisure hours within doors.

On the whole, his character was, in its mass, perfect; in nothing bad, in few points indifferent; and it may truly be said that never did nature and fortune combine more perfectly to make a man great and to place him in the same constellation with whatever worthies have merited from man an everlasting remembrance. For his was the singular destiny and merit, of leading the armies of his country successfully through an arduous war, for the establishment of its independence, of conducting its councils through the birth of a government new in its forms and principles, until it had settled down into a quiet and orderly train; and of scrupulously obeying the laws through the whole of his career, civil and military, of which the history of the world furnishes no other example. * * *

Let's Look After America First

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1939

RADIO ADDRESS BY HON. RUSH D. HOLT, OF WEST VIRGINIA, FEBRUARY 16, 1939

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on February 16, on the subject "Let's Look After America First."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The United States is a great country. We have an excellent, well-established system of government. We have a huge economic reservoir for prosperity. No country in the world has a higher standard of living. We lead the world. Residents of foreign countries speak of wonderful America. Our shores bespeak to them the approach to a happy life. We have liberty.

Let's look after America first.

To become entangled in the controversies of foreign countries is a sure way to endanger our country. We again hear the call to save the democracies. Has it been so long that we have forgotten the call in the last war, that call for us to enter in order that we could make "the world safe for democracy"? Instead of a world safe for democracy, we see today fewer democratic nations. Out of the last war came the dictators.

Whenever Great Britain has any chestnuts in the fire and the United States is needed to pull those chestnuts out, we hear the call of our duty to save the world.

A propaganda machine helped to make America war conscious 20 years ago. You have heard of the startling story of the purchase of newspapers and other means of communication. You have heard of the infamous Creel organization. No; you did not hear those things then. It was years afterward when the story was told; but in the meantime thousands of our best men were sacrificed, thousands were wounded, thousands were subjected to gas, thousands received shock from which they will never recover.

We are told again that the people have a right to know only those things the powers in Washington feel they should know. We are again told we cannot have a successful foreign policy unless that policy is clothed in secrecy. We are again told that we cannot reveal the truth, we cannot reveal the facts, to the boys and men who will be called upon to go to battle, to suffer and to die, to enforce the actions of those who knew the secrets and would not tell.

We had secrets before our entrance in the last World War. We discovered those secrets but not until the terrible tragedy of war had been felt. We discovered those secrets after the damage had been done. The history of the loans that helped to involve us was secret to those who fought, but knowledge to those who did not go to battle. The history of the entangling diplomacy of Europe was known to many in Washington but was a secret to the rest of the country. If the American people had known the secrets of our foreign affairs, many a man would be at his home tonight instead of being a corpse in France or a cripple in the hospital. They were told they were fighting to make the world safe for democracy.

Senator HIRAM JOHNSON, one of the Senate's outstanding Members, expressed the thought so well when on the floor of the United States Senate said:

"Good God, do you not think, Senators, the American people have the right to know if they are going down the road to war? Do you not think the American people, with their experience of the past 20 years, should be informed if their rulers are going to take them even to the brink of war? Why should they not be informed? They are our masters."

I have heard it said that this move to stop the secrecy is a political move. I have heard it said that we who believe the American people have a right to know are playing politics. I have heard it said that we are trying to embarrass the administration. If that is politics, it is sound politics. If that is politics, it is the best and most appropriate use of politics I can find. It is not the type of politics I have seen in Washington, that kind is repulsive to one who has ideals. Embarrass the administration. Why should they be embarrassed? If they have done right, there will be no embarrassment. If they have done wrong and involve America in the controversies of Europe, they should not only be embarrassed but they should be punished.

War is a gradual process. We gradually get into war. The incident that causes the declaration is only one of the last incidents. President Roosevelt, speaking in 1936, said: "At this late date with the wisdom which is so easy after the event, we find it possible to trace the tragic series of small decisions which led Europe into the Great War in 1914 and eventually engulfed us and many other nations. We can keep out of war if those who watch and decide make certain that the small decisions of each day do not lead toward war and if, at the same time, they possess the courage to say 'No' to those who selfishly or unwisely would let us go to war." Yes, the President was right in 1936. It was the small decisions which led Europe into the Great War in 1914 and eventually engulfed us and many other nations. Yes, it will be the small decisions which will lead us into the next war. We have a right to know about these decisions.

The French Air Minister, Guy La Chambre, was quoted as telling the French Chamber of Deputies:

"I take this opportunity of thanking the great American democracy and its leader, President Roosevelt, for the way they have shown they are thinking of one thing in this matter—how best to serve France."

I feel it is more important to this country to think of how best to serve the United States.

War planes are to be sold to France and England. It has been said that we shall help our national defense in that way. This means we are selling planes to European powers. Then we are shown that we need more because Europe has more, the very same planes we sold them. It is the circle of armament that the world has seen time and time again, with no one winning except those who profit from the sale.

The Military Affairs Committee of the United States Senate made public today some valuable information about the transaction with France. The move was made at the instance of President Roosevelt, who had overruled General Craig, Chief of Staff of the United States Army. General Craig had felt it unwise, believing that it might interfere with our own program.

We also have been told—one of the few thing we have been told, may I say—that this will give more industrial development, and, therefore, help cure unemployment. President Roosevelt called this kind of money "Fool's gold." I think it valuable enough to read an extended quotation from the President's speech of 1936. He said:

"If war should break out again in another continent, let us not blink the fact that we should find in this country thousands of Americans who, seeking immediate riches—fool's gold—would attempt to break down or evade our neutrality. They would tell you, and, unfortunately, their views would get wide publicity"—I must stop there to emphasize his prophecy of 1936 as to wide publicity except the statement comes from the administration spokesman. I continue with the President's speech: "—get wide publicity that if they could produce and ship this and that and the other article to belligerent nations, the unemployed of America would all find work.

"It would be hard to resist that clamor; it would be hard for many Americans, I fear, to look beyond, to realize the inevitable penalties, the inevitable day of reckoning that comes from a false prosperity."

How true was the President's statement. Yet, we hear the argument advanced by those favoring the sale of these planes that we just as well get that money as someone else.

The President at Buenos Aires said:

"We know, too, that vast armaments are rising on every side and that the work of creating them employs men and women by the millions. It is natural, however, for us to conclude that such employment is false employment, that it builds no permanent structures and creates no consumer goods for the maintenance of lasting prosperity."

If that was true in 1936, and it was, why isn't it true in 1939?

Are we involved in Europe? There is a question. Our officials say no but we have heard much from abroad. May I cite a few of these statements?

Lord Plymouth told the English House of Lords:

"The British Government has been in constant consultation with the Government of the United States in connection with the events in the Far East. Action has been taken independently but it has almost invariably been along parallel lines."

Parallel lines go in the same direction.

Anthony Eden, who came to New York to talk to us about foreign affairs not so many weeks ago, told Parliament:

"We are constantly and daily in close consultation with the Government of the United States. Over and over again, we have taken either parallel or similar action and that in itself is an indication of the closeness of such collaboration."

Yes, Mr. Eden advises us that England does not desire us to pull her chestnuts out of the fire, yet, he wants us to join in their movement to line up "to save the democracies." That is his privilege to ask but it is our privilege to refuse to sacrifice our Americans to carry out this parallel action.

Hilaire Belloc, well-known English writer in G. K. Chesterton's Weekly, published in England, wrote an article last year. Listen to Belloc:

"We got the United States into the Great War on our side, and what was more extraordinary, we managed in this debt business, to make France the villain of the piece. We have got them to feel with us against the modern Italy, and we have got them to talk of ourselves as a democracy." Then he adds, "Can we rope them into the fight?"

Yes; rope us in. Yes; fool us on the war debts. Yes; make us think of England as a democracy.

May I hesitate long enough to call your attention to the war debts, that debt for which we are taxing our people to pay the interest, that debt which we gave to England and to France and to other countries. England owes us four and one-half billion dollars. France owes us approximately four billions.

We were "Shylock" to them when we spoke of war debts a few years ago. Now, when they need us "to save the democracies," we are not "Shylock" but "beloved Uncle Sam."

One author wrote:

"Funny about these internationalists. You will never find them except in America."

Most of these are the men who will serve their country behind a desk, far removed from the line of fire, at a "dollar a year" or more, while the men who are now working and looking after America will be in the trenches.

I believe in an adequate national defense. Defend our shores against any attack, but our line of national defense does not extend to the Rhine or to any other European or Asiatic river.

The cost of our national defense is based on the type of foreign policy we have. If the foreign policy is one of parallel action and "policing the world," we will need a larger and more expensive program than if our foreign policy is based on minding our own business.

I am a young man, the youngest in the United States Senate. I feel the problems of youth. When youth faces war and realizes its significance, it will mobilize its efforts to abolish it. War rewards the acts civilization punishes, spreads the immorality peace curtails, destroys the ideals education cultivates.

As a young man I can see my friends marching to war "to police the world for democracy." They are happy and healthy, now. When they return, yet, some will never return, many will be wounded, gassed, and destroyed. Many will be hopeless cripples for life. Let us look after our Americans first.

Keep the torch of liberty in America. Let the false theories of dictatorships collapse, and they will. Make the example of America known throughout the world. Another war will strike at liberty. Fascism and communism arose to power after and from the last war. Instead of saving the democracies, our involvement in war will endanger the greatest democracy in the world, that of the United States of America. Our country has given us much. Let us look after America first.

Our American Heritage

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1939

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN, BEFORE WOMEN'S POLITICAL STUDY CLUB OF WASHINGTON, D. C., FEBRUARY 18, 1939

Mr. McNARY. Mr. President, on February 18 last, the distinguished junior Senator from Wisconsin [Mr. WILEY] delivered an interesting address before the Women's Political Study Club of Washington, D. C., which I ask unanimous consent to have printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Amidst our confused thinking, our disordered economic life, our discouraged aged people, our frustrated unemployed, and our ever-increasing national debt, may I bring to you a great hope, a hope that is becoming more and more definite and certain—the hope that we are coming through our national Gethsemane strengthened and cleansed. It will not be via the legislative route alone; it will be through a combination of remedies that we find our birthright.

First. Into the consciousness of the people there will be born again the need for self-reliance, industry, and thrift.

Second. We are going to get rid of the remnant of politicians, that remnant of politicians which still exists and which still continues to highjack industry.

Third. Labor and capital are going to see the imperative need of joining forces instead of working against each other.

Fourth. Society is going to see the imperative need of giving the farmer cost of production for what he produces.

Fifth. Where Government competes with private industry, it must have no special privileges.

Sixth. Where Government in times of emergency, when certain classes of our people are financially submerged or hard hit, acts as the agent of all the people to lift the load from the unfortunate—then Government must get a new vision of its obligation and not slash and cut and destroy values in the economic structure. Government must revert to the position of servant.

Seventh. When Government as the agent uses the money out of the Public Treasury as it has in W. P. A., Government must see that the money is handled as trust funds should be handled, that chiselers and grafters are not given control, that the money goes to the needy instead of for overhead and favored sons—so that the money is used to maintain and develop instead of depleting the morale of the people.

When we speak of our American heritage, two questions arise. First, Is this just another flag-waving rallying cry? Second, Can we define our American heritage, and why should we?

In the time I have to speak today, I'll try to develop the theme of an American heritage, not as a dusty catch-phrase, but as a living and vital part of our daily life.

Before we attempt to define this living interpretation we must first see the necessity for reviewing the American heritage. After all, it seems very presumptuous to tell an American audience what their heritage is.

Just what is the necessity for reviewing the American heritage? The necessity is written in the bold-face, spread-eagle banner headlines of our daily papers that tell us how far we have strayed from that heritage.

The necessity is written in the ever-lengthening shadows of 10,000,000 unemployed—more jobless than in all the other major powers combined.

The necessity is written in the $65,000,000,000 that will have been spent by the close of the second term for this administration. The necessity is written in a $10,000,000,000 debt that will be foisted on another generation subjected to mounting tax tolls.

The necessity is written in a growing centralization of Government, in the lockstep of regimentation, in the loss of free enterprise and free initiative, in the growing assaults on private ownership, in 10,000,000 unemployed where "youth" looks for the dawn of tomorrow, with a chance in it.

The necessity is written in the frantic attempts to capture control of the independent agencies of Government, in the challenge hurled by the executive branch to the Legislature, in the arbitrary power of a Chief Executive who can devalue the American dollar at any time, who can change the monetary standards at any time by decreeing the free coinage of silver.

The necessity is written in the disappearance elsewhere of self-government and free democracy, and in this country, in the disintegration of our constitutional system of checks and balances.

The necessity is written in idle farms and empty factories, in the strangulation of American enterprise, in the existence of minority pressure groups who seek to dominate an inarticulate majority.

The necessity for reviewing the American heritage, my friends, is written in the guarded speech of 370,000,000 of people in the world today, where freedom of speech, press, and worship are being invaded. Everywhere, we can profit by reviewing the American heritage because it repudiates the menace of overwhelming fears—fear of one class for another, fear of capital for industry, fear of the people for government.

Now, then, what are the physical aspects of our heritage?

Our land occupies about 6 percent of the total area of the globe. We have about 7 percent of the world's population. But, as is well known, we have 60 percent of the world's telephone and telegraph equipment. We drive 80 percent of the world's automobiles. We look out over 60 percent of the world's wheat and cotton, 70 percent of its oil supplies, 50 percent of its copper and pig iron. We claim nearly 67 percent of the banking resources of the world. We own half of the world's supply of gold, and our purchasing power is greater than the purchasing power of 500,000,000 Europeans.

This is the country where we spend more for education than all the rest of the world put together. This is the land where 10,000,000 persons with twenty to forty million dependents are direct owners in the larger industries of the country.

This is the land with the world's greatest philanthropists, the most extensive charities, and the widest distribution of wealth. This is America! But this is not the American heritage. It merely represents that heritage.

How can we define that heritage?

Though glibly used and widely misunderstood by Fourth of July orators all over the land, the term "American heritage" cannot be accurately defined by even great scholars.

It may be the power and vision in us distilled from many racial strains. It may be the industrial open-shop system that has so often been called the American Plan.

Some think it is the so-called American idea of social legislation that originated in my own State. In the East I have heard it defined as the "culture" resulting from New England reorganization of English customs and traditions.

Henry Clay thought that it was the home market and protection legislation that he called "the American system." Sometimes it is identified as the political plan of a free ballot or the sacred right to a trial by jury. Occasionally we refer to it as the American version of the British Magna Carta—a system where the rights of hungry men shall not be bartered for bread.

James Truslow Adams called it the "American dream."

He wrote about:

"That dream of a land in which life should be better and richer and fuller for every man, with opportunity for each according to his ability or achievement. * * * The American dream that has lured tens of millions of all nations to our shores * * * has not been a dream of merely material plenty, though that has doubtless counted heavily. It has been much more than that. It has been a dream of being able to grow to fullest development as man and woman, unhampered by the barriers which had slowly been erected in older civilizations, unrepressed by social orders which had developed for the benefit of the classes rather than for the simple human being of any and every class."

It may be a "way of life," minted from the wisdom of the ages.

The American heritage may be any of these ideas or it may be all of them. It may be an evolutionary concept that is still growing—a heritage that we may accept, make additions to, and pass on to still another generation.

What is the evolution of the American heritage?

The American heritage begins before there was an America. Some of the principles incorporated in American ideals were voiced as far back as 1295 when King Edward I summoned the first type of Parliament. Some of them date back to the meadow at Runnymede and the Magna Carta.

Certainly, parts of the heritage trace back to the English ideas of our earliest settlers who came from what was then the freest country on the globe, though rigidly divided into a class system. Equal opportunity in early American life broke down that class system, and began the democracy that became part of our inheritance. In the western part of our country, the frontier preserved that democracy just as the eastern seaboard preserved the culture of the Old World for development in the new.

A great part of the American heritage is concerned with equality.

Even before the Pilgrim Fathers landed, they wrote the Mayflower Compact to set forth principles that would insure equality.

Our early racial influx was almost entirely English. These people brought with them a rigid sense of class distinction. Our early provincial society was patterned after the English. Vast tracts of land were ceded to a privileged few. Newcomers to this land, unable to secure these concessions, began to look beyond the Appalachians.

In New England there were townships with representative government though there were religious and property qualifications for the privilege of the ballot.

In the South there were county governments suited to large plantations. In the middle colonies where there were both commercial and agricultural interests, there was a mixture of county and township government.

Sometimes the interests of these groups conflicted. Sometimes individual interests conflicted. With the growth of independence there was a growth in problems. Freedom for the individual had to keep step with freedom for the group. That is still our basic social problem.

By 1800 Jefferson was President. He had written the terms for equality into the Declaration of Independence. That equality is part of the American heritage. If we set class against class, we destroy it. If we become so engrossed in eliminating privilege from private industry that we shift it to Government, we destroy equality. If we set labor and capital against one another, we destroy it. If we set poor against rich, we destroy it.

A great part of our American heritage is concerned with economics.

Early business was simple and direct. The relation between employer and employee was intimate. The economy of the time was concerned primarily with food and shelter. Basically, that problem is still the same. In 1800, 9 out of every 10 Americans, were farmers. Enterprise was limited. Where it existed it was small and limited to families. Self-sufficiency particularly in the great plantations of the South made the sale of manufactured products very difficult.

In the year that Jefferson was elected President, it became apparent that England was undergoing a great industrial revolution. In this country New England become a manufacturing section. Factories sprang up. Workers became a class. Population increased. Immigrants swarmed to our land. The settlement of the West became a reality as railroads and steamships spanned a nation. Towns began to swell to the size of great cities. There began to exist a definite concentration of wealth.

That began the great economic problem that is still with us.

It created the problem of a fair and equitable distribution of wealth. That didn't mean that all men were to receive the same compensation, because all men didn't have the same abilities. Rather the American heritage demands that all men be given an equality of opportunity, that there be no special privilege, and that each man have a fair chance to claim his portion. Part of our economic inheritance was an inherently American—it certainly isn't a European idea—fear of overwhelming debts. We

were concerned with the maintenance of a close relationship between income and outgo, in keeping the costs of government compatible with the income of that time. Let us not forget this portion of the heritage.

Another phase of the economic birthright is a deep-rooted distrust of unsound money. Unsound money was an economic and political issue in the hectic decades that followed the Civil War. Those were the days when the frontier needed money, and needed it badly; they needed it for their expansion, but the canny bankers of the East remembered the paper currency of the Revolution and frowned on inflation. That, too, is part of our concept.

In business we have had an undeclared-profits tax where the Government virtually seizes the profits so that the business will be kept small. If that squares with our economic tradition, then every large-scale business since the industrial revolution has been wrong.

Today we talk about a planned economy. We are just beginning to learn that you can't hog-tie production and let consumption run wild.

Since you can't regulate consumption, planned economy fails. It's part of our heritage that we spend when and where we choose.

In our economic birthright as it concerns banking, we learned never to concentrate too much power in one man. Today one man is the sole voice in determining the issuance of $3,000,000,000 in greenbacks. He can fix the silver dollar at any ratio he chooses. That, too, is hardly consistent with a heritage that shrieks against concentration of financial power.

The economic miscarriage of lavish expenditures that will probably total sixty-five billion by the end of the second term, with an accompanying $10,000,000,000 debt, again is a far cry from an economic tradition of comparative economy.

Part of our heritage concerns government.

In 1770 there were a number of tiny colonies scattered along the coast. With independence, government became complicated. The 13 small governments became one large Government, with 3,000,000 people distributed in a large area that it took about 6 weeks to traverse. Throughout the years we learned that it was disastrous for a governmental economic concentration to coincide with the political concentration of power. This lesson, too, is part of the heritage.

On March 10, 1933, the Chief Executive requested Congress for powers that were well on the way to establishing government by one man. Here we should recall that our governmental heritage is inextricably bound up in the American constitutional method of checks and balances.

Part of our heritage is concerned with the idea of peace.

We produced a generation that halted yellow fever and united two oceans. That kind of a fighting generation inevitably wondered whether they couldn't control man as well as Nature. To that end we produced a Monroe Doctrine that proclaimed our interest in the Western Hemisphere and our strict policy of noninterference elsewhere. By 1933 our delegate at large to the general disarmament conference said:

"The policy of the United States is to keep out of war and to help in every possible way to discourage war."

These also have become part and parcel with our traditional ideas, and in 1939 there is a great need to reaffirm this part of our heritage.

Part of our heritage is concerned with the wealth of wisdom bequeathed to us by great statesmen, scientists, writers, philosophers, builders, and musicians. Washington, Hamilton, Jefferson, Webster, and Lincoln live in the very fiber of our being. Emerson, Longfellow, and Whitman speak daily to us. But this heritage which we call American includes something else. It includes a deep, abiding faith. Thank God, we still possess it. In generations past it sent our great American men and women forth to do marvelous things. It will equip us again today to do likewise, if we possess it. It has furnished leaders for every emergency that has arisen in the Nation. In our yesterdays it has given strength and beauty and courage and vitality to this Nation. Today, when we are burdened with fears and worries and doubts, this faith will bring us out. It will inspire in us the realization that has always been in the hearts of great leaders, that they are something more than "mudmen," that man and America are made for "big things."

We are cutting out our bluster and egotism and our self-sufficiency and we are depending upon Him who gave us life. Governments everywhere are attempting to set the world right, but it can't be done without faith, without Divine guidance. Leaders are leaning on themselves and failing because they do not know God. This faith is the knowledge that God has made us, that God will keep us, and that He will direct our path. This faith has in the past kept the fires on the home hearthstones of America burning, and this faith is rekindling that flame today. Faith in the ultimate victory of righteousness over wrong has kept men from failure and despair and suicide, and today the old story is being repeated—faith in fellowship and brotherhood.

In agriculture we have a heritage, too. It's a doctrine of abundance and it repudiates every part of the claptrap of planned scarcity. Ten million farm homesteads dug out of the forests and prairies speak authoritatively of this inheritance.

Our inheritance has been forged in the fires of the centuries. Our heritage is common property of every true American. It is his to preserve, to maintain, to transmit to future generations.

The American heritage is menaced today by men with unholy ambitions, by world-wide trends that are utterly at variance with our American concept. The expression in America of these alien strongly centralized governmental tendencies is the final attack in a battle that will, if unchecked, eliminate free democracy from the face of the earth.

I believe that our heritage—political, economic, and spiritual—however difficult to define, can be accurately traced.

We can trace the burning nationalism that followed the War of 1812, the intense concentration on home affairs while we stepped up the economic tempo.

That was a period of native American virility when we were concerned with universal suffrage and skyrocketing population. That was a period when we wrote into our heritage a doctrine that proclaimed our interest in the Western Hemisphere and our policy of noninterference elsewhere.

It is typically American that in this period of material advancement we still lived in a period of democratic idealism, were still concerned with the ever-present problems of the needy and the unfit. We still wailed lustily for the rights of all human beings, still fought for world peace, religion, and equality before the law.

After that period there came a world-wide period of political democracy. In this country that world-wide movement was typified by Andrew Jackson. It was unfortunate that this solid and healthy nationalism had to give way to a slave-born sectionalism. Even in the decade of the 1850's and the Civil War years, however, this country saw its civilization gain added strength.

By 1870 the old flintlock was hung on its wooden peg. The America that was all farm gave way to an America that was in part urbanized and mechanized into an industrial America. From the straggling outposts of frontier camps, America had foraged through the winding Indian trails onto the broad highways of an urban and prosperous nation.

Reformers had struggled for nearly two centuries with vital social reforms, but it took just two decades following Bryan's defeat in 1896 for these principles of justice to be established. Public welfare began to be a consideration in the discussions between capital and labor. We began to be concerned with problems of city planning, of child labor, and the conservation of natural resources.

In colonial days a man burned down a wooden house to get nails to carry with him on the westward trek. Nails were scarce. Lumber was plentiful. By the early twentieth century lumber was no longer an unlimited commodity to be disposed of prodigally. Conservation was written into our heritage so that the material wealth of this land might also be preserved for future generations.

Along with all of this came encouraging progress in education and the arts to further brighten our inheritance.

And all of these, my friends, are part of the American birthright. Our heritage was born in the struggles of a new land, preserved in an agrarian-trading civilization and today in an industrial age faces its greatest test. Our problem is that it shall not die in this new age of science, the machine and autocratic governments.

"You and I have a rendezvous with Life
In the years that are up ahead
To see that our heritage, our American birthright,
Is not destroyed or lost.
Let us pledge our word, good and true,
We will not fail Life's Rendezvous."

Air Power for Peace

EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1939

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, FEBRUARY 18, 1939

Mr. SHEPPARD. Mr. President, I ask unanimous consent to place in the RECORD an address delivered by the Senator from North Carolina [Mr. REYNOLDS] over the Columbia Broadcasting System, on February 18, on the subject of "Air Power for Peace."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, tonight I have chosen for my subject "Air Power for Peace" because I believe that the only way we can guarantee peace for America is to make America first in the air. My good friend O. Max Gardner, former Governor of my home State of North Carolina, stated several days ago in a Washington newspaper that "in America, Europe, and throughout the civilized world there is nothing of more vital concern to men and women today than aviation and its relation to transportation, national defense, and preparation for war"—and that is true! "Last

September there were millions of people paralyzed with the fear that London or Paris, or both of them, might be as completely destroyed from the air as Sodom and Gomorrah."

Now, listen to what the commanding general of the G. H. Q. Air Force, Gen. Frank M. Andrews, has to say. He states that "air power, in its present stage of development has accomplished two things. First, it has thrown the balance of power in war again to the offense; and, second, it has provided nations with a new agency to further their national policies, whether such policies be good or evil.

"Because of its ability to strike rapidly and without warning, against the vital economic and social structures of highly organized countries, it has become a formidable instrumentality in the hands of aggressor nations. * * *.

"That is our problem; that is why America must be strong in the air. That is why this Nation must be prepared to do its part to deny to any enemy the opportunity to establish bases, land or water, anywhere in this hemisphere from which bombardment airplanes may launch attacks. A study of geography will disclose the fact that there exists many land and sea areas which, under certain conditions, could be utilized by a foreign power for air bases.

"Today our share of the Army, Navy, and air team for the defense of American territory and American policies is deficient in air strength. We must build up our air forces and create air bases for the establishment of a sphere of air influence around our part of the continent.

"We are happy that our national policy is a defensive one. We desire only to protect our freedom and our territory. But a policy of defense does not mean that we should wait until a hostile air force appears over our cities or over the Panama Canal or other important military and civil objectives before we attempt to stop it.

"A policy of defense does not mean that we should sit idly by while foreign nations build up powerful air forces with which they may threaten our peace and security. In these days it is apparent that force must be neutralized by force; that threat must be neutralized by the fear of retaliation. * * *

"There are only two ways of stopping an air attack. One is to prevent the hostile air force from getting close enough to launch an attack; the other is to stop the aggressor nation from even planning the attack through fear of retaliation. * * *

"What * * * happened at Munich? There, apparently, we saw the threat of superior air power defeat, in diplomacy, the greatest army in Europe, and the greatest navy in the world."

However, the most significant and impressive statement made by General Andrews in his recent speech was as follows:

"The General Headquarters Air Force, the entire Army combat air force in continental United States (exclusive of possessions), numbers today but slightly over 400 fighting planes."

I ask you: Is not this a startling revelation? This statement from high authority should convince every American citizen that the most important arm of our national defense is today our weakest arm, and it is for this reason that I am taking time over the radio to contribute my voice, as a member of the Military Affairs Committee of the United States Senate, to the stimulation of a national demand for an adequate national defense and for the speedy and prompt enlargement of our air forces.

I have made it my duty to study national defense in many other countries and in this work I have circumnavigated the globe.

Everywhere I have gone, from the smallest nation to the largest, the dominant thought is the world problem of protection from devastation from the air.

Ladies and gentlemen, with all my heart I wish I could tell you how the entire world could be saved from war. I wish I could give you a formula under which men in all nations could find a way to live together in peace and settle their differences by peaceful means. But again, events throughout the world show that there is no magic formula for peace. Every effort at disarmament has failed. Arms limitations have not worked. International law and respect for treaty obligations have broken down. Overwhelming and undoubted power to protect its vital interests has become, for every nation, the only sure guarantee that its rights will be respected and that it will be able to maintain an honorable peace.

In our modern world, aviation has brought a new and powerful force that we in America are determined to use for peace. "American air power for peace" is a slogan which we may well adopt as our guide in the troubled years ahead.

In the past, we have experienced national security largely by reason of the fact that broad oceans on the east and to the west separate us from the rest of the world, and we are bounded by friendly nations to the north of us and to the south of the Rio Grande. Under these conditions, to insure our national security, we had then but to build and maintain our Navy as our first line of defense, and maintain our Army as a skeleton force. With the development of aviation, with modern military planes now capable of crossing the widest expanse of ocean, this security will soon be in jeopardy, if in fact, it has not already become a thing of the past. Our geographic isolation has been destroyed by air power, just as air power has changed the whole defense strategy of other nations. Air power has given aggressor nations a weapon with which to threaten death and destruction to peace-loving peoples, even though separated by mountains and oceans and rimmed in with fortifications of steel and concrete.

Air power knows no boundaries and its wings have annihilated time and distance. There is no power on earth which can stop a modern air force when once it has started on a bombardment mission. Antiaircraft batteries and defense aviation can only minimize its effect. Superior air power in the hands of a nation committed to a policy of armed aggression is nothing less than a high-powered rifle aimed at the heart of any nation within its range.

We are told by our military authorities that there is only one sure protection against the threat of air power, and that is the fear of swift and sure retaliation, with all its attendant horror. No nation will launch its air force against an intended victim if it knows that its own population will be subjected to the same or a worse terror. In other words, no nation will court its own destruction.

My friends, we in America are reluctant to even consider the possibility of directing our air power against the peoples of other nations, with whom we desire only to live in peace, and toward whom we have established the good-neighbor policy. We hope that we will never be forced to take such an action, and yet we must prepare to do so to make sure we will never become a victim of aggression.

Power to defend has always been the greatest power for peace in the world. Peace in America is our greatest responsibility for today and tomorrow. Our power, our wealth, and our influence in the Western Hemisphere emphasize this responsibility, and we cannot escape it. We must not only keep the peace but we must make it impossible, as nearly as it lies within our power to do so, for any nation or group of nations to bring war into this hemisphere. Air power for defense is air power for peace. Air power, and air power alone, can guarantee to keep war out of the western world.

Here is what a great American said last week in the House of Representatives when the authorization bill for 5,500 planes was before that board of Congress. Hon. SAM RAYBURN, of Texas, told the House at that time: "Much has been said about recognizing world conditions. A man would be more than blind in his eyes if he did not realize that there is a serious world condition. He would be less than far-seeing if he did not remember 1914, 1915, 1916, and 1917, when America was smugly sitting here, with a great ocean on either side, believing that the allied armies would defeat the Germans within such a reasonable time that we would never be called upon to participate in that conflict. Conditions in Europe are more volcanic today than they were in the early part of 1914. The world is living closer together; and wherever the frontier of America may be—and we today are not compelled to name it—I believe I speak the mind of the inarticulate millions out there who expect us to speak for them when I say that wherever that frontier may be the people of this land want America to be prepared to defend that frontier." And I, ROBERT R. REYNOLDS, add that our frontier shall be in the Western Hemisphere and not beyond.

Going further, Congressman RAYBURN stated: "It might not be necessary or it might not be feasible to build more than 500 planes the first year, and the second year it might be necessary for the defense of this country and for the peace of the world for the United States of America to build 2,500 planes. It might be necessary before the summer that faces us is over that America should set in motion the forces that will build 3,000 planes in the next 12 months in order to let the world know that America in planes, in ships, in men, and in the equipment for these men is ready to meet a world in arms, because, as a great Speaker of this House once said: 'The American people are the most peaceable people in the world; but when aroused by injustice and by invasion of their rights, they become the most warlike people in the world, willing, if necessary to protect their rights and their liberties, to meet a world in arms.' "

In any instance, let us provide an adequate national defense. Let us keep our powder dry—let us provide air power for peace.

In this month in which we commemorate the anniversary of the birth of George Washington; in this year, when we commemorate his inauguration as the first President of the United States, let each and every one under the great American flag give solemn heed to his admonition: "To be prepared for war is one of the most effectual means of preserving peace." In a world that flies, air power is an overwhelming power for peace—"for the peace of righteousness which alone exalteth a nation."

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, FEBRUARY 12, 1939

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a thoughtful address delivered over the National Broadcasting Co. by the

able junior Senator from Ohio [Mr. TAFT] at a Lincoln Day dinner at the Netherland-Plaza Hotel, Cincinnati, February 11, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

During the campaign in 1938, I frankly and repeatedly stated to the people of Ohio that in my opinion the policies of the New Deal administration had failed to produce either prosperity or security. Government regulation, taxation, competition, and hostility had so discouraged individual and corporate enterprise that all development of new industries and expansion of old industries had substantially ceased. I stated that the Government policy of planned economy, far from producing security, had resulted in keeping 10,000,000 people unemployed who wished to work, and that prosperity could never be restored while this unemployment continued.

No change has occurred in the domestic policy of the administration since November, and no new policy has been proposed in any way likely to put men to work. There has been an effort on the part of the President to divert attention from domestic failure by exaggerating the dangers of a European war. There has been a reaffirmation on the part of the President of his belief in the theory that the Nation can spend itself into prosperity. A Budget has been presented, calling again for expenditures of $9,000,000,000 in the fiscal year beginning the first of next July, with possible tax receipts not in excess of $5,600,000,000. A deficit of $3,400,000,000 will increase the national debt to more than $44,000,000,000. Secretary Morgenthau is now suggesting that the legal limit be raised from $45,000,000,000 to $50,000,000,000. The President has not shown the slightest interest in conferring with or meeting the views of the Democratic Members of Congress. His attitude is clearly shown by his letter demanding an immediate supplemental appropriation of the $150,000,000 which Congress refused to grant last week. Surely he could have attempted to economize in overhead expense and otherwise, and see whether he could meet the wishes of Congress without hardship to those on relief. If he found himself unable to do so, he could have asked for additional appropriations in March. Instead of that, he states his intention to spend all of the money he can during the first 2 months, and demands now an immediate appropriation. He acts as if $725,000,000 were chicken feed. The only proposal designed to improve public conditions and restore employment is the continuation of deficit spending, which has already so obviously failed to produce the promised result.

I am convinced that a Government-regulated, planned economy will always fail in this country. But since going to Washington I have been impressed with the fact that the planned economy so beautifully set forth in theory by New Deal writers is not even a planned economy. I have frequently been told of the overlapping activities of Federal departments, but I have never realized how completely unrelated and unrestrained the different Federal activities are. Every department and independent agency, of which there are literally hundreds, operates within a watertight compartment. The chief of the agency is interested in his own little task, and seems to have no concern about its effect on the work of other agencies or the prosperity of the people as a whole.

Take the problem of relief. We have the P. W. A., the W. P. A., the C. C. C., the National Youth Administration, and the Social Security Board, each one responsible only to the President, and the Children's Bureau and the United States Employment Service in the Department of Labor. Besides these there are three or four agencies dealing with farm relief. Surely the relief problem in the United States is one problem, and someone in the administration should at least be looking at it from a broad and comprehensive standpoint. Senator BYRNES, of South Carolina, after a study of the problem, has proposed an intelligent and thoughtful solution. Probably a consolidation of all the agencies cannot be made, but surely someone in Washington ought to be charged wih studying and dealing intelligently with the entire problem of relief throughout the United States. There is no such person.

The situation with regard to the regulation and control of banking and credit is in an equally unplanned condition. Banks are regulated and inspected by the Federal Reserve Board, by the Federal Deposit Insurance Corporation, and by the Comptroller of the Currency. The action of all these other agencies is substantially affected by the very extensive powers given the Secretary of the Treasury over credit and currency, and the power given the Securities and Exchange Commission over securities issues. I do not say that these various controlling agencies do not confer and try to work out a common policy, but their success is not notable in that direction, as indicated in the recent report of the Federal Reserve Board. Sooner or later a general revision of the entire banking structure and banking and credit control must be made, but neither the President nor anyone else has suggested what it ought to be.

These are only examples of conditions which exist in nearly every field. The Government is like a great automobile plant, with thousands of machines making different automobile parts, and no one charged with the responsibility of finding out whether the parts will fit together when their manufacture is completed. It reminds me more than anything else of those Coney Island institutions where a large number of little automobiles careen around a ring, with electric trolleys, without any brakes of any kind, and with elementary steering devices, operated by amateur drivers, bumping violently into other cars before pursuing their erratic and undirected course.

There is no doubt in my mind that the Federal Government needs a thoroughgoing reorganization, and that some of the unfortunate results of the New Deal can be eliminated thereby. I do not mean to say that we want a renewal of the New Deal reorganization bill of 1937. There is no reason why the President should abolish the office of Comptroller General, so that he may have power to spend money more freely than Congress intends. There is no reason why he should be given additional powers over the civil-service employees. There is no reason why semijudicial bodies should be subjected to Executive control. But a reorganization bill along the general lines outlined by Senator BYRD could easily be passed if the President would lend the slightest support.

The lack of an intelligent directing force accentuates the dangers of a policy based on complete Government regulation of wages, hours, prices, and business in general. Many of the New Deal reforms are desirable and necessary. I am strongly in favor of Federal financial assistance to those unable to support themselves, administered as far as possible through local government. The Federal Government must show an active interest and concern in improving the welfare of the unemployed, of the aged, of dependent children, of the blind, and of other unfortunate groups. It is probable that Congress will adopt the principle of Federal aid providing an adequate local health service to the poor. There is a long list of public works of a Federal or interstate nature, which assures a public-works program for many years to come. I see no reason why that program should continue to include Federal grants for purely local projects.

All of these large items of Federal expenditure are for purposes which are themselves highly commendable; but if each one is administered on the scale which its advocates desire, if each one is administered without any regard to the burden of taxation which discourages private enterprise, if each one is administered without regard to the danger of breaking down individual initiative and self-reliance, then the program as a whole becomes a real danger to the country. It is natural for every public official to feel the supreme importance of his own work. It is natural for him to disregard all other considerations. Probably he would not be a good public official unless he did. But there ought to be someone in the Government concerned to see that its humanitarian agencies are carried out in such a way as to encourage the return of private business activity and the cure of unemployment. Desirable as are these humanitarian activities, a reasonable business prosperity would increase the income and happiness of most of the so-called underprivileged a good deal more than any possible Government action. Furthermore, if we could put to work one-half of the 10,000,000 unemployed, the difficulty and expense of carrying on the humanitarian activities would cease to be any considerable burden.

As a matter of fact, such coordination and guidance from above as these agencies have today in Washington rather encourages unlimited and wasteful expansion than otherwise. The New Deal has thrown itself completely into the arms of the deficit spenders, and those who believe that the Government can spend itself into prosperity. Heretofore the President has always looked forward to a balanced Budget within a reasonable time. In November 1937 Mr. Morgenthau declared that a balanced Budget was the greatest need to assure prosperity. But the President's message on January 4 of this year says nothing about ever balancing the Budget, ridicules the idea of doing so in the year which begins the 1st of next July, and advances seriously the claim that a three and a half billion dollar deficit will add twenty billion to the national income, and thereby balance the Budget without any increase in taxes. Governor Eccles, the Chairman of the Federal Reserve Board, on January 23, advanced the theory that Government deficit spending is the most important factor in creating prosperity. Seven young New Deal economists from Harvard have actually written a book to prove that the only way to secure prosperity is to increase the Government debt every year and indefinitely. The President and Mr. Eccles have not gone quite so far as these young enthusiasts, but no doubt they will soon accept this more liberal and progressive theory. Surely no one will be allowed to out-liberal the New Deal.

It is no wonder that when the head of the Government accepts the view that deficits are a blessing in disguise the very thought of economy vanishes out of the window of every Government department. It is no wonder that the humanitarian activities of the Government, as well as every other branch, are conducted without the slightest regard for the burden of taxation and the discouragement to private enterprise which such a policy produces.

Old arguments are trotted out and new ones invented to justify this extraordinary theory. It is said that the recovery from a national income of $40,000,000,000 in 1932 to $60,000,000,000 in 1938 was all due to Government spending. It is asserted that the recession of 1937 was due to the fact that Government deficits were somewhat reduced. It is said that the slight improvement which has occurred since last summer was due to the Government spending program.

There is not the slightest support for any of these arguments. The Government deficit of $5,000,000,000 under Hoover did not check the depression. When the depression reached its bottom in 1932,

business began to recover, and by the fall of 1933 there had been a very substantial recovery, though neither regulation nor spending had begun. Recovery began in 1932, and continued steadily in nearly every country throughout the world, particularly in England, where the Government always balanced its budget. The recovery in England has been much more substantial than in this country, although they never adopted a spending program and we did. We have recovered from every past depression in the history of the United States without huge Government deficits.

The depression of 1937 did not result from the tapering off of Government expenditures. It resulted from a complete collapse of the capital-goods industries, notably steel. That collapse occurred because Government policy had increased the price of raw materials, the amount of business taxes, and the rate of wages so rapidly that prices of services and manufactured products could not keep up. The result was that in the case of the railroads and utilities, where the prices of their services were fixed, the margin became smaller and smaller until all expenditures for capital improvement, and even for maintenance, had to be abandoned. Railroad orders, ordinarily taking 20 percent of the output of the steel industry, fell to nothing. Utilities had the additional disadvantage of the threat of Government competition. The hotel industry could legally raise the price of their rooms and food but found they could not sell them if they did, and their expenditures for maintenance were cut down to a bare minimum. Manufacturing industries were uncertain what the market would be at the advanced prices made necessary by increase in costs. They were uncertain whether these costs would increase further. The automobile industry was unwilling to make large investments in new machinery to make new models under this condition. There was no machinery production for domestic use for a year. The depression of 1937 was a direct result of Government policies which represented an attempt at a planned economy and its attendant tax burden, and not from the timid attempt to reduce Government expenses.

No one can deny that Government deficit spending creates a slight improvement in business while it is actually going on, but the effect is small and purely temporary. It puts men to work once on public works. The same amount spent for a new factory would give many men work for the rest of their lives.

A new and specious argument has been found—that in order to assure prosperity we must have a certain level of debt; that because we have less private debt today, we must arrange to have more public debt so that this debt structure may still exist. This theory appears in Mr. Eccles' speeches, the President's message, and in the articles of the more devout New Deal columnists. This seems the most extraordinary nonsense. Public debt and private debt are not comparable. Private debt is only incurred justifiably to build up an enterprise likely to produce far more income than is required to pay the interest on the debt. It creates new industry, and puts men to work in that industry. Public debt is incurred either for the purpose of paying deficits in current expenses, or in building public works, which usually result in increased Government expenditures for maintenance.

There is not the slightest necessity for a large debt structure. We could be just as prosperous with half the debt which now exists. Increased private debt is rather a result of prosperity than a cause of it. Public debt is likely to be a result of depression, and not a cause either of depression or prosperity. It is important that private funds be available to create debt so that industry may more easily expand, but the expansion results from individual initiative, invention, and enterprise, and from a prosperous, consuming nation rather than from increased debt.

As a matter of fact, the present condition of the country is eloquent testimony to the complete fallacy of the theory that a people can spend itself into prosperity. In 10 years we have increased our Government debt by more than $20,000,000,000, the greatest spree in the history of the country, and yet today there are as many unemployed as there were in October, 1933. Our national income in 1938 was about $60,000,000,000, 25 percent less than in 1928, when there were 10,000,000 fewer people. If recovery from the depression had been normal and unhampered by Government regulation, spending, and taxation, it ought to be $90,000,000,000 today instead of sixty.

The spending policy is vain. It is dangerous because our debt structure is becoming top-heavy. No doubt we can carry it today, but any reasonable prosperity will increase the rate of interest on Government bonds and increase our burden, which already is approximately $1,000,000,000 a year. If we should again become involved in a major depression or in another war, we would start from a new base so high that a slight addition to debt might make the entire structure top-heavy. Repudiation and inflation are not perhaps just around the corner, but they are infinitely nearer than they were. They would involve ruin to many millions of people, more to the poor than to the rich, and would certainly threaten the whole existence of our American form of government and life.

Even more than that, a Federal deficit-spending policy involves a deliberate deception. The people are taught in effect that all of the money paid out by the Federal Government, in contrast to that raised by local taxation, is really a present to the locality. They are led to believe that they are getting something without paying for it. They are taught to lean on the Federal Government and rely less and less on their own efforts and activity. Every former President, Republican or Democrat, has felt a deep sense of his obligation to keep the country out of debt as far as he possibly could, because he knew that such a policy was morally unsound, and ultimately destructive of the Government itself. But, instead of that, we see today a universal policy of public spending, used to deceive the people, and used for political purposes to secure votes for the spenders.

A complete change in Government policy, therefore, is even more essential today than it was before the President embraced so completely the spending program. Ninety-six men in the Senate and 435 in the House cannot possibly function as an executive, legislate intelligence and judgment into Government officials, or even work out a sound fiscal program of expenditure over Executive opposition. The Federal Budget presented by the President covers a thousand pages. It is almost impossible for Congress, particularly without a complete reorganization of the Government, to secure substantial economies without danger of wrecking essential services. Economy has always been the function of the President and can hardly be secured without his cooperation.

The only way to restore prosperity in the United States is to cure as far as possible the evil of unemployment. This can only be done by speeding up private agriculture, commerce, and industry to employ more people. Existing industry must be encouraged to expand. Individuals must be encouraged to spend their own time and their own money in developing new enterprises and new products. Roughly speaking, no one has invested either time or money in new enterprise during the past 5 years. Sometimes they have been willing to loan others money, but when it comes to taking a substantial risk, they have been discouraged by excessive Government interference with prices, wages, hours, and business conditions of all kinds. They have been discouraged by excessive and punitive taxation. They have been discouraged by Government hostility, and in many cases the threat of Government competition. It is beyond the power of Congress to change the attitude of the executive departments, or the manner in which many laws whose purpose is excellent are being administered. It is even beyond the power of Congress to change any regulatory or tax law, or abolish a department over the opposition of the President. The only solution seems to lie in a change of Executive control in 1940.

Congress, however, can, and I hope will, revise and correct some of the very obvious faults which have developed even in the more justifiable New Deal activities. Several programs for a reorganization of relief have been presented. Senator BYRNES, of South Carolina, would coordinate most of the relief activities in one department, and I believe that should be done, with the possible exception of the Public Works Administration. Mr. WOODRUM of Virginia has introduced a bill to return the administration of relief to the States, and with that theory I am in thorough accord. I believe that a Federal grant of about 75 percent of total relief expenditures should be provided for, with a Federal board authorized to increase this percentage in cases where unemployment is extraordinary or unusual poverty exists. I believe the grant should be conditional on the setting up of a nonpartisan administration of relief by the State legislatures.

Congress is now considering a complete revision of the Social Security Act. A commission appointed by the President has recommended a great reduction in the reserve fund. Other forms of old-age pension are being considered by Congress. There is general agreement that the present system, while excellent in purpose, has not produced social security, and is draining out of the country over a billion dollars a year, which is being invested in Government bonds and used to pay New Deal deficits. I believe that social security should be expanded to include some assistance to health work in the localities, but without socializing medicine, and without imposing an additional compulsory pay-roll tax to take care of health insurance.

Various amendments have been presented to the Wagner Act, designed to effect a change particularly in the manner in which that act is administered by the National Labor Relations Board. While the purpose of the act is highly desirable, and the right of collective bargaining should be protected by law, its administration has tended to increase labor disputes and deter the recovery of private industry.

No one is satisfied with the present farm plan, and numerous remedies have been proposed. How the administration can ever straighten out the complete mess which the cotton situation has reached is difficult to see. The Government now owns 11,000,000,000 bales of cotton, four times what the Hoover Farm Board owned, and the price of cotton has not been improved.

There is not a single field in which the actual operation of New Deal humanitarian agencies has met the views of those sincerely interested in its success. There is not a single field in which duplication and confusion does not exist. There is no one concerned with seeing that desirable activities are conducted in such a way as to assist the prosperity of the country rather than discourage all individual enterprise.

Congress is headed in the right direction. I hope before the end of the session the outlines of a program may be clearly defined to replace the dangerous conglomeration of good and bad activities of the present administration. But I see no hope of finally solving these problems as long as the President maintains his present attitude, as long as no reorganization of the Government is secured, as long as the spending philosophy, vitiating every good purpose, prevails in the seats of the mighty.

Relief

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1939

LETTER FROM MRS. ROMA (McKELVEY) McPHERSON, OF BATTLE CREEK, MICH.

Mr. HOFFMAN. Mr. Speaker, everyone, except possibly those on relief, is helping furnish the money which State and Federal Governments are handing out in one way or another.

Practically everyone knows, if he stops to think, that the practice which we have been following for the last 6 years of spending as a nation more than we receive cannot go on forever.

Many write me asking that I vote against Government waste and extravagance, improper appropriations, and this I have done. At the same time individuals and groups will write, insisting that I vote for particular appropriations in which they happen to be interested.

The only way that economy can be practiced is to cut down on appropriations. Unfortunately, while everyone wants a cut, no one wants it in the appropriation in which he happens to be interested. Because these groups write so many letters, some Congressmen continue to vote excessive appropriations.

Probably you are tired of hearing what I have to say about relief, so, to vary the program, I will quote here a letter from a woman 49 years of age, who owns a farm; who has had years of experience; who is a descendant of a French immigrant who came over in 1637 to avoid religious persecution; who is descended from the Revolutionary soldier Jonathan Quick, who was with General Washington at Valley Forge.

She quite evidently not only has good, hard common sense and is practical but she knows what she is writing about. Just read what this woman writes me. I quote:

R. F. D. 3, Box 187,
Battle Creek, Mich., January 24, 1939.

Congressman CLARE HOFFMAN,
Washington, D. C.

DEAR SIR: In re the black plague, and direct relief, as practiced in this era of the New Deal.

I believe the sick should be cared for, that those hungry, unhoused, cold, should have means of getting these things, and if there is positively no private employment for them, then they should have relief. That is, persons with dependents, of school age, and older persons, or those in ill health. But I do believe if this Government work were done under contractors obliged to employ those eligible for relief there would be more work done.

But why should two healthy persons, not too old, with no dependents be subjects of relief except as an emergency matter? I believe that most of them could find places of some kind in the city homes or on the farms for the work they could do or learn to do with small wage or at least full maintenance. But they will not do these things. Families unable to pay high wages would do this for the help received but they value themselves pretty high when they can get taken care of.

When you look out your window and see a group of men frolicking up and down the highway, dancing around a potfire, occasionally leaving this type of employment to take a wheelbarrow and dump it, that has been brought to them by another fat, young guy who ran it down the hill coasting fashion, then take up the firepot spatting game again, poking his fellows in the ribs occasionally, then grabbing a shovel and going forth to labor for a few minutes, back to the firepot, etc., through the day, you wonder where we are going from here.

I know one family case very well, and it is indicative of thousands of families throughout the land. This family worked for my family three generations ago, before I was born. The old folks worked hard, earned their money, spent it unwisely at times, perhaps, but it was earned money, raised a large and good-for-not-much family. Today every one of that family except one boy is on some kind of relief, and now the third generation is marrying and bringing children into the world as fast as possible in order to get their share of this good thing while it lasts; and they feel that it is to be a permanent thing. You cannot get one of them now to work on the farms. They "don't like to farm, rather work for Uncle Sam," and that is just what they are doing.

The farmers I know around here are up in arms about this relief, although few of them will sit down and write their Congressmen or do anything themselves to stop this thing. They cannot get adequate help anymore; and if any of these people do work, they want a wage higher than can be afforded on the farm and leave anything for the owner's own work and investment. The most of the old-time farm labor, the class who always earned their living working on the farms, is now on some form of relief.

The average laborer—that is, the man fitted for nothing else and who belongs in the class of labor permanently—takes his money when he gets it, goes out and buys a car of some kind and a radio, perhaps second-hand, perhaps new, and almost always on time. His rent may not be paid ahead, he may owe the butcher, the baker, the candlestick maker. None of that matters, except that he, too, must own a car and a radio. Nice things, both of them, if you can own them without gouging someone else to get them. He does everything else likewise.

He refuses work that he does not like. He may have some small private business of his own. He works at this in season, spending his money as fast as it comes. Winter comes along, warm clothes needed for the family, fuel, of course, food. No money. Spent during the summer. He hies himself to the relief station. He must eat. No work. He gets W. P. A. or direct relief. The rest of us who are paying the bill have to work to keep going whether or not the soles of our shoes are whole. But he and his family are cared for.

Young men and women of work age sit around home and eat off dad's tickets, direct or W. P. A. purchased. Probably they do not know how to do one single thing well, but try to get them to live with you for maintenance and learn something useful. They simply will not do it.

A 17-year-old boy was here the other day. Told me his mother and six children had been deserted by the father and that they were on relief. I gave him 2 bushels of potatoes and some money in advance for a piece of wood cutting he thought he might do; and it occurred to me that he would be better off here eating square meals and having a warm bed for a while until spring work opened, as he had no equipment for wood cutting. This morning he told me, "Ma didn't want him to do it. She wants me there to watch the baby when she goes away." Ten-dollar ticket every 2 weeks for food, he told me; coal also. The money I paid him in advance, I found, went to maintain an old car owned in the family.

Responding to an ad of mine in the local paper the other day, a mother called for her young son. She told me they were on relief, wished he had some kind of place. I had advertised for a third helper, was only offering $5 a month. Her boy knew nothing whatsoever about a farm, but she wrathily informed me that "anyone's time ought to be worth at least $30 a month." Worth a lot while the Government is maintaining them.

An instance from one relief family I know, shows the attitude of the generation growing up. In the family is a boy about 12 or 13 years old. I have a large number of thrifty and heavy-bearing black walnut trees. I offered Billy one-half of them, just to pick up my half and put them in my cellar, only having to carry them a few rods. He did not show up at the agreed time, but later was here with some of the family on an errand. Thinking perhaps the family would not transport him to the job, and feeling sorry for him, I told him to get a gunnysack from the woodhouse and go get himself some walnuts. He did not move. I asked him if he did not want them. He said, "Have I got to give you half of them?" That job of walnuts would have put all the clothes that child needed on his back for the winter, but he did not have to do anything for clothes; it is all provided.

Regarding the matter of returning relief to local control, I think a remark passed in our household the other day will illustrate the worth of that change. Jed Jones (it isn't his name, but he lives a drunken, lazy, illiterate man, single, but on W. P. A.). He will not work for the neighbors, at least not until recently since neighborhood condemnation is getting dangerous. Two years ago he came out with a good used car for which he paid $300, W. P. A. money; he frequents beer parlors and does as any of his class do who have more money than they have been used to. Our comment was, "Imagine Jed Jones going to the supervisor for help."

Our economic ship is going on the rocks if it is not already being battered to pieces by them. We who are trying to hold our own, and are tired of taking care of the unworthy cases, and the huge families that know no limitation in numbers, will have to help pull it off the rocks or we are going down with it. Back home the best thing we can do is to yell, and yell as loud as we can, about the way this thing is being conducted.

I wish this letter might put a few instances that are real into your hands. Probably you know as much as I do about it, but it is one of the things we back home might do, to give our Congressmen some idea of the way things are going on, and what we think about it.

Yours truly,

ROMA (McKELVEY) McPHERSON.

Sales Tax on Fuel Oil Would Penalize Farmer, City Man, and Industry

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1939

EDITORIAL FROM DODGE CITY (KANS.) DAILY GLOBE

Mr. HOUSTON. Mr. Speaker, fuel oil is playing an increasing role in American life. It does its part in speeding our mercantile marine over the oceans and in supplying power to the Navy which guards our shores. It powers Diesel trucks which bring better goods at lower costs to every householder, and it is the fuel of the fast stream-lined trains.

It lightens the burden of the householder, for it frees him from the hateful task of shoveling coal and carrying ashes, and it makes life more pleasant for his wife and family when he is away from home. It has become an everyday necessity, both in the farmer's stove and the city man's furnace. It has reduced the smoke nuisance in our cities.

Bills have been introduced in the Congress, both last year and this year, to tax this fuel out of existence. One pending measure would impose a 3-cent tax, the other 1 cent per gallon. In the first instance, a tax of 40 percent, in the other 12 percent. Such a sales tax cannot be justified as a reasonable levy for its effect and intent is simply to penalize one industry for the benefit of another at the expense of the overburdened taxpayer.

In order to show what the oil industry means to the State of Kansas, I insert in the RECORD, by unanimous consent, an editorial by Mr. J. C. Denious, editor of the Daily Globe, Dodge City, Kans., and member of the Kansas Senate, as follows:

[From Dodge City (Kans.) Daily Globe]

OIL AS FARM RELIEF—A "BENEFIT" SYSTEM THAT HELPED WESTERN KANSAS THROUGH THE LEAN YEARS

The oil chariot lugged $20,000,000 into western Kansas in 1937, and deposited it upon the doorsteps of countless numbers of landowners.

How it feels to be on the receiving end of $20,000,000 in a bad year when harsh financial difficulties are arising from drought, depression, and regimentation can be described by the western Kansas landowner with deep conviction and lofty eloquence. The advent of the oil industry into the western counties of the Jayhawker State was a grand and glorious experience for the people of western Kansas.

The old story of the once profligate son who went to the distant city and made good, and then returned in time to save the old homestead for his aged and destitute parents, has its counterpart in this story of the oil chariot hastening at top speed into a distressed area and scattering in its wake a fabulous fortune for the relief of those who were feeling the ever-tightening pinch of hostile economic forces.

The oil millions which came to western Kansas landowners that year were in payment for oil leases, bonuses, and royalties. They were sufficient to pay the taxes on all the farm lands and farm improvements in the 61 western counties, and leave about $3,500,000 for interest payments and for new tires for the model T's. The income from oil in these counties would have repaid the annual expenditure for relief in the entire State of Kansas, and then there would have remained something besides to provide the modest fare of those forgotten souls who were still trying to make their own living without public aid. Had the Federal Government withheld all cash benefits and bonuses to Kansas farmers that year, the loss would have been less severe than the surrender of the western Kansas oil income.

In sharp contrast with public financing, the funds which the oil industry paid to landowners added nothing to the national debt. Neither the landowners nor the Secretary of the Treasury at Washington had to issue bonds nor sign notes to get the oil money for the farm people. The next generation will not have to pay it back. As current income, it has been collected and spent. A reasonable prosperity for the oil industry would keep it coming through the march of years.

Residents of areas far removed from oil production have shared in the distribution of this princely fortune. Ford County, for instance, is not even close to wells that are producing oil in substantial amounts, and yet at the beginning of 1938 it had 207,744 acres, or 30 percent of its total acreage under lease. Since the average rental for leases is 75 cents per acre, Ford County landowners must have received about $155,000 in payments of rentals during the year. That amount would have paid 65 percent of all the taxes assessed against the farm land and farm improvements in the county.

Grant County, a smaller county, was even more fortunate. With 80 percent of its farm land leased in 1938, it received in rental payments about $222,000 which was more than double the amount of the taxes assessed against its farm real estate. Practically all of the counties in range 1, which runs north and south through Wichita, and those lying west of that range received a fair slice of the melon.

Even if all the oil revenues of the area had been limited to that single $20,000,000 year, so vast a sum would have stubbornly checked an economic decline in this great empire where earnings from grain production and livestock had been subnormal for several years. The fact is, revenues from oil leases has been a reliable source of income here for the past 10 years. In 1936 that income was about $15,500,000. In 1937 it was close to $20,000,000, and in 1938 about $11,000,000. The grand total for the 10-year period amounts to $97,000,000 in rentals on nonproducing acreage and bonuses for new leases.

Receipts from the sale of natural gas would make important additions to these estimates, for southwestern Kansas has the largest known natural-gas-producing area in the world. However, no income from natural gas has been included in the figures presented here. They include none of the salaries and wages paid for the drilling of oil wells and for their operation. Nothing is included for the purchase of supplies nor for the payments made for shooting rights where seismograph parties were employed. The funds described were accumulated solely from rentals, bonuses, and royalties.

At a time when agricultural production was skimpy, when markets failed to respond to the declarations of new statutes, when business lagged, when taxes multiplied—at a time when the present generation was engaged in its most desperate economic struggle—the oil industry quietly stepped in to assuage the strain in this western area.

And so in gratitude and in admiration, western Kansas humbly bows to the miracle industry which pays us generously for the privilege of revealing to us the hidden wealth of our own possessions.

Centenary of Frances E. Willard

EXTENSION OF REMARKS
OF
HON. U. S. GUYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1939

ADDRESS BY HON. U. S. GUYER, OF KANSAS, DELIVERED IN STATUARY HALL, FEBRUARY 19, 1939

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me in Statuary Hall, in the Capitol on the occasion of the celebration of the centenary of the birth of Miss Frances E. Willard:

Mme. President and fellow admirers of Miss Willard and her incomparable career of accomplishment, I want to thank you ladies for this invitation to address you upon the centenary of Frances E. Willard. It may be my only opportunity to speak in this historic hall, the old chamber of the House of Representatives. I certainly could not covet a finer subject or a more pleasing occasion. My only regret is that lack of time and limited ability prevents me from delivering a message worthy of the subject and occasion.

Permit me to suggest that Kansas, like all the later pioneer States, owes much to the State of Illinois. Kansas was settled very considerably by people from Illinois and particularly by Union soldiers attracted by the liberal advantages in homesteading extended to veterans of the Union armies. This is attested by the names of Illinois cities transplanted in Kansas. One county in my district has an Ottawa and a Peoria, the latter only the name now of a wide place in a country road. The principal product of Peoria, Ill., is not very popular in Kansas, and that may explain the superior development of Ottawa, Kans., one of the finest towns on earth with 10,000 good people and a thriving Baptist university known as Ottawa University.

But Kansas owes most to Illinois by reason of the early adoption by Kansas in 1880 of the principle and practice of prohibition of the manufacture and sale within the State of Kansas of intoxicating liquors, a policy which after over a half century of trial, Kansas again in 1934 reiterated its adherence by a brutal majority of almost 100,000. This policy was adopted in Kansas

by reason of the sleepless crusade that Miss Willard was then prosecuting against the liquor traffic. Miss Willard had many interests, such as woman suffrage, Christian education of girls, and peace, but her overmastering passion was the legal prohibition of the traffic in intoxicating liquors.

So, it is with great pleasure that representing Kansas in particular, I appear here today in this, the old Hall of Representatives, to do honor to Miss Willard, not only a superlatively great woman, an incomparable organizer of one of the largest and most perfect organizations the earth has ever known, but also a great, constructive Christian statesman, as well.

What is a statesman and what constitutes statesmanship? This is a hall where bronze and marble preserve the memory of statesmen and soldiers who have wrought for the welfare and happiness of their country.

One of the truest measures of a statesman is his ability to look into the future and predict correctly the effect of principles and policies when practically applied to the affairs of government; one who for the welfare of his country can mold public opinion to the degree that they finally crystalize their ideas and ideals into statute and constitution.

The might of Gladstone's statesmanship consisted in his uncanny ability to open the door of tomorrow and lead us through its portals to show us the glorious era of Victoria and the far-flung power of the British Empire.

The wonder of Bismarck's genius was that when he knocked at the gates of Destiny with his huge iron fist they swung ajar to reveal the fall of the third Napoleon at Sedan and the German Empire proclaimed in the heart of France in the Palace of Versailles—the German Empire that went down with William II in blood and fire in 1918.

The power of Webster consisted in the great grasp with which he tore aside the curtains that divide us from the future and pointed us to a "Union forever, one and inseparable."

The glory of Abraham Lincoln's statesmanship, which towered head and shoulders above his contemporaries, was the superlative quality which enabled him to see with the eye of a seer and a prophet that this Nation could not long endure "half slave and half free."

And if prophetic power signalizes the statesman, then Miss Willard possessed superlative constructive statesmanship, for she saw with true, prophetic vision that this Nation's highest attainment could not be reached without both men and women working together for their joint welfare. The nineteenth amendment was the answer to her prayer and superlative cooperation with other great women in the enfranchisement of the women of our country.

But the supreme object of her herculean efforts was the legal prohibition of the traffic in intoxicating liquors. Her career as a temperance and prohibition advocate began in the late seventies, becoming president of the National Woman's Christian Temperance Union. That organization became a giant power under the magic of her executive ability and organizing genius. That society had its roots deep in the heart of the country, and it became her superb empire over which she presided with quiet grace and unquestioned authority.

She began her temperance work about the time of the celebrated "crusades" in Ohio in the seventies. This was the first decade after the War between the States. That war, like every great war, was followed by a decadence of morals and an increase in crime. Just before the beginning of that war there were 11 States which had State prohibitory liquor laws, but after it was over, only one State had a prohibitory law, and that was Maine. There had been a great increase in the use of alcoholic liquor so the people who believed in such drastic laws had a monumental task to perform, and the great advance in prohibition sentiment from that time on speaks volumes for the work of Miss Willard and her W. C. T. U.

That organization had many departments thoroughly organized. They procured statutes providing for the teaching in the public schools of the effects of alcohol and narcotics upon the human system. They crusaded for State prohibitory laws, and at the time of the ratification of the eighteenth amendment in 1919 there were some 33 States with constitutional amendments or statutory provisions prohibiting the manufacture and sale of intoxicating liquors.

Then came the recession of morals and moral standards following the World War, and in 1933 the eighteenth amendment was repealed, and the country fell back into a hell of debauchery and drunkenness the like of which was unknown to this generation.

But I am sure if Miss Willard were here she would not be discouraged, for did she not see the same phenomenon follow the Civil War? It is but the forward and backward swing of the pendulum. Moral reforms do not permanently go backward.

It is true that many sinister influences have produced appalling conditions of crime and degeneracy. Literature and art of every sort have suffered along with other spiritual entities which reflect the soul and spirit of our national life. Books which have been best sellers have been so salacious that they could not be sent through the United States mail without violating the Federal statutes. Art! Has there been a canvas painted since the war which by its beauty and thought has caught the gaze of the public eye? With the exception of Borglum's creations at Stone Mountain and Mount Rushmore, which really challenge the massive grandeur of ancient Egypt, what has been done worthy of serious notice? Music? There never was a time when people were so famished for good music, yet you cannot turn on the radio without being feloniously assaulted by a nightmare of jazz.

The drama, or its substitute, the silver screen? Sensuality enthroned! Sex deified! Vice and crime lionized.

And how about the home life of our people? It has drifted far from the old standards, but maybe we'd better draw the veil on that.

I do not wish to leave the impression that I think that all of these calamities are the fruits of the repeal of the eighteenth amendment; but along with the moral decadence which inevitably followed the World War, the repeal of the eighteenth amendment was the most prolific cause of this deplorable condition. Crime statistics show an alarming increase in arrests for intoxication. In Los Angeles such arrests have increased 345 percent, while arrests for all crimes the country over have increased 41 percent, which in itself is an appalling record when we remember that the repealers promised a decrease not only in intoxication but also in crime in general. I think that one of the most appalling conditions connected with the repeal of the eighteenth amendment is the fact that there are more girls and women employed in places that sell liquor than there are girls and women in universities, colleges, and institutions of higher learning. Yet even in the old saloon days girls and women were not allowed to enter such places.

About the only encouraging aspect of these conditions produced by repeal is the complaints about such excesses coming primarily from the former advocates of repeal rather than from the drys, many of whom here in Washington tell me that the result in the end will be that prohibition is on its way back and that if it ever comes back it will stick for good. This emphasizes my statement that moral reforms do not go backward. You can never predict the result of such a reform until the last battle is fought. I do not believe the people of the United States will forever tolerate this enemy of our civilization, which is the most prolific cause of crime, waste, human suffering, disease, and general inefficiency.

In the World War we banished alcohol from the Army, from our camps, and from our fighting men. How much more necessary it is in such times of stress as we have in this great depression to put the brakes on alcohol. One of the most stupid and insane actions ever taken by the United States was to turn loose the curse of alcohol in the midst of a great depression to absorb over $5,000,000,000 of the money of the people for something that is worse than nothing; something that employs less labor for its product than anything else in the whole gamut of manufacture. I do not envy the burden that must rest upon the consciences of those who clamored, "Down with prohibition," and "From this hour the eighteenth amendment is doomed." The repeal of the eighteenth amendment was the colossal blunder of the present century; it was worse than a blunder, it was a crime against our civilization.

I refer to these conditions as paralleling what happened in the temperance reform in the life and experience of this great woman over a half century ago. But that did not appal her heroic soul, and today her spirit stirs in the hearts and souls of her devoted followers who meet here today to celebrate her centenary where a State which possessed a noble galaxy of greatness demonstrates its discrimination and emphasizes its choice of one of the loveliest characters as well as one of the most potent moral forces of the world in her time. Illinois has not so much honored Miss Willard as Illinois has honored herself in making such a noble choice to stand here in this hall of memory for all the ages to see the symbol of a great State and its appreciation of her who taught us "how divine a thing a woman may be made."

The Townsend Plan

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

LETTERS TO DR. FRANCIS E. TOWNSEND AND ARTHUR L. JOHNSON

Mr. OLIVER. Mr. Speaker, under leave to extend my remarks, I am incorporating herewith copies of the two letters which I have recently addressed to Dr. F. E. Townsend and Arthur L. Johnson, both of whom are leaders in Nation-wide old-age pension organizations. The letters are as follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., February 17, 1939.

Dr. FRANCIS E. TOWNSEND,
Townsend National Headquarters,
450 East Ohio Street, Chicago, Ill.

DEAR DR. TOWNSEND: For several days I have participated in and listened to the hearings now being held on proposed amendments to the existing social-security law.

I have been increasingly impressed with the necessity for presenting a united front before the members of the Committee on Ways and Means of all forces and organizations which believe that old-age dividends should be wholly administered and financed by the Federal Government.

It is my sincere belief at this juncture that unless a compromise is reached and a coalition is effected between the Townsend national organization, on the one hand, and the General Welfare Federation, on the other, then the Ways and Means Committee will use this split in forces and opinions as a logical reason for not extending favorable consideration to either H. R. 2 or H. R. 11.

Such a development will afford little solace or comfort to those citizens over 60 years of age in this country today who quite hopelessly face insurmountable adverse economic problems.

As we frankly estimate the situation today we must admit that no real differences exist between those who advocate H. R. 2 and those who believe in H. R. 11. Mr. Silva appeared in support of a gross income tax levy as a witness for the Townsend national organization. Mr. Bouma, legislative agent for H. R. 2, stated that any legislative vehicle which enacted into law the broad general purposes of the Townsend principle would satisfy him, and I assume that this is the official position of the Townsend national organization. Apparently nobody contends at this point that the $200 feature is paramount.

A house divided against itself will not stand. Labor is finding this true. Our cause will find it true. Our main objective is to convince this committee and Congress that the present old-age assistance and old-age insurance titles of the Social Security Act should be repealed and that in their place should be enacted a law which provides the essential points of both legislative proposals, namely:

1. A nationally administered and financed annuity.
2. A reduction of retirement age to 60.
3. A monthly annuity payment adequately large to provide work opportunities for those under 60.
4. A voluntary removal from gainful occupation of those over 60.
5. A tax medium widely distributed which provides a pay-as-we-go economy to replace the deficit-borrowing financing of the past decade.

I was present at the hearing today when you commented to the effect that if H. R. 2 could not be passed you would be opposed to the passage of H. R. 11 or any other bill. I believe that this is an unfortunate attitude, because the citizens over 60 need purchasing power now, and certainly legislation which makes this possible on a national basis should be favorably acted upon by those who believe in Townsend philosophy. Insecure people over 60 should not be sacrificed to a too determined adherence to any one bill or plan. If we cannot gain our goal in its entirety, let us at least make any reasonable start which may be possible.

I am addressing a similar request for harmony, conciliation, cooperation, and consolidation to Mr. Arthur Johnson, because I feel that both of you gentlemen are sincerely interested in reaching the objective for which we have all been striving during the past 6 years. I also feel that because I have never taken an arbitrary position with reference to any pension organization or personalities it is perfectly reasonable and proper for me to address you both in the best interests of the senior citizens of the Nation who today more than at any other time in American history need consolidated cooperation in their behalf.

The best interests of our citizens who believe in this philosophy require a disarmament conference of you leaders of these great national organizations.

Very truly yours,

JAMES C. OLIVER, M. C.

HOUSE OF REPRESENTATIVES,
Washington, D. C., February 17, 1939.

Mr. ARTHUR L. JOHNSON,
General Welfare Federation, Washington, D. C.

DEAR MR. JOHNSON: Events which have occurred during the past 2 weeks as hearings have been held on proposed changes to existing social security laws have convinced me that Dr. Townsend and you, as leaders in these great old-age pension movements, should forget your grievances of the past and consolidate your forces in behalf of the best interests of the senior citizens of this Nation and the Nation itself.

My observations of and participation in these hearings impel me to reach this conclusion.

The basic and fundamental issue at this time is not the personal animosity or the organizational differences of the two forces which you gentlemen lead. The issue is, however, whether or not our combined strength can persuade the members of the Committee on Ways and Means that the old-age assistance and old-age insurance titles of the social security law should be replaced with a national disbursement of social dividends to those over 60 wholly administered and financed by the Federal Government.

It appears to me that our House, which at the present time is divided against itself, is the first great obstacle for us to overcome. Certainly, if we cannot agree ourselves and present a united front in support of our own cause we cannot expect the members of this committee to change their views materially. It seems obvious to me that we cannot anticipate any other result if some reconciliation is not reached soon. Labor is divided. We are divided. Even on a united basis, the rank and file of the people have tremendous economic odds to overcome.

I have always been impressed with your sincerity in this cause, and I feel that your sincere desire for a successful culmination of this issue entirely outweighs any pride of authorship that you may properly have in either H. R. 2 or H. R. 11. Therefore, why is it not incumbent upon both Dr. Townsend and you at this point to reach a common meeting ground, forget the past, and march forward together in the best interests of the people who are asking for—

1. A nationally administered and financed annuity.
2. A reduction of retirement age to 60.
3. A monthly annuitant payment adequately large to provide work opportunities for all under 60.
4. A voluntary removal from gainful occupation of all over 60.
5. A tax medium widely distributed which provides a pay-as-we-go economy to replace the deficit financing of the past decade.

I am addressing a similar request for harmony, consolidation, cooperation, and conciliation to Dr. Townsend because I feel that both of you gentlemen are sincerely interested in reaching the objective for which we have all been striving during the past 6 years. I also feel that because I have never taken an arbitrary position with reference to any pension organization or personality, it is perfectly reasonable and proper for me to address you both in the best interests of the senior citizens of the Nation who today more than at any other time in American history need consolidated cooperation in their behalf.

The best interests of our citizens who believe in this philosophy require a disarmament conference of you leaders of these great national organizations.

Very truly yours,

JAMES C. OLIVER, M. C.

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1939

Mr. ANGELL. Mr. Speaker, I desire to speak with reference to H. R. 2, generally known as the General Welfare Act and also as the Townsend national-recovery plan.

This plan has two major purposes: First, to promote national recovery; second, to provide for our senior citizens 60 years of age or over.

Briefly, the plan provides:

First. For the retirement of all citizens who are 60 years of age or over from gainful employment, who desire to avail themselves of the privileges of the plan. Acceptance of its terms are not compulsory. All citizens who have attained the age of 60 years and who are otherwise qualified may receive the annuity provided by this law.

Second. For the levying of a Federal tax of 2 percent on all monetary transactions, collectible monthly.

Third. The tax revenues thus collected are to be distributed pro rata among all citizens who qualify under the act.

Fourth. The moneys thus paid to annuitants must be expended for American-made goods within 30 days from time of payment.

It has been estimated that there are some 8,000,000 Americans over the age of 60 years who could qualify under this plan, and that half of them are employed in gainful pursuits. This would provide jobs for younger workers, and thus reduce the unemployment rolls by some four millions. The forced spending of these funds would immediately release in the channels of trade a tremendous sum of money which would provide buying power not only for the purpose of relieving our distressed senior citizens but would at once put to work great numbers of other workers in providing the necessary goods, which, under the provisions of the act, must be manufactured or fabricated in the United States. It would mean that the laborers in the woods, in the fields, in the mines, in the shops, in the stores, as well as professional workers, would find market for their goods or services.

It is believed that the effects of the operation of this legislation would not only be manifest after the stream of funds began to find its way into the channels of trade, but would be operative even before that time by reason of the fact that merchants and manufacturers would immediately upon the passage of the act begin operations to supply the commodities which would be in demand at once when the funds were available for spending. This would be imperative by reason of the requirement that the funds received must be spent within 30 days. It therefore would not only at once afford relief to manufacturers and dealers in consumable goods, but the durable goods industry would at once be forced to expend large sums in equipment in making ready to supply the needs

of this new group of customers. It is believed that these incentives given to business and the increased volume of trade would largely absorb the transaction tax.

The keen interest in the adoption of this plan is apparent throughout all sections of the United States. Many States in the Union have memorialized the Congress to call a convention to adopt the Townsend plan or to pass legislation putting the Townsend plan into effect.

On November 8, 1938, at the general election held in the State of Oregon, there was an initiative measure on the ballot authorizing and directing the Legislature of the State of Oregon to apply to the Congress of the United States for a convention to propose the philosophy and purpose of the Townsend National Recovery Plan as an amendment to the Federal Constitution. This measure was adopted. Pursuant to this measure, the State Legislature of Oregon recently adopted House Joint Memorial No. 1, carrying out the mandate of the people as expressed in that vote. A copy of the memorial is as follows:

House Joint Memorial 1

To the Honorable Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Fortieth Legislative Assembly of the State of Oregon, convened in regular session, respectfully represent that—

Whereas pursuant to the provisions of section 1 of article IV of the Constitution of Oregon, there was approved by the legal voters of the State of Oregon at the regular general election held on the 8th day of November A. D. 1938, an initiative measure entitled "A bill for an act authorizing and directing the Legislature of the State of Oregon to apply to the Congress of the United States for a convention to propose the philosophy and principles of the Townsend national recovery plan as an amendment to the Federal Constitution," which measure so adopted reads as follows:

"Be it enacted by the people of the State of Oregon:

"SECTION 1. The Legislature of the State of Oregon is hereby authorized and directed to make application to the Congress of the United States, not later than March 1, 1939, for the calling by the Congress, pursuant to the provisions of article V of the Constitution of the United States, of a national convention for proposing an amendment to the said Constitution to provide for the establishment and operation of the philosophy and principles of the Townsend national recovery plan, otherwise known and described as the proposed General Welfare Act of 1937 (H. R. 4199)"; and

Whereas pursuant to the vote of the people and the laws of the State of Oregon, the Governor of the State of Oregon did, by proclamation made on the first day of December A. D. 1938, give the whole number of votes cast in the State for and against the said measure, and declared said measure approved by majority of those voting thereon to be in full force and effect as the law of the State of Oregon from the date of said proclamation: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the senate jointly concurring therein), That in accordance with the direction of said initiative measure, the Legislature of the State of Oregon hereby does by this joint memorial make application to the Congress of the United States to call a national convention, pursuant to the provisions of article V of the Constitution of the United States, for the purpose of proposing an amendment to the said Constitution to provide for the establishment and operation of the philosophy and principles of the Townsend national recovery plan, otherwise known and described as the proposed General Welfare Act of 1937 (H. R. 4199).

Resolved, That a certified copy of this joint memorial be sent forthwith to the President of the United States and the President of the United States Senate, the Speaker of the House of Representatives, and to each of the Members of the congressional delegation from the State of Oregon, and that the secretary of state hereby is instructed to transmit the same.

Relief and Unemployment

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

RADIO ADDRESS BY HON. ROBERT G. ALLEN, OF PENNSYLVANIA, FEBRUARY 9, 1939

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the Columbia Broadcasting System, Thursday, February 9:

There are two problems confronting Congress today which transcend all others in importance. The first problem is domestic and rests in our depressed economic conditions, particularly in the unemployment of 11,000,000 of our people. The second problem relates to our foreign affairs and to the position which America must assume in a chaotic and belligerent world. One cannot belittle the importance of either problem, but I submit that the more critical of the two is that which prevails right here at home. It is the duty of this Congress to consider national problems according to their relative importance. You will agree with me, I am sure, that there is far greater danger in our disturbed internal affairs than in troubled world conditions. It is the prime patriotic purpose of every American to preserve this democracy of ours and its institutions. I gravely fear that if our domestic affairs are not put in order in the near future we will have no democracy to defend 5 years hence. In my considered judgment, 11,000,000 jobless Americans—jobless through no fault of their own—present a far more vital problem than a remote civil war in Spain. Horrible as the Japanese invasion of China has been and reprehensible as it is, I am far more concerned with the revival of American business, the prosperity of 30,000,000 American farmers, restored opportunity to American youth, and greater security for the old people of this Nation. Repugnant as the aggressive attitude of Hitler and his Nazis may be to us as individuals, we must recognize that it is our duty to fix attention on the unsettled conditions in the United States. These very conditions are a fertile breeding ground for nazi-ism and communism. From these enemies within our gates we have far more to fear than from an imaginary enemy across either sea. Instead of criticizing foreign nations and their governments, we had better indulge in a little self-criticism for our failure to regulate our own affairs.

In as comprehensible manner as time will permit, I would like to discuss the domestic problems which confront Congress, and their possible solution. For 6 years our Government has attempted to settle these problems in an easy and happy manner. Thoughtlessly we have continued to prime a leaky pump when we should have repaired it. Repeatedly we have reenacted emergency legislation which has no long-range value. Consistently we have refused to face unpleasant reality, and consequently nothing fundamental has been done in recent years to create a real and durable prosperity. Gradually we have become credit addicts, and now we realize that in the near future there will be no money left for dope. There just is no easy solution to our perplexing problems; the time is here, now, when we must tighten our belts and in a spirit of self-sacrifice get down to hard work.

Six years ago, 4 years ago, even 2 years ago, this Government could probably afford to appropriate huge sums of money for various purposes, because we felt that those expenditures were temporary and that with returning prosperity they could be reduced drastically. Even now the money we spend might not hurt so much if the end were in sight and if next year would find us in the Promised Land. The end is not in sight, however. Unemployment is nearly as great as it was in 1932, our national debt is assuming astronomical proportions, and business conditions are depressed at low levels. Congress can no longer assume the hopeful attitude that these conditions will correct themselves or that they will be corrected by the familiar pump-priming processes.

It is an easy thing to elaborate on America's problems and perhaps to criticize those in high office for acts of omission. It is a difficult task, however, to offer a sound solution to these problems. Compared with the difficulties which confront other governments and other people in the world today, I am convinced that our own troubles are relatively simple. They can be overcome if we, the American people, have the will to do it. If we were living in China, Spain, Germany, or in Italy, for example, our problems would really be baffling. In those nations there is a reason for poverty, unemployment, and chaos. Either their land has been exhausted through centuries of hard cultivation, or nature has not blessed them with abundant resources, or their machinery is antiquated and their labor force untrained. And to top it all, these nations have heavily concentrated populations trying to subsist on limited resources. Compare for a moment, their situation with our own here in America. We have countless acres of rich agricultural land. We have exhaustless natural treasures, the most modern machinery and a trained labor force which is second to none in the world. We have everything at our disposal to create wealth and achieve prosperity. I hate to think what historians of the future will write about this generation of Americans who had everything that generous nature can bestow but who were too selfish or stupid or blind to avail themselves of great opportunities.

There is a solution to our domestic problems. It requires common sense, hard thinking, return to reality and recognition of certain natural laws which we have disobeyed in the past. I do not pretend to know the answer in its entirety but I believe I do know the first step which must be taken. The Congress of the United States through one of its committees should invite the recognized leaders of business, labor, and agriculture to a conference in Washington in order to form a constructive long-range policy to reconstruct our crumbling economy. In my opinion, the President of the United States should have done this 2 years ago, but now I believe it is the duty of Congress to make the first move. No one will deny that the Government, industry, labor, and the farmers working together on a reconstruction program could bring immediate results.

As I see it, this program must be one of industrial expansion and increased production. After all, it is the production of goods and

services alone which create wealth. In this proposed conference I would endeavor to strike a bargain. I would ask business what legislative steps they wanted Congress to take or what laws they wished modified or eliminated in return for the reemployment of six or eight million men. I would offer the resources of the United States Treasury to aid business out of its slump. I would make it possible for small business concerns to obtain necessary loans through private agencies by Government guaranty of a portion of those loans. In return for this aid and cooperation from the Government, business must agree to reemploy so many men every 90 days. I would also have an understanding with business that as production increased and costs came down, selling prices would also come down and wages would be advanced, so that both labor and the consumer could share in the increased wealth which was being created, as well as business itself. In this way, the consumer, the laborer, and the businessman share equitably. No enduring prosperity will ever be realized unless this formula is recognized.

In considering these suggestions of mine, you will probably maintain that business will not reemploy men unless an immediate market for their goods is available. We must realize that business needs customers today more than anything else—customers with money in their pockets eager to buy. These men who will be reemployed will themselves, within a few months, become the customers which business needs so badly. When they have received their first pay checks they will commence to buy, and when they commence to buy, more goods will be produced to meet the demand. The employment of men in profitable enterprise has a cumulative effect. The buying power of one person helps provide a job for another. I firmly believe that if our Government, industry, labor, and agriculture would concentrate on some such program as this, we would be on the road to real prosperity within a year. The $80,000,000,000 national income mentioned by President Roosevelt on January 3 would become a reality. A program of this kind represents real pump priming in the field of productive enterprise and will produce more than a feeble trickle from the pump's snout.

You may question the administrative difficulties of developing such a program as I have suggested. Let me remind you that our Government a few years ago paid farmers a bounty for plowing under their crops and killing off livestock which they could not sell profitably. If a government agency can subsidize the destruction of our national wealth, a similar agency can certainly reverse that procedure and assist industry in some form for increasing production, for reemploying unemployed men and for cooperating in a program which will restore general prosperity to all our people. Utilization of our resources, full production and reemployment of idle people must be our battle cry from now on.

The American people have overcome seemingly insurmountable obstacles in the fields of science and engineering. A bridge now spans the Golden Gate in California and an Empire State Building rears its head above the skyline of New York as a monument to the material progress of our Nation. Space and time have been conquered by the genius of man. In the face of such progress our failure to conduct human and economic affairs becomes more tragic. Surely this same genius which has carried us to advanced stages in some fields can solve the domestic problems of the American people and guarantee a flourishing democracy for posterity.

Aviation and American Welfare

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA, AT THE NATIONAL AVIATION FORUM, FEBRUARY 20, 1939

Mr. RANDOLPH. Mr. Speaker, under leave granted to extend my remarks in the RECORD I include the following address delivered by me this morning at the National Aviation Forum:

Man's conquest of the air has shaken to its foundations more than one ancient faith. No longer can an insular nation rest in quiet within the embrace of an encircling ocean. No longer are the barricades of mountain ranges impregnable. No longer may noncombatants live securely behind the front-line trenches. No longer does the law of nations impose rules upon warfare.

In its twenty-fourth annual report, the National Advisory Committee for Aeronautics made this penetrating observation:

"The crisis in Europe in the fall of 1938 brought forcibly to world-wide attention the overshadowing influence of air power in international affairs. The realization that aircraft had been built in great numbers and developed to a point where they are capable of operating at high speeds over long distances with large bombing loads thrust upon the world a new concept of national defense. The imminent prospect of noncombatants being subject to indiscriminate attack by aircraft stirred the imaginations and fears of all peoples. The sudden and rather general appreciation of the potentialities of modern air power is the most significant event that has occurred in modern times in connection with strengthening the desires of peoples to avoid war."

Evident indeed it is that a desperate urge for peace has motivated many peoples and many statesmen during the stirring events of the past year. But evident equally it is that the growth of air power has contributed more than any single factor to the seeming inevitability of war, a war the disaster and terror of which surpass the most fiendish imagination.

NATIONS PREPARE FOR WAR

Therefore, while governments abroad seek feverishly to avoid or at least to postpone armed conflict, they are engaged in a mad effort to prepare for conflict. Their plans for defense, so carefully formulated during the years past, have suddenly to be revolutionized. Protecting oceans have overnight become cause for fear. For even as oceans protect a defender against the infantry of an attacking nation, so they protect the air force of an attacker against the vigilance and the weapons of defense. With bombing planes which can soar to immense heights, approach unobserved over the sea, and then with motors silent glide for miles until they have reached their objective, men may yet learn that the ramparts of ocean waves are more to be cursed than welcomed.

It is not surprising, therefore, that we, despite a location more fortunate than that enjoyed by any other of the world's powers, should have come to the abrupt realization that our ancient ideas of security must be modified and that we must look closely to the strength of our arms in the air if we are to discharge our obligations to those who come after.

In our present preoccupation with the necessity to provide fighting planes, we must not lose sight of the fact that military air strength is dependent in the final analysis upon the strength of civil aeronautics. It is true that in the first weeks of war that nation will be supreme which is best equipped immediately to people the skies with airmen ready to fight and to kill. But after the first weeks that supremacy will be lost unless that nation has the capacity for producing and maintaining, under the stress of war and at a moment's notice, a constantly increasing air force. That capacity can never be gained after war breaks out. It must be possessed ahead of time.

Bitter experience in the World War demonstrated the fallacy of the illusion that peacetime automotive industries can be immediately converted to airplane production. They can, of course, do much, but were we to rely even in substantial part upon them we would be courting disaster. The capacity for producing and maintaining an air force of the immeasurable dimensions which war will demand must be secured in peacetime through the creation of and support for factories which are devoted specifically and exclusively to aeronautics.

AIRCRAFT CHANGES RAPID

In the last war the development of aeronautics was, relatively speaking, embryonic. Nonetheless, the experience of 1914–18 furnishes lessons to which we must give heed.

Among those lessons, that which stands out is based upon the fact that the type of aircraft used on the western front changed so rapidly that each of the contending armies had at all times to struggle along with airplanes between half and two-thirds of which were obsolete. In the matter of single-seater pursuit planes alone, the British had during the war 27 different types, the French 31, the Italians 13, and the Germans 12. No sooner was one type developed than the ingenuity of technicians on one side or the other produced another and a better type. No sooner had the forces of one side secured superior equipment, than the forces of the other side produced something better. Technical genius, locked in titanic combat, can and will in a few weeks, and even in a few days, make obsolete the finest product that man has produced.

Therefore, I repeat that the air force possessed when war breaks out will guarantee strength for but a fleeting time. For the long struggle which modern war promises, strength must depend upon manufacturing capacity and genius.

I wish that I had the power to impress upon America so deeply that it could never be overlooked the implications of this truth.

As we scan the record of the last war we observe that during its first 3 years France was compelled to change its entire air program 18 different times; that even 6 months before the end of the war, with all the strain that had been placed upon its facilities during its herculean efforts in that dreadful spring of 1918, Germany placed seven advanced and different types of pursuit planes in the skies of the western front; that in a few short months after our entrance into that holocaust our own country was forced completely to reverse its rosy plans for producing aircraft on our shores because of the lightning speed with which inventive genius was improving and perfecting aircraft abroad.

Observe this single dramatic instance: In September of 1917 we contracted with a manufacturing company in this country for the production of 3,000 of a particular type of airplane. In October of that year this contract had to be canceled because it had been shown during the second battle of Verdun, in August 1917, that that type of plane had already become obsolete. The second battle of Verdun had occurred after the plane had been recommended, at the end of July 1917, for American production. Thus the conclusions reached by our experts, with the best advice which our Allies could give, were demonstrated within a few days to be out of date.

AMERICA MUST BE READY

Imagine, therefore, what our plight would be were we to face armed conflict once more without having manufacturing facilities so geared and prepared that they could turn out on the instant the latest in aeronautical equipment and could maintain the dizzy pace set by the inexorable demands of warfare.

To provide this capacity there is one, and only one, course that we can adopt. We must during peacetime promote and maintain civil aeronautics, providing for its constant growth and improvement, so that our factories can keep busy and make the necessary expansion, so that inventions may be availed of and improved, so that the skills of workmen and of mechanics may be developed and multiplied.

In a word, wartime supremacy in the air is based upon peacetime supremacy in the air. As the President says in his message to this forum—

"Civil aviation is clearly recognized as the backlog of national defense * * *."

Another page of history gives us a warning. More than 100 years ago Yankee genius produced the sailing clipper and our flag was borne proudly over the seven seas into the most remote ports of the world. But there ensued a long period of decline. Obscurant national policy and the ravages of civil war effectively swept from the waves the flag which had once so proudly flown. Finally we were forced to endure the humiliation, when we sent our fleet on its tour around the world, of having to depend upon foreign bottoms for supply; and our circumstances, when we faced the crisis of 1914–18, were miserable and shocking.

In the air we stand today where on the sea we stood a hundred years ago. But we are not unchallenged, and the question of gravest import to our national security of tomorrow is, "Will we permit our clippers of the sky to be sunk as ignominiously as were our clippers of the sea?"

CONGRESS TAKES ACTION

Last year the Congress took a step which, if adhered to and pursued, should go far toward guaranteeing that our air arm shall not be palsied. In the Civil Aeronautics Act of 1938 it was declared that a new Civil Aeronautics Authority would coordinate the regulation and promotion of civil aeronautics in order that there might be developed an air-transport system adapted not only to the present but to the future needs of commerce, the Postal Service, and the national defense. In its declaration of policy that statute sets forth in measured terms and with the foresight of brilliant statesmanship a purpose and an objective which should command the unswerving fidelity of the country for years to come. None of us should retreat one step from the course so wisely charted in that act. Upon faithful adherence to that course our national security depends.

In a modest way I devoted such efforts as I could last year to aid the adoption of the Civil Aeronautics Act. At that time I reminded my colleagues on the floor of Congress:

"The air-transport industry has become a vital transportation medium with incalculable promise to the future of commerce and to the efficiency of the Nation in time of possible military emergency."

My investigation and study of civil aeronautics and its potential contribution to the Nation's welfare lead me, with a conviction that grows with each new day's disclosure of the course of world events, to the conclusion that there are few investments more prudent than those our country can and should make in civil flying. Repeatedly I have sought to further those legislative measures which would promote the cause of civil aeronautics, because that cause is the service of our Nation. Fortunately there has of late been a growing consciousness of the significance of civil aeronautics to our future well-being. But this recognition should not lead us to lessen our labors to aid civil aeronautics in finding its proper place in our land. We should continue the fight with redoubled force.

NOT A WARLIKE COUNTRY

Ours is not a warlike Nation. Our tradition is a search for peace with our neighbors and for an opportunity in our own way to work out our national destiny. Our Nation was born of a spirit which offered the oppressed of all the world a haven of refuge. Prejudices and hates of other lands were consumed here in the great melting pot which has given us our distinctive character. From 1789 to 1939 this Nation has endured as a monument to peace and to democracy, and the teeming millions of our continent propose to maintain that monument in the centuries to come.

Our first duty, therefore, is to assure that we shall always possess the means to defend that monument. On the sands of Kitty Hawk a new means for that defense was given birth, but so also was a new means for attacking our ocean-lapped citadel.

So with new weapons of defense we must combat new weapons of attack, the possibilities of which are as yet quite unplumbed. We cannot sit by and permit others to explore those possibilities while our wings grow rusty and our propellers idle.

We must be alert to take every advantage of the air, to fill the heavens with pilots and with planes, to provide the factories and the technicians which we need, to inform our people of the myriad purposes which aeronautics may serve, to encourage them to use and to enjoy the benefits of flight. And with an aeronautical industry thus assured we may face the future with confidence. Let the genius of an enemy do its worst, we shall match him and surpass him.

The Library of Congress

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

Mr. CELLER. Mr. Speaker, a great deal, in the aggregate, has been said about the Library of Congress as a library—as the National Library—as, perhaps, the largest library in the world. It is a matter of pardonable pride for Americans to consider the Library of Congress in this light; and especially so for Members of Congress, whose name it bears and to whose needs it primarily ministers.

The bare statistics of the Library collections are bewildering. It is not my purpose to emphasize them. What I wish to bring to your attention is the extent and variety of services which the Library offers to Members of Congress. Here is an institution which is much more than a library, in the common acceptance of that term. Organized into 28 divisions, it offers services of the most diverse and inclusive character. The law library and the divisions such as the reading room, manuscripts, maps, periodicals, are constantly alert to make their specialized collections responsive to the demands that pour in on Members. Convenient study space is made available in the congressional reading room, in the various collections of law, and elsewhere throughout the great building, where Members who have need to examine a great mass of material can do so without turning their offices into miniature libraries.

But, specifically, I want to call your attention to the agencies in the Library which are available for active research on behalf of Members. I mention, for example, the law library, the bibliography division, the 16 professional consultants, the chief reference librarian, and particularly the one division which Congress has had set up for its own special assistance in this field—the legislative reference service. Here is maintained a corps of trained assistants whose sole purpose is to aid Members in the performance of their official duties. Free of the routine maintenance duties that necessarily tie down many of the divisions, the legislative reference service personnel stands ready, within the limits of its congressional "charter," to bring the resources of the Library to bear on specific problems presented by Members. When Congress, in 1915, reflected the current trend toward legislative reference service, and established an agency of its own in the Library of Congress, it thus defined the general functions of the new service:

> * * * to gather, classify, and make available, in translations, indexes, digests, compilations, and bulletins, and otherwise, data for or bearing upon legislation, and to render such data serviceable to Congress and committees and Members thereof.

Never has the importance of adequate research in the preparation of legislation been more keenly felt than in the past few years, crowded as they have been with events of far-reaching significance. And I desire publicly to express the appreciation of one Member of Congress for the assistance which the Legislative Reference Service has furnished. With no ax to grind, no special interest to support, it has carefully and expeditiously met the most diverse inquiries, to the great relief of our overworked office staffs, and the furtherance of the public business. In recent months, its translation service has been especially helpful to Members whose connections have brought them into close contact with European developments. The foresight of the Congress of

25 years ago in providing for this special unit in the Library of Congress convenient to its vast collections and cooperating with its many divisions is being amply rewarded.

It is without doubt true that the efficiency of this branch of the Library of Congress has been enhanced by the fact that the administration of the Legislative Reference Service from its very inception has been placed in the hands and under the control of the Librarian of Congress, who, as no other individual in respect of this particular service, is qualified and in a position to see to it that the Members of Congress are properly and efficiently served.

In this connection I should like to call the attention of the Members to Senate Joint Resolution 5, introduced on January 4, 1939, by Mr. CLARK of Missouri. This resolution, which in no way indicates the reason or reasons for its introduction, makes provision for the transfer of the jurisdiction of the Legislative Reference Service to the President of the Senate and the Speaker of the House of Representatives.

It will be recalled that a similar venture to transfer the said jurisdiction was made during the third session of the Seventy-fifth Congress. At that time an attempt was made to transfer the power of appointing the employees in the Legislative Reference Service from the Librarian of Congress to the President of the Senate and the Speaker of the House of Representatives. In the ensuing debate it was pertinently pointed out that it would be "an anomaly to think of giving to somebody outside the Library the appointment of certain persons who are going to function under the administration of the Librarian."

The proposed amendment to the appropriation bill was finally defeated on a point of order. It seems to me, however, irrespective of the motive which prompted the amendment, that the interest of the Congress will be served best if the Legislative Reference Service remain under the administration of the Librarian of Congress, where it has been since its foundation, in 1915. This arrangement has been most satisfactory to the Members concerned. Any proposed transfer of the jurisdiction at this time would mean not only to engage in a dubious experiment, but would also tend to undermine the discipline and efficiency of this service which has not been found wanting in the past. Perhaps, it would be pertinent to remark right here that the present incumbent of the librarianship, Dr. Herbert Putnam, as most of the Members know, has held this high office for the space of 40 years this coming March, and has held this trust with rare ability and distinction. We are happy to know that on his retirement, the Congress, the Library, and the general public will not be deprived of Dr. Putnam's expert services, since the law enacted last year provides for his appointment as Librarian Emeritus of the Library of Congress. It is a special privilege and a pleasure for me to testify that the services rendered by Dr. Putnam, with due consideration to those who have so capably preceded him, have been surpassed by none. May I add the hope that a kind fate may spare us this eminent public servant for many a year to come.

The Members of Congress have likewise been benefited by the splendid service and cooperation extended by Mr. John T. Vance the law librarian, and his able staff, including Mr. Benjamin O. Coleman, Mr. Harry C. Shriver, Mr. Harry C. Nail, and Mr. Marsh T. McCoy.

Of equally great benefit to us has been the Legislative Reference Service of the library, under the able guidance of Mr. W. C. Gilbert, acting director of the service, and his splendid staff of workers. These include Mr. W. H. McClenon, who is in charge of the Federal law section; Mr. R. E. Manning, in charge of the bill digest section; Mrs. M. G. Blachly, in charge of the current information section; Mr. A. Bernard, who is assigned especially to inquiries in foreign taxation and economic matters, as well as in the matter of translations from French; and Messrs. A. C. Schwarting and Karl Metz, both of whom are highly qualified for translations, especially from the German language into English.

General Rivers on Guam

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1939

SUMMARY PREPARED BY MAJ. GEN. WILLIAM C. RIVERS, RETIRED, UNITED STATES ARMY

Mr. VOORHIS of California. Mr. Speaker, the following summary of the cost to the taxpayers of America of establishing at Guam a fortified base was made by Maj. Gen. William C. Rivers, United States Army, retired, who served 11 consecutive years in the Philippines. Certainly it should receive the consideration of the House in connection with this most important matter.

THE COST OF AN ADVANCED SALIENT AT GUAM

If we now plan to hold the Philippines and Guam, the United States must dominate the northwest Pacific Ocean. (Our policy has been heretofore to dominate the eastern Pacific. Our principal authority on naval matters said to the Vinson Naval Committee on January 31, 1938: "The defensive line of the American Navy at the present time reaches from the Aleutian Islands to the Hawaiian Islands, to Samoa, and to the Canal.")

The admiral said again to the same committee on January 25, 1939: "A naval base on the island of Guam would be extremely valuable in augmenting the defensive power of the American Fleet."

THE COST

Congress allotted one and one-fifth billions for naval increase last spring. The statement of the admiral to the Naval Committee on January 31, 1938, was that the Navy would be "seriously inadequate to the task of sending a naval expedition to the Philippines"—even after the completion of the above increase. "I doubt if we could undertake such an expedition with three times the increase," was the admiral's conclusion.

The 1938 allotment for naval increase was one and two-tenths billions.

Three times that increase—still insufficient—three and six-tenths billions.

The probable additional sum required, one billion.

The total amount needed for naval increase, five and eight-tenths billions.

Some other costs are: For most of the nine new bases in the Pacific there will be needed underground fuel-storage plants, heavy guns manned by artillery soldiers of our Army, antiaircraft guns, and so on. Then there is the additional number of officers and men for the increased number of war vessels. We see, therefore, that we must estimate the cost of holding Guam and the Philippines as fully $8,000,000,000.

A great ocean contains a number of sea lanes. It is the mission of the fleet to control these sea lanes. In order to do this, many distant bases are required. However, most bases add to the number of the sea lanes. The more bases you establish the more sea lanes you mark out. The more sea lanes you must dominate the more long-range cruisers and battleships you must lay down.

Look at the matter in another way: If the United States Fleet dominates from Manila eastward to the mid-Atlantic, it will control the sea lanes over more than one-half the globe; over that part of the earth covering 200 degrees of longitude. Such a consummation will, naturally, cost a good deal of money. It leaves only 160° of the earth's circumference for the other nations of the world to control.

The Discovery of the Verendrye Plate

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1939

ADDRESS BY ELMER ANDERSON, JANUARY 18, 1939

Mr. MUNDT. Mr. Speaker, I ask unanimous consent to extend my remarks to include therein an address given

before the South Dakota State Historical Society on January 18, 1939, by Hon. Elmer Anderson, of Willow Lake, S. Dak. Mr. Anderson was a former member of the South Dakota State Legislature and during the winter of 1913, while serving as a member of this legislature, had the good fortune to be present when the famed Verendrye plate was discovered along the banks of the Missouri River.

This plate has great interest to students of history since it records the fact that the intrepid French explorer, Verendrye, visited the northwest in the year 1743 and claimed for France the great territory, including South Dakota, which has now become one of the most bountiful and productive farming regions of the world.

Mr. Speaker, and my colleagues, I give you the address of the Honorable Elmer Anderson, entitled "The Discovery of the Verendrye Plate":

THE DISCOVERY OF THE VERENDRYE PLATE

Dear fellow members of the State Historical Society, it is with much pleasure that I have the privilege of being present at this the annual meeting of the State Historical Society and to participate in its deliberations.

My many years of membership have inspired me with a feeling of love and respect for these loyal and patriotic members who are constantly gathering historical facts of the passing events of the times and recording them to the benefit of posterity.

It is of still greater interest to me to have the privilege of relating the small part that fell to me on that mild and pleasant winter Sunday afternoon, the 16th day of February 1913.

Though a quarter century has passed since that day, this is the first opportunity I have had to relate fully before this body the humble and insignificant part that I played in the finding and the identification of the Verendrye plate. Passing time has marked me with threescore and ten years, but I still vividly recall the pleasure and keen delight that I felt in being personally connected with this important event. Providence dealt kindly with me in so designing the course of events in my life and so directing me on that day that I should be at Fort Pierre not far from the spot at the time the Verendrye plate was found.

Many others have, with much more ability than I possess, explained to you the significance of the Verendrye plate, how it had been deposited by a French explorer in the eighteenth century on the crest of one of the hills overlooking the Missouri near its junction with Bad River; how its existence and approximate location had long been known from the reports made by that explorer, and how its discovery served to verify some of South Dakota's early history for which these reports had been the source. My little part in the finding of this plate can be briefly told, for it was purely a case of coincidence and my connection is of practically no significance to anyone except myself.

During the winter of 1913 I happened to be in Pierre serving as a member of the State legislature. The legislative work, as usual, had been strenuous, and on this particular day a fellow member of the legislature, the Honorable George W. White, and I decided to take advantage of this day of rest by seeking recreation in the form of an outing. It was a beautiful, balmy, springlike day, and we agreed upon the plan of crossing the Missouri for the purpose of meandering over and among the hills and bluffs on the Fort Pierre side of the river. Our mission was purely one for recreation and sightseeing and not a search for hidden treasures, other than the beauties of the landscape and the skyline.

We spent several delightful hours wandering among and over these hills, absorbing the sunshine and the mild spring air and enjoying the beauty of the broad valley and expanse of prairie on the one side and the silvery ribbonlike streams below us on the other. It is possible and very likely that we discussed the history of the setting in which we found ourselves, the little frontier town at the foot of the hills, and the herd of buffalo which was then pastured just beyond us to the west.

During the course of the afternoon we at one time slightly altered our direction in order to avoid a hill crest where a group of children were absorbed in play. We did not wish to disturb them, and little did we realize that those children were innocently participating in an event of historical significance and importance.

As the afternoon passed away much too rapidly, Mr. White and I made our way back toward the depot, for we were to return to Pierre on the ferry train. Our train was to leave the Fort Pierre station at 5 o'clock. With the nearing of that hour we approached the depot, and as we drew near we were met by a man and a boy. The man proved to be Mr. William O'Rielly, a resident of Fort Pierre with whom I had become acquainted during a previous session of the legislature. The boy was his son, George. Mr. O'Rielly carried in his hand a rather small, dark, flat object which he rather hurriedly handed to me as we exchanged greetings. He explained that it had been uncovered by the group of children playing on a nearby hilltop, and his boy, who was among them, had brought it to him. The object was a metal plate which bore evidence of obscure and indistinct markings and engravings of unfamiliar form. Mr. O'Rielly expressed the belief that it might have value, and he asked our opinion on the matter. I rather hastily surveyed the plate, picked and scratched at some of the grooves and indentations as the others looked on. After removing considerable grime and encrusted gumbo soil, the engraving in one spot revealed a series of numbers which careful scrutiny proved to be 1–7–4–3. These numbers were immediately established in our minds as indicating the year date, 1743.

I then handed the plate to my companion, Mr. White, who continued to scratch away the caked rust-like covering until he had made vaguely distinguishable some of the other marks and indentations. We were then able to vaguely recognize a part of the engraving as the word "Verendrye."

It was at once evident that we had in our possession an object which had long been sought in connection with the verification of white man's first visit to this region. We explained to Mr. O'Rielly that we believed this metal plate to be a thing of considerable historical importance and value and we asked his permission to carry it with us on our return to Pierre in order that it might be more carefully examined by the secretary of the State historical society.

Mr. O'Rielly politely but firmly refused our request so we returned to Pierre without the plate.

After we had arrived at Pierre we contacted by telephone Doane Robinson, secretary of the State historical society and to him related our experience in connection with the finding of a lead plate at Fort Pierre. He was very much interested and expressed the belief that it might be the long-sought plate buried by the early French explorer.

The following morning Mr. Robinson and a group of friends visited Fort Pierre to confer with Mr. O'Rielly and to examine the plate. After careful examination this group identified the plate as the one deposited by the French explorer, Chevalier de la Verendrye, on the 30th day of March in 1743.

This plate had been deposited by the Frenchman to betoken the claim of France to this vast inland wilderness by right of first exploration. For 170 years it had lain there in its shallow earthen depository gathering not only a distinguishing crust from the elements but also veneration with the passing of time. For a century and a quarter it almost alone marked the advance of white man into this region. Then after the establishment of the settlement at Fort Pierre it remained for another 40 years a concealed proof of the veracity, the courage, the loyalty, and the daring of that bold subject of the King of France.

The passing of 26 years has not dimmed in the least the pride which I feel in having been so closely, yet so unimportantly, associated with the finding of that historical document—a document which had long been eagerly sought as the missing link in the chain of facts in the early history of this section of our continent. The finding of it has definitely proven to be a link connecting the Old World with the New and the past with the present. The plate is owned by the State Historical Society and is on display in its museum.

I am justly grateful for this opportunity to relate my connection with this historical event to you, my fellow members of the South Dakota State Historical Society.

INSCRIPTION ON THE VERENDRYE PLATE

Obverse: "In the twenty-sixth year of the reign of Louis XV, the most illustrious Lord, the Lord Marquis of Beauharnois being Viceroy, 1741, Peter Gaultier de Laverendrie placed this."

Reverse: "Placed by the Chevalier de la Verendrye Louis Joseph (Verendrye) Louis La Londette A. Miotte March 30, 1743."

Organization of the District of Columbia Government

EXTENSION OF REMARKS

OF

HON. AMBROSE J. KENNEDY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

Mr. KENNEDY of Maryland. Mr. Speaker, the public press has had much to say in recent days on the question of better organization for administration of local government affairs in the District of Columbia. The discussion has centered around a proposed plan of organization presented for the consideration of the District Committees of the two houses in a report commonly called the Griffenhagen report.

This report is now available in printed form and copies can be secured from the House document room. I earnestly beseech the Members of this body to secure copies and familiarize themselves with the contents of this report so that they may be informed in connection with any bills that may be introduced on the subject and may know how to respond to requests for their votes for or against any such measures. The essence of the proposed plan is presented in 21 pages of language that is clear, concise, and easy to read

and understand. For those who wish to go deeper into the subject, further details are presented in supplementary schedules. A good general idea of the proposed plan can be secured from this report in less than half an hour.

As most of you, no doubt, are aware, the study on which this report is based, has been in progress for the last 9 months under the auspices of the two District Committees, of one of which I happen to be a member. We availed ourselves of the counsel and technical assistance of the organization of Griffenhagen & Associates. This organization has been engaged for 28 years as consultants in public administration and finance serving the National, State, municipal, and other governments throughout the United States and Canada. Its findings are deserving of respectful attention.

No doubt most of you, in reading the report, will find details with which you do not agree. That is the case with me and with my colleagues on the committees and is not at all surprising. It is heardly to be expected that anyone could develop such a comprehensive plan, comprising so many details, affecting so many vital interests, and involving so many controversial questions on which everyone could agree on first reading.

I ask you to read the report with open minds, with the idea foremost that here is a serious and earnest attempt to provide a sound and practical solution to a problem that has baffled those interested in local government in the District for many decades. It is entitled to serious consideration.

I ask you to study the plan as a whole, that you reserve judgment on any details with which you are not in agreement until there has been full opportunity for discussion.

Please remember that each recommendation is based on careful reasoning and that you may find the reasons cogent enough to overcome your first impressions when the matters have had full discussion. But as to any real questions on which you may remain unconvinced I ask you to direct your attention to amendments in such details rather than to oppose the whole plan.

It is not proposed nor intended that the plan presented be adopted in the exact form in which it is presented, nor in any form until after there has been full and free discussion to bring out the merits and demerits of the plan as a whole and in its many parts. For this purpose the reorganization subcommittee of the House District Committee, of which I am chairman, plans to go exhaustively into the report and to hold a series of hearings at which all points of view may find full expression.

We desire at this point to make grateful acknowledgment to the chairman of the Senate Committee on the District of Columbia for his offer to appoint a similar subcommittee to cooperate on the Senate side in the study of the report and the preparation of a plan for putting it into effect.

On the basis of compromise as to any controversial points on which reconcilement of conflicting points of view are impossible, it is intended to propose legislation to make effective the most desirable plan that can be evolved. It is to the question of an informed reception of such proposed legislation when it is introduced, that my remarks are now addressed.

It is hardly necessary for me to go at length into the circumstances leading up to the report I am now discussing. It is a matter of common knowledge that the District is operating under a form of government that was adopted over 60 years ago. In all these years as new activities have been taken up, new agencies have been established to carry them on. Furthermore, numerous special authorities, advisory boards, and coordinating committees have been established. These various agencies have been set up in all sorts of ways, with little thought of fitting them into any common plan. Some of them, exercising local government functions, are parts of Federal Departments, some definitely parts of the District municipal government, others of hybrid forms are partly Federal and partly local with little regard to their place in any planned system.

The result of all this is a hodge-podge, a conglomerate mess of agencies operating in all sorts of degrees of independence of each other, without possibility of a common plan or unified operation. Through lack of a local governing authority clothed with adequate powers of local government, the Congress of the United States has been compelled to act as a city council for the District and to set its ponderous machinery in motion in matters of the most trivial detail of no national interest whatever.

This confused and complex situation has been recognized for years as calling for corrective action. Again and again, studies have been made and plans have been evolved for improvement, which have gone for naught, for lack of sufficient interest to press them to conclusion in the Halls of Congress.

The situation is ever becoming more and more acute, the demands of an aroused citizenry of the District for relief ever more insistent. It is urgently to be impressed upon you that now is the time for action. The excellent plan now in the hands of the committees and soon to be placed before you, perhaps in modified form, should not be ignored as have those in the past.

It is important, in this connection, to bear in mind that the plan for modernization and simplification of the organization structure of government for the District has no necessary relationship with the movement for voting representation for the District. The two matters should not be confused. There is need for an effective and economical form of government structure, whether or not representation is given to the residents. The two movements are not in conflict. Neither should either one be tied up with the other and made to depend upon it. Each can be considered without the other, on its own merits.

Shall We Quarantine The Aggressors?

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

ADDRESS BY HON. JOHN M. COFFEE, OF WASHINGTON, FEBRUARY 17, 1939

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herein an address delivered by me at a well-attended meeting in Philadelphia, featuring a debate between myself and Senator NYE, of North Dakota. The meeting was held under the auspices of the American League for Peace and Democracy. Senator NYE upheld the negative and I the affirmative of the question "Shall we Quarantine the Aggressors?" Because I believe the subject matter to be particularly pertinent to any study of the world situation, I am placing it in the RECORD. The address is as follows:

Mr. Chairman, fellow citizens, and members of the radio audience, at the outset I wish to compliment Senator NYE upon the excellent work performed by himself and his famous Munitions Committee in exposing the shoddy racket of the "merchants of death" in promoting sales of munitions, in fomenting revolutions, in propaganda, and likewise the underhanded methods of international bankers. Senator NYE and I are warm personal friends, and in agreement on many matters of legislation. Particularly do we frequently, heartily, agree in our protagonism of measures designed to solve the internal problems of our common country. Hence, I hope it will be understood that there is nothing personal here in our pleasant interchange of observations anent the international situation.

I congratulate Senator NYE on having championed the cause of those who advocate the lifting of the embargo against Spain. With that viewpoint I am in hearty accord.

NO PARALLEL BETWEEN NOW AND OTHER TIMES

No parallel can fairly be drawn between conditions now prevailing in a tragic world and those which obtained at any other time in the history of the universe. We must view the international scene objectively. We must not allow our natural partisanship for America to be colored or tinctured by a refusal to recognize that we are living in a world gone mad; that savages are running amok, yet savages who are in control of powerful

governments; that following the World War the Treaty of Versailles created conditions favorable to the establishment of totalitarianism in the "have-not" countries. We must accept a measure of blame for the harsh terms we imposed upon defeated nations in the World War. Exultant in victory, the Allies imposed upon their stricken victims requirements so extreme, indemnities so great, that despair and chaos inevitably ensued in the countries affected. The Allies prepared the soil and thus fertilized it for the sowing of the seed of fascism, the fruitage of which we have viewed with misgivings in recent years. I do not condemn so much the demoralized citizens of these countries for having accepted the plausible preachments of the oratorical champions of the new order. I do deplore the failure of the Allies to recognize the danger, and circumvent it while there was yet time.

TREATIES MEAN NOTHING TO THE FASCISTS

The dream of Woodrow Wilson, the League of Nations, might have succeeded had we been a member, but without force in the form of an army and navy with which to carry out its decrees, it was foredoomed in any case to impotence. In 1922 we saw its first defeat, when Mussolini seized and occupied, on a pretext, the island of Corfu, a Greek possession. The League bitterly protested, but to no avail. Since that time international treaties have become scraps of paper, solemn covenants have been repudiated with impunity. We have witnessed the rise of fascism. The shadow of the swastika has been growing longer across the map of the earth. The cloud of the fasces daily grows darker.

The Treaty of Versailles has been broken; the Naval Disarmament Treaty of 1922 has been ignored; the Nine Power Pact, guaranteeing the territorial inviolability of China, has been shattered; the Kellogg-Briand Treaty, declaring against war as an instrument of national policy, to which more than 50 nations were signatory, has been flagrantly flouted; the "open door" in China has been closed by Japan. The famous 14 points of Woodrow Wilson, upon the basis of which the Central Powers agreed to capitulate to the Allies in 1918, have become a nebulous ghost of the past. The League of Nations is now a floundering, inept, sterile body of diplomats, engaged in feeble oratorical contests. Bluff and gusto have become the order of the day. The international gold standard is gone; Fascist powers operate on fiat money; the light of learning burns but dimly amid the dark night which some think presages a return to the Dark Ages; minority races are persecuted; religions are scorned and sneered at; Jews are flailed, tormented, and insulted. We witness the rise of the power of the sword. The Bill of Rights is being stamped out. Culture and learning are ridiculed. The product of the ages, of art and research is being burned and destroyed; the democracies of the world which were begat, for the most part, in the last two centuries—in the face of economic disorders, problems of the machine age, commercial competition, overproduction—are succumbing to fascism.

DEMOCRARY IS DISAPPEARING

Call the roll of the once-proud democracies of Europe. Where are they now? Portugal, Fascist; Spain, Fascist, in all but a small sector still held by the Loyalists; Italy, Austria, Germany, Poland, Estonia, Latvia, Lithuania, Greece, Turkey, Japan, Hungary, Rumania, Bulgaria, Albania—all Fascist! What do we find in Central and South America? The two Negro Republics of Haiti and Cuba—dictator-controlled. In all of South America but three republics still retain some attributes of a true democracy. Of the five republics of Central America, south of Mexico, we find but one which is not totalitarian.

Fascism is creeping with not too stealthy footsteps into Mexico and Canada, where drilled troopers wearing the silver shirt goosestep behind the swastika emblem, brazenly flaunting their contempt for the government of which they are resident. In the United States the German-American Bund and Silver Shirts, between them, boast of 100 camps, with a half-million membership. Screaming their hatred for the Jew and for organized labor, these psychopathic sycophants of the bellicose megalomaniacs of Europe, with consummate gall advocate the overthrow of the American Government, if need be, by force.

THE JEW, THE CATHOLIC, THE TRADE-UNIONIST, THE MASON, ARE PILLORIED

The Jew is not the only victim of the Fascist pogrom; already the Catholic Church has felt its menace. Let no Catholic delude himself that he can long escape the scorched-earth policy of the Fascist dictator. The wealth of the church attracts his covetous eyes. Organized labor has been extirpated in Japan, Germany, and Italy, and the countries under their sway. Next come the secret societies, the Masonic lodges; any organization which does not offer complete and supine homage will not be tolerated. They will all be "gone with the wind" because criticism of any kind is construed as laying impious hands upon the ark of the covenant.

Surveying such a mad world, shall we turn the other cheek? Do we think that we can emulate the ostrich and hide from evil by sticking our heads in the sand? Do we think the forest fire will make a detour as it approaches our home property? I contend that the proper way to fight a forest fire is to build a back-fire. Meet it before it reaches your house and engulfs it. When one observes a tidal wave approaching, he doesn't wait until it submerges him.

CIVILIZATION ITSELF IS THREATENED BY FASCISM

Ethiopia has been ruthlessly subjugated. The islands in the Mediterranean have been forcibly seized. Austria has been conquered. Czechoslovakia has been dismembered. Spain has been inundated with blood, and is about to be converted involuntarily into a Fascist puppet state. In the Far East that slumbering giant, old China, has been invaded, its women, its children, and its old men cruelly bombed and blown to bits. China has ever sought friendship and peace, but the philosophy of Confucius has been answered by the weapons of Mars. From tri-motor Italian planes, flying 20,000 feet up, have fallen 2,000-pound TNT bombs, dropped by Fascist aviators upon hospitals and churches. Too high to be seen or heard from the ground. From airplanes machine-gun bullets have pursued the fleeing refugees, as the women and children, half-starved and ragged, attempted to find safety. The bravery in which the Fascist indulges is that kind of fortitude. Mussolini's son wrote in a recent book that it was the "cutest" kind of sportsmanship to shoot at these harmless women and children from an airplane.

SHALL WE IGNORE THE PRAIRIE-FIRE APPROACHING US?

Are we callous to the sufferings of the world? Are we immune to the fate of democracy everywhere? Do we think that because in the past we have escaped we shall forever be safe? To maintain peace for America, let us help expel war from the world.

When Spain is overrun and the French, the Moors, and the Italians, with a few Spanish Fascists, line the French border at the Pyrenees in the next few weeks, they will hurl a challenge to the French Nation to surrender the French Riviera, Savoy, Nice, give up the island of Corsica, evacuate Tunis, abandon French Somaliland, give up the railroad connecting Abyssinia with the seacoast, divide up its rights on the Suez Canal. That will be the crisis. What then? Will France give in? For the first time, then, we will find the Fascists facing us across the Atlantic. They will control the Canary Islands. If France does not give in, she must fight. Otherwise she becomes a third-rate power. The Fascists are masters at bluffing, but if they win enough booty by that method they won't have to stop at merely bluffing; they will be fortified and ready. Hitler has bluffed his way into the Saar Basin and the Rhineland. By gusto and bluster he has rebuilt the German Navy, reestablished the German air force, re-created the German Army—all in violation of treaty. The democratic nations stood back and watched him do it because none of them wished to go to war again so soon. The taste of the unspeakable carnage of the last conflagration still lingered unpleasantly on their lips. We are living in an epoch of brute force.

PRESIDENT F. D. ROOSEVELT FORESAW THE APPROACHING CRISIS

Let me recall to your minds the immortal words of President Franklin Roosevelt when he advocated a quarantine of the aggressors at Chicago in 1937. I quote: "The present reign of terror and international lawlessness began a few years ago. It began through unjustified interference of other nations, or the invasion of alien territory, in violation of treaties, and has now reached a stage where the very foundations of civilization are seriously threatened. * * * Innocent people and nations are being cruelly sacrificed to a greed for power and supremacy which is devoid of all sense of justice and humane consideration.

"If these things come to pass in other parts of the world, let no one imagine that America will escape, that it may expect mercy, that this Western Hemisphere will not be attacked, and that it will continue tranquilly and peacefully to carry on the ethics and the arts of civilization. War is a contagion, whether it is declared or undeclared. It can engulf states and peoples, remote from the original scene of hostilities."

Can any sane person argue that the covetous eyes of greedy dictators are not already cast in the direction of the richest Nation on earth? That heavily financed propaganda from Berlin is not being widely scattered throughout this country? With our enormous industrial production and store of gold, we may readily be the objective. Let us not wait for the attack; let us fight Indians with Indian methods; let us boycott the aggressor nations.

BOYCOTTS ARE WELL GROUNDED IN PRECEDENT

Our colonial forefathers boycotted Great Britain. They refused to buy the products of the mother country. They threw the tea into the Boston Harbor. When France acquired Louisiana from Spain in 1800 Jefferson wrote a friend that he would be compelled completely to embargo France because of the menace of such a neighbor. He even predicted we would have to war against her. But Napoleon needed money and sold this possession to us for $15,000,000. From 1807 to 1812, by nonintervention pacts and embargoes, the United States quarantined both France and Great Britain.

I advocate concerted action by the democracies to resist aggressors. We are citizens in a family of nations. We are inseparably a part of the universe. We must preserve the fruits of the Renaissance. We must resist turning the clock backward.

BOYCOTTS, NOT IMPOTENT DIPLOMACY, IS DESIRED

Notes and official protests have no effect in restraining an aggressor nation. We must boycott them; we must refuse to sell our products to them or buy the products they export to us. Since 1931 Fascist aggression has scored an almost unbroken record of success. Today it is supremely confident of its ability to get what it wants by the use of, or the mere threat of, force. H. V. Kaltenborn, America's foremost radio commentator on international affairs, states that "There is but one way—short of red war—to meet this challenge. That is the way of the white war of sanction and reprisal."

In 1937 Japan depended on the United States for 93 percent of her copper, 91 percent of her automobiles and parts, 61 percent of her petroleum and oil; half of her machinery and engines, 42 percent of her pig iron, and 60 percent of other iron and steel. There is no other country from which she could purchase it. Japan furnishes a perfect example of how independent action by a single country could effectively cripple the war-making power of another. Foreign exchange restrictions have left several million Japanese factory hands idle. The United States buys something like 90 percent of all the silk exported by Japan. An embargo on Japanese silk would at once create an economic crisis in Japan, for no other country can, or will, buy Japan's silk.

THE 1937 NEUTRALITY ACT HAS FAILED TO ACHIEVE THE END SOUGHT

I voted against the present neutrality bill. It fails to discriminate between the aggressor and invaded nation in international warfare. It applies restrictions alike to civil war. No other nation is so stupid as to allow conditions outside its country to cripple the freedom of action within the country itself. The neutrality law is responsible for the debacle in Spain in the sense that our embargo denied the recognized government opportunity to purchase essential war materials from us. We have furnished Japan already $300,000,000 in war material. Let us stop being partners of these ruthless butchers. Shall we continue to soil our hands in the blood of the poor Chinese?

THERE IS TREMENDOUS SUPPORT FOR A QUARANTINE-THE-AGGRESSOR POLICY

I quote Walter Lippmann: "If Great Britain and France fall before the menace which confronts them in Europe, and are no longer able to hold the western coast of Europe and Africa at the Straits of Dover, in Portugal, at Gibraltar, and down the African coast, then we shall find ourselves without the power to maintain our position in both oceans and, for the first time in our history, will become insecure and vulnerable." It is to prevent that situation that I advocate an embargo of the aggressors and concerted action by the democracies to resist now the onward march of fascism, through economic agreements, reprisals, sanctions, and deprivations.

In this respect I am following good precedent. All save one of the peace organizations of the United States advocate this viewpoint. In insisting upon this attitude toward Japan, I am heeding the precepts of every Republican Secretary of State for 40 years.

Six hundred and ninety out of seven hundred newspapers examined have editorially urged a boycott of Japan. It may be contended that such boycotts would cause war. Far from it; they would make impossible the carrying on of aggressive war; they would implement the League of Nations Covenant; they would revive respect for international law. Such an embargo was urged by the General Federation of Women's Clubs of America. It is backed by such formidable organizations as the Federal Council of Churches, the American Association of University Women, the National Board of the Y. W. C. A., the National Federation of Business and Professional Women's Clubs, the National League of Women Voters, the National W. C. T. U., the National Council of Jewish Women, the National Committee of Church Women, the National Women's Trade Union League, the C. I. O., the American Youth Congress, the A. F. of L., the Gallup poll.

No one wants war. All of us are trying to forestall war. Senator NYE and I are working toward the same objective. We want to remold "this sorry scheme of things * * * nearer to the heart's desire," but we propose different roads. The Japanese have a proverb, "There are many pathways to the summit of Fujiyama, but they all converge at the crest." Honest differences divide people on the subject. Such men as Earl Browder, of the Communist Party, and David Lawrence and Dorothy Thompson, ultraconservative columnists, and the Washington Star advocate the general doctrine of collective security and quarantining of aggressors; whereas Herbert Hoover, repudiating his former viewpoint; Publisher William Randolph Hearst, Mark Sullivan, Senator Rush Holt, and Congressman Hamilton Fish and Norman Thomas are all isolationists.

WE ARE ERECTING A FRANKENSTEIN

By selling munitions and essential materials of war to Fascist powers and paying exchangeable cash for their products, we are aiding and abetting the very aggression which 90 percent of us revile. We are strengthening the Fascists, daily adding to their ability to destroy us. It is farcical. After the Naval Disarmament Conference we quit building warships, relying upon the pledges of other nations. Now we are engaged in a feverish contest to build a navy and an air force the equal of any on earth, so that we will be in a position to defend ourselves when Fascist, if unchecked and unsatiated by the offerings involuntarily made by their victims, attempt to consume us. Their voracity is unlimited. It is ludicrous to supply these monsters with the means to destroy us and then build great armaments to defend ourselves from the Frankenstein which we, in part, have been and are creating.

Civilization is now at the threshold. Shall we permit it to be thrust into the abyss? There are those who cry "America for Americans"; "Keep our nose out of other people's business"; who cite George Washington's warning about foreign entanglements, but fail to quote his approval of such alliances to conquer emergencies; who prate of the Monroe Doctrine; who talk about the unpaid war debts owed to us by England and France; who sneer at "perfidious Albion." I do not exonerate these countries from blame for countless faults, but neither do I demand the pedigree of the coast guardsman who is in position to rescue me from a sinking ship. I accept aid. Where would America be had we not had Lafayette, Rochambeau, the Cound de Grasse, the French fleet, French troops, Von Steuben, and Kosciusko during the Revolutionary War? What was it stopped Napoleon in 1815? Concerted action of nations led by Great Britain resisting an aggressor. What stopped Spain in 1588? Concerted action of invaded nations resisting an aggressor. The same is true of Frederick the Great. With all her faults, Great Britain has been a bulwark of strength to America. France and Great Britain have been and are our first line of defense.

AMEND THE NEUTRALITY BILL

Therefore, I advocate that the Neutrality Act of 1937 be so amended as to permit the placing of an embargo against aggressor nations, as advocated by the National Committee for Concerted Peace Efforts, the aggressor to be determined by the President of the United States, backed by a majority vote of the Congress.

I join with the New York Times in supporting collective security.

DEMOCRATIC HUMILITY VERSUS FASCIST IDOLATRY OF NIETZSCHE

Twenty-five years ago, international bankers fomented sentiment for war. Today no one advocates war, but a clarion voice is rising in increasing volume from the throats of millions, demanding that we stop sending scrap iron to Japan, where it will be made into machine-guns, insisting that we no longer stand aloof incurring the hatred of the entire world, but take our proper part in it, lest we be engulfed and destroyed. Fascism is on the march. Its slogan is "rule or ruin." Brute force is its weapon; its morals are nonexistent; its religion is neopaganism; it worships the philosophy of Friedrich Nietzsche in his Thus Spake Zarathustra. We do not deify man. The democracies inculcate the doctrine of humility. They must draw their power from the people.

The very faults of the democracies are their justification. They are dilatory and inefficient, but whatever their faults the people derive the benefit of their virtues. One may be asked, "What is a democracy?" Let us measure them by the criterion of the Bill of Rights. Democracy is a precious idea, eminently worth preserving. We have only had a flickering of culture in a few centuries out of the entire earth's history; we must do all in our power to help preserve what it has been such a struggle to attain. Let us not see our brothers of the same governmental complexion snuffed out, and feel secure that we can remain untouchable.

Quarantine the aggressors!

Taxing Government Securities and Salaries

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

RADIO ADDRESS BY HON. JESSE P. WOLCOTT, OF MICHIGAN

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by the gentleman from Michigan [Mr. WOLCOTT] in connection with the American Forum of the Air last night:

Mr. Chairman, ladies, and gentlemen, the question tonight is Taxing Government Securities and Salaries.

In presenting the negative side of the question, I desire to clarify the position taken by the opponents of the several proposals. The bills before the Congress are supposed to be reciprocal in their character. It is proposed that the Congress grant authority to the States having income-tax laws, to tax the salaries of Federal officials and employees and the income from Federal securities. In turn, the salaries of State and municipal officers and employees, and the income from State and municipal securities are to be taxed by the Federal Government. Because of the decided advantage given to the Federal Government, it is doubtful whether this arrangement is reciprocal. The Federal Government would be given a profit of about $17,000,000, but the States would suffer a loss of about $96,000,000, due to increase in interest charges.

There is nothing reciprocal about this. Even my worthy and highly esteemed adversary, Mr. Hanes, in his statement before the special Senate committee, admits that there will be some increase in interest rates, but places emphasis on the fact that the increase will be moderate. Taxation will simply add to the burden of debt financing by the States. If the Government continues its present policy of investing Social Security reserves in current issues of Federal obligations, the disadvantage to the States of this so-called reciprocity will be proportionally increased.

The important question, however, is not, Shall these taxes be authorized? but one which goes to the very heart of the American form of government, How shall they be authorized?

All of the studies of these propositions recognize that a fundamental question of State sovereignty and independence is involved. It is the contention of the opponents that these tax proposals

can be effectuated only by an amendment to the Constitution. The basis for our contention lies in the recognized fact that the Congress cannot amend the Constitution.

Every United States Senator and Member of the House of Representatives is bound by an oath or affirmation, which must be given without any mental reservation or purpose of evasion, to support and defend the Constitution of the United States. This means that they are under oath to preserve our tripartite system of government, wherein the legislative branch makes the laws and the judicial branch interprets the Constitution and the laws.

The Supreme Court has repeatedly held that the salaries of State officers and the income from State securities are immune from Federal taxation. The Congress is not vested with authority to veto decisions of the Supreme Court in respect to constitutional questions. To give it this power would destroy the American form of government; it would destroy certain checks and balances, the maintenance of which has perpetuated our dual democracy for 150 years.

Concerning the constitutionality of the taxing of State securities by legislative enactment, the Supreme Court has held that the Congress has no power to include in a general income tax the income from State and local bonds. To do this would be to impose a tax on the power of the States and their subdivisions to borrow money, and thus be unconstitutional.

On the question of Federal taxation of the salaries of State officers, the Supreme Court has repeatedly held in a long line of decisions that the salaries of State officials and State employees engaged in functions indispensable to the maintenance of a State government cannot be taxed by the United States.

In recent decisions the Supreme Court has not reversed itself in this respect; it has merely clarified its precedents by establishing that State officers and employees engaged in proprietary functions not essential to the continued existence of the State government may be taxed.

The Department of Justice, relying upon these clarifications, now contends that because of the trend of these later decisions, the Supreme Court will reverse its time-honored conclusions. These conjectures on the part of the Department of Justice are insufficient for the Congress of the United States to predicate a reversal of its custom to respect the decisions of the Supreme Court.

The Department of Justice and the Treasury Department never have contended that these tax proposals are entirely free from constitutional doubt as to their validity. When Mr. James W. Morris, the Assistant Attorney General, presented his arguments before the Ways and Means Committee, Hon. DANIEL A. REED, of New York, a member of the committee, asked Mr. Morris this question:

"Do you personally entertain any doubt as to the constitutionality of the proposal which is brought here?"

Mr. Morris replied:

"I do not think I would be candid if I said that the question was one without doubt."

As late as last week, Hon. Robert H. Jackson, the Solicitor General of the United States, presented a brief to the Supreme Court on this subject. The question under consideration involved the right of the State of New York to tax the salary of an attorney of the Home Owners' Loan Corporation, a Federal agency. Mr. Jackson contended in his brief that the salaries of State employees are not immune from Federal taxation, but recognized that the Supreme Court has held on at least four occasion that the salary of an officer of a State or the Federal Government is exempt from taxation by the other. He attempted to distinguish between an employee and an officer. He admitted, that if as he contended, no distinction could be drawn between a State officer and a State employee, his position was contradicted by the decisions of the Court. He contended that the Court had committed error in previous cases, and asked that these decisions be reconsidered. In other words, he asked the Supreme Court to reverse a stand which it has taken for over 100 years; that the taxation of salaries of officers of the State and Federal Governments are constitutionally exempt from taxation by the other.

It seems to me that what the Court has clearly held is that an officer or employee of a State, performing an essential governmental function, is immune from Federal taxation under the United States Constitution; but where the State officers or employees are engaged in nongovernmental functions of a proprietary nature, the salaries of those employed in such activities, although authorized by State constitutions, are not beyond the taxing power of the United States. The position which we take, therefore, is that none of the recent decisions of the Supreme Court modify our contention that existing revenue laws tax the compensation of local officers and employees to the fullest extent permitted under the Constitution.

If the Supreme Court has held it unconstitutional to tax the salaries of State officers and the income and property of State and municipal securities—and I do not believe there should be much doubt about this—we cannot stress too forcibly the importance of adhering to its decisions.

There must be some basic foundation upon which men and governments may rely in day-to-day dealings. Recognizing this necessity, English and American courts, for at least three centuries, have always imposed upon themselves the duty of respecting their own prior decisions. The public, by custom and usage, has been taught to consider the decisions of the Supreme Court as enunciations of the established law of the land. To destroy the respect which our people have for Supreme Court decisions would be to undermine an integral part of the foundation of our American form of government.

The Court, by restricting its reviews to important problems, shows that it expects its own decisions to be respected by those who are not litigants before them. And that assumes that the Court, more or less, covenants to decide the next case in the same way.

Outstanding liberal Justices have recognized the necessity for strict adherence to the precedents established in and by our courts.

The late Mr. Justice Cardozo writes in his great work the Nature of the Judicial Process, "I think adherence to precedents should be the rule and not the exception."

In an address before the New York State Bar Association in 1932 he especially condemned those who impatiently brush aside the law of a century when it does not happen to fit in with their own predilections.

The Department of Justice, which asks that the Supreme Court reverse itself and hold these taxes to be constitutional, daily argues before the courts on other matters that precedents should be respected and followed.

Justice Reed, when Solicitor General of the United States, arguing before the Supreme Court, recognized the advisability of respecting the precedents of the Court when he said: "Certainly, the principle of the tax immunity of the sovereign itself is too firmly established now to be reexamined."

But even stronger is the language used by Mr. Justice Harlan, to express himself as follows:

"* * * While in a large sense, constitutional questions may not be considered as finally settled, unless settled rightly, it is certain that a departure by this Court from a settled course of decisions on grave constitutional questions, under which vast transactions have occurred, and under which the Government has been administered during great crises, will shake public confidence in the stability of the law."

Even in Shakespeare's time, the doctrine of stare decisis was well established. Bassanio says in the Merchant of Venice:

"Wrest once the law to your authority; to do a great right, do a little wrong."

And Portia answers:

"It must not be. 'Twill be recorded for a precedent, and many an error by the same example will rush into the state."

The eminent Judge Cooley in his Treatise on Constitutional Limitations says:

"A constitution is not to be made to mean one thing at one time and another at some subsequent time when the circumstances may have so changed as perhaps to make a different rule in the case seem desirable. * * * A court or legislature which should allow a change in public sentiment to influence it in giving construction to a written constitution, not warranted by the intention of its founders, would be justly chargeable with reckless disregard of official oath and public duty; * * *. What a court is to do, therefore, is to declare the law as written, leaving it to the people themselves to make such changes as new circumstances may require."

On a previous occasion the Congress of the United States was asked to pass a bill notwithstanding doubts as to its constitutionality, however reasonable those doubts might be. The people of the United States voiced their condemnation in no uncertain language. They sensed a danger to our democracy. The people of the United States do not want the Congress to tamper with the Constitution—they do not want it perverted or vitiated by congressional assumption or conjecture.

The stability of this Government is in proportion to the respect which our people have for the opinions of the Supreme Court. If evils and inequities exist, they must be remedied in compliance with and not in spite of the Constitution.

The Supreme Court has held that these tax proposals are unconstitutional. In consequence, the only way all the salaries of State and political subdivision officers and employees and the income from State securities can be reached by the Federal Government and all the salaries of Federal officers and employees and the income from Federal securities can be reached by the State governments, is by a constitutional amendment.

Wool Labeling Act

EXTENSION OF REMARKS

OF

HON. JOHN A. MARTIN

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

RADIO ADDRESS OF HON. CHARLES L. SOUTH, OF TEXAS, FEBRUARY 18, 1939

Mr. MARTIN of Colorado. Mr. Speaker, under leave granted by the House, I submit for the RECORD an address on the pending Wool Labeling Act made by my colleague,

Hon. CHARLES L. SOUTH, of Texas, over the system of the National Broadcasting Co. at Washington, D. C., Saturday, February 18, 1939.

The address is as follows:

Most of us who are at all familiar with the Wool Products Labeling Act of 1939 are in favor of its passage. The Interstate and Foreign Commerce Committee of the House of Representatives now has this bill under consideration, and a subcommittee recently appointed by Chairman LEA, of which I am a member, will begin hearings within the next few days on this bill, H. R. 944, introduced by Congressman MARTIN of Colorado. As the name implies, this proposed legislation will require woolen manufacturers, and others handling their products, down to and including the retailer, to disclose to the purchaser by means of labels, tags, or stamps, the fiber content of fabrics or goods which will be offered to the public as "woolen goods."

This bill proposes to afford the consumer of wearing apparel, and many other textile articles, a protection similar to that now given in another field by the Pure Food and Drugs Act, with which many of you are familiar.

The Wool Labeling Act has the Nation-wide support of various civic, farm, and labor organizations. Among others might be mentioned the General Federation of Women's Clubs, the United Textile Workers of America, the National Grange, the National Farmers' Union, the American Farm Bureau Federation, the National Cooperative Council, the Texas Sheep and Goat Raisers' Association, the National Wool Growers' Association, and the Wyoming Wool Growers' Association.

But few people realize the extent to which the public is imposed upon in the purchase of what they believe to be genuine woolen articles, by the substitution of used or reclaimed wool, commonly known as shoddy, and by other substitute fibers. Year after year the use of various substitutes for new virgin wool has increased until in 1936, the last year for which figures are available, the woolen industry used 220,000,000 pounds of clean new wool, generally known as virgin wool, and more than one-half of this amount of reclaimed wool, or shoddy. In addition to this, some 70,000,000 pounds of rayon and 80,000,000 pounds of cotton were sold as wool. In other words, the woolen industry today uses more substitute fiber than new virgin wool fiber in the manufacture of its products.

The sponsors of this measure do not contend that rayon and cotton cannot be successfully blended with wool. This would depend largely upon the kind and character of the fabric. If such fabric will give better service than pure wool, it will naturally displace wool. We do feel, however, that the customer is entitled to know exactly what he is buying.

Given this information, the consumer can then decide whether he wishes to buy an article of clothing, or any other product, made of pure virgin wool, or one containing reclaimed wool, or shoddy, or any other substitutes. In either case the product will sell in an honest market on its own merits.

The attitude of the informed lady consumer is, I think, well stated by Mrs. Paul E. Howe, who testified before the House committee recently, representing the American Home Economics Association. I quote from her testimony:

"However, if the consumer is to buy intelligently, she must be able to pick out the fiber or combination of fibers which will best meet her needs at her price. If she wants the particular characteristics of wool—warmth and felting qualities—or the fineness, strength, smoothness of silk, the washability and inexpensiveness of cotton, the draping quality of rayon, the smooth coolness of acetate rayon, she should be able to know when she has that fiber. Further, if a fabric is to give satisfactory service, it must be handled properly under the needle, in wear, cleaning, and storage. Each fiber requires somewhat different handling to insure maximum satisfaction.

"As I indicated before, many fabrics are now woven of two or more fibers in various combinations and percentage combinations. For proper handling, as well as for economic protection, we believe the name of each fiber and the percentage present should be plainly stated on the label."

As heretofore stated, the use of shoddy by woolen manufacturers amounts to at least 111,500,000 pounds, which is salvaged largely from waste products and worn-out rags.

The seriousness of this whole problem is well illustrated by a statement recently made before the National Retail Dry Goods Association in New York City, by Mr. Henry Miller, Assistant Director of Trade Practice Conferences of the Federal Trade Commission. I quote:

"In recent years there has developed a singularly aggravated situation of confusion, misrepresentation, and deceptive concealment in the merchandising of fabrics, clothing, and other textile products in the channels of trade, and to the consuming public * * *.

"Under the circumstances it is quite evident that the disclosure of the character of the fiber content affords the only adequate corrective for the confusion and misunderstanding so harmful to the buying public and to business * * *. Through disclosure of the essential facts on the label those who deliberately misrepresent would have their falsehood exposed. Those inclined to misrepresent through ignorance or lack of knowledge would have the information necessary to prevent the misrepresentation. * * *

"Textiles may be said to be as essential as food and shelter to the existence of every man, woman, and child. The sale and distribution of such essential commodities under conditions of honesty and competitive fairness is a matter of vital concern to business and to the buying public."

Since the consumer is often unable to detect inferior fibers, his only protection against fraud and misrepresentation is a law which will force the seller to accurately inform the purchaser as to what fibers have been used in the manufacture of the goods in question.

You can readily understand why virgin wool, which is new and unused, is greatly superior to reclaimed or used wool. Not only is this true because a part of the wearing qualities of the latter have been destroyed by use, but these wastes and worn-out materials must first be reduced to a fibrous mass by a severe tearing and shredding process, and are also subjected to a hydro-sulphuric acid bath, which necessarily damages the fibers already weakened through wear, abuse, and mishandling. Moreover, there is no way of determining the number of times reclaimed or used fibers may be handed down from one garment to another.

No woolen manufacturer attempts to deny the absolute fact that reclaimed wool always makes a product which is inferior to one made of the same grades of virgin wool. It never makes a product which is as good.

Virgin wool and reclaimed wool are bought in their own special markets under their own trade terms, and reclaimed wool always sells for from one-third to one-half the price of comparable grades of virgin wool for which it is used as a substitute.

No woolen manufacturer would permit a wool dealer to make a delivery of reclaimed wool, or shoddy, against an order for virgin wool. Any dealer who attempted to make such a delivery would be guilty of deception and fraud. Surely, these same standards of honesty governing the purchase of raw materials should be applied equally to the manufactured products made from these raw materials.

Is the purchaser or consumer not entitled to know whether he is buying a new and unused article? And is there any better way of providing this information than affixing a stamp, tag, or label, as provided in the pending bill? This legislation does not prevent the sale of textiles containing used or inferior fibers, but merely protects the purchaser by informing him as to what he is buying.

I am driving an automobile which has been driven some 25,000 miles. So far as I can tell, it performs as well as it ever did. My watch, which has been in use several years, keeps time as accurately as it did when new. Both of these articles have a substantial resale value, and might be offered at a price which would warrant their purchase, but no one would contend that it would not be dishonest to offer them, or any of their used parts, to the public in such a manner as to conceal the fact that they were used or "second-hand" goods. The lubricating oil which is drained from your crankcase after rendering the usual service, in most cases has some value as a lubricant, and if mixed with unused oil, would be very difficult for the average motorist to detect. Yet no honest person will contend that its sale in this manner should be permitted. If the purchaser wants to buy inferior or waste oil, he should, and does have that privilege, but it would be manifestly unfair to permit him to purchase it without an affirmative showing in this respect.

We propose to have this legislation enforced by the Federal Trade Commission. There is no doubt but that this Commission can, and if given the authority through proper legislation, will, administer the law fairly and effectively. Bills to require the truthful labeling of fabrics have been before Congress almost continuously since 1902. Extensive and lengthy hearings have been held on many of them. A wool labeling bill was passed by the Senate during the closing days of the last session of Congress. The Martin bill was favorably reported to the House Committee on Interstate and Foreign Commerce by a subcommittee, of which Congressman LEA acted as chairman. Consideration by the House was prevented by adjournment, which occurred soon thereafter. In my judgment, no sound argument can be made against the enactment of this legislation, which will do much toward the realization of our ultimate goal as so aptly expressed by the late Mr. Justice Cardozo, "the careless and unscrupulous must rise to the standards of the scrupulous and diligent."

Freight Rate Discriminations

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

LETTER FROM J. F. SCULLEN, OF BELLE GLADE, FLA., AND REPLY THERETO

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD on the subject of

Freight Rate Discriminations, I am inserting a copy of a letter which I have received from Mr. J. F. Scullen, president of the Belle Glade Chamber of Commerce, at Belle Glade, Fla., together with a copy of my reply.

I am doing this for the reason that they cover one phase of these freight-rate discriminations that I think should be brought to the attention of all the American people.

It is bad enough for business generally, and for the farmers in particular, in the various sections of the country, to suffer as a result of these freight-rate discriminations. But it is infinitely worse when they contribute to wrecking the health and destroying the lives of innocent people, and especially of little children in the manner in which I have pointed out in my letter to Mr. Scullen.

The material referred to follows:

BELLE GLADE CHAMBER OF COMMERCE,
Belle Glade, Fla., February 13, 1939.

Congressman JOHN E. RANKIN,
Washington, D. C.

DEAR CONGRESSMAN RANKIN: South Florida is less than half the distance of southern California and northern Mexico from the population centers of the North and East.

Freight rates on vegetables and fruits to the population centers of the North and East from southern California and northern Mexico are less than half the freight rates from south Florida.

Such a freight-rate structure would indicate that those responsible for the establishment of such rates believe that it costs four times as much to move a ton of freight along the eastern seaboard as it does to haul a ton of freight all the way across the continent, including climbing two high mountain ranges.

If Congress will insist on equitable freight rates the people of the dense northern and eastern population centers can get health-giving fresh fruits and vegetables at lower costs and the farmer will receive a higher return.

If you are in favor of lower cost, and thus higher standards of living for the urban dweller and at the same time greater return to the farmer, you will insist upon lower freight rates from Florida to the consuming centers.

Respectfully,

BELLE GLADE CHAMBER OF COMMERCE,
J. F. SCULLEN, *President.*

HOUSE OF REPRESENTATIVES,
Washington D. C., February 18, 1939.

Mr. J. F. SCULLEN,
President, Belle Glade Chamber of Commerce,
Belle Glade, Fla.

MY DEAR MR. SCULLEN: Your letter of February 13, complaining of the discrimination in freight rates came to me today, and in reply I desire to say that our present freight-rate structure is a disgrace to a civilized country. It is simply criminal. It has been built up by the railroads through the Interstate Commerce Commission, which they have controlled practically ever since its creation, for the purpose of benefiting special interests in the Northeast, and wringing from the unprotected public who pay the freight every penny the traffic will bear.

It imposes a penalty on the South and the Middle West that no other civilized country under the sun would tolerate.

In the case of which you complain it goes much farther and punishes the people of the Northern and Western States, and especially the helpless children in those areas, in the most cruel and inhuman manner, causing the deaths of thousands of them every year because of a lack of those necessities of life which tropical fruits would supply, and which they would enjoy if it were not for these freight-rate discriminations. In other words, if they could ship Florida fruit north at reasonable rates, or at the same rate freight can be shipped south, it would save the lives of thousands of people annually, especially in the Great Lakes States, and even in the Middle West and far West, who are now dying from goiter, one of the most terrible diseases known to this country, and which is caused by a lack of iodine, which Florida fruit would supply.

The record shows that more people died in the State of Illinois in 1 year from goiter than died in Mississippi from typhoid, malaria, and goiter—all three. The record also shows that in some of the Great Lakes States 100 percent of the school children in some areas are affected with thyroid trouble, which, if it is not overcome, will develop into goiter in later years, probably with fatal results.

If these children could only have the oranges and grapefruit that are now going to waste in Florida, they could invariably overcome this malady, or prevent its inception, and grow into strong, healthy men and women.

As I said, goiter, or thyroid trouble, is caused from a lack of iodine in the food people eat. Iodine comes from the sea; it is taken up with the moisture and deposited in the soil by the rain that falls in nearby areas. Then it is absorbed by the fruits, vegetables, and so forth, grown in that soil and transferred into the systems of people who eat those products.

There is little or no iodine in the soil of any of the North Central or Middle Western States, while the soil of Florida and the other Gulf States is literally saturated with it; and the fruits and vegetables grown in those areas are amply supplied with it, with the result that goiter in that section is practically unknown.

People in the Northern and Western States are trying to supply this deficiency by putting iodine in their salt, but it is not having the desired effect. There is no substitute for nature. What they need to do is to eat more tropical, or semitropical, fruits, vegetables, etc., and especially fruit and vegetables grown in the Gulf and South Atlantic States, where the supply of iodine in the soil is abundant.

I have just returned from Florida, where I saw groves of oranges and grapefruit going to waste because the freight rates are so high they could not be shipped. They were offered to me on the farm at 32 cents a crate. In Washington I pay from 10 cents to 25 cents for a half a grapefruit.

I might point out here also that southern fruits and vegetables are also abundantly supplied with the necessary life-giving vitamins which, as everyone knows, come from or are produced or increased by the rays of the tropical or semitropical sun, and therefore contain more food value. In addition to preventing thyroid trouble, which, as I said, invariably develops into goiter and becomes fatal, as well as contributing to other maladies, southern fruits and southern vegetables also prevent rickets and other similar troubles by supplying the necessary vitamins to keep growing children strong and healthy.

It is certainly paradoxical for this Government to spend millions of dollars on public health, and then permit one of its agencies, the Interstate Commerce Commission, to so juggle transportation rates between the North, the South, and the West, as to destroy the health, and even the lives, of thousands of children in the Northern and Western States for want of the very elements that Florida fruit, which is now going to waste, would supply.

I shall do everything in my power to get these discriminations in freight rates eliminated; but we are going to have a hard battle of it. The railroads and the great financial interests that control them, seem to be totally indifferent to the injury done to Southern agriculture and horticulture, and to the wrecking of the health and destruction of the lives of innocent men, women, and children in the Northern States, for which these discriminations in freight rates are largely responsible.

They now want to outlaw motor transportation to prevent you people from shipping fruit by truck, which would increase the suffering, as well as the death rolls, the present policy is producing in the Northern and Western States.

Trusting that we may succeed in getting these injustices eliminated for the benefit of all concerned, and assuring you of my support in this movement, I am

Sincerely yours,

J. E. RANKIN.

Lessons From Lincoln

EXTENSION OF REMARKS
OF
HON. CARL E. MAPES
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1939

ADDRESS BY HON. GEORGE A. DONDERO, OF MICHIGAN, FEBRUARY 16, 1939

Mr. MAPES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. GEORGE A. DONDERO, of Michigan, before the Northwest Republican Club of Detroit, Mich., February 16, 1939:

People of every land, especially America, seeking the right and the light, cannot too often remember that once there lived and served a man named Abraham Lincoln. He still lives and will continue to live so long as "government of the people * * * shall not perish from the earth."

Kentucky claims him as her son. This Nation claims him as her own. But I speak the universal language when I say of him:

"No country can claim, no age can appropriate him; * * *. He was the boon of Providence to the human race; his fame is eternal; his residence the universe."

Wherever in this world liberty and justice, mercy and kindness, truth, and rugged honesty are known and understood there also is known and understood the name and character of Abraham Lincoln.

Six score and ten years ago this month Abraham Enlow, a pioneer trapper, bound homeward through the forests, lost his way in a blizzard. He came suddenly to a pool of open water. Kneeling down, shading his eyes from the blinding snow, he observed in the bottom of the pool familiar stones and objects. Said he to himself:

"Now I know where I am; this is Rock Spring, and I am close to the cabin of my nearest neighbor."

Making his way over the hill through the snow, he came to a rude log cabin. He forced the door open and walked in. The room was cold. A movement beneath a deerskin covering on a bed of leaves in one corner of the cabin startled him. He hears a woman's voice say feebly, "See if the baby is alive." He kindled a fire, warmed the room, and searched for food. All he found was a bowl with a little goose grease in the bottom of it. Melting this before the blazing fire and using a piece of tallow candle wicking as a nipple, he kept the breath of life in that baby's breast.

Today the world knows that baby became a splendid lawyer, a champion of freedom's cause, the first successful standard bearer of a mighty political party, the emancipator of a race, the savior of a nation, and one of the greatest of the great Americans.

REVERENCE FOR GOD

Thus was the entrance of this great and gentle soul into the world attended with poverty and tragedy. The lowliness of that birth was singularly akin to that of Him who was born in a manger in Bethlehem, the One to whom Lincoln in the dark hours of his Nation's peril ever turned for that guidance which never failed him.

He never lost his faith in divine Providence. From the lips of President McKinley we have the story told to him by General Sickles, of New York, who was carried to Washington desperately wounded after the Battle of Gettysburg. His first caller was President Lincoln. Sickles said, "Mr. President, what do you think of Gettysburg?" to which Lincoln replied:

"Well, Sickles, I will tell you. When I heard that General Lee was marching with his vast army on Gettysburg, and that the safety of the Capitol, North, and of the whole Nation was imperiled, I went into a little room that I have at the White House, where nobody goes but me, and I just got down on both my knees and I prayed to the Lord God Almighty as I never had prayed before, and I told Him that this was His people and that this was His country, and these were His battles we were fighting, and that we could not stand any more Fredericksburgs or Chancellorsvilles; and I told Him that if He would stand by me I would stand by Him."

And Sickles says that the President ended with the statement: "After that, Sickles, I somehow had no more fear about Gettysburg."

It seems to me that all of us would like to stand within that little room in the White House where Lincoln just talked to God. It must be holy ground where God and man talk together.

Had Lincoln not lived, there would be a vacant place in the history of our Republic. That he did live makes a bright and illustrious chapter in the cause of freedom and the advancement of mankind throughout the world. Let this Nation, preserved by Lincoln, be forever proud that he wrought for us, "To lift the weights from the shoulders of men that all shall have an equal chance."

LINCOLN GREATEST—HUMILITY

We can learn much from Lincoln. The preservation of our form of government under the Constitution was his first concern. The country never placed a President in the White House who was more careful that each branch of the Government should function and carry out its duty to the people. To Lincoln ours was a government of laws and not of men. With him nothing was politically right that was morally wrong.

The question has been asked, "When was Lincoln at his greatest?" This is a difficult question to answer. I believe he rose to sublime heights in the choice of his Cabinet. He selected three men who had opposed him in the convention which nominated him for the Presidency. Two of them were assigned to positions of the highest trust and responsibility by Lincoln; Seward as Secretary of State and Chase as Secretary of the Treasury. The one held him in contempt at first; the other snubbed him. It was a part of Lincoln's greatness that he could submerge every personal emotion for the sake of his country. He wanted to weld every faction and divergent opinion in order to preserve the Union. Lincoln may not have needed these men in his Cabinet for his own success, but he believed his country needed them—and his country came first with him.

Lincoln once said he could stand a considerable amount of abuse without malice. That he could is evidenced by his answer to the inventor of a new gun lock who had been sent by Lincoln to see Stanton. Stanton, after listening to his visitor, inquired who sent him. Receiving the information, Stanton exclaimed, "Lincoln is a damned fool!" When the man carried that remark back to Lincoln, he must have stood amazed when Lincoln gently replied, "Well, Stanton is usually right."

He who can set aside all personal pride, malice, or pique and appoint as his aides those who oppose and berate him is a giant among men. We in this day, especially those in high places in Government, can learn here a lesson in forbearance, tolerance, patience, and patriotism undefiled, from this gaunt rail splitter of the Sangamon.

Some believe that Lincoln the lawyer was Lincoln at his greatest. The law never brought to the bar a more able exponent or a stancher defender. As President he wisely and humanely administered the law without fear or favor. In that high principle and practice lies the hope of our republican form of Government. Whenever unprejudiced administration of law and order are forsaken, dictators are sure to arise to usurp the functions and prerogatives of the law. This is one of the great and vital lessons Lincoln has for us, as exemplified by him through the tear-drenched years of the Civil War.

THRIFT

Holy Writ admonishes us, "Where there is no vision the people perish." Well we may say today, when it seems to be discarded and forgotten, that where there is no thrift there is no hope. It was heartening news to many people in my State during the last campaign to learn that one community in Michigan neither asked for or received Federal relief. Every property owner had paid his taxes, except one, and no one was unemployed. A news reporter, sent to ascertain the secret of this most unusual condition, inquired of the mayor of that town the reason; the mayor replied, "You know we Germans are hard workers and we save our money."

Before Lincoln was 35 years of age he said:

"From the bankrupt state of the Public Treasury, the pecuniary embarrassments prevailing in every department of society, and the impending danger of the degredation of the state, you had a right to expect that your representatives would lose no time in devising and adopting measures to avert threatened calamaties, alleviate the distress of the people, and allay the fearful apprehensions in regard to the future prosperity of the state. It was not expected by you that the spirit of the party would take the lead in the councils of the state and make every interest bend to its demands. Nor was it expected that any party would assume to itself the entire control of legislation, and convert the means and offices of the state and the substance of the people into alinement for party subsistence. Neither could it have been expected by you that party spirit, however strong its desires and unreasonable its demands, would have passed the sanctuary of the Constitution, and entered with its unhallowed and hideous form into the formation of the judiciary system.

"For several years past revenues of the Government have been unequal to its expenditures, and consequently loan after loan, sometimes direct and sometimes indirect in form, has been resorted to. By this means a new national debt has been created and is still growing on us with a rapidity fearful to contemplate—a rapidity only reasonably to be expected in time of war * * *. Coming expenditures must be met, and the present debt must be paid; and money cannot always be borrowed for these objects. The system of loans is but temporary in its nature and must soon explode. It is a system not only ruinous while it lasts but one that must soon fail and leave us destitute. As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and next, no one left to borrow from, so must it be with a government."

Lincoln was not alone in his abhorrence of governmental extravagance and debt. Before him, Andrew Jackson in 1824 said:

"I am one of those who do not believe a national debt is a national blessing, as it is calculated to raise around the administration a moneyed aristocracy dangerous to the liberties of the country." Thus from Lincoln himself we learn the lesson that thrift is a virtue, whether in or out of government, a virtue which I think must be revived again before our country will go forward to a better day.

The lesson of the virtue of thrift is brought home to us by Lincoln's personal affairs, although what I am now about to say may be a great surprise to some not familiar with Lincoln's finances. At the time of his election to the Presidency, the only property generally known to belong to him was a vacant lot in Lincoln, Ill., given him in payment for services in laying out the town; the taxes on this lot were less than a dollar a year. In addition was a tract of 160 acres of land in Iowa, worth about $10 an acre, which he received for his services in the Black Hawk War; his home in Springfield, Ill., which he purchased for $1,500 from the clergyman who married him, and some well-used furniture, a scanty law library, and a little office furniture; these, it was supposed, were the whole of his worldly goods.

The statement of Ward Lamon, his personal friend, and later his bodyguard in the District of Columbia, and of many writers, that Lincoln had accumulated no property except that I have mentioned, and that he had to borrow money to go to his inauguration has been generally accepted as true. I say it will be a surprise to writers, historians, and biographers, and to many other people to learn at this late day that such statements were incorrect. When Lincoln boarded the train at Springfield to journey to Washington on February 11, 1861, he had $100 in cash in his pocket and three drafts for $100 each on a New York bank.

A most important Lincoln manuscript, entirely in his own handwriting, has recently come to light in the form of an itemized statement, or list, of loans and mortgages which Lincoln drew up during his final hours in Springfield. Instead of having to borrow money, as Lamon said, to pay his expenses, Lincoln had a bank account of $1,600 from which he drew the $400 mentioned for his traveling expenses to Washington; in addition, he left with Robert J. Irwin, Lincoln's friend from 1834, and cashier of the Marine & Fire Insurance Co., of Springfield, 11 promissory notes for money loaned to prominent people around Springfield. These notes totaled $9,337.90, all drawing 10-percent interest, the prevailing rate prior to the Civil War. On two pieces of paper, now yellowed by age, and water-stained, he set forth his thrifty savings of 25 years from the practice of law. Mayhap, under the modern political philosophy of some, Lincoln was an "economic royalist" in his day.

Knowing that he was compelled to earn every dollar he ever had, and of the meager fees he received as a lawyer, we can appreciate and we would do well to emulate in our personal and national affairs the thrift and economy exemplified by Lincoln in his private affairs—a thrift and economy which he carried over into his administration of government.

The insurance company to which I have alluded apparently conducted a banking business as a side issue, for I have in my possession two of the original checks drawn by Lincoln on that company, which were given to me by the Lincoln family.

STEPPING STONES

There is another significant lesson in Lincoln's life which I think has been overlooked.

Historians, as I say, have been prone to regard Lincoln as more or less of an improvident failure in business previous to his election to the Presidency. His unfortunate experiences in operating a store have always been cited as proof of his lack of business acumen and foresight.

He seemed at a period in his life to meet with one failure after another, both in business and in his more intimate affairs of the heart.

It seems not to have occurred to most Lincoln students that Destiny ofttimes marks her man, and with an inexorable compulsion directs him into her paths and the work he is to do in the world. This was so with Lincoln. We all recognize now that he was a man of destiny. Studying his life and experiences from this standpoint, we can readily observe that if Lincoln had prospered in the store business he might have remained a contented and obscure tradesman, and this Nation would have been denied the benefit of his wonderful gentleness, strength, and wisdom in its hour of peril.

Had Lincoln been successful as a surveyor, or as a small-town lawyer, he might have remained contented in one of those corners of obscurity and the world would have lost the bright and shining inspiration which his struggles and his accomplishments offer to those everywhere on the globe who are striving in lowliness, poverty, and hardship to rise to the heights of their ideals.

Destiny marked Lincoln for her own. So it is perhaps little wonder that he failed in those mediocre pursuits only to rise to the grandeur and the inspiration of his accomplishments as a statesman. Perhaps here we have the explanation of those peculiar contradictions in Lincoln's experience which have been misinterpreted as lack of business ability and foresight.

THE OVERCOMER

Modern America can draw a further lesson from this great and gentle man, the commemoration of whose natal day brings us together here on this occasion. There is one word in the English language that Lincoln understood better than most men, and that was the word "thorough."

It has been well said of Lincoln that he was "the overcomer." "He was the conqueror of all difficulties. He was the Knight of the Sublime Order of Disappointment. Yearning to learn, he was censured for that disposition; craving information, he was deprived of almost all books; loving his fellow men, he was afflicted for years with bashfulness; with an eye and ear for all the beautiful in nature, in poetry, and in song, he was burdened, he says, with a voice, face, and form alike unfortunate. But those who knew him, and particularly those who encountered his eternal friendliness, never deemed him uncouth or uncomely. * * * To them he was a tall, spare, but well-formed, muscular man, very erect, with impressive, plain, unassuming bearing."

EDUCATION

The young men and young women of our country—and all of us, forsooth—should observe the lesson in Lincoln's life that education does not depend upon a college or university course so much as upon the individual himself. Most of us know that Lincoln never attended a university, college, high school, or grammar school. I once asked Robert Todd Lincoln about the schooling of his father, to which he replied:

"My father had nothing to start with, and he hardly ever went to school."

We know that Lincoln attended a crude pioneer school for at least four terms of about 3 months each, or less than a year in all.

We have all heard the story, and we can, across the vista of the years, again see that gaunt young man trudging miles to get a precious book and trudging back to his rail splitting. We can still see him in those moments of rest from his arduous labors devouring the pages of the treasured volume. We can still see him after the end of his day of toil lying before the blaze of the crackling logs, his weariness forgotten, eagerly absorbing knowledge from whatever volume he happened to have borrowed. What a lesson to those of us today in our modern, comfortable schools and universities, with our modern libraries filled with volumes, getting our education under circumstances of ease and luxury which Lincoln never knew—what a rebuke to those of us who feel that we lack opportunity!

Lincoln was a wise man, wise beyond most of his fellow men, because he knew the source of infinite knowledge and always he turned inward to that source, and it never failed him.

It may be correct to speak of Lincoln as an untutored man, but it is not correct to speak of him as an uneducated man. His primary course was in a Kentucky cabin with his mother acting as principal. There he learned the way to infinite wisdom. There he learned to turn inward to that source of eternal light which enabled him to pilot his Nation successfully through its hours of peril. He may not have learned to make maps in that school, but he learned manners and morals.

At the age of 9 he entered a little school, a house in the woods on his father's farm in the State of Indiana. It was there his attention was first directed to physical culture. We know from his life that he was never permitted to neglect that subject. His gymnasium was equipped with wedges, mauls, log chains, swaying saplings, and sturdy oaks. His nature study was on the campus where he found sweet-williams, purple grapes, prairie grasses, and the wild rose. From all of these, from tree and shrub and plant, from form, color, and perfume came that deep sense of beauty which he expressed in his matchless prose poems and speeches.

Lincoln all his early life learned lessons in political economy, for he knew the value of money. He understood the virtue of economy. He knew the worth and necessity of labor.

Lincoln became a great linguist. His success was all the greater because he confined himself to the study of one language. The result of his language studies is the purest English ever written. So diligently did he apply himself to the study of history that before he died he learned how to make history. Civil government he learned under Jefferson, Madison, and Hamilton. His post-graduate course in law he obtained from Blackstone, and from that department he carried away all the honors and was the valedictorian of his profession.

Lincoln was not only the best-educated man of his day, but he was the best-educated man of any day, because he had learned to think straight and to think through. After all, the aim and end of education is to learn how to think, how to recognize knowledge. That Lincoln knew as did few other men of any time.

SACRIFICE FOR COUNTRY

There is another great lesson which we today may well learn and heed from Lincoln's life. That is the lesson of personal sacrifice for our country. He yielded all he had, even life itself, that the Nation might live and that the American system of government might be saved and perpetuated.

What is the American system of government as Lincoln understood it? It is moderation instead of radicalism. It is common sense instead of emotionalism. It is government based on facts and not on fancies. It is calm logic instead of fine phrases. It is deep principles instead of lofty platitudes. It is history and experience and not theory and adventure. It is good will and not hatred. It is candor and courage in high places, and not shifty political opportunism.

Some people, both in and out of Government, have had the temerity of late to say that our democracy has failed, and that some other form of rule should be substituted in its place. Some have said they could not eat the Constitution of the United States. I answer that for 150 years they have lived and eaten better under it than any other people on the face of the earth. What have we accomplished under the American system of government, which Lincoln loved so well?

Hear me and listen to these indisputed facts: With 6 percent of the world's area and 7 percent of its population, we in this Nation operate 60 percent of the world's telephone and telegraph facilities; 33 percent of the railroads; 80 percent of the motorcars. We consume 48 percent of the world's coffee; 53 percent of its tin; 56 percent of its rubber; 21 percent of its sugar; 72 percent of its silk; 36 percent of its coal; 42 percent of its iron; 47 percent of its copper; 69 percent of its petroleum. We produce 70 percent of its oil; 60 percent of its wheat and cotton; 50 percent of its copper and iron; 40 percent of its lead.

We have two-thirds of civilization's banking resources and of its gold. We have a purchasing power greater than that of 500,000,000 Europeans, or of a billion Asiatics. We have the highest wage scale, the shortest working hours, the best working conditions, the highest living levels, and the greatest percentage of home owners on earth. When we move confidently forward, we have the greatest prosperity in human experience since the history of man began.

"Oh wad some power the giftie gie us
To see oursels as others see us!"

So wrote beloved Bobby Burns. "To see ourselves as others see us," helpful though it be, is sometimes humiliating. Not long since we had the opportunity of seeing ourselves as others see us through the editorial of the London Sphere, an English newspaper which contained some blunt advice. If we are tempted to resent this alien frankness, we should remember that it is foolish for us to ignore the truth, no matter whence it comes. Let me quote a paragraph of this frank foreign appraisal of us:

"Pompous statesmen, looking over this estate (of busy America) solemnly declare that the methods by which it was created are all wrong, ought to be abandoned, must be discarded; that the time has come to substitute political management for individual initiative and supervision. There is only one way to characterize that proposal. It is just damned foolishness."

NEED OF TODAY

Three-quarters of a century after Lincoln, the lesson for us today and the need of the hour is a restoration of our morale, a reawakening of our spiritual perceptions; a restablishment of independence of thought; and a revival of faith and confidence in the American way of doing things.

"Not by birth, not by the sword, not by the influence of wealth; not by intrigue, not by the clamor of the mob, not even by remarkable superiority of talent, of eloquence, or of learning, but by untiring energy, by unswerving integrity, by uncompromising courage, by kindness of heart, by strong common sense, has Abraham Lincoln commended himself to his countrymen and won himself a place among the princes of the earth."

With foreign "isms" rampant throughout our land, their infection spreading to high places within our Government, starting a decay from within, we would do well to rededicate ourselves to our country, to our homes and our God, with the inspiration of Lincoln's words when he said:

"Many free countries have lost their liberty, and ours may lose hers, but if she shall, be it my proudest plume, not that I was the last to desert, but that I never deserted her."

And so, with his words echoing in our ears, let us with this tribute leave him to the ages to which he belongs. The inspiration of his example of meekness, gentleness, love, courage, patriotism, and devotion to high principles will shine down the corridors of the years and for all time illuminate the pathway of those in every clime who shall try to struggle upward from poverty, privation, and obscurity to the highest of their soul's ideals.

Admission of German Refugee Children

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

EDITORIALS AND LETTERS REGARDING ADMISSION OF GERMAN REFUGEE CHILDREN

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD certain editorials and letters regarding the admission of German refugee children into the United States. The matters I desire to have inserted in the RECORD are listed as follows:

(1) Editorial, New York Herald Tribune, February 11, 1939.

(2) Editorial, Richmond Times-Dispatch, February 1939.

(3) Editorial, New York Times, February 18, 1939.

(4) Editorial, Washington Star, February 16, 1939.

(5) Letter from the Reverend Harry Emerson Fosdick, the Riverside Church, New York City, February 15, 1939.

(6) Letter from the Reverend Harry S. Coffin, president, Union Theological Seminary, New York City, February 15, 1939.

(7) Letter from J. F. E. Nickelsburg, the Lutheran Welfare Council, New York City, February 17, 1939.

There being no objection, the editorials and letters were ordered to be printed in the RECORD, as follows:

THE CHILD REFUGEES

[From the New York Herald Tribune of February 11, 1939]

When all the politics and the passions surrounding the Nazi dictatorship are forgotten, it seems probable that the memory of crowds of helpless children, thrust into trains with a bare 40 cents in the pocket of each and perhaps, or perhaps not, tags recording the names of the parents who were forced to abandon them to perpetual exile, will survive as the most vivid monument to the humanity of the Hitlerian god-state.

The United States cannot, and should not be asked to, succor all the victims of race prejudice and high politics who have been set cruelly adrift by the new barbarism. Its first duty is to preserve its own unity as a nation. But the children are a special case. There are estimated to be about 50,000 German children under 14 whose parents are in concentration camps or who, for one reason or another, have been thrown on the mercy of the outer world. About half of them are Jews; the rest are Catholic or Protestant children who committed the crime of having a Jewish grandparent or were guilty of being born to purely Teutonic parents of too liberal or independent a cast of mind. Great Britain has already agreed to take 5,000 of these waifs; small and crowded Holland has taken in 1,700 and is accepting more. Senator WAGNER has now introduced a bill, endorsed by Catholic and Protestant churchmen, by both wings of the labor movement, and by many leading Americans, which would permit 20,000 children under 14 to be received in the United States outside of quota restrictions within the next 2 years.

These 20,000 children would not compete in American labor markets; all would be under 14. They would not become public charges; the bill would simply allow them to be brought in by those already willing to receive and support them. The whole group would be but a drop in the vast American population bucket—amounting to one refugee child for every 2,000 children under 14 now in the country—and their rescue (if accepting them for permanent, even though kindly, separation from their parents and homes can be called rescue) would take but a few drops out of the buckets of misery filled by the new politics. Small as it is, it seems well worth the doing—both for the portion of misery that it would end and as a gesture to the world of where American sympathies unmistakably lie.

[From the Richmond Times-Dispatch]

AIDING REFUGEE CHILDREN

It is difficult to see how anyone with humanitarian impulses can oppose the resolution introduced in Congress by Senator WAGNER, which calls for the admission to this country of 10,000 refugee children from Germany.

Those of us who have enjoyed a normal and happy childhood should try to place ourselves in the position of these unfortunate boys and girls in the Germany of today, where they are treated as outcasts, scoffed at in public, and in many cases thrown out of orphan asylums and left on the verge of starvation. How can we, who profess to believe in democracy and human rights, sit idly by and allow such atrocities to be committed without raising a finger?

The admission of 10,000 of these children to the United States during each of the next 2 years would not affect our unemployment problem adversely. The children, all under 14, would be admitted only on condition that responsible individuals or organizations agreed to care for them. Mrs. Calvin Coolidge recently joined with a group of women in Northampton, Mass., who wish to take 25 of these children, and there are thousands of other individuals and organizations who would gladly do likewise.

So far from competing with American citizens for jobs, these children would make jobs, for the money spent in providing for them would mean the purchase of goods and services. Both the A. F. of L. and the C. I. O. have endorsed the plan in principle.

If Great Britain can offer 7,800 of these defenseless children a refuge, as she has done, there is certainly every reason why the United States, with its population of 130,000,000 and its tremendous area, can take a mere 10,000 in 1939 and another 10,000 in 1940. It figures out as one refugee child to every 13,000 American citizens. How can anyone object to that?

[From New York Times of February 18, 1939]

CHILDREN IN THE DARK

It is hard to see how Congress or the American public can refuse the plea that Senator WAGNER makes in his proposal to admit 10,000 German-born refugee children to the United States, outside the quota limits, within the next 2 years. If we had a barbed-wire frontier, as have some less fortunate countries, and could see these children, whose parents are dead or in prisons and concentration camps, we would not hesitate. All we need is imagination. They cry out to us from their darkness.

Can their admission do harm? To ask the question is to answer it. All would be under 14, and so would not compete for employment. None could become public charges, for the law would require that their support be guaranteed by responsible individuals or organizations. They would be "of every race and creed." If heredity means anything, they would grow up to be good citizens, for in most instances they are alone in the world because their parents put obedience to conscience above obedience to tyranny. They would love liberty because they know from bitter experience what the loss of liberty means.

We have gladly given aid at different times to the children of Belgium, of devastated France, of revolutionary Russia, of postwar Germany, of eastern Europe, of China. Though we no longer open our gates to all the earth's oppressed, it is in our tradition, in keeping with the warm-heartedness on which we pride ourselves, to open them to these children.

There is nothing sectarian, nothing political, in this appeal, nothing but a helping hand to young boys and girls who sorely need it. Surely Congress need not fear lack of popular approval in passing the Wagner resolution.

[From Washington Evening Star of February 16, 1939]

A COMMENDABLE PROJECT

Congress has just had laid before it a bill jointly sponsored by Senator ROBERT F. WAGNER, Democrat, of New York, and Representative EDITH NOURSE ROGERS, Republican, of Massachusetts, providing for practical, concrete action by the United States to aid the most helpless victims of Nazi persecution—the children of Germany's unwanted population.

Without disturbing the immigration quota system, the Wagner-Rogers bill would permit a limited number of German children to be brought here, when foster parents are ready to give them homes. It limits the age of the youthful immigrants to 14 years and under, so that they can be no burden on the labor market—a phase of the project which is approved by both the American Federation of Labor and the Congress of Industrial Organization. It would allow annual admission for 2 years of a maximum of 10,000 children, many of whom would be quite young.

Several responsible national organizations, representing various religious denominations, stand ready to cooperate in placing the young refugees in homes throughout the entire country. That seasoned American agency of humanitarianism in many fields, the American Friends Service Committee, has tendered its "complete support" and expressed its willingness "to assume any responsibility within our power in carrying out any provisions of the legislation requested of us."

The Star believes it speaks for Americans of every class and creed in commending the Wagner-Rogers proposal to the prompt

and favorable attention of Congress. No Federal appropriation is required. No child would be brought to the United States unless adequate guaranties were made for his or her support and until he or she is assured a proper home with people of his own religious faith—Jewish, Protestant, or Catholic.

It is estimated there are about 50,000 German children from whom selections might be made—those who would emigrate without their parents. A little more than half of these are Jewish. The plight of the parents of these youngsters is tragic. They have been forced out of employment, ruined in business, or thrown into concentration camps. They face a life utterly without hope.

Great Britain, the Netherlands, and Belgium have opened their doors to increasingly large numbers of these unfortunate boys and girls. The United States now has opportunity to do likewise under conditions which safeguard every essential interest involved.

THE RIVERSIDE CHURCH,
New York, N. Y., February 15, 1939.

The Honorable ROBERT F. WAGNER,
Senate, Washington, D. C.

DEAR SENATOR WAGNER: I am writing briefly to express my deep appreciation of your good will toward the many children from Germany whom we are hoping may find a home here in the United States. I know about your bill introduced into the Senate allowing 10,000 children from Germany under the age of 15 to come to this country. May I express, and I am sure that in this I voice the sentiments of many, my cordial commendation?

Sincerely yours,

HARRY E. FOSDICK.

UNION THEOLOGICAL SEMINARY,
New York, February 15, 1939.

The Honorable ROBERT F. WAGNER,
Senate Chamber, Washington, D. C.

MY DEAR SENATOR WAGNER: May I express my hearty appreciation of the action you have taken in introducing a bill for the admission of refugee children from Germany and trust that it will be given favorable consideration. This seems an act of humanity which our country dare not refuse in the light of the critical situation.

Gratefully yours,

HENRY S. COFFIN.

THE AMERICAN LUTHERAN PUBLICITY BUREAU,
New York, N. Y., February 17, 1939.

Hon. ROBERT F. WAGNER,
Senator from New York,
Washington, D. C.

DEAR SENATOR WAGNER: As chairman of the welfare committee of the Metropolitan Lutheran Inner Mission Society and a trustee of the Lutheran Welfare Council, city of New York, I wish to express my hearty approval of your proposed bill favoring the admission of 2,000 children 14 years of age and under into the United States on the terms enumerated in your proposed legislation.

If the various organizations with which I am connected can be of any service in carrying out your proposed plans, I shall be glad to receive from you additional information which might aid us to give cooperation in carrying out your splendid ideals.

You have my permission to make public announcement of my endorsement of your project.

Trusting Congress will pass your bill, I remain,

Sincerely,

J. F. E. NICKELSBURG.

The Tradition of American Security

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

ADDRESS BY HON. HARRY S. TRUMAN BEFORE THE NATIONAL AVIATION FORUM, FEBRUARY 20, 1939

Mr. MINTON. Mr. President, last evening I had the very great pleasure of hearing the junior Senator from Missouri [Mr. TRUMAN] deliver a most interesting address before the National Aviation Forum, at the Mayflower Hotel. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My subject this evening is rather a large one—The Tradition of American Security. Search for security was what caused the first settlement on the Atlantic coast of North America. Pilgrims and Puritans came that they might worship God to suit themselves, and as soon as they could do it, they immediately became persecutors of those among them who had other notions than theirs about worship, and Rhode Island and Providence plantations of Roger Williams was the result. Huguenots came to the Carolinas as a result of the Edict of Nantes so they could be secure in their rights of religion. Lord Baltimore brought his Catholic followers to Maryland for the same reason.

Written in 1776, the Declaration of Independence states certain inalienable rights to which all people are entitled, among them security in person and property. The colonists were in constant fear of attack by red men and were in almost continued argument with the mother country over certain rights and privileges, as well as with the French on the north and west. When the Colonies became the United States of America a foreign policy was inaugurated by George Washington, Thomas Jefferson, and James Monroe—"No entangling alliances. America for Americans." Mr. Jefferson stretched the Constitution until it cracked to make the young Nation secure on its western frontier by making the Louisiana Purchase. That security was further enhanced by pushing the western boundary to the Pacific.

After the War between the States we settled down to a policy of taking care of ourselves and a fancied isolation because we were fortified by two great oceans and the Monroe Doctrine, and then came the Spanish War, for which we were not prepared and from which we had to enter upon a Pacific—Ocean not peace—policy. No matter what we may say about it, the Philippine Commonwealth is our baby, and the Pacific Ocean is no longer our western frontier.

We became embroiled in the World War for the very same reasons that we entered the War of 1812, and we entered it in exactly the same unprepared condition. We tried to keep out of it by a system of strict neutrality, being cautioned by President Wilson not to even express our sentiments on the belligerents.

Jefferson, by his Embargo Act, hoped to keep us out of the Napoleonic wars, but Great Britain, just as Germany did in 1916, exasperated us to the point where we had to fight, and if it hadn't been for old "Andy" Jackson we'd have had little to boast of in that war, with our Capitol and our White House both burned by the enemy.

The Germans in 1916, just as the English in 1812, thought we wouldn't fight and that if we made the attempt we couldn't. In both instances the foreigners were misled by the talkers and the publicity hounds here at home.

Europe's troubles, in my opinion, are racial and economic. France and the old Austro-Hungarian Empire were the only two really self-contained nations on the continent. Germany, with an area about the size of Texas, had 60,000,000 people and not enough raw materials to anywhere near keep her machines going. The Kaiser tried to expand in the direction of the Black Sea or down the Danube Basin, just as Hitler is doing now. But Britain and Russia were always there to head him off. As they always have when pressure of economics and population became too great, the Germans exploded and the World War was the result. Had we—a new factor in world affairs—not joined the Allies, Germany and Austria would have won the World War and all central Europe and the granary of Russia, the Ukraine, would have been the German Empire.

Wilson, in his 14 points for peace, clearly saw that Europe could never be at peace unless the economic barriers could be torn away and the races be made to understand each other and have a will to live in peace. He tried to obtain a settlement of European difficulties in the Versailles Treaty, but Lloyd George and Clemenceau had been returned to power in elections won by promises to stick to the old conqueror theory of making the vanquished meet the expenses of the war. Lloyd George asked for an indemnity of $120,000,000,000—more than all the wealth of the German and Austro-Hungarian Empires together. Italy insisted on her pound of flesh; France insisted upon the utmost humiliation of the Germans; Britain, just as she'd done with Napoleon, along with old Clemenceau, messed up the map of Europe, and our failure to take our place in world affairs upset the whole apple cart, and we are right back where Julius Caesar left off.

After we failed to ratify the Versailles Treaty all sorts of expedients were resorted to, such as "outlawing" war—a silly phrase, to begin with—neutrality laws that won't work; sinking our Navy; and a lot of other falderol that won't have any more effect on the course of events than trying to dam Niagara or change the course of Mars.

Peace is a state of mind. We can't even have it here at home. Our economic situation almost brought us to disaster because there are so many greedy people in control of affairs. It seems that when a man is lucky and can become a factor in the control of land, or money, or government, he's not so much interested in the welfare of the race as a whole as he is in increasing the size of his holdings or his power.

The European situation is simply a continuation of that age-long expansion and overgrowth of population. We are all for peace, but I'm not sure that any of us would submit to having our lives and our property taken by force simply because the taker could do it by main strength.

The northern tribes of Europe first overran Italy and Greece, built up great civilizations, and were in turn overrun by other northern tribes who have built up great civilizations. In the meantime the northern tribes have become civilized themselves, but their instinct to increase and multiply and take what they want hasn't left them.

The world is smaller and distance in time is shorter today than it was a thousand years ago, and we must find some way to live honorably and peaceably together.

Japan, Italy, Germany—all signed the pact to outlaw war. Does it do that? Japan invades and attempts to destroy China, bombs cities and hospitals, and follows the precepts of Attila and Ghenghis Khan. Italy does the same thing to Ethiopia, the oldest kingdom in the world and a member of the association of nations, as is China. Now the German dictator is following the example set by Italy and Japan. Where will it end? Are we at the end of another enlightened age, as the Greeks were in 300 B. C. and as the Romans were 600 years later? I hope not, and I also hope we'll find a way to world peace. But until that time comes, I, for one, believe in a policy of adequate preparedness for defense. If occasion demanded, I am certain that American geniuses can create a bombing plane that can travel 10,000 miles and accomplish its mission. What then happens to impregnable Atlantic and Pacific barriers? Why, I expect to live to see the day when we'll have round-the-world passenger service by plane at 500 miles per hour.

The President has offered a reasonable program of preparedness by land, sea, and air. Sea defense cannot be accomplished by waving a wand; artillerymen and mechanized soldiers don't spring to arms overnight. Pilots and 600-miles-an-hour pursuit planes cannot be called for today and be in service tomorrow. We must meet a world situation, which we helped to bring about, by a realistic policy of preparedness. We have the finest material in the world with which to work, and I, for one, want to see it properly used. I'm no militarist. I want peace, and I want security. The best insurance I know to obtain them is to carry through an adequate plan for defense on land, at sea, and in the air.

America's Foreign Policy

EXTENSION OF REMARKS

OF

HON. HIRAM W. JOHNSON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

RADIO ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE, MONDAY, FEBRUARY 20, 1939

Mr. JOHNSON of California. Mr. President, I ask leave to have printed in the RECORD an address delivered by the senior Senator from New Hampshire [Mr. BRIDGES] last evening over the National Broadcasting Co. network on the foreign policy of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, I wish to speak tonight on a subject of vital importance to every American, our foreign policy.

The United States maintained a definite policy so far as her relationships with other nations were concerned, from the formation of our Union until the last 5 or 6 years. While this policy was one of constant change in matters of trade, transportation, communication, and concerted action in time of disaster, the basic principles seldom were violated. When they were violated, when we departed from our historic rule of friendly relations with all and entangling alliances with none, we suffered.

War is an ugly word. Above all things, America must keep out of war. Our best safeguard of continued peace is a realistic foreign policy. A policy based upon fundamental proven principles and maintained for a longer time than necessary to deliver a "fireside chat." This policy must be founded upon the idea of keeping out of all war; not upon the idea of selecting our enemies and friends in advance and treating them accordingly. We cannot act in the cause of peace as though we intended to fight. If we do, let us not be surprised when the call to arms rings from the house tops.

I believe the American people want peace. I believe the American people will refuse to send any mother's son to shed his blood upon a field of battle in any foreign land. I believe in the sanctity of our American form of government and in the territorial integrity of our American soil. I believe the American people want a foreign policy that will preserve these ideas first, last, and always.

Our country had such a policy, but in the maze of intrigue, politics, and secret meetings, it has been mislaid. It must be reestablished. It will be reestablished by popular demand and concerted action on the part of the American public. It is the crying need of this generation.

The present administration has undertaken to change many conditions, concepts, and relationships. Domestic affairs may be the subject of tinkering on the part of any government, but foreign affairs are too delicate, too fraught with danger of dire consequences, to permit unwise experimentation and blind groping. In the field of foreign affairs the Roosevelt administration has set itself up as the greatest authority of all time. Using every resource of the Federal Government, it has endeavored to convince the people of its great wisdom in statecraft. The truth of the matter is that it has brought us close to the brink of war. Since 1933 we have seen a new foreign policy hatched every few months—to the confusion of the people, the unrest of our industries, and the distrust of foreign nations.

One of the most glaring inconsistencies of our foreign policies under the present administration is that of our trade relations. On the one hand we try to extend trade frontiers through the promulgation of reciprocal-trade agreements. On the other we curtail our trade frontiers by providing for embargoes in our Neutrality Act.

What are some of the inconsistencies of the President himself? In January, 1936, he said, speaking of war, "We hope that we are not again at the threshold of such an era but if face it we must, then the United States and the rest of the Americas can play but one role; through a well-ordered neutrality to do naught to encourage the contest, through adequate defense to save ourselves from embroilment and attack, and through example and all legitimate encouragement and assistance to persuade other nations to return to the days of peace and good will." Clearly that stood for neutrality. But compare it to his Chicago speech delivered in October, 1937. "When an epidemic of physical disease starts to spread the community approves and joins in a quarantine * * *." Now, we have lost neutrality.

In his Chautauqua, N. Y., speech of August, 1936, the President said, "I wish I could keep war from all nations; but that is beyond my power. I can at least make certain that no act of the United States helps to produce or promote war." Compare that with his statement made in his message to Congress last January, "Words may be futile, but war is not the only means of commanding a decent respect for the opinions of mankind. There are many methods short of war, but stronger and more effective than mere war, of bringing home to aggressive governments the aggregate sentiments of our own people."

To add to the confusion, more recently the President released the following statement: "We are against any entangling alliances, obviously."

It is now common knowledge that the President supported the recent negotiations between a French air mission and an American company for the purchase of American-made military airplanes of an advanced design. I favor the sale of planes to France and Great Britain, or to any other nation, on a cash basis, provided that the United States has the right of priority of purchase on all new military developments. But I do object to the secret and unusual way in which this current deal was handled. Naturally I am not in favor of the dictatorial methods or the ideologies of any of the dictator nations. On the other hand, I do not believe that an official of this Government should take such a drastic step; a step which overturns our basic foreign policy of friendly relations to all, and entangling alliances with none.

The unfortunate crash of this airplane warns the American people that the foreign policy of their government, the very bedrock of all our foreign relations, is subject to change overnight at the whims of the Chief Executive. I believe alliances or secret agreements between the United States and foreign governments are of primary interest to the American people. Alliances and agreements may lead us into war. Whether we fight a "just" war or an "unjust" war, millions of our young men will never care. In any war they will be among the dead. Our desire for peace or war is the crux of the whole matter. Therefore, our policy is a subject for all our people to decide. If we do not want war, let us not take any steps in that direction.

For our foreign policy we can adopt either the processes of war or the processes of peace. The processes of war involve foreign commitments and alliances; meddling in the internal affairs of foreign nations; sanctions, embargoes and boycott; charges and tirades by irresponsible officials; propaganda campaigns to incite mob action; the creation of incidents to arouse public opinion; the recall of ambassadors and ministers. The processes of war also involve secret conferences upon matters of which the American public is kept in ignorance plus the determination to defend international morality and to act as a world policeman.

The processes of peace involve minding our own business; taking steps to see that America remains neutral whenever possible; offering to act as mediator in solving differences between nations; promoting conferences looking toward the limitation of world armaments. The processes of peace mean the building of adequate military, naval, and air forces to defend the United States and its neighbors, to the north and to the south, against foreign aggression.

It is obvious that we cannot adopt both the processes of war and the processes of peace. We cannot, for instance, have what some choose to term "collective security" without also adopting a policy of entangling alliances. The Roosevelt administration has tried to adopt some of the elements of the international philosophy and some of the elements of the isolation philosophy. Such a procedure has resulted in disaster. So far as a foreign policy is concerned the administration is upon the horns of a dilemma, and unless the people speak, it will remain there.

I do not subscribe wholeheartedly to a foreign policy based upon isolation. Modern science has robbed America of the effectiveness of such a program. But we can couple our traditional foreign policy with a sensible, workable, Neutrality Act. The result will be a new program which will more nearly satisfy the requirements of peace.

Freedom of the seas, the Monroe Doctrine, and the open door in the Far East, have been the basis of American foreign relations. They can so continue only if our present Neutrality Act is amended. The discretion of whether or not a state of war exists between two nations should rest with the Congress rather than with the Chief Executive. The decision of war or peace is too great to leave in the hands of any one man. As Tolstoy once said, "War is such a terrible, such an atrocious thing, that no man, especially no Christian man, has the right to assume the responsibility of beginning it."

A change should be undertaken to make the Neutrality Act more workable, and more in line with our desire for continued peace. Under the present act we defeat our own purpose. Its enforcement is the one thing most likely to draw us into any world conflict. The whole field of international law stands behind the traditional American foreign policy of which I have spoken. We should be willing to further insure peace by a few simple curtailments in our rights of trade during wartime. Let us remember that most wars start as the result of international incidents; therefore, it should be our desire to prevent the occurrence of those incidents.

Once the manifest destiny of our Nation meant the dominant expansion of America in the Western Hemisphere and Far East. Yankee imperialism was feared and respected. Today we do not want our neighbors to fear us. We do want the respect of the world. Our manifest destiny is to keep unspoiled the best example in our civilization of a democracy that works—free from the plots, plans, and diseases of European politics. That destiny can best be met by formulating a foreign policy based upon the processes of peace—and sticking to it. Let the American public demand of their President and of their Congress the immediate adoption of the processes of peace. Let us demand an end of guile, secrecy, and the mystification which surrounds our relations with other countries. Only by honesty, consistency, and confidence can we have a foreign policy suitable for America. Today America must move deliberately, without threat or bluster, and in the words of Theodore Roosevelt, "Speak softly and carry a big stick."

New Housing As a Job Provider

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

EDITORIAL FROM AMERICAN FEDERATION OF LABOR WEEKLY NEWS SERVICE OF FEBRUARY 18, 1939

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial on housing, taken from the American Federation of Labor Weekly News Service of February 18, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From American Federation of Labor Weekly News Service of February 18, 1939]

NEW HOUSING AS JOB PROVIDER

The tremendous possibilities of work for millions of the unemployed in providing adequate housing for hundreds of thousands of working men and women in the low-income groups are pointedly revealed in recent figures compiled by the American Federation of Labor in connection with the proposal to set up a National Planning Board, composed of representatives of all groups of industry, commerce, finance, and consumers, for the purpose of encouraging investors to lend their idle funds for industrial expansion.

Declaring that a "program to rehouse our population living in slum areas" would be at least a partial answer to the admitted social need for housing, the A. F. of L. said:

"The United States Housing Authority has made a good beginning, and in 1940 it will build 90,000 low-rent homes and give jobs to 213,000 persons producing materials and erecting the houses. But this is a very small beginning compared to the need. For over and above the United States Housing Authority program and the maximum private industry will build, there is need for 710,000 homes which have not been planned for. A large proportion of this need is in low-rent homes which are not profitable for private industry. To build these homes would employ 1,683,000 persons. In all, it has been estimated that we need to build 1,300,000 new homes each year for the next 10 years. This would create 3,081,000 jobs yearly."

In the important field of "low-rent homes which are not profitable for private industry" the United States Housing Authority has already allocated the $800,000,000 in loans for this purpose authorized by Congress, with new demands for slum-clearance funds coming in every day.

It has been estimated that the $800,000,000 already earmarked will provide direct employment at the site of the slum-clearance projects for more than 200,000 building-trades mechanics and laborers, and in addition will give work to approximately 450,000 employees in the production of building materials and their transportation. This means approximately 700,000 full-time jobs in industries where employment is critically needed.

Well-informed observers claim that the housing for low-income groups already guaranteed by the $800,000,000 Housing Authority loans makes only a dent in adequate housing requirements for the masses of our people. It is therefore axiomatically evident that an enlargement of the Federal housing program is an important element in this definite social improvement capable of mitigating markedly the unemployment crisis.

To meet in part this admitted emergency, Senator ROBERT F. WAGNER, of New York, has introduced a bill in the United States Senate authorizing an additional $800,000,000 for low-cost housing loans and $45,000,000 to subsidize certain rents which still will be too high. The new bill is endorsed by the American Federation of Labor.

The Silver Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

EDITORIAL FROM WASHINGTON EVENING STAR

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington (D. C.) Evening Star of February 20, 1939, entitled "Silver-Lined Cloud."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Washington Evening Star of February 20, 1939]

SILVER-LINED CLOUD

For more than 4 years the United States has been pouring sand in a rat hole, with proverbial results. The sand is silver and the rat hole is a great underground vault at West Point. The policy involved can only be considered as an amazingly stupid yielding to a pressure group. Within the last few days Wayne C. Taylor has resigned as Assistant Secretary of the Treasury, largely in protest against that policy. Senator TOWNSEND, of Delaware, has proposed the repeal of the act of 1934, and even members of the silver bloc have indicated a willingness to discuss modification.

The Government-set price for newly mined domestic silver now is slightly over 64 cents an ounce, and for foreign silver it is 43 cents. The price in the open market is a little less. Since 1934 the Government has bought more than a billion dollars' worth. Eighty-two percent went to foreign markets and 18 percent to domestic mines.

Theoretically, all this costs the Government nothing. At 43 cents an ounce the Treasury gets about 2⅓ ounces for a dollar. This is paid for with silver certificates, each dollar of which is backed up by seventy-seven hundreds of an ounce, the actual amount in a silver dollar. The rest remains inactive, but is available as a possible reserve for two or more dollar bills. The plan originally was to keep on buying until either the world price reached the statutory maximum of $1.29 an ounce, or the silver reserve equaled one-fourth the gold held. In this the policy has failed. The world-market price refuses to top the level set for foreign bullion, and twice as much silver as already is in storage would be required to reach the gold ratio.

In world finance, also, the program has fallen down. It has succeeded only in demonetizing the principal countries using silver coinage, and it drove China off the silver standard. It has failed to serve as a medium of bolstering trade with the "silver countries," most of which have been forced into a barter system. In its effects on the internal politics of Mexico, the biggest source of silver for the vaults at West Point, even more than through the direct profits realized, it has been a mainstay of the regime which has made a policy of expropriating American properties.

The principal achievement has been to establish a billion-dollar smoke screen to hide a $180,000,000 direct subsidy to the mine owners in seven Western States. Perhaps there is an argument for continuing domestic purchases. Proponents of the program claim it has kept 400,000 persons off relief. Yet, since silver production in the United States is largely a byproduct of other nonferrous mines, and since less than a hundred thousand are employed in all such enterprises, the figure seems excessive. Some

purchasing at home might be acceptable but the situation seems to call for more logical reasons for preserving a failing policy, 88 percent of which involves the foreign market, just to pile up tons of metal which is serving no useful purpose.

Cotton Program

EXTENSION OF REMARKS
OF

HON. HATTIE W. CARAWAY
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

RADIO ADDRESS BY DR. M. F. DICKINSON

Mrs. CARAWAY. Mr. President, on Saturday, January 24 last, Dr. M. F. Dickinson, of Little Rock, Ark., manager of the insurance department of the Arkansas division of the Farmers' Educational and Cooperative Union of America, delivered at Chicago a very interesting and able radio address on the cotton program, having particular reference to Government protection for the family-size farmer. I ask unanimous consent to have the address inserted in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, the cotton farmers of the South extend greetings to the farmers and their friends throughout the Nation. Let me express to the National Broadcasting Co. and to President Vesecky, of the National Farmers Union, the appreciation of both the southern farmers and myself for this opportunity to present our cause to the Nation.

It is a peculiar twist of fate that would bring poverty and even hunger to so many people in this, the greatest Nation on earth—a Nation that, although comprising only 7 percent of the population of the world, has 35 percent of all the railroads, 45 percent of the radios, one-half of all the telephones, and 70 percent of all the automobiles in the world. A Nation that uses 50 percent of all the silk, of all the petroleum products, of the rubber, and of all the coffee in the world. But regardless of this wonderful showing, regardless of all of our wealth, our great manufacturing industries, our natural resources, our transportation facilities, we find eleven to twelve million people still unemployed, with 3,000,000 families on relief.

While we realize that legislation alone cannot restore prosperity to agriculture of the Nation, yet our lawmakers can help in many ways. For example, farm tenancy has been increasing rapidly, especially in the Middle West and in the South. The Bankhead-Jones Act at the best is a mere gesture in making home owners of these tenants. I desire to call your attention to a bill Senator LEE, of Oklahoma, introduced in the last Congress providing that insurance companies, Federal land banks, or large private landowners may cut their farms into family-sized tracts and sell to tenants, the Government to insure the purchase money, provided both the purchasers and the farms are approved by F. S. A. Such a law properly administered would really accomplish something in putting dispossessed farmers back as home owners.

But as I am speaking to you today as a member of the cotton commodity committee of the National Farmers Union, I shall confine my remarks largely to the southern farmer, and more directly to the southern cotton farmer's problems. In doing so I shall speak frankly not only to our own southern people but to the farmers, the businessmen, and the statesmen throughout other sections of the Nation. I say this because it is apparent that one of the results, if not the purpose, of the present farm bill as it applies to cotton is to drive the upland farmer out of the cotton business, reserving the growing of cotton to the plantation owners either corporate or private, in the Delta sections. When this one and one-half million upland families are forced to abandon growing cotton, and that time is not far off if we continue under the present control program, they must turn to other lines of agriculture. The Extension Service throughout the South is encouraging them to take up dairying, livestock feeding, trucking, and in some sections the growing of wheat and other crops. You northern farmers and your lawmakers can readily understand what this will mean to your markets. Let us assume that this million and one-half farmers branched into competitive farming against you and averaged only 30 acres of wheat to the family, growing 10 bushels per acre, and 10 cows producing butterfat; this would mean 450,000,000 bushels of wheat added to the already overproduction of wheat in this country. It would mean 15,000,000 more cows producing dairy products to be added to the already well-supplied market of butterfat.

In other words, it would increase the production of wheat in this country about 50 percent, and almost double our dairy production. This would bankrupt the farmers in other sections without benefiting anybody except the large plantation owners growing cotton in the South. Therefore, the farmers of the North, the East, and the West should be vitally interested in a cotton farmers' program that will enable the farmers of the South to continue growing cotton. Although President Roosevelt told us more than 5 years ago that the prices of farm products must be increased to the point of enabling the farmers to enjoy a decent standard of living, we sold our cotton this last year for about $5 a bale less than it was selling when he made this speech in October 1933.

We have only to refer you to the N. E. C. report made to the President last summer to refresh your minds as to the terrible conditions that exist in the cotton fields of the Southland. This report to the President said that even in prosperous 1929 the southern farmers' income averaged only $186; that the 53 percent of the farm population in the South who are sharecroppers had an average annual income ranging from $38 to $87, or $73 per family, and, remember, $73 is an average of only 20 cents per day.

When the present program of crop control went into effect, each farm was cut 40 percent below its 5-year average of 1928–33. This applied not only to the plantations, but to the hill farmers who were cultivating only enough acres to produce sufficient cash money to take care of their needs. With this 40 percent cut, they were not left with sufficient acres to produce enough cotton to enable them to support their families and pay the interest and principal on their mortgage debts—the result being the loss of many thousand homes through foreclosure.

Only a few days ago an official connected with farm-debt adjustment in one of our Southern States made the remark to me that unless we could have a change in our present control program many small-home owners were doomed. He said he and his committee had been trying to adjust a farmer's debt that day and found that he was allowed only 2.7 acres for cotton. This would produce barely one bale, and even at 16 cents per pound, or twice what we received for it this year, it would give him a cash income from his cotton of only $80. This farmer had no future paying ability, and under the present program cannot have it.

This last year the Delta farmers were allowed from 31 percent to 40 percent of their cultivatable acreage for cotton, while the hill farmers were allowed only 25 percent and less. With these reductions in acreage from year to year, there could be but one effect. The plantation owners and landlords of smaller tracts using tenants could no longer use all of their tenants. They could not be responsible for food and clothing for them and their families. Therefore, these tenants were asked to move from the farms. Thousands upon thousands were thrown out of their homes onto the highways without food or shelter, without a place to move, and without a dollar with which to move had they known where to go. Suffering from hunger and cold, they were subjected to the ravages of disease. Some committed suicide, others died from hunger and exposure. The Government was forced to step in through its relief agencies and assume the responsibility of feeding, clothing, and housing these unfortunate tenants.

Only recently you have read in your papers about the thousands of sharecroppers camped along the highways in southeastern Missouri, because of ejections from their homes made necessary by the present cotton acreage control program. Many of us are inclined to place all the blame for such seeming inhumanitarism upon the plantation owners or landlords, but remember they can no longer use these families, therefore they cannot be responsible for their maintenance. The farm program that changed the methods of farming in the South is wholly responsible for all this suffering among our people and not the landlords. Do you wonder, then, that although the South's population comprises 28 percent of the Nation's population, our income is only 12 percent of the national income? Do you wonder that the South has been dubbed the No. 1 economic problem of the Nation by our President? Do you wonder that three-fourths of all the children between the ages of 10 and 15 years employed in the United States are Southern boys and girls? On several hundred thousand of these cotton farms you will find children much younger going to the fields with their parents; yes, mere babies 7 and 8 years of age. Professional social workers, who have overrun Washington during the last few years, work themselves into a lather of indignation over the plight of women and children employees of sweatshops. The minimum-wage bill and generous relief donations typify our Government's efforts to alleviate distress among these classes.

Who now will deny the human misery that stalks the cotton-fields of the South?

Is there no compassion for the little children who slave under a broiling sun, wielding hoes or dragging heavy cotton sacks for long weary hours, breaking their little bodies in toil in order that their parents may realize just barely enough cash income each year to half feed them on corn bread, sorghum molasses, and cottonseed-oil gravy, and half clothe them in flour and fertilizer sacks?

Is there no indignation against the system of crop control that condemns hundreds of thousands of women on southern cotton farms to longer hours of labor and to more grueling toil than were ever known to employees of so-called eastern sweatshops?

The employees of sweatshop factories are now given protection in the minimum-wage law enacted by the 1938 Congress. The five-bale parity plan which we are offering would give cotton

farmers sufficient income to curtail child labor in their fields, to properly feed and clothe them, and to give their womenfolk some relief from care and bitter toil.

Are the women and children of southern cotton farmers less sensitive to physical privation or less deserving than those whom our Government has already helped?

Remember, too, these women and children in the sweatshops work only 7 or 8 hours a day, while the women and children in the cotton fields work from sun-up to sun-down, 10 to 12 hours a day. Does it not make your heart bleed when you see little children 6 and 7 years old dragging a cotton sack with the perspiration streaming from their little cheeks; a little child 5 years old taking care of a tiny baby out in the cotton field while their mother breaks her back picking cotton?

Is there no resentment against a program that has driven one-half million families from our cotton farms onto W. P. A.?

But you have another reason to come to our help in securing legislation to place a floor under the income of these cotton-growing families. You, Mr. Citizen, north of Mason and Dixon's line, you from the sunny slopes of beautiful California, you from the snow-capped peaks of Washington and Montana, and you from the ocean-lapped shores of New England are being taxed to feed and clothe these poor unfortunate tenants and sharecroppers who have been driven from the farm by our present farm program. Now, if the program is to be continued, as the Secretary of Agriculture says it will be, and our up-land farmers are driven from the cotton-producing business and thereby forced to take up the growing of wheat, dairy products, livestock, truck, and fruit and other crops that you farmers are now producing, you will suffer, indeed, through your markets.

So I desire to impress upon your minds most forcefully that you are vitally interested in the prosperity of the southern farmer. You are interested in keeping him in the cotton-producing business. The South is essentially adapted to growing cotton. We have the climate, the soil, the equipment, and the labor. We know how to produce cotton. It will take us some time, of course, to learn to produce dairy products as cheaply as you do, to learn how to protect our fruit trees from insects and disease, but we will learn it; and, with our 2 to 4 months more of green pastures for our dairy cows and livestock and our mild winters, we will be able to produce these products cheaper than you folk of the Northern States can. We plead with you in the name of suffering humanity to join us in our efforts to have Secretary Wallace and the Congress abandon the present cotton-acreage-control program that is so rapidly destroying the South and its people, and that if continued will force us to become strong competitors of yours, thereby destroying you farmers of other regions of the Nation by creating surpluses of the products you are now producing. Your answer is, "Submit a sound program that will put us back on the road to prosperity."

In answer to that, the National Farmers Union has accepted the challenge by offering you the domestic-allotment plan with the five-bale parity feature as the mechanics for distributing the American-consumed cotton to the individual cotton growers, thereby protecting the family-sized farmer. By the domestic-allotment plan we mean the Government is to guarantee to the southern cotton growers parity or cost of production on that part of the cotton that is consumed in America. They can do this in two ways, either have the farmer sell his cotton on the market and let the Government subsidize the difference between the market and 16 cents a pound or whatever cost of production might be; or, preferably, the Government may protect the cotton market in America by tariffs against the importation of raw cotton and manufactured goods from cotton and other competitive fibers.

Under this plan the Government would not have to spend one dime to guarantee the farmer cost of production. By the five-bale feature we mean that each family shall be entitled, as his allotment of that part of the crop to be consumed in America, all he produces up to and including five bales. If he desires to grow more than five bales, he must be content to sell it on the world market. Each farmer would be left to grow as much as he pleases. This would put the cotton growers back into the bidding for their lost markets and save millions of dollars of the taxpayers' money which has been invested in cotton loans. This plan is sound and practical. We have one and three-fourths million farmers producing since control a little less than 3,000,000 bales. We have three-fourths million more farmers that would have five bales each, or three and three-fourths million bales, making a total of six and one-half to six and three-fourths million bales on which the Government would guarantee parity. This is our average American consumption; of course, if the plan encourages the one and one-half million upland farmers to increase their production to, say, 4,000,000 bales, making a total required allotment of seven and three-fourths million bales, we would just reduce the number of bales per family to four and one-half bales each. If, on the other hand, the five-bale allotment should fall under the domestic consumption, then we would increase the family allotment to five and one-half or six bales per family.

We understand you have the same problem of protecting the family size wheat grower against the corporation wheat ranches of the Campbells and Clarks and others as we have it down South. We believe, however, the principle of the five-bale distribution of the American consumed cotton could be applied just as successfully to the distribution of the wheat to be consumed in America. While the control program may have been all right for your products, it does not work with cotton. It has helped to lose our foreign market, probably forever. It has driven tenants from the plantations and smaller farms onto the W. P. A. pay rolls. It has caused farmers to lose their homes by the thousands and it is gradually driving them into other lines of agriculture in competition with you, and remember Congressman Boileau, of Wisconsin, said a year ago, in discussing the present farm bill in Congress, that if the South increased the production of dairy products only 14 percent it would bankrupt the dairymen of Wisconsin and New England. Our thought is that the South can be saved—that it can be lifted from the position of being the No. 1 economic problem of the Nation—that the farmers of the South can have their standard of living raised—that those who have been driven from the farms on to W. P. A. can be returned to the farms. That tenancy can gradually be eliminated and homeowners substituted in lieu thereof, but this cannot be done under the present farm program as it relates to cotton. We believe the farmer is entitled to a two-price plan for his products, just as industry has a two-price plan for their products through tariff protection. Do you not wonder that the farmers have been able to stay in business as long as they have when our manufacturers through protection of our Government, whom we all support through taxes, are permitted to sell a mowing machine to the American farmers for $52 more than they sell the same machine to his competitor farmers in South America, Europe, Asia, and Africa; when they are permitted to sell a wagon to American farmers for $50 more than they sell the same wagon to his competitors in these other countries, this being true of all other farming implements, fencing wire, and other tariff-protected products of our American factories that the farmers must buy.

Yes; our manufacturers have one price for their products consumed in America through tariff protection. The balance of their products they sell to foreign trade on the world market. Are not the farmers of America entitled to the same protection for their products? Give them one price for all their products consumed in America and then let them, as industry does, sell their surplus on the world market at the prevailing prices. Certainly there is nothing unfair about this.

Do not criticize us too severely for the unfortunate economic conditions of the South as we have not had a fair break with the rest of the Nation from the Congress since the Civil War. We have been handicapped with high tariffs on the things we must buy and have been forced to sell our products on a competitive market with the whole world. We have been greatly hampered in the development of industries by high freight rates not imposed upon other parts of the country. We have accepted and have complied to the letter with all farm bills and regulations promulgated by the Department of Agriculture. We have accepted reciprocal-trade agreements, but it is hard to understand how the South can profit by trade agreements that permit vegetable oils to be imported free of tariff which cheapen our cottonseed and soybean oils. We are convinced that if tariffs are to be levied on the importation of manufactured products they must be levied on the importation of agricultural products. Either the whole Nation should be on a free-trade basis or it should be on a protective-tariff basis, furnishing a shelter for agriculture both in the North and in the South.

Therefore we ask you farmers, businessmen, and lawmakers throughout the Nation to help us get for the American farmers this two-price plan, familiarly known as the domestic-allotment plan. But if you give us the domestic-allotment plan and then do not provide for an equitable distribution of that part of the crop to be consumed by the American people among the individual farmers, thus protecting the family-size farmer, you still will not save the great masses, the one and one-half million cotton growers referred to in the early part of my discussion. When the Congress opened lands for homesteads they did not say to one farmer, "You can homestead only 40 acres because you have owned only 80 acres during the last 5 years, or you cannot homestead at all because you have not owned any land during the last 5 years," and then say to another citizen, "You can homestead 3,000 acres because you have owned 6,000 acres during the last 5 years." But that is exactly what they do under the present farm bill. No; they said to each farmer, "You can homestead 160 acres, no more." Why should not Congress distribute the American-consumed part of the crop among the different cotton-growing families on the same basis, or five bales to the family, provided the family grows five bales?

This will encourage the plantation owner to put his tenants back on his farm, as each tenant will get his five-bale allotment. The plantation owner will be benefited, as he will get his customary rental—one-fourth if an ordinary renter; one-half if a sharecropper. Therefore the plan will be fair to the little farmer and fair to the big farmer. It will be fair to the Government, because the taxpayers will be relieved of more than one-half million families now on W. P. A. pay rolls as they are placed back on the farms, and now costing the Government $200,000,000 a year. This will give the southern cotton-growing families purchasing power to buy fruits of the States of Washington, California, and New York; to buy dairy products of Wisconsin and New England; to buy wheat of the Great Plains. It will give them purchasing power to buy the products of our factories, as clothing, mattresses, blankets, bedsheets, farming implements, automobiles, and trucks.

Many of those trying to give farm relief have lost sight of the human equation of the cotton problem. They are so concerned with the number of acres that they have no time and little thought for the number of families who are being lost in the shuffle of allotments.

President Roosevelt did not consider production or anything else except human need when he called on the Congress to "put a floor under the income of wage earners" through enactment of a minimum-wage, maximum-hour law. So, let us again consider the human need and place a floor under the income of the farmers

of America. Perhaps that small percentage of the farming lands in the rich river-bottom areas could produce sufficient cotton for all our needs through intensive power cultivation. But more than 2,000,000 Southern families deserve the right to make their own living. They are already with us. Birth control will not solve their immediate problem. Today's problem must be met today. The five-bale parity plan would put a fixed floor under the income of every cotton-growing family; it would provide work in private enterprise for thousands now groveling in politically made work which in a large part must necessarily be a sham so far as actual achievement is concerned.

We of the cotton South who are working toward enactment of this plan into law ask you to join us in calling upon the President and the Congress merely to do for Southern cotton-growing families what they have done for wage earners in manufacturing and for the unemployed who have been given places on the W. P. A. pay rolls, the right to work and to a living wage as a reward.

We call upon you cotton farmers to rise up and demand your rights; to express yourselves as free citizens and not sit in tonguetied fear of political bossism; to step forth as stalwart sentries at the post of duty designated for the pioneer husbandmen by Thomas Jefferson—defenders of human freedom on this earth of "government of the people, by the people, and for the people."

We call upon every patriotic southerner to join us in a movement that will put the underprivileged classes of our southland on a plane of equality with other American groups, and that will fit them for larger contributions to national prosperity and progress.

The Works Progress Administration

EXTENSION OF REMARKS
OF
HON. HARRY S. TRUMAN
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

RADIO ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, JANUARY 21, 1939

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered over the radio on Saturday, January 21, by the Senator from Florida [Mr. PEPPER]. His topic was the Works Progress Administration.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, you know that the Senate is now determining the amount to be appropriated by the Federal Government for the support of the work relief program between now and the 30th of June, the remainder of this fiscal year. The President, after consultations with the W. P. A. Administrator, the Secretary of the Treasury, and other informed and careful advisors, recommended to the Congress the provision of $875,000,000 for this purpose. The chairman of the Appropriations subcommittee in the House of Representatives declined even to introduce the bill providing for the amount the President requested—$875,000,000—but introduced a bill providing for only $725,000,000. The House Appropriations Committee approved this figure, which meant a reduction of $150,000,000 in the current rate of Federal expenditure for the work relief program. The matter was handled in such a way that the House of Representatives approved this $150,000,000 cut without a record vote. Thus, a bill providing for $725,000,000 instead of $875,000,000 as the President recommended, has come to the Senate.

There are two ideas about the matter of the Government helping the people to better their condition. One idea was expressed in 1932 by the Honorable Merle Thorpe, editor of the Nation's Business, and at that time assistant director of President Hoover's organization on unemployment relief. Mr. Thorpe said: "When England first began to take care of the unemployed, she, like Rome, had no idea that it would lead to the dole. England, as we are doing today in the United States, developed a sloppy sentimentalism that the Government should care for its people.

"When old-age pensions were adopted, England took the first step to destroy the foundations of thrift. Labor exchanges and unemployment insurance were then introduced, on the idiotic idea that it was the duty of the Government to find its citizens work."

The American people in the election of 1932 repudiated that idea, and the government that believed in that attitude of indifference to the suffering of its people.

Suppose we look for a bit at the history of the Federal Government's effort since 1932 to alleviate the widespread distress in this country following in the wake of the depression. In 1932 the Republican administration created the Reconstruction Finance Corporation to make loans to private business and to States and municipalities for relief purposes. Between the creation of this act in July 1932, and the first of January 1933, $80,000,000 altogether was disbursed for relief purposes. That amount was approximately the same that the Reconstruction Finance Corporation of Hoover days loaned to Hon. Charles Dawes and his bank in the city of Chicago. In May 1933 President Roosevelt caused the creation of the Federal Emergency Relief Administration, which administered outright Federal relief grants under a scheme of partnership with other Government units. This was our first experience with the huge problem of aid to the unemployed and relief to the impoverished.

The program, being new and we being without experience in its operation, contained, naturally, many defects, although it definitely began to put money into circulation and to give succor to people in a way that immeasurably diminished the tragic shock of those sad days. In November 1933, the Civil Works Administration was created, under which the Federal Government undertook directly a program of public works in which the workers were hired directly by the Government; work was given to the unemployed at fixed wages and not on a needs basis. This program, at its peak, gave employment to 4,200,000 persons, roughly one-half of whom were taken directly from the relief rolls. Ninety percent of the cost of this program was borne by the Federal Government. We were learning something about work for the unemployed, and we had learned by these experimentations that a large variety of useful projects could be operated with unemployed labor which would not compete with private business, would give jobs to those who had a right to work, and give to the public a purchasing power that would move the whole economic machine toward a greater prosperity.

The C. W. A. program gave way again in 1934, and early 1935, to the revived F. E. R. A., which subsidized the State-relief and work-relief organizations and directly carried on a Federal construction and public-works program. This program, in addition to affording employment to the needy, also provided direct relief to many not engaged in the work program. Finally, in the spring of 1935, Congress provided for the Works Progress Administration, which discontinued entirely any direct relief and provided relief only in the way of a works program which gave opportunity for employment. The 1935 appropriation for the entire works program was four and one-half billion dollars; in 1936, two and one-quarter billion dollars; in 1937, one and three-quarter billion dollars; about the same amount in 1938.

The President's recommendation contemplates an expenditure for the next 6 months approximately the same amount that was spent for the program during the last 6 months. The House has proposed to reduce that amount by $150,000,000.

Under the present W. P. A. program, therefore, all direct relief and all relief which is not covered by the employment program of the Federal Government is left upon the shoulders of the States and the political subdivisions thereof. I know there is no city or county official hearing my voice who will not attest that the burden that the local governments are now carrying is all they can bear, and most of them are wondering how much longer they are going to be able to continue to do what they are now doing, because it will be remembered that the depression lasted from 1929 until 1933 when the entire load of relief was carried by the States and their political subdivisions without any help from the Federal Government, thereby running them into a great debt, and in many many cases straining their fiscal strength to the utmost.

There are now employed upon the W. P. A. program approximately 3,000,000 persons. It comes from reliable sources that even now the Federal Government is giving direct employment to only approximately 27 percent of the 11,000,000 unemployed of this country. It is a matter of common knowledge that every year approximately 500,000 new workers come into working age. That means that since Roosevelt took office, approximately 6 years, about 3,000,000 new workers have grown into the workers' field. Therefore, it might be said that every job that the Federal Government is now providing has been taken by a new worker who was not a worker in 1933 when we had approximately 15,000,000 unemployed. You can see, therefore, how little we have been able to do in diminishing the number of unemployed who were unemployed in 1933.

Another fact commonly overlooked is the number of workers every year thrown out of employment by improvement in the use of machinery and mechanical devices. It is estimated that in 1938 at least 10 percent fewer men were required to turn out the same quantity of goods in America as in 1929. Or, put another way, had it not been for technological improvement between 1929 and 1938, at least 1,000,000 more workers would have been required than were employed to produce the national income of 1938. If we take into consideration the number of new workers growing into working age every year and the number of workers being displaced from jobs every year by mechanical improvement, our national income in 1939 would have to be one-quarter again as high as it was in 1929 to give the same number of people work as were employed in 1929.

I wonder how seriously those who are so loud in their demand for a reduction in the appropriation have regarded the problem, how adequately do they think that even the amount the President has recommended is taking care of the needs of the country. The truth is—and all of these figures were given in evidence before the Senate committee—that there are 750,000 people in the United States certified by the public-welfare agency of their own county and community as being in sore need of work relief,

who are not even now, and will not be if the amount the President recommended is adopted, able to get a W. P. A. job. In addition to that, under the existing rules of the W. P. A. on account of the limited funds now available, no farmer who receives any benefit, even a $50 loan from a Federal farm aid agency, is eligible for W. P. A. work. That cuts off at least another 100,000 who actually need a job and can't get it because funds are not available.

There are 1,640,000 people over 65, every one of whom is receiving from Social Security benefits less than he or she would receive from minimum W. P. A. wages. There are in addition 256,000 mothers with dependent children, reaching a total of 630,000 children, and every one of these mothers usually also receives a lesser amount than the minimum W. P. A. wage. There are 1,520,000 families, representing five or six million people altogether, who are receiving direct relief from the States and their political subdivisions, in every case in an amount less than the minimum found by the W. P. A. to be necessary for a bare sustenance. There are at least 750,000 farmers whose annual income is less than that found by the W. P. A. to be necessary for a meager livelihood. It, therefore, makes us who know these facts unable to understand the reasoning of those who arbitrarily demand that even the present rate of Federal assistance through work relief be diminished by $150,000,000 in the next 6 months.

The effect of that reduction would be to throw out of employment—to put altogether in most cases without means of a livelihood—200,000 persons in January, 200,000 more in February, 200,000 more in March, 200,000 more in April, 200,000 more in May, and the same number in June. In my State of Florida, for example, that would mean that between now and June the number on the W. P. A. should be reduced from 52,400 by 19,600, a total reduction of 37 percent, and there will be corresponding reductions throughout the whole country.

All of us will remember that nearly every one of those persons has been largely for years making a bare living and has had no opportunity to accumulate savings. Who is going to give a job to those 200,000 people each month that the opposition proposes to cut off? How are the States and their political subdivisions going to provide for these additional unemployed that the opposition proposes to throw in their laps? Who can measure the cost in human suffering, in blighted lives, in premature death, from undernourishment, or ill care that that contribution to economy which some of our friends so ably want to make to America? At a time when America needs the producing capacity, the earning, the creative effort of every one of those men and women the opposition proposes to make them derelict in their own country.

Our experience over the last 6 years has indicated that these Federal contributions are not charity. When we give a job to an unemployed man we don't help him any more than we help the merchant with whom he spends the money he gets from his job. The whole economic system derives as much as that man does from the benefit of what he receives and, in addition, our economy is enriched by the work he does. All over this Nation public buildings, highways, streets, airports, recreational facilities, water and drainage systems, flood- and erosion-control work, conservation activities, such as reforestation and the like, stand out to sustain the statement of Fortune Magazine, the magazine of business, in October 1937, that, on the whole, the W. P. A. "functions with an efficiency of which any industrialist could be proud."

It seems now that we have had enough experience with the general beneficial effects of a public investment program to leave no doubt in anyone's mind of not only the necessity, but the desirability of such a policy. We started investigating because the spending we have been doing, as the President pointed out, is an investment the way fertilizer under a crop is an investment. In 1933 and 1934 and 1935 and 1936, and the early part of 1937, we had a prosperity that compared favorably with that of 1929 and many of the large corporations of this country made more money than they made in the boom year—1929, under the pressure of those who make the same argument that the opposition is now making, the argument of economy and lower Federal participation in the recovery program. We stopped our spending, or investment program, sharply in 1937, and in the summer we dropped into the abyss of a recession almost as severe as the depression of 1932, and we stayed in the trough of that recession until in the spring of 1938. The courage of President Roosevelt, and the policy that he had demonstrated, reasserted themselves and the Federal effort was revived and now it has borne fruit again, for the securities listed upon the stock exchange alone have increased since that Federal appropriation of the spring of 1938 at least three times more than the entire Federal appropriation. In fact, the Federal debt has been increased a total of $18,000,000,000 since this administration took office, but at the same time, and as a direct result of that debt, the American people are making a total income this year of $70,000,000,000, when in 1932 they made only about $38,000,000,000.

Roger Babson on October 28 last said: "Business in the United States is surging ahead. There is no longer any doubt about the present recovery."

How can anyone miss the causal connection between this Federal activity and the ensuing economic improvement? Now, our friends of the opposition, while they talk about business confidence being desirable, want to destroy business confidence by cutting off business' customers.

It is like old Benjamin Franklin said about honesty—this is the best policy. They, therefore, who look to their selfish interests, to the prosperity of their country, the welfare of everybody, not even to speak of a tragic, dismal future of those whose very lives may be shattered by what we do in this measure cannot, I believe, refuse to support the President in the salutary recommendation he has made.

America's Place in the World

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

ADDRESS BY HON. GERALD P. NYE, OF NORTH DAKOTA, FEBRUARY 18, 1939

Mr. REED. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the distinguished Senator from North Dakota [Mr. NYE] before the Saturday Discussion Club, National Republican Club, at New York City on Saturday, February 18, 1939. The subject of the address is Our Place in the World.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Shall we be a policeman for all the world? Shall we strive to inflict upon others our theories and wishes as to what government ought to be the world over? Shall we ridicule the economic practices of others? If it be our choice to be and do these things, then what of our proven ability, or lack of ability, as a policeman? How well prepared are we to demonstrate that ours is the only form of government that lends itself to the needs and interests of people the world over? How successful have been our own economic practices that we should want to inflict them upon others?

All these questions, and many more, suggest themselves when we lend ourselves to a discussion of our American place in the world. But for my purpose today one question stands out more invitingly than any other—what of Republican responsibility and opportunity as respects our place as a nation in the world?

Certain is one thing—America's place in the world is in a very definite and large way dependent upon her own strength of mind and body. A sick nation can hardly expect to afford a world leadership or worthy example. We may preach, make faces, throw our money around, bluff, and bluster, but so long as we suffer our present economic illness it is hardly likely that we shall be taken seriously abroad.

PUT OUR OWN HOUSE IN ORDER

If ever we are wanting a place of leadership and influence, the kind that wins good faith and confidence, we must have our own house in such order as will inspire and give us firm foundation from which to do our speaking. To talk boldly to the world, to get into the middle of the world's embroilments may serve the immediate purposes of some people insofar as it takes the popular mind off failure at home. But it can only invite a condition of added decay, injury, and illness at home that hasn't responded to the remedies that have been administered, even though they have been the most costly prescriptions civilization has known. In a word, we will do well, it seems to me, to confine ourselves for the moment to correcting our own ills, to saving our own democracy rather than soliciting the trouble to come from any move to police and doctor the world.

I think our country has never had a more difficult task than the one at hand. And it worries me more than a little to observe how large is the will to criticize what is being done with the express purpose of meeting the task, and how rare is the seeming ability of these critics to meet the challenge with constructive means to substitute for the plans and efforts that have failed.

GOVERNMENT MUST CONTINUE HELP

While I am ready to agree that there is lack of confidence by business in government, that this definitely retards recovery, I am completely without patience with those who proclaim that all that is necessary to put the country on its feet is for the Government to quit trying to help improve the situation and let our economic order find its own level. I might have some sympathy for this theory if only I didn't know that those who preach it would not want to give up many of the advantages that government and law has given them and under which they have prospered in other days, and under which some of them prosper even today.

It is idle to talk of what is wrong without offering a means of correction. The Republican Party may conclude that victory in 1940 is dependent only upon the President's will to continue losing his temper and continuing failure of his administration. That might win. But dependence upon any such negative course would drive me quickly to the conclusion that the Republican Party "ain't

goin' no place in 1940." The American people not only want action but they need it desperately.

What kind of action is it the people want? More Government in business? More Government tinkering with wheat acres and the lives of little pigs? More Government spending? Not at all. What is wanted is Government action which will let the people enjoy the resources of the Nation and the fruits of honest toil in production.

RELIEF FROM RELIEF NEEDED

What kind of action is it the people want? A primary desire is for relief from relief. This desire is common to people off relief and most people on relief, all of whom thoroughly dislike seeing a Government trying to meet an emergency of need by many through programs which too frequently ignore the needs of the truly deserving, while many others enjoy, on relief or in administration of relief, a grander standard of living than ever was their lot under the most prosperous conditions the Nation has known. Relief from relief does not require abandonment of governmental help to those who find themselves up against difficulties which they had no hand in inviting. It does require a weeding-out process that will let fewer Federal dollars meet actual needs and send thousands into positions where they can at least know that they must try to help themselves.

There are fields in which the Government might operate in a way that would bring a quick and lasting recovery into every occupation, afford tremendous relief from relief, and restore security and contentment in those places where despair now holds sway in spite of 5 years of Government spending in the name of accomplishment of desirable results.

BUILD A HEALTHY AGRICULTURE

To me it has always appeared that a healthy agricultural industry was basic to an economic state that would serve well the interests of business, capital, and labor. American agriculture hasn't known prosperity in many years. This administration has declared its purpose to correct this disparity directly involving a third of our population. Its efforts have failed miserably. Today finds the farmer exceedingly weary of the New Deal agricultural program, sick to death of the control program.

AMERICAN PRICE FOR FARM PRODUCTS

The thunder of farm disapproval rolls heavier every hour. The counting of the votes of last November in the farm States reveals only in part the degree of protest existing. But this protest is not demanding abandonment of Government assistance to agriculture. Instead, it is requiring an adoption of policy that will go directly to the heart of the trouble and afford a price for farm products that will represent the cost of producing them. An American price for farm products consumed in America is not more than our farm people have a right to expect. It is the least that ought to be given them. There ought to be adoption of the pending cost of production program in substitution of the existing acreage control policy which has had no tendency to improve farm prices, and this in spite of the millions that Government has poured into the cause.

Our policies should be predicated primarily on what is the best for the United States. The effect on the remainder of the world should be a secondary consideration. In that way we shall best serve world civilization, for I am convinced that our greatest contribution to the welfare of mankind and to future generations is to preserve intact our way of life and our democracy. We will do well to afford a substantial plan for agriculture in our economy.

TRADE TREATIES HURT FARMER

This thought inspires me to say a few words about our reciprocal-trade program. This program has been hailed by the Roosevelt administration as one of the greatest contributions to a peaceful solution of the world's troubles, as "a great cornerstone for the edifice of peace."

If the reciprocal-trade program held out the promise of diminishing the prospects of war in the world—if it could be demonstrated that actually it did contribute to keeping the world at peace—then it might be worth while despite its unfavorable impact on American agriculture and industry and its disruptive effects on our national economy.

But the record does not offer evidence to sustain the high claims made for this program as an instrument of promoting peace. This Government has pursued the reciprocal-trade program unceasingly now since its first enactment in 1934. It has had a trial of almost 5 years. Negotiations have been carried on with a score of nations. All the world has been informed of the nature and methods of such an undertaking. Surely if there is inherent in this program forces which make for peace they should by now be apparent in measurable form.

But what do we find? Instead of war being more remote in the world, we find that it is far more imminent today than it was in 1934. One need not demonstrate that contention with specific incidents. It is apparent daily in our national life and in every country in the world. Virtually the entire time of the present session of Congress has been devoted to a discussion of war and preparation for war. Congress now is being asked to appropriate for national defense a sum more than twice that spent for national defense by this country 4 years ago. In greater degree the same story is true of all of the major countries of the world. During the life of the reciprocal-trade program we have seen the greatest armaments race of all history, with our country a party to it.

The reciprocal-trade program has done positive injury to the American farmer. While the farmer is asked by his own Government to reduce his production to the requirements of American consumers, he has had to watch the same Government bringing him new competition. Imports coming from Canada for instance, imports in competition with the American farmer, are permitted in the name of helping Canadian farmers to buy Michigan automobiles, thus aiding business and labor. But what of the American farmer who by reason of the Canadian competition loses his own market and ability to buy the same product of the automobile manufacturer?

GIVE AMERICAN FARMER AMERICAN MARKET

Preservation of an expanded American market for the American farmer is the greatest contribution which this or any other administration can make toward stabilizing our economic life. No longer is the foreign market the hope of the American farmer. His hope is an enlarged domestic market protected against the low-cost producers abroad.

Instead of worrying about increasing the standard of living abroad we should set ourselves to work to increase the standard of living in America through increased consumption and new industrial uses for American farm products. The very least to which the American farmer is entitled is the American market. Let him have that, and we shall have started down the road to economic recovery—because increased purchasing power on the farm means employment for workers in the cities—and once we achieve economic recovery we need not worry about the future of our civilization or institutions, irrespective of what happens in other parts of the world.

COMFORTABLE STANDARD FOR AGED

Let America have a healthy agricultural industry and see how fast the wheels of other industries will start turning. Add to this a reasonable governmental assistance to the aged, such as will let the aged enjoy a comfortable standard of living, and we shall have a condition at home that can be disturbed or destroyed only as we shall be caused to cast our fortunes into a mad world jackpot.

THE ROAD TO WAR

There is a greater need today for calm, clear thinking about our country's relationship to the remainder of the world than on any other subject. In the event that the dreaded second world war should come, what we do now is far more crucial than what we do after the conflict commences. If we are to be spared the agony and devastation of participation in another war, the policies now being formulated will achieve that merciful end. If we are to be plunged into that war, it will be likewise because of what is done now.

This is so clearly demonstrated in retrospect by the years from 1914 to 1917 that it should require no argument. Those years are a story of a nation drifting into deepening entanglements with a European conflict with which it had originally little direct concern and finally into that struggle. No single action was responsible for American involvement in the World War. Rather, it was the cumulative force of a long series of day-by-day actions, each establishing precedents for those that were to follow and each bringing involvement closer.

With that frightful experience still fresh in our minds, it is amazing that so many persons, in high and low places, should forget the lesson of 1914 to 1917. Yet today that lesson has been forgotten by the very men and women who best should remember it. Steps are being taken, policies are being inaugurated, precedents established today that in large degree parallel the "road to war" which America trod only a little more than 20 years ago.

In the thunder of angry and emotional oratory—amidst high-sounding but vague words which make for confusion—between seemingly contradictory policies, punctuated by incidents of official secrecy—all of which constitute the backdrop of the Washington scene today—it appears that this country has no foreign policy, except that of drift and day-to-day expediency divorced from realism.

ALARMING FOREIGN POLICY

Yet closer examination of the words and deeds of our Chief Executive in the field of foreign affairs reveals a thread of policy which needs to be brought out into the strong sunlight of day. At times this policy is declared in generalities—at other times it is intimated. Nevertheless it has become sufficiently clear as to cause alarm and to demand a frank discussion of its soundness and its implications.

EMOTION AND HYSTERIA

This policy is based on the belief—fallacious and erroneous, in my opinion—that if there is another general war in Europe the involvement of this country in that conflict is inevitable—that there is nothing we can do—no step that we can take—that will save us from being sucked into such a war. This is a counsel of despair, generated by emotion and hysteria, without a basis of either fact or realistic appreciation of world affairs.

Yet it is on the acceptance of this belief that there is predicated the contention that America must give aid and support to the democracies of Europe in difficulties with which we have no concern. It is the basis for the contention that this country should not undertake to observe a rigid neutrality but should take sides in words and deed among the quarreling nations of Europe and Asia.

In other words, our policy appears to be that since our involvement in another war is inevitable, then we should do all in our power now to assist and support nations which in a future conflict may be our allies in order to prevent such a war. Since this proposition is predicated on a theory that we are doomed to be participants in another war, whether we like it or not, it is argued that by pursuing a policy of cooperation and collaboration

with certain European nations we are not running any risk which does not now confront us.

Such was the implication of President Roosevelt's Chicago speech of October 1937 in which he pleaded for the support of this country in a quarantine of the so-called aggressor nations of the world. More clearly it was the implication of the President's message to Congress last month. In that address the President undertook to arouse the people of this country to a spirit of a holy war by an appeal to our desire to worship God according to the dictates of our conscience.

"Storms from abroad," asserted the President, "directly challenge three institutions indispensable to Americans now, as always. The first is religion. It is the source of the other two—democracy and international good faith."

Having thus laid down his theme, the President continued by saying:

"There comes a time in the affairs of men when they must prepare to defend not their homes alone but the tenets of faith and humanity on which their churches, their governments, and their very civilization are founded. The defense of religion, of democracy, and of good faith among nations is all the same fight. To save one we must now make up our minds to save all."

OUR RELIGIOUS FREEDOM NOT IMPERILED

I deny emphatically that religious freedom in this country will be imperiled by whatever happens abroad. I deny that our democracy or our civilization is threatened by developments abroad so long as we keep ourselves free from involvement in the quarrels of Europe. I assert with confidence that the greatest threat to American democracy is to be found in policies which ultimately will have the effect of making us participants in the quarrels of Europe and in any war which should break out.

COVER UP FAILURES AT HOME

Reluctantly I am forced to the conclusion that the President by such utterances as those contained in his message to Congress is seeking to draw a red herring across the trail of his failures in domestic policies. He is seeking by appeals to emotion to win support for a program which would be rejected by the common sense of men. Whatever the President's motives, he is urging us to pursue a course which in the years to come may lead us to a disastrous end.

Already do we find our leadership worked to a point where it permits no criticism of its foreign policy, if any. Critics of that policy are cast aside as "boobs" or "liars," and are being referred to as profacists, prompted by partisan prejudices. Lest anyone think I am thus prompted when I declare my views concerning the direction which the President is pursuing, permit me to quote from an editorial commenting on the President's message to Congress which recently appeared in the Christian Century, a nondenominational religious periodical with a national circulation:

"Here, we do not hesitate to say, is the most misleading and dangerous appeal made to the American people by a Chief Executive in the history of the Republic," this editorial said of the President's message, "Misleading, because the entire argument rests on the premise of an impending attack by the totalitarian states on the democracies of this hemisphere. Such a prospect, except to a fevered imagination, is fantastic. Not even the military and naval men, with all their clamor for more armaments, believe there is the slightest danger of such an invasion in any perceivable future. A rudimentary knowledge of the difficulties in which Hitler and Mussolini are involved in Europe, or of the trouble which the Japanese are having in trying to chew what they have already bitten off in China, should set at rest fear of an impending attack either on this Nation or on the other American Republics."

HYSTERICAL URGE DELIBERATE

"But this appeal," the editorial from the Christian Century continued, "not only rests on a fictitious premise, it is dangerous—diabolically dangerous—in its attempt to rouse religious passion. The President has done this deliberately, with his eyes open, and as a means of destroying the sober, calm judgment of the American people. Knowing that there would be opposition to the gigantic armament program which he desires, he has deliberately sought to divert the whole matter out of the realm of rational discussion into a realm of emotional ferment where men can be swayed to impulsive action by being frightened with the cry, 'Your religion is at stake!'"

WISE LEADERSHIP CAN AVOID WAR

Of course, it is fantastic, as this editor wrote, to say that this country is in danger of an impending attack abroad. And it is just as fantastic to contend that this country cannot keep out of another war if its people are determined to do so and if our Government pursues a course of caution and wisdom.

We now know that had our people been alive to the danger confronting them at the beginning of the World War that we could have avoided actions which subsequently led to our involvement in that conflict. We now know that we fought in vain to make the world safe for democracy and that that high ideal has become a term of mockery.

We now also know that trade in munitions of war and the loans we made to the Allies were the first fatal steps along the road which led this country into the World War. Those events marked the turning of the road away from the first neutrality proclamation of President Wilson in which he warned the country against taking sides. If only President Wilson had adhered to and had given practical application to that declaration, we could have escaped participation in the conflict.

The knowledge of what happened between 1914 and 1917 should forearm us against the dangers which overwhelmed us in those earlier years. Because of that experience, we should now be able to steer a course that would avoid the whirlpools which sucked us into war some 20 years ago. Add to that realistic appreciation that those who threaten war in Europe are facing eastward and not toward the west and us.

WAR MEANS END FOR AMERICAN INSTITUTIONS

These factors, along with our geographic isolation, makes it ridiculous to talk about this Nation facing an impending threat, either of actual invasion or to its institutions from beyond our borders, unless we deliberately ally ourselves with the affairs of Europe. It must be obvious that participation in another war by this country would mean the end of those American institutions of liberty and freedom for which we now are being urged to fight.

Despite the lessons of our experience, we now find the President insisting that we must cooperate economically with one group of nations threatened with war while he heaps reproaches and odium on the opposing group of nations. More amazingly, he invokes the need of providing employment for our jobless as one reason for such cooperation, as he did in justification of his promotion of secret assistance given France in the purchase of airplanes in this country. I express my amazement advisedly, because none has stated the danger involved in such action more cogently than did President Roosevelt less than 3 years ago in an address at Chautauqua, N. Y.

PROFIT FROM WAR MOVES PRESIDENT

"If war should break out again in another continent," the President said on that occasion, "let us not blink the fact that we would find in this country thousands of Americans who, seeking immediate riches—fool's gold—would attempt to break down or evade our neutrality.

"They would tell you—and unfortunately their views would get wide publicity—that if they could produce and ship this or that and the other article to belligerent nations the unemployed of America would all find work. They would tell you that if they could extend credit to warring nations that credit would be used in the United States to build homes and factories and pay our debts. They would tell you that America once more would capture the trade of the world."

And on that day also, President Roosevelt declared that "we can keep out of war if those who watch and decide have a sufficiently detailed understanding of international affairs to make certain that the small decisions of each day do not lead toward war and, at the same time, they possess the courage to say 'No' to those who selfishly or unwisely would let us go to war."

Great, indeed, is the distance which Mr. Roosevelt has traveled from the day he made that address to his recent press conference in which he defended cooperation with France in the purchase of airplanes here as a means of putting people to work in idle factories. Like President Wilson he has forgotten the fundamental soundness of being neutral in thought as well as in action.

These hours cry out for an alertness on the part of Americans if our country is to retain a substantial position in the world. The cry is for America to confine herself to a mind-our-own-business policy. And we've so much business to mind here at home if we've a care about saving the things we prize. And since there is such will on the part of present-day leadership to assume that the people are quite content with the direction that leadership is affording, there ought to be loud expression of voice by the fathers and mothers of this land who too silently pray that things are not what they seem to be.

Testimonial Dinner to Hon. Homer Cummings

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

ADDRESS BY HON. HENRY F. ASHURST, OF ARIZONA, JANUARY 11, 1939

Mr. ASHURST. Mr. President, I ask unanimous consent to print in the Appendix of the RECORD the speech delivered by me at the testimonial dinner in honor of Hon. Homer Cummings on January 11, 1939.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, ladies, and gentlemen, the famous English poet Alexander Pope, in his Odyssey of Homer, wrote a couplet:

"True friendship's laws are by this rule express'd,
Welcome the coming, speed the parting guest."

This same poet, in Book II of his Satires, wrote:

"For I, who hold sage Homer's rule the best,
Welcome the coming, speed the going guest."

Had our erudite and affable toastmaster been permitted to be present when the divine afflatus was inspiring the poet, doubtless our toastmaster would have suggested that it be written:

"Welcome the coming, feed the going guest."

Personally, I am much in favor of postprandial orations, that is, after-dinner speeches. They are islands of relaxation and comradeship anchored in life's wild and wasteful ocean and are pleasant interludes amidst the clashes of the hustings, the court, the forum, and the absorbing pursuits of commercial and industrial life.

Occasions such as this afford a serene atmosphere where delicate fancy, historical allusion, and beautiful words are permitted to form the staple of public utterance, and the speeches are intended neither to threaten, challenge, nor to rebuke.

Although postprandial oratory is generally supposed to be too glamorous to be of substance, the truth is that many of the brightest, wittiest, and wisest sayings of our times have been engendered amid the incense of fragrant cigars and the aroma of café noir. Poets, artists, philosophers, statesmen, scientists, novelists, and men noted for their brilliant wit and delightful humor have given to the world some of their best utterances at public dinners.

If a student of astronomy, whose vigils are devoted to a study of the magnitudes, motions, and distances of stars and planets in celestial space, were asked to describe in a single speech, the relation of the sun to our solar system, the student would stand amazed at the immensity of his task.

Not less immense would be the task of the speaker who in a single speech attempted to describe the relation of the Attorney General's Department to American justice.

Mr. Cummings was inducted into the office of Attorney General with but few days—less than half a dozen—within which to orient himself and adjust his affairs before assuming his duties and he entered office at a time when doubt and fear, twin specters of evil, had seized millions of persons; but quietly, unobtrusively, capably, he selected a staff for his Department, gave the staff his confidence and support, and in my opinion one of the reasons for his success is that he has always been willing to submit himself to the crucible of self-correction which comes, and comes only, from associating with other men.

This occasion would seem to invite a speaker to discuss, in some detail, the vast and important labors and achievements of Mr. Cummings as Attorney General, but even to enumerate the various reforms and accomplishments of the Department of Justice, under his leadership would be to stretch this address beyond the polite limits of a banquet speech.

For the fiscal year ending June 30, 1938, the total expenditures of the Federal Government, including relief, were $7,691,287,108. The expense of the judicial branch of the Government—that is to say, the energies and operations of our Federal courts—was only $9,500,000, which means that the cost of the judicial branch of our Government for that fiscal year was only one-eighth of 1 percent of the cost of our Federal establishment.

Not the least in importance of the arduous labors of Attorney General Cummings was his formulation and advocacy of the antigangster or anticrime laws passed during the Seventy-third, Seventy-fourth, and Seventy-fifth Congresses, and I would be wholly lacking in grace if I failed to note the able support given to these bills by Representative SUMNERS of Texas, chairman of the House Committee on the Judiciary.

Superlatives in speech are usually evidences of a weary man or sometimes an indolent man who does not seek a more nearly exact medium of expression. Nevertheless I choose to employ superlatives, because they are required truly to delineate and set forth the achievements of General Cummings and his staff, with particular reference to the energies of the Federal Bureau of Investigation, in coping with professional criminals.

When Mr. Cummings was inducted into the office of Attorney General he made a careful study of the character and attainments of Mr. J. Edgar Hoover, and I say advisedly that Mr. Cummings exhibited courage and foresight in retaining Mr. Hoover as Director of the Federal Bureau of Investigation, that is to say, chief of the G-men, and he gave Mr. Hoover encouragement and assistance. Arguments were made to General Cummings to try to induce him not to retain Mr. Hoover's services, but Mr. Cummings, with a judgment and a foresight almost telepathic, retained Mr. Hoover and the judgment and sagacity of Mr. Cummings have been vindicated.

Many persons of a speculative turn of mind have wondered whether Mr. Cummings was a right-winger or a left-winger—on that subject. I have no information—but being himself considerable of a philosopher, he probably came to the conclusion that a bird cannot fly with two right wings any more than a bird can fly with two left wings, therefore as a public official, he turned neither to the right nor to the left but went straight forward.

In bygone days there was a prominent pugilist named John L. Sullivan, one of the most successful pugilists America ever produced. Fifty years ago he was one of the most noted men in the world; today his name is nothing but a gorgeous reminiscence. In Mr. Sullivan's decline when the nymphs of his noonday had gone and the shadows of twilight gathered about him, he was asked the question as to what particular feature he ascribed his dazzling success in the prize ring, and he instantly replied, "I never took a backward step."

So Attorney General Cummings turned neither to the right nor to the left and never took a backward step.

Another reason for his success is that he understands the foundations and the framework of the Constitution; realizes that it was written neither on rubber nor on brass and that, while written on parchment, it was also written in the inborn, invincible, ineradicable sentiments and aspirations of men who love liberty under the aegis of the law.

He realized that it was intended to implement and aid the law in protecting and defending the rights and immunities of free men, an instrument to give the law the scope and opportunity to cope with the ruthless cunning of chicanery and, above all, that the Constitution was not written to debilitate or enfeeble the Nation, reject the fruits of the discoveries of science, or to stop or stay America's dramatic march onward and upward for good in the affairs of her citizens.

In an era when vituperation and calumny are largely the stock in trade of political warfare, Mr. Cummings, instead of permitting his temper to become caustically embrittled, carried himself with dignity of demeanor and constant propriety of speech.

No public official in our time ever held the standard of responsibility higher than he. Neither friend nor enemy nor ambition nor praise nor censure could swerve him from the path of duty. He made no bargains.

No Department of Justice existed in our Government prior to the year 1870, although, of course, there had been an Attorney Generalship since 1789, and this Department of Justice has grown from meager and slender facilities and equipment into a department of enormous importance and responsibility, until it stands today the strong citadel and tower of defense of the inviolable rights of a free people, a barrier alike against the frenzied onslaught of faction and the insidious encroachment of privilege.

In conclusion, this occasion affords me the opportunity to say to General Cummings what I believe is in the heart of every person here present, namely, that we have never wavered in our admiration and affection for you, and we all feel that the Fates treated us kindly in making us your contemporaries and your friends.

National Defense and Foreign Policy

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1939

RADIO ADDRESS BY HON. CARL HINSHAW, OF CALIFORNIA, FEBRUARY 18, 1939

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio last Saturday:

Here in Washington, and all up and down the Atlantic coast, it is now a quarter to eleven—getting on toward midnight.

In New Orleans, St. Louis, Chicago, and throughout the great Mississippi Valley it is a quarter to ten.

In the Rocky Mountain States it is a quarter to nine, while out on the Pacific coast—in California, Oregon, and Washington—it is a quarter to eight. The sun set on our Pacific shores just a few minutes ago, while here in Washington it is an hour before midnight.

The difference in time from east coast to west is 3 hours—the distance is 3,000 miles—a thousand miles per hour, and that is the speed at which the earth's surface moves at this latitude while the earth revolves on its axis.

A thousand miles per hour is the speed at which the sunset moves around our part of the world—24,000 miles in 24 hours.

Recently an Army plane made a coast-to-coast flight in 7 hours. Its average speed was 420 miles an hour—"loafing along," as the pilot said.

Shortly before that a plane in an uncontrolled power dive reached the terrific speed of probably 600 miles per hour—more than half as fast as the earth itself turns on its axis. Not long ago this speed was said to be impossible.

How long will it be before a plane will be able to travel with the sunset at 1,000 miles per hour?

It is startling demonstrations such as these that bring both courage and fear to the hearts of our people—for then do we realize how split-second fast are the modern weapons of offense and defense.

But let us examine these things with sober thoughtfulness. What do they mean to us? Danger—yes; but not so dangerous as they might appear.

Do you realize that while these little fighting pursuit ships can fly at terrific speed, there isn't a bomber built anywhere in the world that can fly loaded more than 800 miles, locate its target, drop its bombs, and return to its base? Eight hundred miles is the bomber's range.

In order to damage the cities of the United States, a foreign power must establish an air base within 800 miles of our American cities—and what do you suppose we will be doing about that?

What do you think the House of Representatives just passed this military-defense bill for, authorizing the increase of our air force to 5,500 planes?

Then let me point out something else.

Do you fear that this country can be defeated from the air? Don't worry. That is silly. All an enemy air force can do is to harrass the people. It can destroy much property and some lives with bombs but it can't take and occupy the country.

An enemy of the United States must have ships—transports and a navy big enough to guard them—in order to land on our shores millions of soldiers. And after it has landed them it must feed them and supply them with munitions.

Friends, the best that the United States could do in the matter of transport in the World War, without an enemy ship on the high seas, was to transport an army of 3,000,000 fighting men to France and maintain them there.

Even after our men arrived there with all the transport, and all the great navies of the world to guard them, was Germany beaten by force of arms alone?

Not a shot was fired on German soil. Germany was not beaten by force of arms alone, she was starved into submission. Her people broken by starvation, children with rickets and tuberculosis, from undernourishment. Women gaunt and weary from hunger.

What good food they had was given to her soldiers to give them strength to fight. Could her soldiers keep up good courage to go on with the fight when they knew their families at home were starving?

Germany suffered for lack of food—not guns.

Then look at Spain—little Spain, beset from all sides by the powerful military forces of Europe. Bombs destroyed her cities and killed some civilians. The troops of Franco, Hitler, and Mussolini drove in upon her—but hunger beset her people. Women and children are the real sufferers in Spain.

Friends, from the stormy Atlantic to my home in sunny California, the United States of America, reasonably prepared for armed defense, will never be conquered by any foreign power. Why? Because we can't be starved into submission. We can be damaged from the air, we can suffer loss of life, but our farmers will save America.

I am for national defense as a guaranty of peace. I am for preparedness with planes and guns, a navy, and men, but the main line of our defense is our army of farmers.

And right here I come to my point.

What is this administration doing about our food supply?

Talk about planes and guns and battleships and men, let's have them, but what about our food supply?

Bullets will make men die, but food, and only food, will keep men alive.

The greatest living humanitarian, Herbert Hoover, knew this when he insisted that the Allies in the World War permit the shipment of foodstuffs to feed the starving women and children of Germany and Belgium. Could the Allies themselves have kept on without food from America?

So what about our agricultural program in America? We have sought to destroy that very abundance of food that God has so bountifully given us, killed pigs and cattle, plowed under crops, restricted production to fit an ever-decreasing purchasing power, until today we in the United States of America are importing food to feed our own people. In 1937 we imported—imported, mind you, brought in from foreign countries—agricultural products that, if they had been grown in this country, would have required the planting and harvesting of 15,000,000 acres of American soil and the services of all the farmers and farm labor necessary to cultivate that land.

Think of it! A desecration, a shame, in a land of plenty, while millions of our people are hungry, ill-clothed, ill-housed. No wonder the world looks on us as a lot of lunatics. We must be crazy. The bread basket of the world with millions of hungry and undernourished people. Just try to believe it possible.

Now I submit to you, each of you: Even though it is only in the interest of national defense, should we not be producing abundant crops and laying aside stores of foodstuffs against war and drought and pests? Should we not be encouraging our farmers to grow more instead of less, when not only our own forgotten men and women, the great mass of unemployed, are hungry and weary of waiting for, shall I say, "recovery"? But all the beleaguered people of the world need so badly the foodstuffs we can grow in America.

I submit to you, satisfied people with full bellies do not need to fight. Starved people fight to live—fight for food and the right to live.

Why is Japan on the warpath? Because she can't feed her people on the pitifully meager acres of her little island.

Why is Germany on the warpath? Because she can't feed her people forever on substitutes for food.

Why is Italy on the warpath? Because she can't feed her people on the waters of the salt Mediterranean Ocean.

Why are the people of those countries so willing to lay down their lives for their fatherland? Because they are hungry and gaunt—half starved. They want food, milk, bread, oranges, meat, potatoes, cereals, grapefruit, prunes, apricots and peaches, beans, corn and barley and they can't get enough of them.

The American Continent has them, and so they cast hungry, covetous eyes upon us, like a starved child sniffing at a bakery door.

What are we going to do—fight them? Let's feed them instead.

What does the "good neighbor" do? Does he slap his neighbor on the mouth, growl, and kick him away? You answer that one.

What then is our second line of national defense? It is a busy, happy, well-fed people, working, doing business, rendering services to one another, earning, saving, spending, living the American way.

I submit to you that our second line of national defense—not only against the foreign enemy from across the sea—but from that far more dangerous enemy that gnaws at this country's very vitals from within—is a sound prosperous industry and commerce—fostered by an ever watchful—but encouraging Government.

I am not here concerned with party politics. Party has about as little as anything you can imagine to do with it. I don't care what party label a man may wear. I want to know what kind of a man he is—what does he believe—what does he practice—what does he say—what does he do—what is in his heart.

Some small show has been made of party politics here in Congress—but it is only a bluff show. On fundamental issues, the men and women of both great parties stand shoulder to shoulder—four-square against foreign doctrines—Republicans and Democrats alike are first of all Americans. And so we stand together on national defense.

What of our foreign policy—for it is that policy which will ultimately decide our requirements for national defense. We have heard much of "good neighbor," "quarantine of aggressor nations," "freedom of the seas," etc.

Is the United States in some immediate peril? Then we are entitled to know about it. The American people have not heard of any foreign threat against our shores. If we are threatened, whence comes this threat? There is much talk of secret things; what knowledge is so dangerous that it must be kept from the American people? I deny that this Government has any right to keep such secrets from the people.

That which we know about we do not fear. It is secrecy itself that we fear, secret negotiations, secret alliances, secret treaties.

Is the Secretary of State or the President engaging us in obligations to join with certain foreign countries for mutual assistance in the event of war? If so, then the people should know who and why, and against whom and why these alliances are being fostered.

Do we bear a grudge on our own account against any foreign nation? If so, I haven't yet heard which one, nor why.

The American people have a right to know these things. I, for one, believe in the old doctrine of "Open covenants—openly arrived at."

When you come right down to cases, the only foreign nation which is now paying its old war debts to us is little Finland. For Finland we have a place of high honor in our hearts.

I represent the Eleventh District of California in the Congress of the United States. On behalf of the 403,000 people in my district, I must insist that the Congress and the people be informed at once of the danger we are in—if any. It is their right to know, and it is my duty to insist that that information be supplied.

The President of the United States does not have the constitutional power to declare war. Only the people—through their representatives in Congress—may declare war.

Is the stage being set for war? Let the people understand that situation clearly—and then, let them decide.

Affiliation of Station KVOA With Blue Network

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

RADIO ADDRESS BY HON. HENRY F. ASHURST, OF ARIZONA, SUNDAY, FEBRUARY 5, 1939

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the brief radio address delivered by me on February 5, 1939, upon the affiliation of station KVOA in Tucson, Ariz., with the Blue Network of the National Broadcasting Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The radio has made a whispering gallery of the skies. Its messages fly around the world on wings as swift as lightning.

Music being the universal language in which mankind expresses emotion, it is quite appropriate that when station KVOA, of Tucson, Ariz., becomes associated with the National Broadcasting Co., the inaugural should be a musical program.

I welcome this opportunity to salute KVOA and to speak to my invisible audience regarding Arizona whose citizens are patrons of learning, disciples of industry, and apostles of success, and which State, paradoxical as it may seem, is at one and the same time

the oldest and the newest of our governmental subdivisions—oldest in ancient occupation and civilization, and the newest and freshest in modern progress.

The citizens of Arizona celebrate, this year, the four hundredth anniversary of the arrival of Fray Marcos de Niza, the first European to the soil, that is now Arizona.

Arizona was a populous land before Julius Caesar's shouting legions brought tribute back to imperial Rome; and Arizona peoples of antiquity wove and spun cotton and flax into gaudy tapestries and gay raiments and melted gold, silver, and copper from Arizona's hills, into chieftains' ornaments and queens' girdles, long before the Knickerbocker set foot on Manhattan Island. Sublime as are the glories of art and architecture, Arizona contains natural wonders of scenic grandeur sculptured when the world was young by the Hand that sustains all creation. For example, her petrified forest, which lived its green millenniums and put on immortality millions of years ago. No prose poet has ever dipped pen deep enough into the ink of temerity to attempt a complete description of the Grand Canyon with its mosques and minarets, its temples, pyramids, sheer cliffs, and forbidding ramparts and its colors that elude the artist's brush. Arizona has a bracing, cleansing air which heals the throbbing nerves of pain. Her sunshine reddens the bloodless lip and paints the rose upon the invalid's pale cheek. She has irrigation projects so practical and yet so ideal that they charm the imagination with their wizardry. The fertility of Arizona's soil, the salubrity of her climate, the vastness of her mineral wealth make the lamp of Aladdin and the purse of Fortunatus appear tame and commonplace by comparison.

The Preservation of Peace

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1939

LETTER FROM FLOYD MERCER, OF GLENDALE, CALIF.

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Mr. Floyd Mercer, of Glendale, Calif.:

CHAPMAN COLLEGE,
Los Angeles, Calif., February 17, 1939.

Hon. CARL HINSHAW,
Washington, D. C.

DEAR MR. HINSHAW: It has been some time since I received your reply, and I thank you for it. I have thought much about writing more completely but find it difficult to put it on paper. It seems to me that our statesmen are following the European system which is based on fear and suspicion rather than mutual confidence.

Before the Christian era a leading statesman of Israel saw a time when "Nations would beat their spears into pruning hooks and their swords into ploughshares" and "learn war no more."

The Messiah for whom all Israel longed in due course arrived, but instead of being a conquering warrior he admonished to put up the sword "for all they who take up the sword shall perish with the sword." Notwithstanding that He possessed unlimited power, He refused to lift His hand in self-defense, having taught that "he who would save his life shall lose it," while he "who would lose his life for righteousness shall save it." Thus He became and is the Saviour of the world, not in any magical sense but to all who will follow His way of life for He is "the way, the truth, and the life."

For three centuries His disciples refused to take up the sword and conquered the world of their day, changing the whole course of history. Paul, one of the great leaders of this early period, insisted that the way to conquer evil was to "overcome with good." These rules pertain not only to personal relations but to nations as well.

Since the beginning of modern history international relations have been conducted just the opposite of this. Political chicanery, trickery, and deception have been and very much today are the rule.

But our great country, a democracy, is founded upon the principles enunciated by the Galilean centuries ago. A land of the free can only remain so as the bulk of its citizens respect the rights of their neighbors. This relationship exists only where these teachings prevail.

We were drawn into the World War by false propaganda connived in by some of our own leaders. At the close, while we refused to sign the Versailles treaty, we joined in holding Germany wholly guilty and demanded the last farthing as reparation. We had no "fair Portia" to prevent us "taking the pound of flesh," so we, the Allies, bled them white, until Hitler seized the opportune moment to make himself their savior, and continue to the present a menace to the peace of the world. The German people are not to blame.

The United States might have been the champion of right and justice for these people, and proved their friendship by forgiving all payments due us and forgiving all other war loans on condition they cancel similar amounts to Germany, and one further condition that all proceed to disarm. The cost would have been much less than what we have paid and are paying in defense from enemies who would have been friends. It may be too late to do anything about this now.

We know that their restricted territory is not sufficient to maintain a great and growing population. How much better had we recognized this and yielded sufficient land and colonial possessions before they armed and are now getting by threat of fighting when no one else is ready to fight.

In the main, Japan is in the same position. A land area less than California with 70,000,000 population and the world refusing to permit expansion. China with millions of acres of unoccupied land with a small army—depending on the great powers to support her but due to jealousies among themselves and fear of the European situation they were impotent—what more natural that Japan should take by force what should have been granted by mutual consent of all the powers.

The United States in 1924 deliberately insulted Japan, with other orientals, and have done nothing to alleviate the insult but almost as if planned, we add injury to injury, arousing their fears until they groan with taxes to build armament for what they consider an inevitable war. And we build more and more, presumably, in self-defense from them, Hawaii and now Guam which is an especial threat to Japan. To maintain this growing war machine to fight enemies which by the exercise of common horse sense could be made friends, we are collecting tribute from our citizens to the point of curtailing their liberties guaranteed by our Constitution, and as soon as war is declared all these liberties are gone. Why spend billions to build machines of destruction, destruction of civilization itself, when only millions spent in making friends would not only save the present civilization but would go a long way toward a new day when every man would have his own home, self-sustaining, and "nations would learn war no more." "War is hell," and you cannot making anything else out of it. To arm is inevitably to fight. Why not spend something to cultivate good will? Why not try the Golden Rule instead of the old "eye for an eye"?

Mr. HINSHAW, perhaps this does not add much to my previous note, but it seems that a little review of history would reveal the futility of war to settle anything and at least with the modern inventions it means utter destruction. If I could add a word that would help change our policy I would be glad.

Most sincerely,

FLOYD MERCER,
1123 North Howard Street, Glendale, Calif.

Title to Submerged Lands Below Low Water Mark

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1939

RESOLUTION OF BOARD OF HARBOR COMMISSIONERS OF LOS ANGELES, CALIF.

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Board of Harbor Commissioners of the City of Los Angeles:

Resolution 1318

Whereas, on May 1, 1911, the State of California granted to the city of Los Angeles all of the right, title, and interest of said State, held by virtue of its sovereignty, in and to all tide and submerged lands situated below the mean high-tide line of the Pacific Ocean within the limits of said city, to be forever held by said city for the purpose of developing and maintaining harbor and port facilities for the public purposes of commerce and navigation; and

Whereas, the city of Los Angeles has expended many millions of dollars in the construction and maintenance of harbor and port facilities and improvements, and in connection therewith has reclaimed and filled great areas of lands which were submerged and situated below the low-water mark before the work of development and improvement was undertaken; and

Whereas, the water-borne traffic through said port has increased tremendously since said port was established, and the undeveloped tide and submerged lands will be required to provide additional

facilities to meet the constantly increasing demands of commerce through the port of Los Angeles; and

Whereas, there has been introduced in the Congress of the United States Senate Joint Resolution No. 24, which asserts that all submerged lands below the low water mark and within the 3-mile limit lying along the coast of the United States are the property of the United States, and directs the Attorney General of the United States to assert, maintain, and establish the title and possession of the United States to such submerged lands and all petroleum deposits underlying the same and to cause and effectuate by proper proceedings the removal and ejectment of all persons now or hereafter trespassing upon or otherwise occupying said submerged lands or removing the petroleum deposits therefrom without the consent and permission of the United States, and to stop and prevent the taking or removing of petroleum products by others than the United States from such submerged lands; and

Whereas, the adoption by the Congress of such resolution and the compliance by the Attorney General with the authorization and direction contained therein would cloud the title of the city of Los Angeles to the submerged lands within said city, including the submerged lands which have been reclaimed and upon which improvements have been constructed, together with all structures, facilities, and improvements situated thereon, and would prevent the financing of additional reclamation and harbor and port development: Now, therefore, be it

Resolved by the Board of Harbor Commissioners of the City of Los Angeles, That Senate Joint Resolution No. 24 aforesaid be, and the same is hereby, opposed, and the Congress of the United States and Members of the Senate and House of Representatives thereof be, and they are hereby, respectfully urged and petitioned to cast their votes against said resolution or any other legislation which may be introduced for the same purpose; and be it further

Resolved, That the secretary be, and he is hereby, directed to transmit copies of this resolution to the President of the United States, to the Vice President, and to the Senators and Representatives of the State of California in the Congress.

The Background of President George Washington's Farewell Address in the Matter of Foreign Alliances

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1939

Mr. SHANLEY. Mr. Speaker and my colleagues, the great, noble, and well-thought-out Farewell Address of the first President of our Nation whose memorable birthday we celebrate tomorrow has been quoted more often in our history for its injunction against foreign entanglements than for anything else. No man had greater experiences with foreign governments, emissaries, duplicity, and propaganda than he. Burned into his very soul were incidents that left indelible feelings and thought which found utterance in that valedictory to the American people.

Before that, however, the great contemporary statesmen of our first President had given him the background of actual happenings that emphasized the evils of his thoughts on "sympathy for the favored nation" passionate attachment on "one nation for another," or "concessions to the favorite nation of privileges denied to others," or "insidious wiles," or the other alluring but dangerous diplomatic propensities.

Not the least of these advisors was our own Connecticut leader, Oliver Ellsworth, one of our two first Senators and later Chief Justice of the Supreme Court. During those epochal and trying days of the famous armed neutrality efforts of Catherine of Russia, the Dutch were most anxious for us to become a party to a treaty underwriting the high principles of that neutrality. We were expected to do that as a belligerent or later at peace. In either event, we were expected to tie our future to that pronouncement which sought to cut down British dominance on the high seas.

But before that thought could get headway Congress acted. It had established a committee headed by Alexander Hamilton, James Madison, and Oliver Ellsworth. That trio brought in the findings which prompted this resolution dated June 12, 1783.

Whereupon Congress came to the following resolution:

Whereas the primary object of the resolution of October 5, 1780, and of the commission and instructions to Mr. Dana, relative to the accession of the United States to the neutral confederacy, no longer can operate; and as the true interest of these States requires that they should be as little as possible entangled in the politics and controversies of European nations, it is inexpedient to renew the said powers either to Mr. Dana, or to the other Ministers of these United States in Europe; but inasmuch as the liberal principles, on which the said confederacy was established, are conceived to be in general favorable to the interests of nations, and particularly to those of the United States, and ought in that view to be promoted by the latter as far as will consist with their fundamental policy:

Resolved, That the Ministers Plenipotentiary of these United States for negotiating a peace be and they are hereby instructed, in case they should comprise in the definite treaty any stipulations amounting to a recognition of the rights of neutral nations, to avoid accompanying them by any engagements which shall oblige the contracting parties to support those stipulations by arms.

It is interesting to know that still later but before the date of the farewell address, September 17, 1796, we had passed through another crisis like this offering present temporary gains but extending our permanent policy to all nations of Thomas Paine's slogan that separation from England meant separation from British wars.

The later temptation was the earnest desire of Sweden and Denmark, who had signed the armed neutrality formula for us to do so in 1794. But here again that was refused. The Cabinet this time made the decision on the ground that it might be an entangling alliance. Unfortunately this information in the midst of the negotiations for the Jay Treaty was betrayed to the British Minister, Hammond, in Philadelphia. That eased England's worry over our intentions and she definitely held back concessions on maritime rights.

Fear and Its Effects

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

ADDRESS BY HON. GEORGE D. AIKEN, GOVERNOR OF VERMONT, FEBRUARY 11, 1939

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an address by the Honorable George D. Aiken, Governor of the State of Vermont, delivered on February 11, 1939, to an enthusiastic audience of 1,500 people at the Amen Corner Club of Pittsburgh, Pa., one of the most prominent businessmen's clubs in the country.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

America was founded by men and women of courage who believed in the right to express the truth as they saw it, and to whom the expression of that truth was of more vital importance than all else. The Puritans who settled New England, the Swedes of Delaware, the Dutch of New York, the Quakers of Pennsylvania, and the Catholics of Maryland, all possessed that courage which enabled them to brave the dangers of the New World rather than to surrender the right to truth, and to subordinate their opinions to the sovereigns of those European countries from which they came.

America was built by men and women of courage. They did not fear to encounter odds when right was on their side. And they did not lack courage when a distant autocratic government at London taxed them beyond human endurance and denied them the right to govern themselves.

The feeble colonies of America engaged the mighty forces of King George the Third and his hired troops from the continent of Europe. They dared to wage war on the British Empire. They fought through the years of the Revolutionary War with the courage which a higher power gives to men defending their homes, their liberties, and the truth.

The story of Valley Forge is an outstanding example of the suffering which men of America endured in order that a people might be free. Washington could have given up in those dark

days. His men could have returned to the comparative luxury of their homes. They could have succumbed to the fear of reprisals from a distant government and asked for mercy.

Perhaps for a few years more they might have enjoyed conditions which would have been comparatively easy for them. But they chose starvation and liberty in preference to subservience.

In 1776 the United States Government was born. There is no evidence down through the years of history following the Declaration of Independence that America was ever a nation governed by fear.

Until less than 10 years ago the economic depressions which have from time to time afflicted our Nation have not caused the American people to give up hope and surrender to fear of the future.

It is probable that the depression beginning in 1929 would have run a course similar to previous depressions had otherwise normal conditions prevailed. In the early years of this depression our economic system, which was geared on a larger scale than ever before, got more out of joint than ever before. There were bigger bank failures, more unemployment, more idle factories, longer bread lines, and more huge and ever-mounting farm surpluses.

In 1932 the demand for action led to the election of one who promised in ringing tones to dispel our troubles and restore happy days once more to America. His very assurance drove away incipient fear. We elected him, followed him, approved his vigorous leadership because we feared the consequences in inaction.

Today we are a disillusioned people. Six years have passed. Throughout our land in every city and village and farm and home our actions are influenced by fear—fear of our own great Nation to which we have given power almost great enough to destroy the very form of our government.

We have been afraid to speak out against it. Afraid to stand up and say that we insist upon the American Government being conducted in the American way. We fear to speak for many reasons.

We fear the abuse which may be heaped upon us by an extravagant and elaborate propaganda service paid for with the tax money which you and I turn over to pay for legitimate Government services and to feed those who are hungry. This propaganda service emanates from the National Capital and seeps through every section of our Nation.

It is operated by publicity artists whose sole purpose is to lull the fears of those who might consider the New Deal as anything but the solution for our fears, and to heap abuse and ridicule on anyone who dares to speak against it.

Since 1932 we have had the greatest number of unemployed America has ever known. They are unemployed in the midst of work that needs doing, hungry in the face of the greatest of food surpluses, cold with fuel of all kinds crying for a market. Helpless, unless they surrender themselves to the mercies of a government that will, if they do as they are told, give them the munificent sum of $12 a week with which to support their families.

Reliefers are afraid to vote, act, or speak as they please for fear they will be cut off from the pittance that keeps them alive—and voting as they are told. Even relatives of those on Federal pay rolls vote and act in same manner. Business fears to plan for the future because of the ever-present threat of confiscatory tax measures or stifling and retaliatory regulations.

Whole States are afraid to protest against proposals of the Federal administration because they fear that their just portion of those moneys which they have paid or must pay through taxes will be denied to them. There was a time when Federal funds were distributed fairly in Nation-wide programs to benefit individual States. The method of distribution has been changed so that the allocation of Federal funds may now be used for bribes or threats. Bribes in return for the surrender of State and local sovereignty, threats to reduce or cut off those States and communities who refuse to obey the will of the administration. There is scarcely a State or community but what has felt the effect of this.

I have come here tonight to tell you that what America fears today is literally nothing compared to what we have to fear in the future unless we check immediately the mechinations and ambitions of those who intend to dissolve our States and so control the lives of every one of us.

Last June the President of the United States signed the 1938 flood-control bill. It contained a last-minute amendment offered irregularly from the floor of the Senate. The amendment was never referred to a committee and was rushed through in the closing hours of the Congress without general public knowledge of its intent and effect. In spite of the fact that New England and other States voiced opposition and at least 14 Governors who became aware of the situation protested such high-handed actions, the bill passed.

The 1936 flood-control law, which initiated flood-control activity as a proper function of the Federal Government in cooperation with States and local units of government, did not directly state who should own the flood-control dams, but required the States to acquire necessary lands or easements and required them to maintain and operate the dams after construction. But note well that in the only reference to ownership the language was the same as that in other laws and under those other laws the ownership had always remained with the State or local authorities.

This 1936 law authorized the Secretary of War to acquire land for flood-control reservoirs only under one condition—that was that after he had received from localities or States to be benefited the money necessary to buy lands and rights for a dam and reservoirs, to be located in another State which would receive no flood-control benefit from the construction—he might buy such property after he had received the consent of the State in which it was located.

The Barkley amendment reads as follows: "Notwithstanding any restrictions, limitations, or requirement of prior consent provided by any other act, the Secretary of War is hereby authorized and directed to acquire, in the name of the United States, title to all lands, easements, and rights-of-way necessary for any dam and reservoir project or channel improvement or channel rectification project for flood control."

Thus this amendment directs the Secretary of War to take natural resources of the States without their consent and without compensation for loss of taxes. If the provisions of these amendments were carried out to the fullest extent, it would break down the principles of statehood and deprive the people of the various States of their livelihood.

The President is reported to have said as he signed this bill that these amendments were a "step in the right direction." If depriving the people of a State or of all the States of the resources that enable them to govern themselves, to support themselves, and to speak for themselves is a "step in the right direction," what is the ultimate objective?

And what has an administration in mind when a bill is introduced into the Congress which provides, in the event of war or the existence of an emergency due to the imminence of war, that the President is authorized to exert immediate and complete control of absolutely everything in this country?

Who is in a better position to create a national emergency that would make war imminent than the person to whom this bill gives this power? The same man in whom authority for conducting American foreign policy is vested. The President of the United States could create such an emergency overnight.

It is not inconceivable that those who seek to control all persons and all things in this Nation would not hesitate to create a national emergency or even a war to perpetuate and strengthen their control.

Events of the last few days have lent color to the fears which many of us have entertained for months. I quote from the Vermont Republican State platform, written in September 1938: "In the world as it is today it is necessary for every country to count on the possibility of armed conflict, for it is no longer true that it takes two to make a war.

"We hereby pledge ourselves to employ every means to avoid this calamity. But we warn our fellow citizens that should we be drawn into war under this administration, we face a peril greater than war itself—the permanent loss of our liberties.

"Every instance, every previous act, of the administration points to a seizing of the excuse of warfare to put upon every citizen and every material resource of his Nation a permanent statutory control which will bind us when the emergency has passed.

"By all means we must avoid war under this administration if we would preserve for ourselves that freedom which our sister democracies across the sea are feverishly preparing to defend."

This declaration was agreed to in view of the situation as we saw it last September. It is no less alarming now.

And what is the aim of a Federal administration that has introduced in Congress such a measure as the Mansfield bill of a year ago? Its provisions go far beyond those of the Alien and Sedition Acts of 1797 in making criticism of government a felony.

I tell you tonight that if the people of America do not stop this subtle, indirect, ruthless, and totalitarian ambition emanating from Washington, and stop it now, that we will be too late.

If we are to turn back this tide that will inevitably overcome the people of America in such a manner as the European people have been subdued, we have got to show some of the courage upon which the United States and the American form of government was founded and sustained for a century and a half.

Courage and fearlessness and the will to speak the truth will rid us of this danger. I know this to be a fact. I know that a fearless opposition, based upon the principles of right and justice, will stop the trend toward economic and personal slavery in America.

When I say opposition I do not mean obstruction on the part of a selfish and reactionary group to those instances of social progress and justice which should come—and which are going to come, no matter which party is in power.

But I mean opposition that will not flinch and which does not hesitate to speak out clearly and loudly, which will not be silenced by vilification, threats, or bribes—but opposition such as has been recently displayed by the people of Vermont, Oklahoma, Wyoming, and of other States.

I refer to the recent attempt of the Federal administration to break down the structure of the States under the cloak of flood control and of cheap power development. They call it flood control because they would capitalize on the fear of those who live in the valleys, their fear of loss of life and property.

They call it cheap power development because in so doing they can capitalize on the animosity of a very large percentage of the people toward the public-utility companies for their unwarranted inflation of values and unjust collection of exorbitant rates.

On September 21 New England sustained terrific damage due to a hurricane. During the tropical storm the water of streams and rivers overflowed banks, inundating homes, causing loss of life and destruction of property. This disaster offered the Federal administration the opportunity it had been seeking. It had already, by

tricky methods, secured the adoption of the Barkley amendments to the flood-control bill in the summer of 1938.

But even after the enactment of that law with its amendments, we people in New England never thought that any Federal administration, even though it possessed the authority of this act, would go so far as to attempt to take from the States their resources without their consent.

Yet in October we were advised that the War Department intended to construct a dam at the little community of Union Village, Vt. The consent of the State had not been sought.

I wrote immediately to the Secretary of War, stating that I could not and would not recognize the right of the Federal Government to take our resources at will and without our consent. Yet in this instance we were anxious and desirous of affording all possible protection to the people of the lower Connecticut Valley.

As we were empowered to do under our law, the State of Vermont would consent to the construction of this dam and would acquire the land and turn it over to the United States Government free and clear from any strings and incumbrances of any nature so that the dam could be constructed and thus afford a small measure of security to the people of Massachusetts and Connecticut.

The Secretary of War sent representatives to Montpelier with a contract written by the War Department itself. The contract provided that the State would acquire the necessary land and would transfer it to the Federal Government.

The public works board of my State considered the contract on the 19th of December and signed it. It was signed for the United States Government by an officer of the War Department. I kept it overnight and approved it the next day, sending it back to the War Department with the full and unqualified approval of the State of Vermont.

There was not even one restriction as to the use to which this dam might be put. If the Federal Government could find any water power there, we made no objection to their development of such water power; and there was nothing in the contract to prevent their use of it.

This was on December 20. On January 5 a news dispatch states that the Secretary of War had refused to approve this agreement because it contained too many strings. If there were any restrictions in this contract, they were written into it by the War Department itself.

A day or two after reading the news in the papers I received a letter which repudiated the written agreement between the State and the Federal Government. This action of the War Department stripped the issue of its disguise of flood control and cheap power.

It left bared before all the people of America the fact that the Federal administration, possibly to establish a precedent, was determined to acquire this property without the consent of the State even when we were willing to give that consent.

This made it necessary for us to decide whether we should resist and fight for the existence of Vermont as a sovereign State or submit and let ourselves be ruled by a centralized government.

Perhaps folks up in Vermont are a little different from folks in some sections of the country. Ninety-two percent of our farmers own their own farms. Because of that they may be more independent. We are a State that for 160 years has paid our bills and has refused to pile up debt for future generations. Hard work and careful use of our natural resources has enabled us to do this. We hate debt in Vermont. We see the evil that it has brought upon us individually and nationally. And so we hate it even as we love liberty.

If we should give in to this determined action by the administration seeking to take from us one small river without our consent, we would allow them to establish a precedent for taking all our water resources and our land and forests and mineral wealth as well. This, according to the President, would be a "step in the right direction."

I placed the matter before the Legislature of the State of Vermont. I told them we had to fight or run. If they wanted to fight, it would be necessary to vote money to fight with. A resolution authorizing these funds was presented.

A handful of Federal administration Democrats argued for 2 hours against the adoption of this resolution. By 215 to 15 the house voted the money. The vote was not a party division. The majority of the Democratic legislators in Vermont did not vote against their State and its people.

The other five New England States joined action with Vermont the next day.

We expected that we would have to go to the United States Supreme Court to find out what that tribunal would decide as to the right of the Federal Government to destroy the States by gradual confiscation of their resources.

We were taken by surprise when it was announced that the President would give up the plan to construct a dam at Union Village rather than risk a court fight with the little State of Vermont.

The President's Secretary, Mr. Early, is reported by the newspapers to have said, "If New England doesn't want the money, other sections will take it and can have it." In other words, the money appropriated for flood control in New England would be given to those sections declaring their subservience to the Federal administration.

Federal authorities seemed to think that the right of this Government to do what it pleased when it pleased with the property we consider as belonging to ourselves and to our States should not be questioned. They threatened to take from us our share of the money which our people had paid as taxes, unless we admitted the absolute sovereignty of the White House.

Oklahoma was facing a similar situation. Her legislature requested the Federal Government to delay construction of a dam on the Red River. This dam would flood 145,000 acres of Oklahoma's best land. Administration supporters wired Oklahoma's courageous Governor to cease opposing Federal tactics, lest Federal money to Oklahoma be entirely cut off.

The Federal propaganda artists became busy. They attempted to becloud the issue. They tried to distract public attention to other things. In Vermont they indulged in a campaign of abuse.

Their unwillingness to accept a court test on the issue showed that they knew they were legally wrong and must depend on other means to attain their end. That is why I came down here tonight to tell you the truth in this matter.

There is no power issue in Vermont because we placed no restrictions on the development of power at the dam they contemplate building. There is no flood-control issue because we fully and freely offered to cooperate in flood control, and at a distinct loss to ourselves. The issue, as I told our legislature, was one of whether the Federal Government has a right to take from us what it wishes and without our consent.

A few days ago word came from Washington that the Federal Government conceded its lack of authority to take jurisdiction over streams and valleys of New England without the consent of the States. Requests have been made of New Hampshire and Massachusetts, where options have been freely purchased, to give consent to these purchases so that the work might proceed in a lawful manner.

They have found that the State of Vermont is the only New England State concerned where they can legally build dams—because we are the only State that could legally give consent—yet we are the target for Federal abuse because we demanded the observance of the law and the Constitution in the matter.

It appears that one victory for democracy has been won. But we cannot forget that the War Department had been directed to take these resources without asking consent of the States. And if Vermont had not challenged that procedure, they might have been successful.

It is not likely that the little group of centralizationists in Washington have been thus easily swerved from their ultimate purpose. They have been temporarily checked, but eternal vigilance must be the price of our safety.

Pennsylvania has as much to lose as Vermont. If they can by any means take our rivers, our forests, and our beautiful valleys, so can they take your coal, your forests, and your oil. And believe me, if you do not watch out, and stand up for your rights, they will do just that.

The time to fight this thing is now. If we let it go on, we will lose. There is no way that we will regain what we have already lost without hardship. The annals of the ages do not record that a nation is strengthened or liberty won by the wasting of resources in order to enjoy luxury for a time.

And even as Washington and his men endured that terrible winter, the American people will have to spend another winter at Valley Forge. The longer we put it off, the harder it is going to be. Depending on a central government that is itself dependent on us will do us no good. The people of America are heartsick and weary, but we must not give up. We must throw off fear, and replace it with courage and determination to fight for the right.

When Vermont took action in opposing the arbitrary methods of the Federal Government, newspapers throughout the length and breadth of the country carried the story. For the first time many people have learned the real issue. Approximately 80 percent of all editorial reaction, Democratic as well as Republican, has been favorable. Less than 20 percent supported the Federal purposes.

Thousands of people have written me, people from all over the country. People from the prairies and people from the lower Connecticut Valley who were supposed to receive benefits from the flood-control program, urging that Vermont hold fast. People in the lower Connecticut Valley tell me that they would rather have their homes under water forever than to surrender the heritage of generations for a mess of pottage.

Once let American people lose their fear, regain their courage, and work together—and we will sweep back this tide that is threatening to engulf us just as it has engulfed the people of European countries.

In concluding, may I make a few observations on the relationship which I think the Federal Government should bear to the States?

Government is not an empty institution, but its course is colored and shaped by those men who are exercising public power; and as we watch men, even as ourselves, exercising authority over their fellow citizens, we perceive certain fundamental truths about the operation of government.

The first of these truths is the tendency of government to increase its own powers and to perpetuate itself.

The second is the tendency exhibited by men governing; that as their power or authority increases and becomes more secure, their government is less and less responsive to the needs and desires of the people. There is an increasingly greater tendency for the acts and policies of government to follow the desires of those in power rather than to follow established laws and principles. Some successful politicians feel that they themselves are the law.

A third tendency which is more of the people than of the men in government is that the general public disassociates itself from

the costs of any level of government except that one to which they pay direct taxes. This tendency is seen in the case of States and smaller subdivisions striving for increased subsidies or other payments from the Federal Government. They pretend that it is the Federal Government's money and therefore costs them nothing.

When we receive a subsidy we must repay it twofold. First the money which we have received plus much more in administrative and other expenses must be ultimately repaid in taxes. A second payment is in the form of larger and larger exercise of Federal control over local affairs. This results in destruction of the responsibility of the people of the local communities for their Government and thus breaks down good citizenship in our Republic. As citizens we are furnishing all the money used to buy it.

The more we permit power to be concentrated into one central authority, the less that authority considers the effect of its use on the individual or community.

The administration of such authority is of necessity inflexible and unyielding. The more centralized it is, the more corrosive it is to individual initiative and freedom.

The liberty of the individual, an inherent characteristic of the American form of government, is linked completely with a decentralized form of government with much authority in the hands of States and regions.

When we plead for a Federal works program for State or regional development, we may expect that such a program will be used as a vehicle to deprive that region of its natural assets and the political jurisdiction of the people living therein.

There is already sufficient authority granted to the Federal Government to permit it to assist the States in all safe and desirable ways to make regional developments.

If the Central Government is willing to proceed in harmony with American principles, there is no need for asking for greater grants of power. Yet our present administration not only demands of the States and regions a surrender of their sovereignty in return for flood control and other public works, but has definitely taken a stand against permitting two or more States to cooperate in solving their own problems.

We cannot equivocate any longer, but Pennsylvania and Vermont and the 46 other States of the Union must stand shoulder to shoulder and say to those who would apply to America the policies on which some European governments are run today, "You shall go no further."

Activities of the Export-Import Bank and the R. F. C.

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1939

LETTER FROM JESSE H. JONES AND SUMMARY OF THE ACTIVITIES OF THE RECONSTRUCTION FINANCE CORPORATION

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Hon. Jesse H. Jones, Chairman of the Reconstruction Finance Corporation, and also a summary of R. F. C. activities since its organization:

RECONSTRUCTION FINANCE CORPORATION,
Washington, February 20, 1939.

Hon. BRENT SPENCE,
Member, Banking and Currency Committee,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN SPENCE: In compliance with your request for further information regarding the Export-Import Bank, I give you the history of its organization and operations. Much of this was included in our testimony before the committee.

The bank was created February 12, 1934, pursuant to executive order, with capital stock of $11,000,000, $1,000,000 common stock provided from N. I. R. A. funds held by the Secretary of State and the Secretary of Commerce for benefit of the United States, and $10,000,000 preferred stock furnished by the R. F. C. upon request of the Secretary of the Treasury with the approval of the President. The preferred stock has been increased in this manner to $45,000,000.

The board of trustees named in the Executive order were: Daniel C. Roper, Secretary of Commerce; Robert F. Kelley, Chief of the Division of Eastern European Affairs, Department of State; Chester C. Davis, Administrator, Agricultural Adjustment Administration; Stanley Reed, General Counsel, and Lynn P. Talley, Executive Assistant to the Directors, of R. F. C. The board was increased by a further Executive order on February 14, 1934, to include: R. Walton Moore, Assistant Secretary of State, who has served as chairman of the board ever since; George N. Peek, Assistant to the President, who served as president of the bank; Tom K. Smith, Assistant to the Secretary of the Treasury; and Harold H. Neff, Counsel, Federal Trade Commission.

The board of trustees has, with the approval of the President, been changed from time to time, the present board being: R. Walton Moore, Counselor, Department of State; Herbert Feis, Adviser on International Economic Affairs, Department of State; Wayne C. Taylor, Assistant Secretary of the Treasury; Warren Lee Pierson, President, Export-Import Bank; A. G. Black, Chief, Bureau of Agricultural Economics, Department of Agriculture; Harry L. Hopkins, Secretary of Commerce; Richard C. Patterson, Jr., Assistant Secretary of Commerce; Jesse H. Jones, Chairman, H. A. Mulligan, Treasurer, and W. J. Johnson, Assistant Chief, Examining Division, R. F. C.; Russell L. Snodgrass, Assistant General Counsel, R. F. C.

The bank's principal activity has been to aid in the exportation of agricultural and manufactured products. Commitments have been made in the aggregate amount of $210,613,930, of which amount $92,204,740 was later canceled for the reasons that in some cases the applicants were able to secure the credit from private sources, in others, the transactions for which the loans were authorized were not completed.

In 1933 the R. F. C. authorized a credit to China of $50,000,000 for the purchase of cotton, wheat, and flour in this country. Only $17,105,386 of this credit was used. The balance of the commitment was rescinded at the request of China.

$13,537,388, the unpaid balance of the above, was transferred to the bank April 1936.

The bank also took over from the Farm Credit Administration $3,070,942 balance due from China on the sale of 15,000,000 bushels of wheat to China in 1931. The total purchase price of this wheat was $9,212,826, of which $6,141,884 had been paid.

In May 1936 the indebtedness of China was rearranged to mature July and September 1936, and quarterly from September 1936 to December 1942. Payments have been made regularly, $5,272,187 principal and interest having been paid from September 1937. The last payment, $772,812, was made December 31, 1938. No part of the recent $25,000,000 authorization has been disbursed and no part of it is to be used for the purchase of war materials.

Total disbursements by the bank, including the aforementioned items and disbursements for the Second Export-Import Bank, have been $63,618,965, repayments $36,297,546. One hundred and eighty-one loans have been authorized, 88 of which were not used.

Some manufacturers and exporters who wish to secure export orders must arrange for credits before they can solicit the order. This applies particularly to the smaller manufacturers, but also to the larger ones who are unwilling to carry all of the risk or to tie up too much of their capital in these credit sales.

Loans are never authorized by the Board until after the State and Treasury Departments have been consulted to ascertain if there is any reason, in the opinion of these departments, why a loan should not be made.

The bank's officers are, R. Walton Moore, chairman of the board; Warren Lee Pierson, president and general counsel; W. D. Whittemore, vice president; Hampson Gary, solicitor; Hawthorne Arey, secretary, and H. A. Mulligan, treasurer.

The Departments of State, Treasury, Agriculture, Commerce, and the R. F. C. are represented on the executive committee.

The Second Export-Import Bank of Washington, D. C., was created by Executive order March 12, 1934, with a common capital of $250,000 provided from N. I. R. A. funds held by the Secretary of State and the Secretary of Commerce for benefit of the United States, and $2,500,000 preferred stock subscribed by the R. F. C. This bank was created primarily to furnish needed assistance to the Republic of Cuba in buying and minting silver in this country for Cuba.

Having completed the purpose for which it was created, the bank was dissolved June 30, 1936 and the capital stock retired. There was no loss in its operation.

Sincerely yours,

JESSE H. JONES, *Chairman.*

RECONSTRUCTION FINANCE CORPORATION,
Washington, February 2, 1939.

To the President and the Congress:

I give you a summary of R. F. C. activities since its organization February 2, 1932, 7 years ago.

In addition to the original purposes of the Corporation and the many amendments to the act from time to time which have expanded the scope of its direct operations, our activities have also been carried on through: Commodity Credit Corporation, organized October 17, 1933; the RFC Mortgage Co., organized March 14, 1935; Electric Home and Farm Authority, organized August 1, 1935; Disaster Loan Corporation, created February 15, 1937; Federal National Mortgage Association, organized February 10, 1938.

Total R. F. C. authorizations have been $13,206,639,807. Of this amount $2,900,601,066 was by direction of Congress in which our directors had no discretion.

Authorizations for which our directors have responsibility aggregate $10,306,038,741. Of this amount $2,293,568,866 was withdrawn or canceled; either the purposes for which the authorizations were made were not carried into effect or the applicants found they did not need the money; $7,243,873,197 has been disbursed, and $5,372,565,029, or 74 percent, repaid; $768,596,678 remains available to the borrowers or for the purposes for which the authorizations were made.

Of the amount authorized and disbursed by direction of Congress, $1,799,984,009 was for direct relief, and $1,001,112,169 to other governmental agencies. Of the former amount $17,158,858 was repaid by counties and municipalities, and of the latter amount $37,000,000 was repaid from capital stock of regional agricultural credit corporations. From October 1932 to May 1933 we invested $44,500,000 in the capital stock of 12 regional agricultural credit corporations to make loans principally on livestock. In addition to this investment in their capital stock, we advanced them $173,243,641 to enable them to make loans principally on livestock. All of these loans have been repaid to us, and the companies have sufficient money on hand to retire the balance of the capital stock. These agencies were transferred to the Farm Credit Administration by Executive order in May 1933.

Since their transfer to the Farm Credit Administration they have made additional loans of approximately $100,000,000. All the loans made by them have been repaid except approximately $12,000,000.

In February 1938 we asked Congress to authorize and direct the Secretary of the Treasury to cancel our notes given to the Treasury for disbursements made by direction of Congress for which we received no benefit. The act authorizing such cancelations was approved February 24, 1938. Pursuant to this act notes aggregating $2,699,236,946 have been canceled. As stated, much of this money was used for direct relief, but approximately $850,000,000 is carried by the Treasury and other agencies in the form of capital stock of governmental corporations, or other obligations, or has been converted into cash.

Attached is a break-down of R. F. C. authorizations, cancelations, disbursements, repayments, and balances outstanding; also financial statements of the several agencies. A condensed summary of our activities follows:

Classes of loans: Loan and other aid to agriculture; loans to banks; preferred stock, capital notes, and debentures; closed bank loans; drainage, levee, and irrigation loans; self-liquidating loans; railroad loans; loans to business and industry; mortgage loans; loans to insurance companies; loans to building and loan associations; loans to public school authorities; loans to State funds created to insure deposits of public moneys; mining loans; rural electrification loans; Commodity Credit Corporation; the RFC Mortgage Co.; Federal National Mortgage Association; the Electric Home and Farm Authority; disaster loans.

LOANS AND OTHER AID TO AGRICULTURE

Agriculture in one way or another has been accorded loan authorizations and allocations of $3,101,673,840.

Of this, $399,636,000 was to Federal land banks, $29,035,359 to joint-stock land banks, $9,250,000 to Federal intermediate credit banks and $199,072,648 to livestock and agricultural credit corporations to provide funds to meet the needs of farmers and stockmen.

$1,840,774,178 was for loans through Commodity Credit Corporation and other agricultural agencies to producers of cotton, corn, wheat, tobacco, turpentine, resin, wool, mohair, hops, figs, dates, raisins, prunes, peanuts, butter, and pecans in 39 States.

Cotton loans were made in Alabama, Arizona, Arkansas, California, Florida, Georgia, Louisiana, Mississippi, Missouri, New Mexico, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia.

Corn loans were made in Colorado, Illinois, Indiana, Iowa, Kansas, Kentucky, Minnesota, Missouri, Nebraska, Ohio, Pennsylvania, South Dakota, and Wisconsin.

Wheat loans were made in Arkansas, California, Colorado, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Montana, Nebraska, New York, New Mexico, North Dakota, Ohio, Oklahoma, Oregon, South Dakota, Tennessee, Texas, Utah, Virginia, Washington, Wisconsin, and Wyoming.

Tobacco loans were made in Kentucky, Tennessee, and Virginia.

Turpentine and resin loans were made in Alabama, Georgia, Florida, Louisiana, Mississippi, and South Carolina.

Wool and mohair loans were made in California, Colorado, Idaho, Indiana, Iowa, Kentucky, Massachusetts, Minnesota, Missouri, New Mexico, North Dakota, Oregon, Pennsylvania, Texas, Utah, Wisconsin, and Wyoming.

Loans on figs, dates, raisins, and prunes were made in California; on hops in Washington; and on pecans in Georgia.

Peanut loans were made in Alabama, Florida, Georgia, North Carolina, South Carolina, Texas, and Virginia.

Loans to associations were made on butter produced in California, Illinois, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New York, Ohio, Oregon, Pennsylvania, and Washington.

Eighty-three million three hundred seventy thousand nine hundred and fifty-five dollars went to finance the exportation of some of these commodities.

One hundred and fifteen million dollars was allocated to the Secretary of Agriculture for crop loans. Of this, $44,500,000 was reallocated and, with $40,500,000 allocated by R. F. C. to the Governor of the Farm Credit Administration, used to provide $45,000,000 capital of the Production Credit Corporations and $40,000,000 capital and surplus of the Federal intermediate credit banks.

Sixty-one million nine hundred and thirty-four thousand seven hundred dollars was allocated for the capital and expenses of the regional agricultural credit corporations and $97,000,000 for the capital of the Commodity Credit Corporation.

Of $202,600,000 originally allocated to the Farm Credit Administration for loans to farmers and to joint-stock land banks, $200,000,000 was reallocated and used to provide capital of the Federal Farm Mortgage Corporation.

These items were by direction of Congress and their outstanding balances were included in the items for which our notes were canceled in accordance with the act of Congress approved February 24, 1938.

Farmers and stockmen in every section of the country have been the recipients of these loans.

LOANS TO BANKS

Loans were authorized in the aggregate amount of $1,334,744,454 to 5,816 going banks, principally in 1932 and 1933; $196,378,317 of this amount was not used. One billion, one hundred and thirty-eight million, two hundred and seventeen thousand, three hundred and thirty-seven dollars was used, and 93 percent has been paid. The purpose of these loans was to enable banks to meet the abnormal demands of depositors during that period occasioned by the Nation-wide depression and consequent fear by depositors for the safety of their funds. Two thousand one hundred and twenty-eight of these banks failed after receiving the loans, but 3,688 were enabled to continue, thereby saving millions of depositors and stockholders from loss and inconvenience.

Because of the widespread interest in the $90,000,000 loan to the Central Republic Bank & Trust Co., Chicago, in June 1932, I give the following information regarding its present status:

Repayments, including interest, have been $62,383,207 and the receiver of the bank has on hand $7,300,000 collected from stockholders' assessments. This will be paid over when the judgment of the lower court fixing the assessments has been confirmed. The estimated value of the unliquidated collateral appears to be at least $15,000,000. So, assuming that the stockholders' assessments are effective and the remaining collateral is worth this estimated figure, our loss will be in the neighborhood of $5,000,000 in addition to interest and expense of handling the loan.

PREFERRED STOCK, CAPITAL NOTES, AND DEBENTURES

Banks needed capital more than loans in 1932 and 1933. Loans had the effect of preferring depositors, because as long as banks were able to, they paid their depositors, first come, first served.

By furnishing the banks with capital, depositors were, in effect, insured, no depositor being preferred over another. In some instances the larger depositors voluntarily permitted a part of their deposits to be used in recapitalizing or reestablishing the bank, or agreed that the smaller depositors might be paid first. Our bank capital program was in operation prior to the creation of the Federal Deposit Insurance Corporation, and the announcement that R. F. C. had agreed to supply a bank with capital stopped many bank runs.

We were given authority to buy preferred stock, capital notes, and debentures in banks and to make loans upon preferred stock by an amendment to our act approved March 9, 1933. We agreed to put capital in 6,853 banks in the aggregate amount of $1,349,234,714. Seven hundred and fourteen of these banks did not take the capital, finding they could get along without it, but our agreement to furnish the capital enabled them to carry on with confidence. Our actual investments in bank capital, except for $47,500,000 invested in the preferred stock of export-import banks, have been $1,099,090,662. Approximately 51 percent has been retired.

The terms on which this capital is invested contemplate that it will be retired out of approximately one-half of net earnings of the bank after dividends or interest on our capital, but not in excess of 5½ percent is required to be retired in any one year. However, at the option of the bank R. F. C. capital may be retired earlier if permission is obtained from the Comptroller of the Currency for national banks, and from State bank supervisors for State banks. One thousand, two hundred and eighty banks have retired all of their R. F. C. capital. Eighty-four percent of the remainder are current in interest and dividend payments.

To save so many banks in such a short period through putting new capital in them, in the manner authorized by law, required not only extraordinary effort, but necessarily some risk to the capital invested. We were greatly aided in this work by the various bank supervising authorities. Of the 6,120 banks in which we have invested capital, only 206 have since been closed. We will probably recover our entire investment in 50 of these and the loss in the remaining 156 banks will not be relatively large. Other losses may occur but, treated as a class, our bank capital investment should entail no net loss. Dividends and interest collected in excess of the cost of money to the Corporation should cover the individual losses. During the year ending February 1, 1939, we authorized $29,448,625 new capital in 60 banks.

Assisting banks through providing them with capital was reassuring to depositors. Without this, or Government guaranty of all bank deposits, a great many more would have closed.

CLOSED BANK LOANS

In the original act we were limited to $200,000,000 for loans to closed banks or banks in process of liquidation, but, because of the great number of banks that were failing, our law was further amended on June 14, 1933, removing the limit.

Loans have been authorized for distribution to depositors in 2,773 closed banks in the aggregate amount of $1,331,814,759; $327,511,981 of this was not used; $983,701,788 has been used and 93 percent repaid. A good many million depositors benefited from these loans. Depositors upon the average have received approximately 65 percent of their deposits in closed banks.

Stockholders in closed banks suffered much worse; usually they not only lost their entire investment but were subject to assessments for an equal amount.

DRAINAGE, LEVEE, AND IRRIGATION LOANS

During the decade prior to the depression, laws were passed in many States providing for the creation of drainage, levee, and irrigation districts with authority to issue bonds. Many such projects were promoted that found the taxes and water charges much greater than the farmers could pay. On May 12, 1933, Congress amended the R. F. C. Act, authorizing loans to these districts to enable them to reduce and refinance their outstanding indebtedness.

We have authorized loans to 632 such districts in the amount of $142,845,995, of which $20,480,759 was not availed of; $85,600,433 has been disbursed, and the balance remains available to the borrowers.

The holders of the old bonds have received an average of 48 percent for their bonds. By this reduction of 52 percent in the amount of the bonded indebtedness of the districts, and by our giving longer time and lower interest rates, water and bond service assessments to landowners have been reduced to approximately one-third of what they previously were.

Before their reorganization all of the districts were badly in default, due to the fact that the charges were so heavy the landowners could not pay them. Now 99 percent of the reorganized districts are current in interest and principal payments. More than 130,000 farmers and landowners in 26 States have benefited by these loans.

SELF-LIQUIDATING LOANS

Our authorizations for self-liquidating loans, including security purchases from P. W. A., have been $954,058,325. Of this amount, $741,744,404 has been disbursed and $457,826,219 retired or sold at a premium of $21,016,493 over cost. We feel there will be no net loss from the aggregate of those not yet sold.

These loans and purchases of securities made possible the construction of many useful projects throughout the country; a highway and railroad bridge across the Mississippi River at New Orleans for which there had long been a need, the San Francisco-Oakland Bay Bridge (a highway and interurban railway bridge) costing $73,000,000. These are sound financial projects, as are many other bridges and public projects of various kinds throughout the country that are less prominent, but of equal importance to their respective communities. Useful tunnels have also been financed in this manner.

The construction of a 240-mile aqueduct to carry water from the Colorado River in Arizona to southern California, for which we authorized $208,500,000, has been our largest project. This aqueduct will insure an adequate supply of water for all purposes to Los Angeles and a dozen other smaller cities in southern California. Seventy-five million and fifty-six thousand dollars of these bonds have already been sold at a substantial premium. The project was begun the early part of 1933 and will be completed in about another year. Our first authorization of $40,000,000 was made September 13, 1932. These bonds have taxing authority but should be retired from water charges.

We financed the construction of a power line from Boulder Dam to Los Angeles, costing $22,800,000. This line carries electric current generated by Boulder Dam to Los Angeles, providing a market for the power, and revenue for the Boulder Dam investment, also insuring fair rates to the users of electricity. These bonds have been sold.

RAILROAD LOANS

Of the $1,248,348,560 loan commitments to railroads ($200,460,500 representing securities purchased from P. W. A.), $307,561,724 was not used, the purposes for which the authorizations were made not being carried into effect or the roads having an R. F. C. commitment were able to get the money from private sources; $826,773,161 has been disbursed to 82 roads; $346,509,316 of this has been paid, leaving a balance outstanding of $480,263,845 due from 50 railroads; 32 roads have paid their loans in full; 19 were placed in receivership or trusteeship after receiving loans; 3 of these are no longer indebted to the Corporation. The balance due from the remaining 16 roads in the custody of the courts aggregates $163,565,837. Interest is being paid currently on 2 of these, the loans of which aggregate $25,825,227.

We will have some individual losses on railroad loans, as in other classes of borrowers, but treated as a class, there should be little net loss on railroad loans.

To be more specific in view of your interest, and that of the country generally, in the railroad situation, we have collected $86,335,352 interest from railroad loans, and in addition to this have approximately $15,000,000 interest accrued that we believe to be good. The margin in this interest over the cost of money to the Government will, in our opinion, cover losses on individual railroad loans.

LOANS TO BUSINESS AND INDUSTRY

Seven thousand three hundred and seventy-one loans have been authorized to business enterprises, aggregating $447,324,578. Banks have agreed to take participations in 1,661 of these loans in the amount of $61,492,756, their participations ranging from 10 to 60 percent. The banks and R. F. C. share proportionately in security and repayments. Of the R. F. C. part of these loans, $86,027,903 was not used, and $144,192,699 remains available to the borrowers. Two thousand seven hundred and twenty of these loans, or 37 percent of the total number, have been for $5,000 or less. (During the past 12 months, 49 percent have been for $5,000 or less.) Fifty-three percent of the loans have been for $10,000 or less, 83 percent for $50,000 or less.

In addition to the participations taken for their own account, banks hold $57,552,558 of these loans with a take-out agreement from the R. F. C. For the take-out agreements the R. F. C. gets a part of the interest paid by the borrower. This is 2 percent per annum where the bank's participation is 25 percent of the loan or less; 1½ percent where the bank's participation is from 25 to 50 percent; 1 percent where the bank's participation is 50 percent or more.

Participation agreements and take-out commitments are executed when the loan is made, and the take-out commitment is equivalent to insuring the bank to the extent of the agreed take-out. It is necessary to exercise the same care in insuring part of a loan as when the Corporation makes the entire loan. The same investigation is required and the same expenses incurred.

In April and May 1938 we made commitments to lend apple growers in the State of Washington up to $2,000,000. Under these commitments we authorized 960 loans to 716 applicants in the amount of $1,025,120, of which $991,506 was disbursed.

In addition to the foregoing loans to business, the Electric Home and Farm Authority has bought installment contracts from 2,573 dealers in electrical appliances. These are loans to business. They furnish the dealer with capital for his credit sales. The contracts carry the unconditional endorsement of the dealer.

We will probably have a substantially larger percentage of loss from industrial loans than from any other class. Forty-six of these (representing loans in the aggregate amount of $3,009,092) have already been foreclosed and the security reduced to possession. Properties securing 3 of these loans which amounted to $234,905 have been sold at a net loss to the Corporation of $31,003. Five hundred and forty-three loans to business are in default and 60 are in process of foreclosure. In addition to these, 507 of the loans to apple growers in the State of Washington are in default.

We have authorized two loans at the request of the Maritime Commission, one to the American President Lines, Ltd., $2,500,000, secured by a first mortgage on 13 ships, and another for building ships at Tampa, Fla., $300,000. Local banks took an additional $200,000 participation in this loan.

We have loaned the Tennessee Valley Authority $3,000,000.

We have authorized loans to the Lower Colorado River Authority of $5,000,000 for purchase of operating units in the vicinity of this project. The Authority expects to sell some of the units to the cities and towns in which they operate.

In cooperation with T. V. A. we authorized a $6,000,000 loan to the city of Knoxville to buy its power plant from the Tennessee Public Service Co., but with our commitment it was able to get the money from private sources.

We have indicated our willingness to lend to utility companies, as to any other business enterprise, where, in our opinion, the loans will be properly secured, especially we have offered to lend for expansion and the purchase of new equipment.

MORTGAGE LOANS

This item ($608,597,899) includes the capital stock of the RFC Mortgage Co., $25,000,000, and loan authorizations to the RFC Mortgage Co. of $160,021,276. It also includes the capital stock of the Federal National Mortgage Association, $11,000,000, and loans to it of $50,000,000. It includes $362,576,623 loans to privately owned mortgage-loan companies made principally in 1932, 1933, and 1934 to prevent the companies from failing and to enable them to grant extensions to their borrowers; $418,662,964 has been disbursed and $298,016,329 repaid.

Of all loans to privately owned mortgage companies, we will have only one loss of any consequence, a loan to the Prudence Co. of New York City. This loan was for $20,000,000 made in March and June 1932 on sundry collateral, in an effort to prevent failure of this and other large mortgage guaranty companies. Mortgage guaranty companies located in New York had outstanding guaranteed mortgages in the approximate amount of $2,000,000,000. Practically all of these companies failed.

November 1933 we aided the savings banks of New York State by authorizing the investment of $50,000,000 in the capital notes or debentures of the Savings Banks Trust Co., which company the savings banks of New York organized to assist any that might need to realize on their mortgages. None of this money was used.

We also authorized $86,000,000 to the Institutional Securities Corporation, organized by the savings banks for the same purpose. Only $14,312,567 of the amount was used, and it has all been repaid.

Publication of this procedure by the R. F. C. and the banks was so reassuring to depositors that the banks were able to remove the restrictions on withdrawals allowed under the law in a very short time.

The act authorizing the investment in the preferred stock, capital notes, and debentures of banks made no specific provision for aiding mutual savings banks, of which there are a great many in New York and the New England States. We aided the New England banks and some of those in New York State through buying their notes, with provisions of subordination in favor of depositors, in this manner bringing to the savings banks the same assistance provided for National and State commercial banks.

LOANS TO INSURANCE COMPANIES

Loans were authorized to 133 insurance companies, principally in 1932 and 1933, in the aggregate amount of $104,439,750 to enable

these particular companies to meet the demands of policyholders and other creditors. Thirteen million three hundred and thirty-one thousand four hundred and forty-two dollars of this was not used. Ninety million six hundred and ninety-three thousand two hundred and ten dollars have been disbursed and over 95 percent repaid. Loans were authorized and disbursed on the preferred stock of 10 insurance companies in the amount of $34,475,000. Seven million six hundred and fifty-six thousand nine hundred and fifty-five dollars of this has been repaid. The majority of insurance companies were able to meet their obligations without borrowing from the Government, particularly the larger companies.

LOANS TO BUILDING AND LOAN ASSOCIATIONS

We have authorized loans to 1,023 building and loan associations and receivers of building and loan associations aggregating $154,240,454. Of this amount $29,028,416 was not used; $118,221,783 has been disbursed and over 98 percent repaid. Loans to the open institutions made funds available to meet withdrawals of shareholders and depositors without foreclosing on the property of borrowers, and the loans to closed building and loan associations enabled the receivers to make distribution to depositors and other creditors.

LOANS TO PUBLIC SCHOOL AUTHORITIES

Because of the great amount of delinquent taxes in the city of Chicago from 1928 to 1934, public-school teachers were forced to go without pay from November 15, 1933, to May 31, 1934. August 1934 we loaned $22,300,000 to the Chicago Board of Education to pay back salaries to 15,000 school teachers. The loan was secured by valuable income-bearing real estate belonging to the public-school system of Chicago. The real estate is situated in the Loop district and was ceded by the United States Government to Illinois for public schools when that State entered the Union in 1818. In order to mortgage the property it was necessary for the State Legislature of Illinois to pass an act permitting it to be mortgaged. This act was approved by the Governor February 28, 1934, and by the court under a test case July 31, 1934. The act provided that the property could only be mortgaged to an agency of the United States Government. We made the loan August 27, 1934, and sold it to Chicago banks a few months later, at a substantial premium.

We authorized $2,086,800 to other school districts for refinancing indebtedness; $1,067,300 of this was canceled and $150,000 disbursed.

LOANS TO STATE FUNDS CREATED TO INSURE DEPOSITS OF PUBLIC MONEYS

Due to the great amount of public funds tied up in closed banks belonging to cities, towns, and counties in the State of Wisconsin in 1933, we loaned $13,064,631 to the "Board of Deposits of Wisconsin" to free these funds. It was all soon repaid.

MINING LOANS

One hundred and forty-four loans in the amount of $12,655,500 have been authorized to 126 borrowers for mining, milling, and smelting ores and development of ore bodies. Of this $7,392,000 has been canceled and $4,179,700 disbursed; $1,531,252 has been repaid. Eighty-seven of these loans, aggregating $1,440,500, have been approved under the section of the act which authorizes loans up to $20,000 to one borrower for development; $716,000 of this has been withdrawn or canceled. These development loans will entail a large percentage of loss.

RURAL ELECTRIFICATION LOANS

Loans to the Rural Electrification Administrator are made by direction of Congress upon the request of the Administrator and the approval of the President. One hundred forty-six million five hundred thousand dollars has been authorized and $47,700,000 disbursed. These loans are made on collateral consisting of notes evidencing loans made by the Administrator, which in turn are secured by mortgages on the projects he finances. We lend 85 percent of the face of the collateral. These loans bring electricity and the use of electric facilities to a great many people living in rural districts who otherwise would not have it.

COMMODITY CREDIT CORPORATION

Commodity Credit Corporation was organized October 17, 1933, pursuant to Executive order, with capital stock of $3,000,000 provided from funds made available by the N. I. R. A. In April 1936 Congress directed R. F. C. to increase this capital to $100,000,000 by buying $97,000,000 of the corporation's stock.

Commodity Credit Corporation's principal purpose is to make loans to producers to finance the carrying and orderly marketing of cotton, corn, wheat, and other agricultural commodities. It has done this principally with R. F. C. loans and credit. In an act approved March 8, 1938, Congress authorized Commodity Credit Corporation to borrow directly with Government guaranty, instead of depending entirely upon the R. F. C. This act also directed the Secretary of the Treasury to appraise the assets of Commodity Credit Corporation at the end of March each year and to maintain its capital unimpaired at $100,000,000, and authorized appropriations for that purpose. This was to bring to Congress each year the loss, if any, in commodity loans.

R. F. C. commitments to Commodity Credit Corporation have been $1,754,712,665 and disbursements $767,716,962, all of which has been repaid to R. F. C. Commodity Credit Corporation's disbursements have been $897,779,520, of which $522,983,139 has been repaid. Loans now outstanding, including those held by banks which Commodity Credit Corporation has agreed to purchase, aggregate $757,448,203.

The capital and borrowing authority of the Commodity Credit Corporation is limited to $600,000,000, and to enable it to make the wheat and corn loans in the summer and fall of 1938, the R. F. C. entered into an agreement with Commodity Credit Corporation to buy enough of the farmers' notes held by it to give it the necessary funds to make the corn and wheat loan commitments.

Commodity Credit Corporation is managed by a Board of Directors composed of representatives of the Department of Agriculture, Farm Credit Administration, Export-Import Bank, and the R. F. C. The agencies and facilities of the R. F. C. are used in making and administering the loans.

The Corporation's policy has been to lend only on such commodities as are recommended by the Secretary of Agriculture and approved by the President. The Agricultural Adjustment Act of 1938 directed that loans be made on cotton, corn, and wheat of not less than 52 percent of parity and not more than 75 percent, the loans to become mandatory when the price of these commodities reached 52 percent.

The 1938 loan on cotton was at 52 percent of parity; on corn, 70 percent of parity; and wheat, 52 percent of parity. The loans were authorized after the commodities reached these levels.

When a loan is authorized on a basic commodity such as cotton, corn, wheat, or tobacco, there is no way accurately to determine the amount of money that will be required until the crop has been gathered and the time for making the loan has expired. This makes it necessary to provide funds for the maximum that may be needed.

THE RFC MORTGAGE CO.

Because there was practically no mortgage money available to deserving borrowers to protect their properties from foreclosure, and to aid in the reorganization of properties covered by excessive mortgages and mortgage bond issues, Congress at our request authorized the R. F. C. in January 1935 to invest in the capital stock of mortgage companies up to $100,000,000 when any such investment was approved by the President. Following the approval of this act, we endeavored to interest private capital to organize mortgage companies, offering to take preferred stock with them.

Meeting with no success in this effort we, with the approval of the President, organized the RFC Mortgage Co. March 14, 1935, with a capital of $10,000,000, later increased to $25,000,000. The stock is all owned by the R. F. C. The company has authorized $137,969,839 loans on income producing business properties, borrowing its requirements from the R. F. C.

F. H. A. INSURED MORTGAGES

Because banks, insurance companies, and other private investors were reluctant to buy F. H. A. insured mortgages, we announced August 17, 1935, that we would buy these mortgages at a discount of one-half of 1 percent and sell them at a premium sufficient to cover the cost of operation. We have authorized the purchase of $96,955,222 F. H. A. insured mortgages and have completed the purchase of $73,083,604 of these. We have sold $16,604,899 to private investors at a modest premium; $34,108,848 have been transferred to the Federal National Mortgage Association.

Of the total number of F. H. A. insured mortgages bought, 102 loans, aggregating $400,845, have been foreclosed, for which we hold or will receive the equivalent amount, less cost of foreclosures, in F. H. A. 2¾-percent and 3-percent debentures carrying Government guaranty. The loss on the loans foreclosed will be less than 10 percent.

FEDERAL NATIONAL MORTGAGE ASSOCIATION

The National Housing Act, approved June 27, 1934, provided for the organization of national mortgage associations; and to aid in the establishment of these we, at the request of the Federal Housing Administrator, offered to match dollars with private capital by taking preferred stock in national mortgage associations.

Even on this basis, the Administrator received no applications; and with the approval of the President, we organized the Federal National Mortgage Association February 10, 1938, with a capital of $10,000,000 and a surplus of $1,000,000. It is owned and operated by the R. F. C. and deals exclusively with mortgages insured by the Federal Housing Administration.

It has authorized the purchase of 26,276 mortgages, aggregating $111,470,381. Purchases have been completed on 22,684 of these, aggregating $92,083,405. It has been necessary to start foreclosures on only 25 of these, aggregating $105,288. We finance the Federal National Mortgage Association through sale of its notes to the public. We have sold $85,240,000 of these notes; $29,748,000 bear 2 percent and mature May 16, 1943; $55,492,000 bear 1⅝ percent and mature January 3, 1944. They are not guaranteed by the Government or by the R. F. C., but constitute a sound investment, enjoying certain income-tax exemptions.

The Federal National Mortgage Association offers to buy at par and accrued interest any mortgages insured by the Federal Housing Administrator on new homes, including large-size housing projects. The RFC Mortgage Co. buys insured mortgages on old homes.

THE ELECTRIC HOME AND FARM AUTHORITY

The Electric Home and Farm Authority was incorporated under the laws of the District of Columbia August 1, 1935, to aid in the distribution and sale of electrical equipment in homes and on farms at low financing cost. It has a capital of $850,000 provided from N. I. R. A. funds and held by its trustees for the United States. It borrows its requirements at low rates with R. F. C. backing and management.

It has purchased from 2,573 dealers in 32 States 101,953 installment contracts covering installment sales for home electrical appliances, aggregating $15,573,318, of which $7,239,106 has been paid. These contracts usually run from a few months to 3 years, the average being about 2 years.

Electric Home and Farm Authority operates in cooperation with utility companies and with dealers who sell the equipment. The dealers guarantee the notes, and the utility company makes collections with its monthly bills. It is helpful to householders who find it necessary to buy on installment.

Buying these contracts is making loans to business enterprises, to dealers, upon the security of the equipment sold and the obligation of the purchaser of the equipment. Payments are made promptly, and there are no losses to speak of.

If we did not have the Electric Home and Farm Authority, the R. F. C. would extend the same service in small loans to business. It is much more convenient and economical to handle these particular loans through the Electric Home and Farm Authority as they are now being handled.

DISASTER LOANS

By special direction of Congress through amendments to our act, the R. F. C. from 1933 to 1936 made loans for rehabilitation of property damaged by floods, earthquakes, or other catastrophes; $16,784,521 was authorized for this purpose, $12,003,055 disbursed; $4,278,027 of this has been repaid.

Following the Ohio River flood in January 1937, Congress directed us to organize the Disaster Loan Corporation and provide it with capital up to $20,000,000 to make loans to those who suffered losses from the flood or other catastrophes in the year 1937. This act was later amended to include catastrophe losses that occurred in the years 1936 and 1938.

Immediately following creation of this Corporation, we established offices for making loans at Ashland, Ky., Cincinnati, Ohio, Huntington, W. Va., Ironton, Ohio, Portsmouth, Ohio, Cleveland, Ohio, Paducah, Ky., Memphis, Tenn., Dyersburg, Tenn., Louisville, Ky., Cairo, Ill., Evansville, Ind., Harrisburg, Ill., Galena, Ill., and New Orleans, La. Loan committees composed of local citizens were set up to recommend loans. These committees served on a voluntary basis and were of great assistance to the Corporation in meeting the emergency.

Seven thousand five hundred and fifty-five loans, aggregating $8,805,051, were authorized as a result of the Ohio River flood. One million five hundred and seventy-four thousand five hundred and four dollars was not used. Six million seven hundred and eighty-five thousand seven hundred and twenty-nine dollars of this has been disbursed and $1,752,542 repaid. It is significant of the character and integrity of the American people that 80 percent of these loans are current in their payments.

We are now making disaster loans as a result of the hurricane in September 1938, principally in the New England States. Immediately after the hurricane we established offices at Charleston, S. C., Gardner, Mass., Hartford, Conn., Lowell, Mass., New Bedford, Mass., New London, Conn., Providence, R. I., Springfield, Mass., Worcester, Mass., Keene, N. H., Concord, N. H., New Haven, Conn., Montauk, Long Island, N. Y., Quogue, Long Island, N. Y., with loan committees composed of local citizens to recommend loans. These committee members also serve on a voluntary basis.

Loans aggregating $3,764,625 have been authorized to 1,526 applicants who suffered losses from the hurricane. We are lending to salvage the very large amount of blown-down timber. Probably 25,000 farmers and landowners lost their timber. It is estimated that 3,000,000,000 feet of timber is down as a result of the hurricane, and effort is being made to salvage as much of it as possible. The facilities of the Forestry Service and the Federal Surplus Commodities Corporation are being used to salvage the timber.

Disaster and catastrophe loans have been made in 34 States—Arkansas, California, Connecticut, Florida, Georgia, Idaho, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, New Hampshire, New Jersey, New Mexico, New York, North Carolina, Ohio, Oregon, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Vermont, Washington, and West Virginia.

In addition to R. F. C. loans authorized, and credit actually used, we have assisted a great many borrowers in getting loans from private sources by bringing borrower and lender together when, in our opinion, the loan applicant could properly be taken care of by banks or other private lending institutions, and by indicating that if necessary, to protect the applicant from failure or unnecessary loss, we would make the loan.

The R. F. C. has a capital stock of $500,000,000 appropriated by Congress January 27, 1932. Prior to July 1938 we borrowed additional requirements from the Treasury, except that in buying preferred stock, capital notes, and debentures in banks that needed capital but did not need cash, we sometimes sold them our notes. These notes have been paid.

We now have outstanding in the hands of the public our notes, aggregating $211,460,000, maturing July 20, 1941, and $297,439,000 maturing November 1, 1941. We are selling another issue of approximately $300,000,000 maturing January 15, 1942. All of these notes bear seven-eighths of 1 percent interest per annum. After paying the Treasury the proceeds of this last issue, we will only owe the Treasury approximately $400,000,000.

We have paid the Treasury $194,801,847 interest on borrowed money and $24,507,637 interest to others. Our operating expenses have been slightly less than 1 percent.

In addition to the foregoing, we have accummulated operating reserves sufficient in the opinion of our Board to cover any and all probable losses.

So that the vast amount of credit which has been made available through the R. F. C., and the services it has rendered throughout the country, have been without any net loss to the Government.

In conclusion, I should like to say that our directors are ever mindful of their responsibility to the President and the Congress in administering the affairs of the Corporation.

Sincerely yours,

JESSE H. JONES, *Chairman.*

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1939

ADDRESS BY HON. JOSHUA L. JOHNS, OF WISCONSIN, FEBRUARY 10, 1939

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I wish to include a splendid address which my able colleague, Hon. JOSHUA L. JOHNS, of Wisconsin, delivered at the Lincoln Day dinner at Johnson City, Tenn., on February 10, 1939.

The address is as follows:

Mr. Chairman, ladies, and gentlemen, I am delighted to be back in Tennessee again tonight and I want to thank the Republican committee for this privilege.

It is 32 years ago this year that C. S. Littleton and I formed a partnership for the practice of law at Chattanooga, Tenn. So it is like coming back home when I get back to Tennessee.

Many changes have taken place during these years and I am glad to take up and discuss with you this evening some of these changes.

At this dinner we are celebrating the birthday of Abraham Lincoln. His birthday is being celebrated in many parts of the United States this year, because as the years pass we all realize the profound wisdom of both Lincoln and Washington, and what they mean to the Nation.

No man honored by his people with a seat in Congress can fail to think of some of the great statesmen who sat in the House. Of all the great and nearly great my mind dwells most frequently upon Abraham Lincoln's brief term in the House of Representatives.

Lincoln came to Washington virtually unknown to the Nation at large. He left from Illinois no better off. The principal impression he made upon Washingtonians was the one that followed him through life—that he had an inexhaustible fund of humorous stories and knew how to tell them. By virtue of his funny stories he was monarch of the table at the boarding house where he stayed.

Only one legislative move did he make. He introduced the "Spot Resolution," which sought to compel President Polk to name the exact spot at which American soil was violated by Mexican soldiers. Lincoln and many of his friends believed that he was finished politically when he retired from Congress. But the drama of the Douglas debates, the Chicago nominating convention, Presidency during the trying Civil War days, and death at the hands of an assassin were all to come to him by way of politics. There are so many interesting pages to the Lincoln life that biographers have detailed it in various of its phases, as Seitz in his Lincoln, the Politician. However, right now I am quite naturally thinking of his tenure as Congressman, and wondering how the greatness of his mind could have been lost upon the men who sat with him in Congress.

His residence in Washington, where he died, has become a shrine that is visited by thousands every year, as is the Lincoln Memorial here. Today Lincoln has become a world figure in history. England is proud of the excellent bronze of the Emancipator in London. Lord Chronwood and Emil Ludwig, among Europe's best biographers, have written his life. No more accurate prophecy was ever uttered than Stanton's when he said at Lincoln's passing: "Now, he belongs to the ages." It is inconceivable that Lincoln should be classed as just another Congressman when he served Illinois as I am now serving Wisconsin. But he was.

In searching for guidance during these trying times, I often turn to Lincoln to learn what he would think of some of the things that are being done today. What were his views?

I wonder what he thought about the theory of producing less in order to have more? Whether he believed it was proper for

a person to have ambition and initiative to try and accumulate something for one's self instead of relying on the Government and his neighbors to support him and his family, if he happened to have one?

I wonder what he thought about youth; what he thought about liberty and the rights of individuals; his views on labor and capital.

All these are problems of our daily life now, and I thought he might help me to solve them.

It occurred to me in preparing this address that you might also be interested in his views.

Our Nation has grown wealthy through the individual efforts of the people making up our Government.

Today there seems to be a lack of that ambition and initiative of our citizenship which our fathers and grandfathers possessed, that has builded for us the greatest Nation on earth. There is a reason for it, and perhaps before I am through this evening we may discover what it is and if there is some way of remedying it. I am, therefore, going to quote from Mr. Lincoln, giving his views on these problems, and perhaps we may see some remedy or solution for some of our present governmental problems.

In an address at New Haven, Conn., on September 16, 1859, Lincoln, in speaking of wealth, said: "I take it that it is best for all to leave each man free to acquire property as fast as he can. Some will get wealthy. I don't believe in a law to prevent a man from getting rich; it would do more harm than good. So while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else. When one starts poor, as most of us do in the race of life, free society is such that he knows he can better his condition. He knows that there is no fixed condition of labor for his whole life. I am not ashamed to confess that 25 years ago I was a hired laborer, mauling rails, at work on a flatboat—just what might happen to any poor man's son."

In his message to Congress on December 3, 1861, he said: "Again as has already been said, there is not, of necessity, any such thing as the free hired laborer being fixed to that condition for life. Many independent men everywhere in these States, a few years back in their lives, were hired laborers. The prudent penniless beginner in the world labors for wages awhile, saves a surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him. This is the just and generous and prosperous system which opens the way to all—gives hope to all, and consequent energy and progress and improvement of conditions to all. No men living are more worthy to be trusted than those who toil up from poverty, none less inclined to take or touch aught which they have not honestly earned."

I find nothing about one finding the more-abundant life except through hard work.

He believed that property was the fruit of labor and a positive good in the world.

In reply to a committee from the Working Men's Association of New York, on March 24, 1864, he said to them: "Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence, is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus, by example, assuring that his own shall be safe from violence when built."

Again in an address at Columbus, Ohio, on September 16, 1859, in speaking of each individual, he said: "I believe each individual is naturally entitled to do as he pleases with himself, and the fruit of his labor, so far as it in nowise interferes with any other man's rights."

We hear much of the capitalist today, if there are any left, and of the capitalistic system, and the young man is taught to believe that his chances are not as good today as they were a few years ago.

Lincoln had great faith in the ability of young men to improve themselves. His thought was that suspicion and jealousy were the greatest hindrances to the advancement of young men. He advised them not to allow these two things to stand in their way.

I then wanted his views on creating obligations and not paying them and continually borrowing more all the time.

In a circular from the Whig committee, addressed to the people of Illinois on March 4, 1843, he said a truth that we should all remember. I quote: "The question of revenue we will now briefly consider. For several years past the revenues of the Government have been unequal to its expenditures and, consequently, loan after loan, sometimes direct and sometimes indirect in form, has been resorted to. By this means a new national debt has been created, and is still growing on us with a rapidity fearful to contemplate—a rapidity only reasonably to be expected in time of war. This state of things has been produced by a prevailing unwillingness either to increase the tariff or resort to direct taxation. But the one or the other must come. Coming expenditures must be met, and the present debt must be paid; and money cannot always be borrowed for these objects. The system of loans is but temporary in its nature, and must soon explode. It is a system not only ruinous while it lasts, but one that must soon fail and leave us destitute. As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and, next, no one left to borrow from, so must it be with a government."

He did not believe in the Government interfering in business.

In a speech in Congress on July 27, 1848, he said: "We see it, and to us it appears like principle, and the best sort of principle at that—the principle allowing the people to do as they please with their own business."

I have gone to some length to give you the views of Mr. Lincoln so you might contrast them with the views of some of those holding offices of great trust and responsibility today.

That you may properly have before you some of the facts and figures I hope to interest you in and discuss with you, I am going to briefly sketch our financial condition at the present time.

We are owing more money today than we have ever owed in the history of our Nation. Opinions differ as to whether the money should have been spent, but the sum is the largest ever created in the United States.

Our Budget has been out of balance for 8 years, or since 1931. For 9 years prior to 1931 our revenues averaged $4,000,000,000 per year, and from these revenues we paid about one-half billion dollars each year on our indebtedness created during the World War.

During the past 9 years, however, our average revenues were about the same as the 9-year period prior to that date, but expenditures averaged six and one-half billions annually. Our annual yearly deficit for the past 5 years has been on an average of about three billions per year.

The net deficit for the fiscal year 1938–39, from July 1, 1938, to December 31, 1938, was $1,394,855,574.67, while there was a deficit of over two billions on February 1, 1939. We are now owing approximately $40,000,000,000, which will have reached approximately forty-four billions by the end of the present fiscal year. In addition to these sums we have also guaranteed the payment of some five billions more. Our direct debt limit, by an act of Congress, at the present time is $45,000,000,000, so at the end of the fiscal year we will have almost reached that limit, without taking into consideration our guaranty on other obligations. The Washington Post on February 8 reported the Secretary of the Treasury as saying the national debt would reach $50,000,000,000, and could safely do so. If it does, Congress must give the authority, and I, for one, am opposed to it. We must cut down the spending of money in this country or we are due for trouble. All you need to do is to study the history of the fall of Rome, and the causes of the French Revolution, and we can learn some very valuable lessons.

The last fiscal year, 1937–38, our Government spent twenty-one millions daily—$875,000 every hour, $14,583.33 every minute, and $242.21 every second. The per capita cost of government increased from $27.95 in 1923 to $62.91 in 1937. Many corporations pay more in taxes to the Government than they do to their stockholders, and some more taxes to the Government than they pay to their employees.

In 1937 taxes absorbed 17.6 percent of the national income. If taxes had been levied to cover all Government expenditures it would have taken more than 24 percent of the national income.

In the 8 years, 1931–38, the Federal Government alone spent $23,777,000,000 more than it received in revenue.

Such a large national debt means that we must levy heavy taxes to pay these obligations for borrowed money, or we shall have a permanent debt with large carrying charges; or it means repudiation direct or indirect on the whole or part of the obligation.

If these debts are to be paid it means that the heavier burden you place on private enterprise, the fewer men it can employ. The fewer it employs, the heavier it will be taxed to pay to support the rest, with the further knowledge that heavy taxes may produce a chronic state of depression.

Let us see whether we are improving the situation any from year to year.

As stated a moment ago, on February 1 we had accumulated a deficit of over $2,000,000,000. At the same date last year it was eight hundred millions.

I have not been too critical, as it is my first term in Congress, and I understand it was "planned that way." I was deeply interested in the figures making up the deficit. It appears that the actual excess of cash payments over cash receipts totaled $1,123,000,000, while in the previous fiscal year the Government actually took in one hundred and fifty millions more than was paid out in cash. The only purpose of these figures are to show you we are not getting any place except further in debt and nearer inflation if spending does not stop.

Another great danger in all this spending is that about three-fourths of the direct obligations of the Government are held by banks, Reserve banks, insurance companies, and nonfinance corporations. This is a most dangerous situation, because if Government obligations should drop 10 points it would cause serious trouble, not only in our own country but throughout the world. About 50 percent of the total direct interest-bearing obligations are owned by the banks, and their holdings of Government securities, direct or guaranteed, now represent about 25 percent of their total assets and more than 60 percent of their total investments. At the beginning of the present administration the banks held about 10 percent of Government securities.

The insurance companies, who have some 64,000,000 policyholders, many from people with moderate incomes, have invested their funds, and now own more than four and one-half billion dollars of the direct obligations of the Government. These holdings have increased nearly fifteenfold since 1930.

With the constantly increasing debt we may reach a point where the public may have raised in their minds a doubt as to our ability to pay. Just how near we are to that point, no one

knows, and therein lies the great danger. Each day brings us nearer to that point unless we stop creating deficits.

It has been officially said that: "Upon the unimpaired credit of the United States Government rests the safety of deposits, the security of insurance policies, the activity of industrial enterprises, the value of our agricultural products, and the availability of employment. The credit of the United States Government definitely affects these fundamental human values. It, therefore, becomes our first concern to make secure the foundation. National recovery depends upon it."

We have entirely too much idle money in this country today. A few days ago we reached reserves of over $3,600,000,000.

Most people who spend money feel much better if they know it has gone for a good purpose and they can see any results. We have been on a spending spree now for over 6 years and the question naturally arises—are we nearer out of the depression, recession, or the consternation that followed both?

We all know the increasing tax burden has meant that every self-supporting person has turned over an increasing amount of his labor to meet the increasing expense of government. The cost of keeping the unemployed, necessarily, falls on the employed.

The steel industry is a fair barometer of business conditions in this country today or at any given time. Let us see how they prospered the past year.

A report in the New York Times, under date of February 5, 1939, says that the earnings of the 10 leading companies last year was down 99.4 percent. That their net income in 1938 was $1,085,685 compared with $181,700,908 in 1937. While production declined from an average of 72.38 percent to one of 39.75 percent in 1938. Production stands today around 51½ percent.

The United States Department of Commerce reports a summary of business trends as of February 2, 1939. From this I submit the following: For the month of January the indicated volume of industrial output, seasonably corrected, was lower than in December; automobile production lower than in December; electric power production lower than in December.

In the week ending January 28, the downward movement of security prices was extended. The Dow Jones average of industrial share quotations closed on Saturday, the 28th of January, at 139, 10 points less than on January 20. Since the first of the year the industrial average has declined 10 percent, and at the close of that week's trading was the lowest since last September. Railroad stocks are down 16 percent since the first of the year.

Now the question arises—what can we do about it?

First of all, Government is political, and our experience for 6 years convinces us it knows very little about economics. As a result Government will eventually destroy private business when it is in competition with it, as the taxpayer pays the bill in one instance and the owners in private business. The Government should never be in private competition with private enterprise. In many instances it is proper to regulate it but never control it. When Government control enters, the effectiveness of private management is impaired, if not wholly destroyed.

The purchasing power of the people depends upon the value of production and distribution of goods and services, and our future standard of living depends upon our future value of production. Not upon the theory that if you produce less, you will have more, whether it is earned or not.

We, as American citizens, should demand that the spending spree be stopped and the tax burden lightened as we stop borrowing. This may seem only a dream, yet it is not impossible to reduce the Federal Budget to $6,000,000,000 and balance it there, without sacrificing some of the gains we have made with all the spending.

This is going to be hard to do until public opinion is thoroughly aroused. Too many persons are now beneficiaries of the Government's giving or are with some group that have some objective in view that requires more spending. Unless this can be done, we may expect repudiation or inflation. There is only one other alternative, and that is to levy a sufficient tax that even with more borrowing we could balance the Budget.

It goes without saying the debt increase must be stopped, and by this Congress. We can, or should, reduce the deficits for this fiscal year and end it in the fiscal year 1941.

It is hard to reduce expenditures all at once, and, of course, it cannot or will not be done.

Up until last June 30, we had appropriated twenty-three billions for recovery and relief. Of this amount, eighteen billions has been spent. This is about one-half of all expenditures of the same period. These expenditures were about 80 percent of the total revenues received by the Government, which includes Social Security taxes, and all other new levies during the same 5-year period. A large part of these expenditures have been considered as emergency.

Social Security has cost about eight hundred and thirty millions each year, with another seven hundred millions spent each year on the Agricultural Adjustment Corporation.

Of course, some of the eighteen billions was invested in stocks of the land banks, Farm Mortgage Corporation, Deposit Insurance Corporation, and some in revolving funds for such organizations as the Reconstruction Finance Corporation, Commodity Credit Corporation, and Farm Credit Administration. But the larger portion of it has been for pump priming.

We have just passed, and the President has signed, a bill making available seven hundred and twenty-five millions for the W. P. A. The President says this is not enough, that an emergency still exists.

I am firmly convinced that the President is right and one will exist so long as he occupies a chair in the White House. This statement is made without malice or partisanship. The statement is based entirely upon the past and the present attitude of the administration toward business in general.

The President is a great humanitarian, we all agree, but I know of but few men who would not be if someone else paid the bill. We would all enjoy spending someone else's money, and I cannot help but think of some of the headaches that will follow the spending of all this money.

I have said it must stop. Of course that does not mean that it will.

It can be done, and only two words stand in the way—love and confidence.

If these two words were properly and universally put into use they would solve all the problems confronting us. There must be a better feeling between capital and labor, and this means employer and employee. Confidence of the people must be restored in the operation of governmental affairs. They have been told each time we need money, it is for an emergency, and they are getting tired of this—especially those paying the bill. They are of the opinion that with proper management of governmental affairs this emergency should pass away and we would again be back to normal.

They have not forgotten that after the World War we cut Federal expenditures from $18,500,000,000 in 1919 to about $3,000,000,000 annually, lowered taxes four times, and reduced the Federal debt from $26,600,000,000 to $16,000,000,000, and except for a brief period in the year 1921, the national income was gradually rising from $56,800,000,000 in 1921 to $79,500,000,000 in 1929. The people are satisfied that with proper management this can be done again.

The people are learning a lesson now that will be of lasting benefit to future generations, and that is: That every dollar paid in taxes is a dollar taken away from their purchasing power. That these taxes, added to the cost of articles bought, necessarily reduces the volume of sales and the production of the article, and also lessens the incentive of capital to invest.

Our unemployment problem is our greatest. We must solve this in some other way than our present set-up.

Public works are a part of the normal activities of the State and local and public authorities, and they are continuing and will continue in this country subject to the test of their value to the community; but the experiment of large-scale public works as a method of dealing with unemployment has been tried and has failed, the same as it did in England, and we must take care of our unemployed in some other way.

During the history of our Nation relief has been a local responsibility and will eventually come to this again with the Government sharing the burden, but administered by those near and in direct contact with local conditions and who can use discretion in paying out funds to those needing it.

It is also a fact that many local communities spend more money than is needed and create local obligations because they feel they are getting something from the Government for nothing, but lose sight of the fact that regardless of who is furnishing the funds the local taxpayer in the end will have to share his part of the expense in taxes to pay not only the State and local government tax but the Federal as well. But local governments are gradually learning their lessons.

In a recent survey conducted by the American Institute of Public Opinion, of which Dr. George Gallup is the director, the following question was put to the voters: "Do you think the Federal Government is spending too much, too little, or almost the right amount of money at this time?" Sixty-one percent said too much, 10 percent too little, and 29 percent about right.

This poll would seem to be quite accurate, as about 30 percent of our people are now getting something from the Government, either directly or indirectly. Ten percent would like to have more and perhaps would like a better job. Sixty-one percent seem to agree with us about spending too much. That seems to be a majority. Let us, as a majority, start doing something about it.

National Canners' Association

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 22 (legislative day of Monday, February 20), 1939

EXCERPTS FROM ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, JANUARY 24, 1939

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address delivered by the junior Senator from Florida [Mr.

PEPPER] before the National Canners' Association at Chicago, Ill., January 24, 1939.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Some time ago in Washington I sat around a table with the president of one of America's great technical colleges. That president was explaining to the group what his college was trying to achieve—what it was trying to give students who were there. This president divided the directive part of business into two fields—management and administration. Management, he said, related to the internal operation of a business, the responsibility for the right kind of machinery, proper operation of that machinery, the right kind of personnel, and that personnel being in the right place—efficiency, both in equipment and in operation. Very great, said the president, was the responsibility of such a business executive. Administration, said the president, related to a broader field. It had to do with the relation of that particular business to the world of which it was a part; the relation of that business to its surroundings. It was the duty of management, he pointed out, to ascertain the contribution that that business was to make to its world and to determine the trend of the times so that that business would move in harmony and in tempo with those times. One charged with the administration of a business, therefore, had to be able to see the whole horizon, and not just his own place on the horizon.

About 1 out of 100, said the president, of his students would be fortunate enough to find an opportunity in business to occupy what might be called a chair of administration. Then this interesting speaker began to discuss what his college was trying to give its students so that they would be fitted for that 1 opportunity out of 100 which might come to them to be real business administrators. He said those students were taught economics by an engineer, because an engineer was more likely to sift through the sieve of his practical mind economic theories which others less ardent might more readily embrace. He said that those students would know something about history so that they might compare these times with others, and above all catch something of perspective which comes from knowing how others have lived. Also, he said, and perhaps more important, he wanted these students to sit at the feet of a philosopher. He wanted them to appreciate what was valuable in life. Knowing that men who work spend most of their waking hours at their work, he wanted someone who could make it possible for those men to put into those working hours, and to get out of them, something that was enriching to themselves and to their world.

This evening's conversation was vividly brought back to my mind when reading a part of a report of your own Economic Research Committee, part of which read as follows:

"Appointment of a committee to consider possibilities of developing an economic research program for the canning industry grew out of a general demand that the association, as the national organization representing the industry, do something with respect to correction of factors responsible for the condition in which the canning industry found itself the latter part of the year. The situation was not unlike that encountered at various times in the history of the industry, and it is felt that the association might well undertake research that would prove as valuable to the industry in meeting its recurring economic problems as had its scientific research in solving production problems. The committee's task, therefore, was to develop a program that would discover and evaluate the fundamental factors in the industry's economic problems and at the same time build up collateral association services that this research might reveal to be necessary or desirable."

I congratulate you upon the breadth of your vision. Your association in appointing that committee, and that committee in making its report, are sensible of the fact that your industry is an integral part of the economy of this country. You cannot prosper unless your country prospers, and it is not likely that your country will prosper without your having your share of that prosperity.

We in Washington are very deeply grateful to any business that exhibits that breadth of understanding of our national problems. We are interested in your own progress, in the maintenance of the service that you render to your country—to your world, but we have to take the same position that your association indicated in the appointment of your committee on research and by your committee report, that the way we can best serve you is to serve your country and the economy wherein you occupy so responsible a place.

I was particularly struck by that part of your committee report that said: "* * * It was felt that the association might well undertake research that would prove as valuable to the industry in meeting its recurring economic problems as had its scientific research in solving production problems."

No one knows better than your association what change has come over the world in the last century in technological improvement. The beginning of the machine age denoted the most violent transformation ever to occur in man's manner of living. His whole economy was reordered, his habits shocked into a sudden change, his means of livelihood perhaps swept away, his old trade made useless, his very family life even altered. A magic power had been put in man's hands; their strength magnificently magnified. Space was to be relatively annihilated, distance rendered of little consequence. So much, and so great has been the change that we and our ancestors of even a generation ago live in a different world, and perhaps our children shall refer to us as the old fogies of the first half of the twentieth century.

This new power, which we call the machine age, has not been confined to any phase of our economic life. About 1800, one farmer upon his farm fed about 5 people on the farm, and about one-half person in the city. Now this one farmer feeds 4 people on the farm, 12 in the city, and 2 in foreign countries, a total of 18. Where a laborer in 1869 represented 1 horsepower, he now represents at least 5. In the last 10 years technological improvement has been such in this country that at least 10 percent fewer men were required to turn out the same quantity of goods as in 1929—or, put another way, had it not been for the technological improvement between 1929 and 1938, at least 1,000,000 more workers would have been required than were employed to produce the national income of 1938.

Look what has happened in your own industry since Nicholas Appert in 1810 published his paper on the preservation of perishable foods.

Our whole life has become categorized; special training is required for almost every job. This is an age of specialists. The result has been a tragic dislocation of people. Millions have lost their moorings; they have become derelicts in their own country. There is no place into which they can fit. This situation is not confined to our country. This summer I visited the International Labor Office in Geneva, Switzerland, and saw represented there in graphic form the results of a world-wide economic survey. This survey depicted in the form of blocks upon the table, among other things, the number of unemployed in the nations of the world. By Great Britain there was a high block; by the United States one a bit higher; by those, one representing France almost as high; another representing Holland, comparably as high, and so on, indicating the number of unemployed in each of those nations. Another block by the name of Germany was very short; one by Italy a little higher only. Another by Japan, not as high as Germany. This was shocking information to me. It disclosed fundamentally that at least some nations of the world regarded the challenge of this problem of unemployment and dislocation as so great as to require literally wartime mobilization in a period of actual peace. This depicted to me the fact that a large part of the world's population was willing to give up even the liberty of speech, of the press, of movement, and to submit themselves to a discipline as rigorous as that of wartimes in order that there might be something like economic security and relative stability.

We all know that the price that they paid for the little they got is too dear a price; one that we would not pay under any circumstances. We abhor their methods and the spirit that actuates them, but their action and their being do emphasize the extreme seriousness to the world of modern dislocation of men, which we call unemployment.

There are some who think that a return of prosperity will solve the unemployment problem. They might as well expect the unemployment problem to be solved by the return of buggy factories as to anticipate that. In fact, economists disclosed recently in a hearing before the O'Mahoney committee in Washington, that if we had now the same relative prosperity which the Nation enjoyed in 1929, there would be at least 6,000,000 people unemployed. In 1936 we came within 5 percent of producing as many goods in quantity in this country as we produced in 1929, when, while there were perhaps only 4,000,000 unemployed in 1929, in 1937 there were at least 10,000,000 unemployed.

The machine age is with us. In spite of all of its virtues, notwithstanding the fact that it has given us a higher standard of living than we could ever have enjoyed the other way, it is yet a fact that with our economy organized as it is, there will never be an opportunity in private industry for anything like the men and women of this country who need to work and want to work.

Accordingly, our Federal Government in the last 6 years has set in motion a vast effort to compensate for this deficiency in our economic order. The tragedy is that the jobs created by that effort have been called relief jobs, as if the people who had to resort to those jobs were the recipients of some charity, or were wards of the State like the occupants of an eleemosynary institution. If you put in new machinery in a canning plant and thereby cut 50 percent of the workers off from employment, it is no fault of those workers; and if those workers are not able to get a job in another canning plant because that plant, too, has introduced improved machinery, and if all the other plants in that community have likewise been installed with more efficient machinery and they are unable to get a job with them, I maintain that those people have not become worthless and sorry because finally they have to resort to some creative work intended to compensate for the natural deficiency in the modern industrial age.

The sooner the country admits the ugly fact that leaving out human sentiment, disregarding the normal sympathy that the average human heart extends to his fellow human being, hungry and in rags, there is no prosperity in sight for this Nation; the sooner that we devise some method to give employment to the unemployed, the better off we will be.

Even Thomas Jefferson, in his day, to provide additional land for the congestion of the Atlantic seaboard, bought not only the Louisiana Territory but many acres of land from the Indians. Public land was cheap, and there was a steady flow of the tide of emigration to the West, ever relieving the pressure behind, until finally, in 1890, the Census Bureau of the United States announced that the last American frontier had been reached. The sweep of migration came suddenly up against the waters of the Pacific Ocean. Thereafter there was no geographical escape from bad conditions in any particular area of the country. There were cer-

tain parts not as much occupied as others which gradually filled up, but from that eventful day in 1890 it has become apparent to the people of this country that we have to live with our problems and we have to solve them upon the ground where we are. We can't flee from them to some other place and stay in the United States.

There are a variety of ideas about what should be the role of the Government in meeting today's problems. There are many who refer to Thomas Jefferson as the embodiment of a philosophy that it is none of the Government's business as to how the people get along, that it has no responsibility for whether they have credit, whether they have jobs, whether they have homes, whether they have good business, whether the members of the State have either economic or spiritual security. I have reverted to the fact that Jefferson used Federal money to buy land—100,000,000 acres—not only from Napoleon but from the Indians. You may recall that there were two reasons primarily why Jefferson bought the Louisiana Purchase. One of them was to open the Mississippi River to navigation; the other was to provide additional territory for settlement and use by the people of his country. And you may recall also that Jefferson did this when by the preponderance of opinion of his day he had no constitutional authority so to do.

It might be interesting to recall that in his first message to Congress, Jefferson also made it clear that he was not adverse even to direct governmental aid to business, if in the public interest and under the circumstances in the opinion of the Congress, such aid should be required. For while he stated his belief that "agriculture, manufacture, commerce, and navigation, the four pillars of our prosperity, are the most thriving when left most free to individual enterprise," yet he added, "Protection from casual embarrassment, however, may sometimes be seasonably interposed. If in the course of your observation or inquiry they should appear to need any aid within the limits of our constitutional powers, your sense of their importance is a sufficient assurance they will occupy your attention. We cannot, indeed, but all feel an anxious felicitude for the difficulties under which our carrying trade will soon be placed. How far it can be relieved, otherwise than by time, is a subject of important consideration."

Certainly Jefferson was not beyond using administratively the Federal financial power to weaken the force of the Federalist money interests by building up counteracting Republican financial agencies in what he regarded as the public interest. For Beard tells us that "knowing full well how deeply dyed with federalism the United States Bank and its branches were, Jefferson and his advisers deliberately adopted a policy of manipulating the Government funds in such way as to build up local Republican moneyed machines in order to resist the force of the Federalists' interest and provide competitors that would give the Republicans the power in the economic world, which they so earnestly desired." And, continued Beard, "That this was a conscious policy of Jefferson's administration there can be no doubt." (Economic Origins of Jeffersonian Democracy, by Beard, 1927, p. 446.)

To make the matter beyond doubt, in reply to a communication concerning the bank at Providence, R. I., which was a notorious Federalist stronghold, Jefferson said, "As to the patronage of the Republic bank at Providence, I am decidedly in favor of making all the banks Republican by sharing the deposits among them in proportion to the dispositions they show; if the law now forbids it, we should not permit another session of Congress to pass without amending it. It is material to the safety of Republicanism to detach the mercantile interest from its enemies and incorporate them into the body of its friends." (Economic Origins of Jeffersonian Democracy, by Beard, 1927, pp. 447, 448.)

Moreover, Jefferson clearly foresaw the day when the employment saturation point should be reached even in agriculture and there should arise the necessity of the Government guiding the surplus of labor, that is to say, the unemployed, into some useful and profitable employment.

When, in the summer of 1785, John Jay wrote him asking whether it would be useful to us to carry on all our own production, or none, he replied: "Were we perfectly free to decide this question, I should reason as follows: We have now lands enough to employ an infinite number of people in their cultivation. Cultivators of the earth are the most valuable citizens. They are the most vigorous, the most independent, the most virtuous, they are tied to their country and wedded to its liberty and interests by the most lasting bonds. As long, therefore, as they can find employment in this line, I would not convert them into mariners, artisans, or anything else. But our citizens will find employment in this line, until their numbers, and of course their production, become too great for the demand, both internal and foreign. This is not the case as yet, and probably will not be for a considerable time. As soon as it is, the surplus of hands must be turned to something else." (Economic Origins of Jeffersonian Democracy, by Beard, 1927, pp. 425, 426).

There are three possible theories of what the Government's duty is. The Government might be merely the country's policeman, seeing to it that people are not molested in their physical security and that the ordinary rules of a civilized state might be observed. Such a state would take no concern about economic and financial conditions under which those people labored. It would regard those matters as outside the scope entirely of governmental interest or authority.

Another theory is that government might act only as a compensatory agency. That is to say, to counteract the tendencies of the economic and social order which might lead to harmful results; or, in other words, in times when business was buying little, the Government might buy much to afford a market.

When there was great financial activity in the economic system the Government might shrink the currency in use, and vice versa. Such a government would only set up a counteracting force to another force already in operation, but would do nothing to prevent the formation of the dangerous or undesirable force or to divert it into channels where it might be harmless.

A third theory is that the Government might do all these things and go yet further than that—it might try to avoid dislocations of men from their businesses. It might try to guide the economic system in such a way that neither great inflations nor great depressions would result. It might supplement a deficiency of credit generally with Federal lending agencies. It might try to see to it that conditions were favorable to the employment of people in private enterprise, and when they could not be so employed, give them an opportunity for work directly. Such a government would not regard it as purely a private matter as to whether people were healthy; whether they lived in a healthy environment; whether they had access to hospitals and to medical care; whether they had decent homes in which to live and the sense of patriotism and responsibility which comes from home ownership; whether the number of hours they work and the wages they get are appropriate to their well-being.

There are many who think that such a governmental attitude is imperative to the stability of modern life. There are others who think such a point of view dangerous to the individual liberties of citizens. Here in America we must fight out this question according to our sentiments, according to what is reasonable, and also according to what is sensible according to the democratic process, according to our traditions and our Constitution.

A little bit ago, Walter Lippmann in his column pointed out that maybe what America needed was that her leaders should again get the kind of a classical education that the founding fathers of the country had. An education that came from a deep and rich culture that gave them a broad horizon and a large perspective, that gave them an historic sense. I agree that if the times ever required men of such stature, they are required now.

In an earlier day when chaos seemed to engulf the Old World, our forefathers with their intrepid will, set out to—and established—their civilization and their aspirations upon another. America again must lead the way to new worlds; to new worlds of thought, to new worlds of understanding, to new worlds of adjustment, to new worlds of harmony, to new worlds of unity. And, when this generation, as I prophesy, shall have met its rendezvous with death, they who have gone ahead of us who carried the torchlights of their difficult generations, will know that their fine blood has not lost its vitality, and that we are worthy of their tradition.

Admission of German Refugee Children

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, February 22 (legislative day of Monday, February 20), 1939

EDITORIAL FROM THE PATHFINDER OF FEBRUARY 25, 1939

Mr. WAGNER. Mr. President, I present and ask to have printed in the RECORD an editorial from the Pathfinder appearing in its issue for the 25th instant, headed "Let Them Come In," relating to the admission of German refugee children to this country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pathfinder of February 25, 1939]

LET THEM COME IN

There has just been introduced in Congress a joint resolution aimed at alleviating some of the great personal tragedy implicit in the refugee problem abroad. Sponsored by Democratic Senator ROBERT F. WAGNER and Republican Representative EDITH NOURSE ROGERS, the resolution is naturally nonpartisan because its purpose is wholly humanitarian.

Stated briefly, the Wagner-Rogers proposal would have Congress "authorize the admission into the United States of 10,000 German refugee children of every race and creed during each of the calendar years 1939 and 1940." This would be done only for children aged 14 or under, and it would be done without upsetting present quotas under the immigration laws. Moreover, the Wagner-Rogers bill would specifically provide that no child be admitted unless his support were first adequately guaranteed and unless he were assured

a proper home with individuals, families, or groups of his own religious faith.

Thus, this plan to make life supportable for refugee children, this plan to open up an avenue of hope for the frightened young victims of Europe's wild passions, is carefully circumscribed. Because private individuals, private groups, and private institutions would first guarantee to provide support and care, the admission of 10,000 children this year and 10,000 children next year would not in any sense create a problem of new public charges in America. In addition, because the age group would be fixed at 14 and under, there would be no adverse effect on labor conditions.

According to the best estimates available, there are about 75,000 German children in distress. Such authoritative sources as the American Friends Service Committee say that America's proposed total of 20,000 admissions could be chosen from 50,000 of the 75,000 in distress. Approximately only half of these 50,000 are Jews, the rest being in Nazi disfavor because they may have one or more Jewish grandparents or because their parents are politically outlawed. This means that all faiths are represented and that all groups in the United States have reason to take active interest in the Wagner-Rogers proposal.

Indeed, active interest has already been expressed. The Quaker organization of the American Friends service committee, a group whose humanitarianism has long been a source of inspiration in all parts of the world, has wholeheartedly endorsed the plan. One of the driving forces behind it is a group of religious leaders representing all denominations, Protestant and Catholic alike. In the field of labor, both the American Federation of Labor and the Congress of Industrial Organizations have gone on record in its favor. Behind it, too, are groups of private welfare workers now organizing in order to put the plan into effect as soon as congressional approval is forthcoming. Further, the plan has won the support of numerous prominent individuals, such as Mrs. Calvin Coolidge, who has joined a number of women in Northampton, Mass., in offering to provide for 25 refugee children.

Actually, it is not surprising that there is this unanimity of opinion favoring the Wagner-Rogers resolution. The proposal's objective simply cannot be questioned by any American who believes that this will be a sick world, that this will be a sick civilization, as long as great sections of humanity suffer the torment of being cut adrift, the torment of being refugees, the torment of being unwanted in lands where it once was good to be alive, where the home was, where the heart lay.

While the Wagner-Rogers resolution has to do with only a numerically minor phase of this problem, it promises to ease one of the situation's most tragic complications. Of the hundreds of thousands of Europeans who are refugees or potential refugees, the children arouse the greatest sympathy. With life still stretching before them, they find themselves shorn of opportunity, shorn of education, and in some cases shorn even of the right to play, the right to enjoy the sun and grass. This is not an emotional exaggeration; there are documented stories to confirm it. No imagination is needed to appreciate how evilly a situation of this sort can affect young minds and hearts.

Accordingly, while the Inter-Governmental Committee on Political Refugees weighs broader and more complex plans for solving the problem in general, the United States should join such other countries as Great Britain and the Netherlands in acting immediately to alleviate the situation as it applies to children. This can be done through speedy approval of the Wagner-Rogers resolution. The young thus allowed to enter America will be forced to leave their parents behind, but this part of their tragedy will not be unbearable, because on these shores they will have at least hope to spur them on.

Bituminous Coal Industry

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 22 (legislative day of Monday, February 20), 1939

ARTICLE FROM BLUEFIELD (W. VA.) DAILY TELEGRAPH OF FEBRUARY 21, 1939

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the subject of the bituminous-coal industry published in the Bluefield Daily Telegraph of February 21, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Bluefield (W. Va.) Daily Telegraph of February 21, 1939]

COAL INDUSTRY BLED BLIND BY LEGISLATION

It is so well known that it is needless to repeat that West Virginia depends on its coal industry for a living and any prosperity that it may enjoy. The great bulk of the taxes for public purposes and community and State activities are paid by the coal industry.

The coal industry went in the red—lost—$60,000,000 in 1938 and forced suspension of many mines, throwing thousands of men out of work and wages.

The Daily Telegraph has no hesitancy in saying that the distress of the coal industry is due to the blundering of the present administration at Washington. Not the least of these legislative handicaps is the N. B. C. C., or Guffey Act.

From a letter to the bituminous-coal industry signed by a number of coal producers the following paragraphs are quoted:

"For nearly 2 years we have been doing all we can to help the Coal Commission make this act work. Most of us favored this act when it was before Congress and worked for its passage. We paid our taxes and assessments. We sent in analyses, prices, and reports, put our men on boards and committees, hired lawyers, met, talked, argued, 'coordinated,' and spent our time and money, and have got nothing out of it. For 2 years we have had promises—'prices next month,' 'prices May 1' (what May is not stated), more promises, and in the meantime the act and taxes have been steadily shoving us into bankruptcy. Today we find that a great many people have lost confidence in this act and have not hope of its ever doing us any good.

"SEE RUINOUS PROSPECTS AHEAD

"We don't see any dependable prospect of fair and just minimum prices being made effective. We don't believe they will stick if they are put out, and they might ruin a lot of us if they are established in the manner now in prospect. We are told that some lawyers think the best chance for prices to stick if they are put out is the fact that it will cost so much to obtain court relief if mistakes are made in prices that no small operator can afford the expense of protecting himself. We don't like that.

"MAKES SITUATION WORSE

"We have been taxed and assessed and asked to spend more money we haven't got on a law that we now find makes our situation worse. Those of us who were for the bill are obliged to admit that we made a mistake and got something that won't work.

"ARMY OF SALARY DRAWERS

"We are not criticizing the integrity or ability of the Commission or its staff. We are simply convinced that this act is unworkable and that nobody can make it work. As near as we can find out, in the efforts to put it into effect, you and we, through taxes and assessments, are paying salaries, office rent, telephone bills, and other expenses for a flock of lawyers, statisticians, coordinators, experts, attorneys, tabulators, stenographers, receptionists, directors, enforcement agents, helpers, field agents, doorkeepers, messengers, office boys, commissioners, private secretaries, assistant secretaries, assistant statisticians, assistant attorneys, assistant coordinators, special assistants, committee members, board members, chemists, analysts, engineers, computators, file clerks, rate clerks, price clerks, cost clerks, supply clerks, chief clerks, clerks, division chiefs, bureau heads, assistant chiefs, auditors, advisers, technical advisers, legal advisers, traffic advisers, special advisers, accountants, chief accountants, chief statisticians, telephone operators, inspectors, policemen, samplers, watchmen, etc., employed by the Coal Commission and the district boards.

"DECIDED TO QUIT BEING 'STRUNG ALONG'

"This act has cost us millions of dollars in taxes, assessments, expenses, and ruined coal prices, for which we have got nothing and see no prospect of getting anything. If you had a mine superintendent, you'd have fired him so long ago that with even the beginning of such a record you'd have forgotten his name by now. That's why we decided to quit being 'strung along' any further and go back to being coal-mine operators."

Federal Tax on Interstate Chain Stores

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1939

RADIO ADDRESS BY HON. WRIGHT PATMAN, OF TEXAS, TUESDAY, FEBRUARY 21, 1939

Mr. PATMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address delivered by me on February 21, 1939:

Ladies and gentlemen of the radio audience, I have introduced in the House of Representatives a bill which has for its purpose the substantial curtailment of the powers and size of the great interstate retail chain-store systems. This bill is now H. R. 1 in this, the Seventy-sixth Congress.

Within the interpretations of the United States Supreme Court this bill calls into use the only power which the Congress has to control or put a limit upon the power of one individual or a few powerful corporations to monopolize the retail business of this country.

It uses as a vehicle for this purpose the taxing power, which has been used in the past by both Republican and Democratic administrations to reach worthy objectives that could not be reached in a constitutional manner in any other way.

This bill, if passed, will not destroy any chain-store company, but it will regulate the selfishness and prevent the greed of a few of the larger ones.

QUESTION SHOULD BE VIEWED FROM STANDPOINT OF GENERAL WELFARE

The question of limiting the size of national corporate chains is one that should be viewed by the American people, not from the standpoint of independent merchants, who happen to be in business at this time in competition with the chains, or in the interest of the national corporate chains that are destroying independent merchants but from the standpoint of the public welfare.

WHY CERTAIN EXEMPTIONS IN BILL

This bill does not include wholesalers or manufacturers. Our congressional committee, which agreed upon the terms of this bill, decided that we should confine our efforts to preserving for local people only that type of business which we know local people can and will conduct if permitted to do so. Many of the large wholesalers and manufacturers have retail stores and this bill will apply to them the same as others.

In preparing this bill the chain-tax laws of 22 States were consulted and the exemptions usually carried in these State laws are contained in this bill.

ONE CORPORATION SHOULD NOT HAVE TOO MUCH POWER

This bill has not been introduced in the interest of any special group of businessmen or any special class of people. It is, however, introduced in the interest of the general welfare of all the people. Recorded history has shown that time after time in the past when one man or a few men gained too much power, they never used that power in the people's interest, but rather they used it in furthering their own interest and in adding more power and more wealth to that which they already had.

The courts have always been aware of this. In this country many court decisions have been founded on the premise that it is not wise to permit one man or a few men to have or to gain too much power. This is especially true in certain types of business. The United States Supreme Court emphasized this in connection with the chain-store system in its decision upholding the West Virginia chain-store tax. In that decision the Supreme Court laid down its broad economic and social philosophy against the chain system of retailing.

There are a multitude of sound economic and social reasons why our bill H. R. 1 should be adopted by the Congress to protect the general welfare of the people of this country. I shall not attempt to state them all here tonight in the brief time allotted to me.

Anyone desiring more information on this subject, including the provisions of the bill H. R. 1, may receive it by addressing your request to the speaker, Congressman WRIGHT PATMAN, Washington, D. C. If you are supporting this legislation, you can aid us in this fight by advising your congressional representatives in both the House and the Senate, and at the same time I would like for you to advise me by letter or by card of your support, as I will be greatly encouraged to have the information that the people are supporting me in my endeavor to bring about the enactment of legislation that is intended to promote the interest of our country.

PRICE TO BE CONSIDERED BUT NOT ALWAYS MAIN THING

Practically all of the arguments against this bill to curb interstate chain stores relate to price. That is the economic side only. I admit that price is something to be considered, but there are social reasons for the passage of this bill that overcome any economical reason that is urged against its passage.

INTERSTATE CHAINS GREATEST HINDRANCE TO RECOVERY

The electric power interests claim that if the Government will cease putting up the money for municipalities to go into competition with them that billions of dollars will be spent the next few years in new equipment and supplies. Suppose a law should be passed now that would prevent the interstate chains from going into new territory or new locations to destroy more independent merchants? The result would be that bankers would extend loans to individuals who desire to enter the retail business in such lines as groceries, drugs, shoes, varieties, and others. Now, however, banks cannot safely make these loans, because they know that if the ambitious person who obtains the loan builds up a good business at his location, a national corporate chain will come in after the business is established and, through the use of profits made elsewhere, destroy the business of this individual. There would be an immediate demand for safe loans, aggregating billions of dollars, by efficient, clever businessmen if they were protected against this Wall Street octopus, which is the greatest hindrance to recovery at this time.

IF FARMER PROSPEROUS—NATION PROSPEROUS

It is my belief that the prosperity of this Nation depends upon the prosperity of the American farmer. Any system that reduces the buying power of the farmer works a hardship on all the other people, whether they are engaged in the professions or business or wage earners. When the farmer is prosperous wage earners are prosperous. So the wage earner who insists on perpetuating a system that is reducing the purchasing power of the class that represents the best customer for what he—the wage earner—is manufacturing, is certainly not acting in his own interest or in the country's interest.

The farmers of this Nation today and especially those engaged in dairying, producing livestock, poultry, eggs, and all fruits and vegetables would be enjoying a fair measure of prosperity were it not for the conspiracy of a few interstate chain-store owners who are dominating the market for these products and forcing the prices real low in order to accommodate their city consumers. City consumers, who have vision, realize this and know that it is against their interest and the interest of the country, and would not object to paying a fair price—one that would be fair to the producers.

INTERSTATE CHAINS HAVE NOT ELIMINATED DISTRIBUTIVE EXPENSES

Many people have been led to believe that the large chains have eliminated the wholesalers. This is not true. They have established their own wholesale houses instead. In fact, they have not eliminated a single distributive expense. It is true that they have caused hundreds of thousands of traveling men to lose their jobs, but the money that was formerly paid to these traveling men and which was in turn expended by them for transportation, hotels, and other expenses in every section of the country every day is now being paid to a few highly paid executives in practically one city. So the alleged saving, which can be pointed to by the interstate chains, is that which goes to a few rich people, many of whom do not have children to inherit it, in one city instead of millions of people in every section of the Nation. The Twentieth Century Fund recently reported to the President's committee investigating monopoly that a comparative handful of executives on the whole, in good times or bad—many of them receive as much as $1,000 a day—fare better than the wage earners or investors.

THREE GREATEST OBJECTIONS

I consider the three greatest objections to the interstate corporate chain system are the following:

(a) Concentration of money and credit;
(b) Destruction of local communities; and
(c) Monopoly.

It concentrates money and credit into the hands of a few men controlling a few banks, by draining the money of the Nation into these banks under their control. There are 16,000 banks in this Nation. Today 24 of these banks own one-third of the banking resources of the entire 16,000, and 13 of the 24 are in New York City. This has been caused largely by such systems as the interstate chain store. These 24 banks have interlocking directorates with large corporations that own 58 percent of the corporate wealth of the Nation. The fact cannot be disputed that a few men controlling these few banks control the corporate wealth of our Nation. Such a system is inimical to the general welfare of the people and should not be permitted.

The Federal Government was never called upon to aid the needy in local communities until absentee-owned chains concentrated the money and credit of the country in New York City.

MANY OTHER OBJECTIONS TO INTERSTATE CHAINS

The absentee-owned interstate chain-store system, as now operating, is against the interest of the people of this country for the following reasons:

(1) It destroys community life by refusing to assume the duties and burdens of local citizenship. The chains have never raised the standard of living in any community. Absentee control of business is a detriment to the future welfare of all classes, and there is no class or group that escapes its detrimental effect upon our economic life. Absentee-owned chains do not contribute to local relief, local schools, churches, or charities, except in a miserly sum—entirely out of proportion to their business—in an effort to buy goodwill.

(2) It dries up the local reservoir of credit and destroys the local bank. Net profits remaining in the community and deposited in the local bank circulate many times a year among local citizens.

(3) It causes concentration and control of wealth in the hands of a few.

(4) It causes the cost of food to be higher in towns and communities controlled by it.

(5) It leads toward and will eventually cause monopoly in business.

(6) It destroys local insurance agencies.

(7) It destroys local newspapers.

(8) It destroys the local printing shops.

(9) Local privileges and opportunities that formerly enabled local citizens to assume local relief burdens and responsibilities are taken away.

(10) It unfairly destroys independent business.

(11) The interstate chains do not create. They take away what others have created.

(12) The system destroys individual initiative and crushes the hopes and aspirations of ambitious young people; destroys the independence and self-reliance that built this Nation.

(13) It destroys free competition. The chains charge different prices in different cities in the same State (and even in the same city) depending upon competition from the independent merchant across the street, who is marked as the next victim.

(14) It narrows the market of the farmers and destroys their prices.

(15) The interstate chains are the first to arrive after a town is built and the first to leave when a town is overtaken by drought, cyclone, epidemic, or other unforeseen disaster.

(16) The chains never pay their just and fair share of taxes in proportion to their volume of business.

(17) Their system of doing business encourages cheating and dishonesty, which not only destroys the morals of the millions of good citizens, but causes the consumers to pay millions of dollars a year for merchandise that they do not receive because of short weights and short measures. Court records are available to prove this.

(18) It aids large cities—and especially New York City—to the detriment of the rest of the country. Net profits from farms, mines, or business is the only means of building towns, cities, and States. These net profits (under the chain system) fly overnight to New York. Every dollar (that is taken from your State and mine in net profits) is a loss of many times that one dollar in buying power to the local residents.

(19) It causes bureaucracies and dictatorships in business, and will destroy democracy in our country and substitute fascism instead.

IS NUMBER OF INDEPENDENTS INCREASING?

The interstate chains use deceitful and tricky figures to try to convince the people that they are not gaining control of retail business. They do, according to their claims, 22.6 percent of all the Nation's retail business, while the independents do 73.1 percent, and other types of distributors 4.1 percent. In these figures, they include all retail distribution, including the lines of business in which chains are not engaged at all. They also use in the figures areas in which the chains do not operate. Summing up, the figures are absolutely meaningless. We do know that in lines of business in which interstate chains are engaged and in areas in which they operate, they are not only rapidly gaining a monopoly, but in many places actually dominate the market at this time.

PASSAGE WILL AID CONSUMERS, FARMERS, AND LABORERS

The passage of this bill will greatly help the consumers, the farmers, and the laborers. It will not destroy any business, but it will correct an economic situation that has caused millions of our people to be unemployed today.

Please advise your lawmakers how you stand on this important question.

The Americanism of Washington

EXTENSION OF REMARKS
OF
HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 22, 1939

ADDRESS BY HON. THOMAS D'ALESANDRO, JR., OF MARYLAND, FEBRUARY 22, 1939

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered before the Maryland Free State Post, No. 167, at the Washington Monument in Baltimore, Md., February 22, 1939:

Hard is the task of the man who attempts to say anything new about Washington. Washington needs no eulogies from me, as history gives him all the honors that great men deserve. There is no doubt in anyone's mind that he was truly a man among men, for he venerated truth and virtue above profit or advantage. He always sought the public good and preferred approval of his own conscience above popular applause. He won for himself the title of "Father of his Country," for he was indeed first in war, first in peace, and first in the hearts of his countrymen. Although great in every way, Washington, nevertheless, possessed the traits of ordinary men.

Believing in freedom of speech and freedom to listen and learn, we live in a period of bewildering changes. Some nations have shifted convulsively from one form of government to another overnight. We face the fact that many people recently converted to the new and undemocratic forms are eager to bring about similar changes here in America. Some of their ideals may be new to us; some may seem dangerous; nevertheless, believing in freedom of speech for others as well as for ourselves, we must attempt to silence them with American ideals and let them know that Americanism comes before communism or any other "ism." We should fight to preserve democratic justice and liberty.

We Americans want real democracy and above all, peace. Quoting Washington himself who said that "As disinterested friendships between nations; the enemies of today are the friends of tomorrow, the friends of today the enemies of yesterday." And I will predict that if there is war, it will not come from within the confines of the United States but from without.

You veterans of the Maryland State Post No. 167, as well as all other American World War veterans, well know that America did not go to war for gain, but neither did they go for an opportunity to enter into any world-wide system of communism or any other form of "ism" under which we are to divide up our wealth with the world's poverty, surrender our ideals and interests to those of other lands, or sacrifice the peculiar advantages of our situation. There is no room for communism in America, as well as there is no room for any other form of "isms." The American principles of Washington shall never perish.

I am very happy to have the honor to speak to you at the foot of the monument of America's first citizen, George Washington, on the two hundred and seventh anniversary of his birthday.

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 22, 1939

STATEMENT OF HON. HOMER D. ANGELL, OF OREGON, BEFORE THE WAYS AND MEANS COMMITTEE

Mr. ANGELL. Mr. Speaker, the Ways and Means Committee since February 1 has been holding hearings on the social-security program. Among other proposed legislation, it has held an extensive hearing on H. R. 2, known as the Public Welfare Act, or the Townsend plan. I heretofore presented to the House a memorial adopted by the Oregon Legislature, pursuant to a vote of the electorate of the State of Oregon, asking that the Congress call a constitutional convention to amend the Constitution by embodying the Townsend plan. In support of H. R. 2, I appeared before the Ways and Means Committee and made the following statement:

I appreciate, gentlemen, this opportunity to appear here very briefly before you. It is not my purpose to discuss the intimate details of H. R. No. 2.

I am in favor of the plan. But I do want to take time, if I may, to call your attention to some considerations in our own State of Oregon with reference to this.

We had on the ballot at our last general election a memorial to Congress which had for its purpose asking the State legislature to memorialize Congress to call a convention under the Constitution to enact the Townsend plan. That was passed at the general election, in which there were 183,781 voted for it and 149,711 against it. That was a State-wide election.

Mr. CULLEN. Was that a State-wide referendum or a regular election?

Mr. ANGELL. It was on a petition. We have the initiative and petition. We also have the referendum. But this was on a direct petition.

The legislature which is now in session following the mandate of that vote enacted Joint Memorial No. 1, which has been sent to the Clerk of the House; and I understand that it was passed unanimously. It provided very briefly this: It provided that the Legislature of the State of Oregon hereby does petition the Congress of the United States to call a national convention pursuant to the provisions of article V of the Constitution of the United States for the purpose of proposing an amendment to said Constitution to provide for the establishment and operation of the philosophy and principles of the Townsend national recovery plan, otherwise known and described as the proposed General Welfare Act of 1937 (H. R. 4199).

I am calling that to your attention, gentlemen, to show the viewpoint of the voters of the State of Oregon with reference to the Townsend plan. It is true that there was a substantial number of citizens who did not vote for the memorial, but there was a substantial majority, however, who were in favor of it.

Now, we have in Oregon a situation which perhaps is acute; possibly more so than in some other sections of the country. We have two major industries. One is lumbering; the other is agriculture. And they both are at a very low ebb.

I have here a little pamphlet just recently received, issued by the West Coast Lumbermen's Association, which is an association with which most of you gentlemen no doubt are familiar. It is put out by the lumbering industry.

From this I note that of the men who were employed in mills and logging camps last year there were 18 percent who were employed full time, 29 percent part time, and 53 percent idle. Now, that, of course, is a distressing situation which exists with reference to the major industry of a community.

The other industry, agriculture, was equally distressed. Wheat was selling at 50 cents a bushel, which, of course, is below the cost of production.

Those conditions naturally have drawn to the attention of the citizenship of the State the problems which have to do with the relief of our citizens and, I presume, have played some considerable part with reference to their views on the Townsend plan.

Our State, as shown by this vote, I think, is very favorable to the enactment of legislation along these lines.

Now, I appreciate, of course, that the Social Security Act is a beginning of an attempt to solve the problem which is involved in this particular measure. It is one feature of a larger plan. The Social Security Act, no doubt, has been of real service.

I was a member of our own State legislature, which had to do with the enacting of the legislation to put it into effect as far as our own State was concerned. But I do feel, as I believe that you gentlemen feel, that there are needed modifications in that particular act.

Personally, I am not particularly impressed with the feature of amassing a large sum of money under the provisions of the act, which will amount to forty billions or forty-seven eventually, which necessarily involves a major problem as to its investment. Of course, under the existing features of the law requiring a 3-percent return it is necessary that special bonds of the Government or securities be issued. But it seems to me that that particular feature of the act requires not only one tax to be imposed but three. Of course, there must be a tax imposed on certain individuals for raising the original fund. Then, in order to pay the 3-percent interest, there must be another tax imposed upon the general taxing public to raise funds to take care of that. Of course, if it were $40,000,000,000, that would be over a billion dollars a year tax. That must be raised by a tax upon the general public, and, no doubt, a tax on those who ultimately are to receive this benefit.

Then, in the third case, of course, another tax must be raised to pay the annuitants the moneys that are coming to them, because the money that has been taken in by the Government has been expended.

So I feel that the enactment of such a provision as the Townsend Act, modified perhaps, would be a better solution of the problem than that particular one.

I appreciate that the question of need involved in a discussion of this plan is a major consideration. However, I do not believe that it is the important consideration, because I feel that the citizens of the country, when they attain the age of 60 years, as shown by the statistics, a great many of them at least are not self-supporting. The major proportion of them are not self-supporting. There may be a few out of a hundred that may be taken for an example in the beginning who are in fairly good means. A few more are self-supporting, and the others are either dependent upon the public or upon the charity of their own relatives.

In addition to the question of need, there are a great many unquestionably who are over the age of 60 who, if this law were enacted, would not avail themselves of the opportunity. Some of you gentlemen on the committee, I myself, are over 60 years of age. Of course, we would not avail ourselves of the opportunity. Thousands of our citizens who have sufficient income to care for themselves would not. In my judgment, they would not avail themselves of the opportunity of this act.

So that I feel that the question of need, when it is finally simmered down to its last result, will disclose that possibly in the main the only ones who will take advantage of the act will be those who really are in need.

My personal view is that if a bill of this kind should be enacted, and the committee should feel that there should be some provision with reference to the kind of need, it would not be, as far as my view is concerned, objectionable because I feel that it is a practical question anyway.

I think that the cost of administration that would be involved in determining the question of need, as one member of the committee expressed, under the existing laws, involving large numbers of employees and great expense, is a serious problem; and we would obviate that, of course, if we were to eliminate need as a condition necessary to take under the act.

Now, may it please you gentlemen, I think further with reference to this act that we are sold in America on the proposition that we must take care of the great groups of our senior citizens who are unable to support themselves, who are without means of support. Of course, that is for the moment losing sight of the question of need.

We are applying that principle already under the Social Security Act. We are reaching a small group of our citizens who are 65 years of age who are in need, but only a small group.

It is recognized, I think, by you gentlemen, and by the testimony that has already been taken before this committee, that it should be broadened and there should be a great many other groups taken in. Of course, under the Townsend Act it has universal application and takes in all groups; and by reason of that I think it certainly appeals to one's judgment.

The question of the tax, of course, is the important consideration. I do not doubt that if it were not for the problem of raising the money the other questions would involve very little of you gentlemen's time. You would ultimately arrive at a conclusion settling this question. But the question of the method of raising funds is the all-important consideration.

I do not pose, of course, as a tax expert. Neither do I pretend to advise you gentlemen, with your long experience, on that problem. But I do say this: My thought with reference to that aspect of this bill is that this committee, if they are impressed with the merit of the philosophy of this plan, certainly will be able with your facilities to provide the necessary method of raising the funds. It is a difficult problem. I am of the belief, however, that if this tax were imposed, a 2-percent tax or some similar tax, it would tend to increase the volume of business sufficiently that it would not be just an additional tax. It would not be taking that additional money out of the tax-burdened public or out of industry.

I think that was perhaps brought out by Dr. Altmeyer when he appeared before your committee. This has to do with unemployment compensation, but the principle involved is the same. If I may read from this statement, appearing on page 46 of the proceedings of this committee, he said:

"Unemployment-compensation funds, collected from employers, and in a few States from employees also, are usually spent immediately for food, clothing, shelter, and other family essentials. In other words, they go back into the community, and from the cash registers of local merchants they flow on into the business of the State and the Nation. Experience has already proved that benefit payments help to maintain workers' purchasing power and thereby to stimulate lagging business and industrial activity. This is particularly evident in small one-industry communities where lack of work in the past has meant that a large part of the wage-earning population was deprived of income. In such communities, as well as in larger cities, the payment of benefits to unemployed workers during the last recession has prevented serious losses to retail business and the service industries and, as a result, has tended to maintain employment levels in those businesses."

Now, assuming that under the Townsend plan you should pay $50 or $75 a month to some 8,000,000 annuitants, it would be a large amount of funds in addition to the moneys which they are now receiving from any other sources. It would, as was said by Dr. Altmeyer, be turned right back into the channels of business, and it would unquestionably stimulate business to that extent.

It would require, of course, not only the merchant who is selling the goods to these annuitants, but it would require the industry which manufactures the goods to become busy.

It would create business in our State even though the annuitants are paid in the Middle West or the East, because they would need our lumber and they would need our grain and need our fish. It would mean additional funds for the railroad companies who haul that lumber. It would put people on the pay rolls. And that, of course, is a very important feature of this bill.

The purpose is not only that each be paid an annuity or pension. The purpose of it is to revive business. I think that that perhaps would be the justification for imposing a universal tax on everyone to pay the money to a group of citizens who were in that class and who we assume are in need, although that is not declared in the bill itself. But by doing that we would not only be helping them but we would be increasing business.

Furthermore, we are doing the same thing now with reference to the schools. The biggest expense that we have in our State, and perhaps every State, is the public schools. Men who have no children have to pay just as much as the men who do have children. The question of need is not involved. It is a question of social welfare of the whole social structure.

The same is true with reference to the blind. We tax everybody to take care of them—and the aged the same. All the States, including my own State, tax everyone to take care of the old people. They may have been bankers. They may have dissipated their funds. And yet, if they are in need, and if they reach the age and are otherwise qualified, we tax everybody in the State to take care of them.

So I say there is nothing that is radical or is going very much beyond what exists at the present time to levy a universal tax to take care of everyone who has attained the age of 60 years.

I thank you, gentlemen, very much.

Mr. CULLEN. Thank you very much, Representative. We are glad to have had you before the committee.

Multi-purpose Use of Dams on the Tennessee River

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 22, 1939

Mr. SPARKMAN. Mr. Speaker, the Senate has restored the proposed appropriations to carry along the T. V. A. program. It is assumed the matter will be before this House for a vote within a few days. Many inaccurate statements have been made as to the use of high dams to serve a triple purpose of navigation, flood control, and power. A look at the actual facts in connection with the T. V. A. dams now in operation will disclose the misleading nature of many of those statements.

In the past, most water-control projects in the United States were constructed to serve a single use. Public and private agencies built dams to control floods, to aid navigation, or to provide electric energy. Today dams are being built to serve jointly several purposes. The dams already constructed, under construction, and proposed by T. V. A. on the Tennessee River and its tributaries are multi-purpose dams. They combine three purposes. They are designed and they are operated to control destructive floodwaters, to provide a 9-foot navigation channel from the mouth of the river to Knoxville, and to produce electric power insofar as it is compatible with the first two objectives.

There is little, if any, conflict between the interests of navigation and power. The same high dams which provide a superior type of waterway also create a head for power; the steady, regulated stream flow necessary for navigation is likewise a steady source of electrical energy. In its passage from the headwaters to the mouth of the river, the water does double duty.

Even opponents of multipurpose developments must admit that there is no great incompatibility between the interests of navigation and power. They center their attack on the apparent conflict of interest between flood control and power, and ignore the fact that modern engineering skill in design and operation has conquered the problems encountered when the same structure is used for flood control, as well as to improve navigation and develop power. In design, these multiple-purpose dams are larger than a single-purpose structure would need to be. To make them valuable for all three purposes, the reservoirs must have a greater storage capacity than would be required for the improvement of navigation, or power production, or flood control alone.

Having been designed with multipurpose use in view, the requirements of flood control and power production are readily reconciled in the operation of these T. V. A. dams, because rainfall is variable throughout the year. The heaviest rainfall normally occurs during 4 consecutive months, December through March. This is the period during which destructive floods occur. During the remaining months of the year, especially in the late summer and fall, the river flow may often be at a minimum.

With this situation in mind, a description of the way T. V. A. dams are operated will make clear how the three purposes are jointly served. Let us take Norris Dam. At the beginning of the rainy season in December, the level of Norris Reservoir is at approximately 955 feet above sea level. There is sufficient head at this level for economical production of power. Between this level and the spillway crest at 1,020 feet above sea level, there is storage space for about 1,500,000 acre-feet of water, and if necessary the 14-foot drum gates may be raised to provide an additional 520,000 acre-feet. In the event an extremely disastrous flood should occur there is still an additional 800,000 acre-feet of storage which would be filled while the flow from the reservoir was held to only the amount which could pass over the drum gates. Thus ample flood protection is provided, first by the planning of that dam, and second by its operation.

As the end of the rainy season nears, the flood danger recedes, and the pool level is allowed to rise, always keeping sufficient storage capacity for late freshets. Rainfall records over a period of many years indicate that only minor flood danger exists after April 1. By June the pool level is allowed to reach the spillway crest.

During the summer, the water thus stored may be released as needed to maintain navigation and for production of power. As these releases are made during the summer and fall, the pool level falls back toward elevation 955, automatically creating flood storage space for the next rainy season.

Norris is a high storage dam on a tributary, creating a vast reservoir in mountainous country; Wheeler and Pickwick Landing Dams, which were completed during the same year, are main river dams with a relatively low head. However, the principle of operation is the same. During the flood season, the water level is kept low to provide flood storage. When the flood danger has passed and the dry season approaches, the level is allowed to rise.

Thus, by taking into consideration the seasonal variations of rainfall and stream flow, T. V. A. dams—both tributary storage dams and main river dams—are operated to obtain the benefits of flood control and the production of electric power, at the same time providing one of the finest navigation channels in the country.

The T. V. A. multipurpose dams have already been tried in actual practice for flood control. Norris, Wheeler, and Wilson Reservoirs, the only completed structures, were operated during the period from December 18, 1936, to February 15, 1937, to regulate flood flows in the Tennessee River and Clinch River with beneficial effects on locations within the Tennessee Valley and on the Mississippi River from Cairo south.

During this period Norris Reservoir stored a maximum of 1,390,000 acre-feet of floodwater. Practically all of the inflow for the entire month of January, with the exception of the last day, was stored. This large volume of flood storage was effective in lowering the flood crests on the Tennessee River, particularly at Chattanooga and at Chickamauga and Pickwick Landing Dams. It also reduced the Ohio and Mississippi Rivers flood peaks at Paducah and Cairo.

On four different occasions during January and February Norris Dam was able to reduce flood heights at Chattanooga. Crest stages at Chattanooga were 32.9 on January 4, reduced about 5 feet; 28.8 on January 20, reduced about 5 feet; 27 on January 26, reduced about 4.4 feet; and 27.7 on February 11, reduced about 2.9 feet. Were it not for the protection provided by Norris Dam, the Tennessee River at Chattanooga would have risen above the flood stage of 30 feet during each of these rises and would have reached a stage of about 38 feet on January 4, causing considerable flood damage. With this protection the river exceeded flood stage only on January 4.

During this same period a flood of unprecedented size developed on the Ohio River. During the 15-day period when the Ohio River at Cairo was above the critical stage of 58 feet, 964,000 acre-feet of water was stored in Norris and Wheeler Reservoirs. This represents an average reduction of about 32,000 cubic feet per second from the flood flow of the Tennessee River and probably reduced the maximum stages at Cairo by nearly half a foot. Had Gilbertsville Dam been in operation at that time, this flood crest at Cairo could have been reduced between 2 and 3 feet.

Of All Sad Words of Tongue or Pen, the Saddest Are These, It Might Have Been

---

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

Mr. LUDLOW. Mr. Speaker, I confess that I was disappointed and saddened when Secretary of State Hull advised me that he could not entertain a suggestion that our Government should proceed to initiate a movement to arrange for a naval holiday and to bring the world powers together around a table to discuss limitation of armaments.

I am certain from letters that are coming to me from various points of the compass that many of our American citizens are likewise disappointed and saddened.

No one blames the Secretary of State, who is so fine, so high-minded, so honest, so sincere.

But many think he is mistaken when he says the time is not ripe for such a movement and that the matter should be deferred until there is "reasonable prospect" of the success of a disarmament conference.

A prominent New York woman expresses the view of many of our people in a letter to me when she says:

If we wait till we are sure we can accomplish what we seek, there is great doubt that there will ever be a disarmament conference. We shall doubtless have innumerable conferences before universal, total disarmament is achieved. Each one, though it may fail of its object for the moment, will make the ultimate end possible.

I hope that you will not permit Secretary Hull's letter to discourage you, but that you will write again, telling him that we cannot afford to wait before calling a conference until we are certain of success.

For my part, I believe that America should immediately assume the leadership in building up a world peace psychology to take the place of the world war psychology. The time was when every annual Presidential message sent to Congress proudly proclaimed the gratification of the American people that we were at peace with the world. We in the press gallery always knew before a message was released that it would contain that paragraph.

Let us not get away from that philosophy. It is a wholesome philosophy.

When Cabinet officials fulminate bitter invectives against foreign rulers, as several of our Cabinet ministers have done recently, and the chairman of a great senatorial committee, dealing with foreign affairs, says that we "hate certain foreign governments," we are rocking the boat.

This is no time to rock the boat.

We loathe dictators for their high crimes and misdemeanors and for their revolting disregard of the humanities. But we are not the Supreme Ruler of the Universe and we have no commission from God to police the world.

We will be doing well if we keep our own record clear, build up our moral rearmament, and try to perform our traditional role of good neighbor to the world.

WOULD ELECTRIFY THE WORLD

If America would launch forth with a smashing message for peace by conference, it would electrify the world and would reach over the heads of dictators to the good common people who comprise the warp and woof of every nation. America's message would touch their hearts.

If our State Department will not be moved to call a disarmament conference, I hope it will call a world economic conference.

If we can just get the representatives of all the powers around a table, the first great step will be taken.

The seeds of wars are economic conditions, and if we can bring the nations together to consider economic readjustments, a world war may be prevented.

This ought to appeal mightily to Secretary Hull, whose farsighted vision and wise actions already have done so much to rid the world of unreasonable trade barriers and thus to create a better feeling among nations.

But, whatever we are going to do, let us be doing it now, for sooner than we may expect the night of war may come, when we can work for peace no more.

John Greenleaf Whittier gave utterance to a sorrowful and beautiful thing when he wrote:

> Of all sad words of tongue or pen,
> The saddest are these: It might have been.

Let us call the representatives of the nations together to break the war spell, for if we do not and war comes and our boys are sent away to be gassed and bayoneted and shot, we will be saying with pain in our hearts as they go forth to die:

> Of all sad words of tongue or pen,
> The saddest are these: It might have been.

By unanimous consent I submit for printing in the RECORD the correspondence between Secretary Hull and myself, as follows:

My letter to Mr. Hull:

FEBRUARY 6, 1939.

Hon. CORDELL HULL,
Secretary of State, Washington, D. C.

DEAR MR. SECRETARY: I am moved to write this letter not only because you are our leading official in the field of foreign relations but because of the friendship that has existed between us, long antedating your career in the service of the Nation, subsequently strengthened by our association in the House of Representatives and continuing until this hour. It is needless for me to reiterate my admiration of you or to accord to you the high place you hold in the universal esteem of our people as a good citizen and a high-minded, conscientious, capable official.

I am further moved to write this letter to you because of the hope held out and the assurance given in point No. 3 of our President's four-point program of foreign policy, enunciated by him at his press conference on February 3, when he said:

"We are in complete sympathy with any and every effort made to reduce or limit armaments."

I am writing to suggest that the time has come when the United States should undertake the role which we alone among all the nations of the earth are capable of performing with any assurance of success—the role of peacemaker.

I would respectfully suggest that the United States Government should proceed without delay to sound out the powers on two fundamental propositions: (1) An agreement on a naval holiday which would suspend naval construction until January 1, 1941; and (2) a proposal that all nations send delegates to a conference to discuss limitation of arms to be held in this Capital City some time during the coming summer or fall.

I believe as firmly as I ever believed anything in my life that now is our opportunity to act along these lines, for if we delay action there is a prospect that we may find ourselves just another belligerent in an awful world war, with our opportunity to serve as peacemaker gone forever.

Some may say that with the war psychology pervading the earth, now is a queer time to be proposing intervention for peace, but my reply to that is that now is exactly the right time, before the nations come to grips in a cataclysmic world warfare that might be avoided by a little forehanded discussion around a table. Dictators and war mongers would not like such a proposal coming from America, but it would be hailed with joy and satisfaction by 99 percent of all the peoples all around the globe, for the people who have to do the dying and suffering and to bear the burdens and griefs of war are unspeakably weary of war. By espousing a naval holiday and an arms conference America would instantly win the respect and love of the masses in every land. In dictator countries the masses might not be able immediately to make their approval articulate, but even there a great sentiment would be built up for peace. Nor do I believe that such a straight-from-the-shoulder peace move by America would be foredoomed to failure. I believe it would be successful. As you so well know, Japan through her official spokesman, her foreign minister, already has stated that she will welcome an opportunity to send delegates to such a conference. European dictators may demur, but I believe they would fall in line when they feel the pressure of the common people of their countries. As for the European democracies, I believe they would welcome such a move by America.

Such a movement coming from Washington would not indicate a soft or weak attitude on our part, but would show that, armed in the cause of righteousness, we have the strength and the vision and the determination to assume a role that no other nation is capable of performing nearly as well as we are—the role of peacemaker to relieve the world of the fears and tension that now engulf it.

Let it be known that America stands for conserving and building up human values, rather than for tearing them down. A great commander once drove away the animosities and lifted the burdens from the hearts of millions of people by saying, "Let us have peace," and by assuring the poverty-stricken men of the Southland that they need not surrender their horses, as they would need them for the spring plowing. How relieved humanity would be at this juncture if there were someone in authority to take the lead in checking the war tide, so that we in America might have peace and freedom from agitation; so that we might turn to the problems of economic and moral rehabilitation that so much need our attention and so that the peoples of all other countries everywhere, insofar as their local conditions and surroundings will permit, may be vouchsafed the same blessings. May I conclude with some words by Neville Chamberlain? I quote from his speech to the Foreign Press Association as reported in the London Times of December 14, 1938, when, in discussing how happiness comes to nations he said:

"Something depends upon our material condition, upon our ability to command a standard of comfort which each sets for himself. But even more are we dependent for our happiness upon our mental condition, upon our freedom from apprehension, upon the possession of that peace of mind without which no material comforts can bring satisfaction. It is the absence of that peace of mind which today weighs upon the world and in its turn, by destroying confidence, prevents us from reaping the material advantages to which human progress, in mastering the forces of nature, should entitle us. And I would conclude by appealing through you to all the nations you represent to realize that our aim should be the happiness of all our peoples and that that happiness can be attained if we are willing to lay aside suspicion and prejudice, to cease looking for points of difference, and to search instead for points of agreement."

These are the words of a wise statesman, and I do not know of any greater service, America could render to the world than to implement his philosophy with the means of action, so that around a conference table the representatives of the nations may cease looking for "points of difference" and may search for "points of agreement."

I realize that in the present psychology of the world there can be no disarmament that is not mutual and that with other nations arming to the teeth America must build up its defenses, nor do I

have any criticism of those in charge of our foreign relations because I believe that we are all striving for the same objectives—peace on earth—though perhaps with different ideas and different plans as to how that objective can be reached, but I do hope that you will give serious consideration to this proposal of a naval holiday and an arms-limitation conference because I sincerely believe it offers the way to break the war psychology and to enable America to render the greatest service it possibly could render to the world.

Very truly yours,

LOUIS LUDLOW.

Mr. Hull's reply:

THE SECRETARY OF STATE,
Washington, February 13, 1939.

MY DEAR MR. LUDLOW: I was very interested to receive your letter of February 6, 1939, and I share fully your hope that something may be accomplished in the way of reducing the tension and anxiety and the serious threat to the peace of the world which is evidenced and increased by the excessive building on the part of some nations of large and threatening armaments.

The position and attitude of the United States has been made known by repeated assertions during recent years of the underlying principles which we believe should form the basis of relationships between the nations of the world. The right of independent peoples to live at peace with the people of other nations is fundamental whether they are living in a state which comprises large populations and territory or whether they are living in the smaller states. On July 16, 1937, in a public declaration, I set forth the principles which we believe should govern all states and their international relationships, and I have taken opportunity upon repeated occasions since then to call attention to these principles, which, as you will recall, comprise the following basic lines of policies and attitudes which I consider essential in the maintenance of peaceful relationships between nations:

The abstinence by all nations from use of force in pursuit of policy and from interference in the internal affairs of other nations.

Adjustment of problems in international relations by process of peaceful negotiation and agreement.

Faithful observance of international agreements.

Upholding of the principle of the sanctity of treaties. The modification of provisions of treaties when need therefor arises by orderly processes carried out in a spirit of mutual helpfulness and accommodation.

Respect by all nations for the rights of others and performance by all nations of established obligations.

The maintenance and strengthening of international law.

Promotion of economic security and stability the world over.

The lowering or removing of excessive barriers in international trade.

Equality of commercial opportunity and the application by all nations of the principle of equality of treatment.

Limitation and reduction of armament.

Realizing the necessity for maintaining armed forces adequate for national security, we are prepared to reduce or increase our own armed forces in proportion to reductions or increases made by other countries.

With regard to your specific suggestion that this Government initiate steps with a view to calling a conference to discuss the limitation of arms and endeavor to obtain an international agreement for a naval holiday which would suspend naval construction until January 1, 1941, I believe you will agree that this Government has lost no opportunity to make known its disposition and willingness to discuss with other nations at any time the possibilities of arriving at a universal agreement for the reduction and limitation of arms.

To give some idea of the difficulties of reaching an agreement on armament, I may cite the fact that in 1932 a general disarmament conference was called at Geneva after 5 years of preparatory work. That conference sat in continuous session, with the exception of periodic recesses, through 1932, 1933, and part of 1934, in a most earnest effort to work out a general agreement. However, while some very important conditional agreements were arrived at, it was not possible to reach general agreements, and the conference suspended subject to call. The machinery for its continuance is still in existence. At the time of its suspension, it was hoped that developments would make it possible to reconvene within a few months, but there has never come a time when it has been deemed practicable to reconvene. A great deal of work was done at that conference which will facilitate the reaching of an agreement when all of the principal powers concerned are ready to halt this disastrous race in armament.

At the last naval conference, held in London in 1935–36, we exerted every possible effort to bring about an agreement between the principal naval powers to limit construction as to quantity and types of naval vessels. As you know, we were only able to reach an agreement on the part of some of the major powers, and were unable to reach an agreement with the others.

Unfortunately nothing has happened since that time which gives any basis for hoping that the obstacles which stood in the way of reaching an agreement among all the principal naval powers have in any way changed for the better.

This willingness on our part has been constantly and repeatedly declared and was again announced by the President at a press conference at the White House as recently as a week ago. As far as this Government's taking the initiative in calling a conference on reduction and limitation of armaments is concerned, I can assure you that no opportunity will be lost to give favorable consideration to such a proposal at any time that there may appear to be some reasonable prospect of the success of a conference called for that purpose.

In the meantime, in a world in which other nations are undertaking huge and excessive armament programs, I agree with you that it becomes incumbent upon this Government to carry out its responsibilities for the protection of the American Nation by making certain of the adequacy of its defense.

Very sincerely yours,

CORDELL HULL.

National Defense

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 22, 1939

ADDRESS BY HON. HARRY H. WOODRING BEFORE THE DEMOCRATIC WOMEN'S NATIONAL COUNCIL, FEBRUARY 20, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I wish to include the following address by Hon. Harry H. Woodring, Secretary of War, before the Democratic Women's National Council at Washington, D. C., February 20, 1939:

Tonight I want to discuss with you some very important, though less obvious, features of national defense—that protection for our way of life in America these past 150 years.

Through the effective medium of the daily press and the radio you are well informed on the military program that our President has recommended to the Congress in order to provide us with an Army and a Navy capable of fulfilling their mission as the guardians of this Nation's peace and security.

The President's recommendations have been made after a careful recognition of the power diplomacy so rampant in current world affairs, the necessity for a reaffirmation of the Monroe Doctrine—a cardinal policy of this country ever since its promulgation, regardless of the political party in power—and the vast technical improvements and innovations in the machines of war.

Our revised protective measures have been worked out by military experts after intensive and thorough study of military requirements.

The program as proposed to Congress by our Commander in Chief is based on very real and pressing needs. It represents the very minimum which the best military advice can recommend to guarantee security for every American.

But with all this attention which is being devoted to our Military Establishment and its share in our national defense, there is yet a great and important element to be considered if we would preserve our liberty and our freedom, which can prosper only under democratic government and the capitalistic system.

If you and I and the man in the street do not have an honest opportunity to provide ourselves and our families with a decent, healthy, and happy livelihood, we are not going to be overly interested in protecting our present form of society and in giving to it that support which is absolutely vital to the successful retention of our democratic institutions. Under our theory of government the military is only a factor incident to, and subservient to, the civilian administration; it is that part of our Government necessary for the defense and security of the people as a nation.

Without proper attention to internal problems of deep social and economic significance, we cannot hope to maintain and preserve our American way of life. Our present plans for an enlarged Army and Navy are simply the results of hazardous world conditions which demand a complete reorientation of our defense requirements, plus the need for modernization made necessary by technological, scientific progress in implements of war. The modern gun of yesterday is the flintlock of today.

Democratic form of government has existed, more or less restricted and curtailed, since the days of ancient Greece, but it has remained for our own United States to provide the best example of a country in which the voice of the average citizen had an opportunity to be heard. In most contemporary nations democracy has traveled a pretty rocky road, and in many instances has been supplanted by a form of government that possessed a great deal of glitter—which too late was generally found to be brass.

If we are to continue to enjoy our priceless heritage of democracy and democratic government—so wisely established by our founding fathers and later nurtured by Jefferson, Jackson, Cleveland, and Wilson—it will be due to men like Franklin D. Roosevelt who are aware of the intense and profound changes that have been accomplished in our economic and social life. Men who realize that America today is a very different, a much more mature America—a country that has reached the end of the frontier and the opportunities correlative with the pioneer era.

We have seen small plants diminishing, large factories increasing; the individual proprietor disappearing, the great corporation expanding; the buyer compelled to purchase more and more at a monopoly price; fewer and fewer workers personally acquainted with their employers. We have seen populations shift from the rural to the urban centers, increasing the problems of unemployment in times of depression. There has been great concentration of wealth and political power in the hands of a few. Each phase of our industrial and financial system has become deeply interdependent and vastly interrelated.

The problems attendant these political, social, and economic changes have become correspondingly intricate and complex.

It is small wonder that in their swirling, pulsing, workaday life the American people have one test, and one test only, for the soundness of Government policy or business judgment. This test is, will it work? This is the people's yardstick—realistic and practical, though hard as it may seem. And when the ways and means of administering our Government in decades gone by are measured by such a rule, it is perfectly plain to one who studies the problem that they just won't measure up to present-day requirements.

You can argue for hours as to whether the actions of certain leaders during the 1920's were morally right or morally wrong, but in the eyes of the average citizen you are not making 1 inch of progress toward a workable solution for the problems which face us today.

With the crash in 1929 came a smashing change in the life of our American citizen. He faced problems he never dreamed of before, he saw dashed to pieces established economic concepts long held above question. His security vanished, his savings disappeared, nothing seemed permanent, nothing seemed sacred. He was caught in a maze of events too profound and intense for him to solve. He knew only the suffering they inflicted on him as an individual.

From the depths of the depression has come a new principle in American politics and economics. Without fully recognizing it, no business and no Government policy can be sound. If any program is tried without complete appreciation of its significance, that program is just bound to fail. The principle is this: In our country, which is one of the richest and most powerful in the world, every man is entitled to a living. To live he must work. If our system of private enterprise cannot or does not provide him with an opportunity to earn a livelihood, then the Government must. This is a nation of free men, and a hungry man cannot be free.

I am sure I am safe in saying that all Americans believe this as an abstraction. However, some of us have hedged when faced with it as a concrete fact.

Naturally, we do not like to spend the necessary money in carrying out such a principle, and some of us may incline toward arguing the ethics of it all, but most of us deep down in our hearts know there is no choice. There is no alternative. Without allowing for it, whatever is tried will fail. If men are honestly objective, they will accept it. Business can do nothing about it. Government can do nothing. The American people feel, and will continue to feel that way, whether business or Government likes it or not. Any change in this temper must come from the people themselves, for the business executive and the Government official will never be able to talk them out of it.

The millions of men in this country who have themselves gone hungry and who have seen their wives and children go hungry are not disposed to stand idly by and quibble about it. They are apt to reason brutally and bluntly, even impulsively, that if their democratic form of Government cannot provide them with self-respect and employment within the framework of our capitalistic system, they will get busy and do something about it themselves. They won't be particularly concerned into what channels their actions flow.

It is only through proper attention to and full recognition of this new principle that we shall be able to work out our problems in a setting of true democratic government and the capitalistic system, the only setting in which men can be free.

Of course, no single Government official takes fiendish delight in watching the Government spend his money and your money. Our leaders here in Washington are as vitally concerned with protecting our country financially and socially as the taxpayer himself, in spite of all that is published to the contrary in certain newspapers and periodicals.

But we must spend because we are not prepared to face the graver alternative—depression and chaos. It is in just such turbulent periods that public opinion becomes so attuned to the cries of the peddler of political panaceas.

We've had a clear example of Government spending during the years just past. Under the stimulation of Federal spending in 1933 business improved. When this program was stopped—largely on the insistence of businessmen themselves—our economic progress went into a tail spin. Only with a renewal of Government spending in the spring of last year was business able to level off and once again resume its upward flight across our economic charts.

But just as sure as night succeeds day does taxation follow spending. To spend we must tax, and someone has to do the taxing. Certainly there can be no quarrel with the assumption that the Federal income tax, based on a man's ability to pay, is a far better source of revenue than that which could be provided by the municipal and State governments with their great dependence on the general property tax, a tax which is levied without the slightest regard for the income the property may happen to produce.

Much criticism has been leveled at the Federal Government for the annual deficits in the National Budget and for the yearly increases in the national debt.

These emergency expenditures, brought on by the depression and the resulting dislocations in our social and economic life, had to be made by someone if our democratic form of government and our system of private enterprise was to be preserved and continued. On that point there can be no argument.

Surely, the job could be done more efficiently and at less sacrifice by one agency with equitable taxing powers than by 48 separate entities with limited sources of revenue.

A fair question to ask your Government today is, "When can we stop spending and therefore stop taxing?"

In view of Americans' desire for freedom of thought and opportunity—which can exist only under a democracy and the capitalistic system—and recognizing the new principle that every American must have a fair chance to earn a living, the solution appears to be clear. Private business cannot, if it looks the facts in the face, expect Government to stop spending, and thus stop taxing, until private industry has been ingenious enough to eliminate the necessity for such public spending. The Government is simply endeavoring to "pinch hit" for business until business can rehabilitate itself, get back on its feet, and once again go forward with new ideas, new activity, greater production, and greater employment.

The Government has been holding the fort against the onslaughts of widespread human suffering and misery with its ever-attendant political instability. The next move is up to business—it's up to business to show that it is once again able to shoulder the economic and social responsibilities of our Nation. I favor and hope for decreased Federal expenditures and every encouragement to business to expand and take over the responsibility that rightfully is theirs.

This function of the Government in times of crises is nothing new. There has always been Government assistance to business in one form or another since the birth of our country. At one time it was a land subsidy for private enterprises operating on the Western frontier and a high protective tariff for the industrial East. During the war days the unusual stimulation of business was founded in a huge Federal war debt, and the booming foreign-trade era of the 1920's was paid for by the losses of American investors in the bonds of foreign countries.

In the spring of 1933 I saw this Nation being smased into chaos. Fear and desperation stalked the homes of this country with only a forelorn hope that something or someone would turn up at the last moment to keep them within bounds.

In the fall of 1938 I again saw this Nation face to face with crisis. Once again our hearts were filled with despair and the future loomed dark and foreboding.

And then in each one of these crises, when everyone else had completely abandoned hope, we began to see at work the cool mind and the skilled, sure fingers of one man. That man was Franklin D. Roosevelt. In the space of a few days, in 1933 and again in 1938, when everyone else had quit, he changed that desperation to hope.

Whether we are now to have peace for the years to come or only peace for the moment, we have had revealed to us the handwriting on the wall. We have been warned that only a stanch social and economic structure can secure us against the backwash of the storms that are sweeping the continent of Europe.

We still have time, but we must hurry. Fortunate are we to have Franklin D. Roosevelt as our leader, a man through whose foresight and wisdom was brought about in the short space of 6 years the much-needed reforms which had been stifled for decades. We have been forewarned in putting our house in order, in strengthening this house which is America so that if and when the world hurricane strikes, we may safely ride out the storm.

Another European war—and I certanly hope there will not be one—could only result in the collapse of the economic and social structures of all the nations involved, with severe repercussions for America which we could not expect to avoid.

If our America is to endure these shocks, should they come, our Nation must be united. Removed must be the sense of injustice which millions of our people feel because they have been disappointed in the denial to them of our American way of life. If we cannot remove that sense of injustice, many of our people will find more alluring the new "isms" which haunt the world today, those "isms" which paint so enticing a mirage on the shifting sands of popular discontent.

Our President is fully aware that the keystone of our national defense is a happy, prosperous citizenry. Without a decent, contented home life for a firm foundation, our plans and preparations for an adequate Military Establishment are so much wasted effort.

Millions of Americans who have lost faith in themselves still believe in our democratic form of government and our capitalistic system, because Franklin D. Roosevelt has told them time and time again that it is the one way in which men can be secure and also be free.

Democracy and our form of private enterprise can flourish only under a sound and inspired economic and political liberalism. The reverses democracy has suffered among the nations of this world today are poignant reminders democracy must prove to this generation that it has capacity, vigor, and foresight or it will perish from this earth.

In Franklin Delano Roosevelt democracy has found her champion. The faith of the American people in his ingenuity and in his ability to meet a crisis at the proper time and in the proper way is the main bulwark of our democratic system.

Let Us Prepare for Continuous Peace

EXTENSION OF REMARKS
OF
HON. J. BUELL SNYDER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 22, 1939

RADIO ADDRESS BY HON. J. BUELL SNYDER, OF PENNSYLVANIA, OVER STATION WMBS, UNIONTOWN, PA., JANUARY 19, 1939

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, which I delivered over the radio on Sunday, January 19, 1939, from station WMBS at Uniontown, Pa.:

Friends of the radio audience, no more important question confronts the American people today than that of national defense, yet it is probably true that in the last decade and a half no problem has been more misunderstood or less appreciated. Events throughout the world in the last few years have awakened the people of our country to the true meaning of national defense--that it is a defense of, and a preparedness for, peace and not a preparation for war.

In the years immediately following the World War we had in preparation the greatest Navy on earth, 4,000,000 trained men in the ranks of civil life, and huge stores of war reserves and munitions. But we suffered a return to the false feeling of security and indifference to national defense. We forgot that had we been reasonably prepared in 1917 we probably would never have had to enter that conflict. We abandoned the program for building up the Navy; we let our air defenses decay; we allowed the Army to dwindle to a mere skeleton of enlisted men; we dissipated our war stocks through lack of adequate appropriations for current maintenance.

Now comes the day of reckoning—the inevitable hour for taking stock of our national position—which had to be done by the present administration because it had been neglected in the intervening years. Since 1930, a period marked by the absence of any declared conflicts, war clouds have swept down upon a threatened world. A great proportion of the world's population is at war. Our efforts to give a practical example of disarmament to the world have failed.

As a member of the Appropriations Committee of the House of Representatives, and as chairman of the subcommittee which consider appropriations for our Army and national defense, I have earnestly endeavored for the past 4 years, by research, interviews, and personal contact resulting from many thousands of miles of travel by air and by land, to the various Army posts, arsenals, laboratories, schools, and civilian manufacturing plants, to become familiar with the Army's problems and the part it plays in the national defense.

We must remember that the purpose of the armed forces of the United States is to defend not only the vast continental area representing 6 percent of the world's territory with the longest coast line in the world, but also to protect the lives and property of its 132,000,000 citizens. We must keep secure the world's greatest store of natural resources and developed wealth. We must preserve and protect the ideals of liberty and our representative government, which have made America great. We must have adequate defense installations.

Our Army comprises three elements, the Regular Army, the National Guard, and the Organized Reserves, with two other organizations closely allied, the Reserve Officers' Training Corps and the citizens' military training camps.

The mission of the Regular Army is to garrison our overseas possessions, the seacoast defenses, and the various posts and stations within the continental United States, and to furnish the trained personnel for the instruction, equipping, and directing of the various civilian components. In addition the Regular Army has many nonmilitary activities, such as administering the Panama Canal and the inland waterways. It is a great factor in operating the Civilian Conservation Corps. It is charged with the care of our rivers and harbors and with flood control. To carry out the Army tasks which have been placed upon it by the National Defense Act and by Congress, it is believed that the strength of the Regular Army should be 14,659 officers and 165,000 enlisted men.

The Air Corps alone needs 2,092 officers and 26,615 enlisted men in order to take care of and fly the 2,320 modern airplanes which we will have by the end of 1939. Planes are of no use without crews to fly them. It takes time to train ground crews and educate pilots. The program recommended by the War Department will supply the Air Corps with the necessary officer personnel.

The National Guard of the several States will be called into the Federal service in the event of an emergency. With the Regular Army it forms the first line of defense and must be ready for immediate mobilization. The present authorized strength of the National Guard is 210,000 officers and enlisted men.

Our plan of preparedness is entirely defensive in character. Our Army is small. Counting the active elements of the Regular Army and National Guard, our Army is but seventeenth in size in the world.

To be true to our traditions we must strengthen the Army. The Father of his Country, George Washington, truly said, "In time of peace prepare for war."

There is no time to prepare after war begins. And things have changed since the days of Washington. Nations that call themselves civilized have, within the last 2 or 3 years, just flown over cities and towns without declaring war and dropped deadly bombs and shells, killing millions of innocent men, women, and children.

Yes, my friends, the veneer we call civilization sometimes looks thinner than it did back in the days of the Spartans and the Athenians when the warrior took his sword, girded on his armor, and went out on the field of battle and fought his opponent.

The only thing to do, and I am sure all red-blooded Americans who are listening to me will agree, is to build up here in the United States and in our possessions national-defense installations that will be strong enough at all times so that all foreign powers will respect our strength and thus say to themselves, "We will not encroach upon the shores of the United States because they are too well equipped."

Just remember, my friends, that if China would have had adequate national defense, Japan would not have attacked her. If Ethiopia had been adequately equipped, she would not have been invaded. If Czechoslovakia would have had sufficient national defense installations, she would not have been trampled upon. You may say we are so far away from such nations that we are safe here at home. We are not. With the modern submarines and battleships, airplane carriers, and long-distance airplanes, we are not a bit safer here today, correspondingly speaking, than were the people in Pennsylvania during the Civil War when they thought the invasion from the Southland was impossible.

Thousands of people in Pennsylvania at that time thought that Lee could never reach Pennsylvania, but he did. And today with rulers of great nations that have gone mad with power and greed for worldly possessions, we are, comparatively speaking, just as much in danger of being disturbed here in Pennsylvania by such powers as were our grandparents back in 1861–65.

My committee has just concluded hearings on the Army national defense estimates for 1940. We are providing for many needed installations—airplanes, trucks, tanks, seacoast defense, antiaircraft equipment—and above all, equipment for the doughboys so as to make them comfortable, as well as well equipped.

You read much these days, and hear much over the radio about war and national defense. Propagandists and demogogues are especially busy. History tells us they have always been busy under similar circumstances.

In my position as chairman of the subcommittee that has to do with appropriations for national defense, I am in a position to have the facts, and I am happy to say to you this evening that your Government is taking no chance, and has been and is preparing to protect our shores and our institutions under all circumstances.

My committee is providing for at least 5,500 of the best airplanes in the world. We have the best seacoast defense of any nation. Our antiaircraft equipment will be superior. I was in Panama this summer—the danger crossroads—and there we are preparing to defend our shores and the Monroe Doctrine.

Yes, my fellow countrymen, by the time the last soldier that fought in the World War is laid to rest, that war will have cost this Nation more than $100,000,000,000 in cold money alone, to say nothing of the tens of thousands of precious young men who died on the field of battle.

If we had spent $10,000,000,000 in 1914, 1915, and 1916 for national-defense equipment we never would have been in that World War.

So I think as a people we are safe in following the advice of George Washington and Abraham Lincoln. Their advice was, "Put the roof on the house in dry weather, if you want to keep dry when it rains." In other words, prepare for war in time of peace.

We are not preparing for war, as I said in my opening remark, by providing national defense installations. We are preparing for continuous peace here in the United States. We are preparing a set-up that will enable our boys to remain on our own shores or possessions. Yes, we are preparing to preserve our sacred institutions that we now enjoy because of the sacrifices made by our Revolutionary forefathers and by our grandparents in the bloody Civil War.

What America Thinks About Freedom of the Press

EXTENSION OF REMARKS
OF
HON. C. ARTHUR ANDERSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 22, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, on December 11, 1938, the St. Louis Post-Dispatch, one of the truly great

newspapers of our land, celebrated its sixtieth anniversary. On the occasion of this celebration President Roosevelt wrote a letter to Mr. Joseph Pulitzer, editor of the Post-Dispatch, containing in part the following paragraph:

I have always been firmly persuaded that our newspapers cannot be edited in the interests of the general public, from the counting room. And I wish we could have a national symposium on that question, particularly in its relation to the freedom of the press. How many bogies are conjured up by invoking that greatly overworked phrase?

This paragraph of the President's letter inspired the Post-Dispatch to undertake a national symposium in line with the President's suggestion. The response represents a cross-section of the ideas of all America on that much debated and highly cherished weapon of a free people—freedom of the press.

The Post-Dispatch received 120 replies in its symposium and they were published in daily installments from December 13 to December 25, 1938, inclusive. Among the contributors were seven Members of this House, four Members of the Senate, the Chairman of the Federal Communications Commission, Governors Lehman of New York and Stark of Missouri, Thomas E. Dewey, Gen. Hugh Johnson, William L. Green, John L. Lewis, and scores of newspapermen and women and historians and persons prominent in the life of our Nation today.

Hence, there were expressions from every walk and station in life, and the most striking thing of all was the fact that every contributor was agreed that freedom of the press is the very soul of democracy and that a denial or an abridgment of that freedom would be the first inroad of dictatorship in America.

To those who would doubt the freedom of the American press I quote the words of James Truslow Adams, the noted historian:

Of the 13 countries in which I have lived or visited in the last 12 years I claim that the American press is incomparably the most independent and gives the citizen more information and points of view than are available to the citizens of any other nation.

To those who would question the value of a free press I quote the words of a man who knows just how much a free press can help in a democracy, Hon. Thomas E. Dewey:

Freedom of the press is a double-edged sword. It is a weapon of power and a public trust.

To those who harbor thoughts of regulating or censoring the press I quote H. V. Kaltenborn, the famous commentator:

As to freedom of the press, I believe we have it in full measure. But we must always remember that in order to be completely free to attack evil, the press must also be free to embrace it, for what I consider evil, someone else may believe to be beneficient. In the long run it is the newspaper reader who determines the contents of the printed pages. As his standard rises, so will that of the press.

The symposium conducted by the St. Louis Post-Dispatch is another milestone on the high road of success from which the Post-Dispatch has never veered. No paper has ever employed freedom of the press to greater advantage than the Post-Dispatch, but none has been more vigilant to prevent abuse of that freedom.

Washington Birthday Address

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 23, 1939

ADDRESS BY HON. HARRY FLOOD BYRD, OF VIRGINIA, AT ALEXANDRIA, VA., FEBRUARY 22, 1939

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an eloquent and timely address delivered by the Senator from Virginia [Mr. BYRD] on February 22 last before the Alexandria-Washington Masonic Lodge, of which George Washington was a member. The celebration was held in accordance with the custom of this lodge, which has paid tribute to George Washington for 137 years on the day of the anniversary of his birth.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Gen. Robert E. Lee once exclaimed that there was none other worthy to stand comparison with George Washington in the qualities that make a man great. The admiration that Lee cherished for Washington was enough in itself to justify the first place that good Americans proudly give to your neighbor, the master of Mount Vernon—sometime your fellow townsman. A young man with little inherited wealth, he became, before he died, the richest proprietor in colonial America. A young man without the military training that institutions like West Point now provide, he maintained his army for years in the field against British regulars, hungry for want of sufficient food, and cold for the lack of adequate clothing. An instinctive conservative, a lover of law and order, yet he rebelled against humiliating oppression and periled his life and honor against a king who denied his colonials the right to live in liberty and pursue happiness, each in his own way.

Washington loved Virginia, but he lived to become the father of a Nation formed of all the States, and declared that "the name of America must always exalt the just pride of patriotism." "Washington," says the historian Guizot, "did the two greatest things which in politics it is permitted man to attempt. He maintained by peace the independence which he had conquered by war. He founded a free government in the name of the principles of order and by reestablishing their sway."

It is a long time since Guizot made this striking declaration; many Americans have achieved greatness by service to country since our first President was entombed on the banks of the Potomac, but Washington remains today, in the words of Col. Henry Lee, "First in peace, first in war, and first in the hearts of his countrymen." Not only was Washington a great man; he was a good man; he was great in achievements and he was also noble in character.

He led to success a revolution against the British and then did much to rationalize the revolutionary processes within the bounds of a constitution that has become the admiration even of British statesmen. Washington saved the Colonials from anarchy by his successful fight for the adoption of the Constitution. Without Washington's sword we would not have won our independence; without Washington's wisdom we would not have disciplined our independence; and without Washington's example and leadership we would not have secured the rights of every individual to life, to liberty, to property, and to the pursuit of happiness.

Undoubtedly, Washington was a very great man, but he was also a very simple man. It was not difficult to understand his philosophy of life. He was a practical man, controlled by high standards of square dealing and honest conduct. In a day when wealth was in land, he spent less than he made and put the surplus into more land, and then when he had accumulated a good deal, he bought stock in the primitive internal development companies that were foreshadowing in their feeble way the great corporations that have followed. He lived a comfortable life when he was not at war, but he was careful and thrifty, and he admonished the infant country, of which he was the father, to be industrious and economical. His religion was simple, too. He believed in God and in the Son of God, who stood ready to save his soul. He did not pray in the market places, but he went down on his knees and raised his face in humble petition to the only King to whom he professed allegiance.

What we may call his political faith was simple, too. He believed in the rights of the individual as phrased by Jefferson in the Declaration of Independence. He believed that every man had the right to life, to liberty, and to the pursuit of happiness, but he believed, also, that each man must so exercise these rights as not unduly to interfere with the exercise by his fellows of similar rights. He believed with Jefferson that you must train men in public schools to use wisely their liberty. Here in Alexandria he gave money to establish a free school in the days when there were few such schools. He believed profoundly in the right of the individual honestly to acquire and legally to hold private property, and he never felt any occasion to apologize for a recognition of the profit motive as the mainspring of our business development.

Once America had won her independence, Washington led and supported the establishment of a more perfect union, under a Constitution that protected property as well as the inalienable rights of the individual. The Father of his Country was free from new "isms" and a craze for new things merely because they were new. His common sense taught him that new ideas must be tested by trial and error before they can safely be substituted for time-honored practices. He detested all demagogs and suspected the peddlers of political nostrums who promised too much.

It is one of the ironies of history that this conservative Virginian in his day should have led a rebellion against his King, while Robert E. Lee, another conservative Virginian, in his later day should have felt constrained to lead a rebellion against the flag that he loved. The exalted characters of Washington and Lee attested the purity of their motives in each instance and won the

admiration of their countrymen, and, ultimately, the respect of the world, for the honesty of their decisions and the nobility of their conduct. Both of these men—Washington and Lee—are intimately associated with Alexandria.

Tonight we are here to pay honor to General Washington. He was one of you—a member of your town council and your magisterial court, the founder of your fire department and of your first free school. He bought stock in your first bank and left this stock to help the school that he had founded. When one is shown the site of the office the general sometimes occupied here, it is easy to visualize him coming just around the corner. Others claim to be Washington's home town and many claim a Washington's headquarters, but here in Alexandria was the place with which this great American was most intimately associated through much of his life.

General Washington died 139 years ago, and this is the one hundred and thirty-seventh time that your lodge has celebrated his birthday. These celebrations you have maintained since the last year of his life, save only the years of the War between the States. The continuity of your tributes has enabled you to feel the inspiration of Washington as if he still lived in the flesh.

When Washington was a captain in 1758 he represented my county of Frederick, of which Clarke was then a part, in the house of burgesses, and from 1765 to the beginning of the Revolution he represented the town of Alexandria in the house of burgesses. Washington, in his youth, surveyed many tracts of land, but here he actually platted your city. I have seen this original plat in the Library of Congress. Washington's spirit still seems present in your Town Tavern, where he recruited his first command. It was here, too, in the Carlyle House, that he was made a major on Braddock's staff.

All of us owe a debt of gratitude to Charles H. Callahan, who has so ably and diligently summarized Washington's long and intimate association with Alexandria.

Noble as Washington was, however, he did not escape detractors. Within the last 20 years clever writers have insisted that Washington was not a good general; that Washington had no original ideas; that Washington sat silent and uninfluential in the Philadelphia convention that formulated the Constitution of the United States. It is, of course, true that Washington was not a brilliant writer as was George Mason, his State rights friend; as was Alexander Hamilton, his anti-State rights friend; or as was Thomas Jefferson. Yet Washington tried to make Jefferson and Hamilton work together in his Cabinet for the good of the new country, and only the rare force of the first President's personality restrained for a time the open conflict of Virginia's apostle of State rights with New York's champion of a powerful and predominate central government.

It is true, also, that Washington was not a great public speaker, as was Patrick Henry, who opposed vehemently and eloquently the adoption of the Federal Constitution by Virginia. Washington was not much of a theorizer about governmental forms. He was a severely practical man. He was a keen and accurate observer and he had a lot of time to reflect on his observations. In the hours that he walked, in the days that he rode horseback, in the weeks that he jolted over rough roads or trails in his coach he went over much of the American East and North and his mind dwelt on serious things. He had a clear mind, a strong mind that dealt directly with things that he did know, and so it became clear to him when it was the time for the American Colonies to revolt, and it was clear to him after independence had been won from the British that the jealous and provincial Colonies would lose the victory they had achieved unless a federal government could be formed under a constitution designed to protect a more effective union.

In simple language, one may say that this Constitution protects your individual freedom and your individual property, and your right to have home tribunals pass upon those matters which most intimately affect you.

The founders of our Republic had learned from history and experience that the rights of the individual are more securely safeguarded if the laws which govern us are made and administered, so far as possible, by home legislatures and courts. Then, too, in a country so vast and diversified as this, a central government may not understand and effectively meet all the local problems peculiar to the several sections and whose needs vary greatly one from the other.

Men of equally good intentions cannot always agree upon the proper boundaries of the rights of the States; cannot take a map and mark where the jurisdiction of the Federal Government begins and the jurisdiction of the State government ends. Yet remember that the Constitution provides that the Government has only the powers granted it by the States and that all powers not granted are reserved to the States or the people thereof.

It may be true, then, that Washington sat silent as debate in establishing the Constitution blazed and died, only to flame again through the long hot days in Philadelphia while the delegates struggled behind closed doors to frame a Constitution under which a nation could be born and live.

But there is evidence that Washington wrote letters and talked privately in favor of a workable Constitution; and at last, when the ferocious fight occurred in Virginia to approve and adopt the Federal Constitution, it was the force of George Washington, the greatest man in all the Colonies, who assured Virginia's approval of the organic law.

If Virginia had rejected the Constitution its adoption could scarcely have been accomplished. Jefferson was absent in France; Patrick Henry, old but still eloquent, thundered against the Constitution as destructive of State rights; but Washington stood firm on his statement that the choice was between the Constitution and anarchy.

This majestic man who had won our independence by the sword thus preserved us from the weakness of disunion by the force of his personality and the popular confidence he commanded. Washington possessed something that was worth more to the infant America than intellectual brilliancy, than a vivid imagination, than a beguiling fancy, than a forceful eloquence. George Washington was a great character. His character was composed of a courage that never faltered, a fortitude that never failed, a dignity that never cheapened, an honesty that never compromised, a self-discipline that he rarely relaxed, and a will that never weakened.

In this time of turmoil and doubt, domestic and international, let us lift up our eyes to the height of that tall tower which the Masons of America have erected here in honor of Washington and pray that the strength that cometh from the hills may descend upon us and guide us forever.

Seventy-fifth Anniversary of Knights of Pythias

EXTENSION OF REMARKS
OF
HON. JAMES J. DAVIS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1939

ADDRESS BY HON. TOM CONNALLY, OF TEXAS

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by our distinguished and eminent colleague the junior Senator from Texas [Mr. CONNALLY], a former grand chancelor of the Knights of Pythias of the State of Texas, dealing with the activities of this order with the splendid courage and high spirit for which this illustrious orator is noted.

The address was delivered on the occasion of the celebration of the seventy-fifth anniversary of the founding of Knights of Pythias.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Supreme Chancelor, distinguished officials, Knights of Pythias, and members of the Pythian Sisters, I acknowledge with appreciation the honor of addressing this notable assembly which has journeyed to Washington to celebrate the founding of the Order of Knights of Pythias. Here on February 19, 1864—here where could be heard the roar of cannon from the red battlefield of a tragic and terrible War Between the States—here was founded an order whose purpose was to teach brotherhood and the healing of the wounds and scars and miseries that war has brought—here in this city 75 years ago there came together a band of men in whose brains there quickened a conception of fraternity and whose hearts were thrilled by an ambitious yet unselfish purpose, to give it to the world; a purpose to conquer men not by the sword but by brotherly love; not to enslave their bodies in chains, but to fire their hearts with noble purpose and turn their hands to chivalric conduct toward their fellows.

Here they fashioned the order, and giving it the benediction of their faith and baptizing it with their tears, set it upon that marvelous career that has challenged attention and compelled admiration wherever its lustrous banner blows. It may be suggested that they but builded upon a tradition of friendship that had come marching down the centuries from that far-off land and time where legend flourishes and history fades.

As the field of the historian stretches back through authentic times and finally touches that vague and shadowy period where no enduring record has been preserved, there begins that mysterious realm where myth and fable abound, rich in poetic imagery, striking in its conception of the heroic and dramatic in its vivid protrayal of human passions and romance; with so much of reality as to make it possible history; with so much of lore as to make its authenticity uncertain; and yet withal so much beauty, so much grandeur, as to make the picture, whether real or phantom, equally dear to the human heart.

To this wonderful period we are indebted for noble conceptions of man and woman alike. In this enchanted land we find Penelope, as she watches and waits through the years for the return of her husband from the Trojan war. Here she sat among her slaves and, as each declining day lengthened the period of her enforced widowhood, labored steadily on, trusting that the warrior would at last thread his way through the perils and temptations of his journey and once again clasp to his hungry heart the faithful wife; with woman's confidence, believing that he would pass safely

between Scylla and Charybdis; that he would listen with unmoved emotions to the siren's seductive song; that the frail little bark should breast every storm and tempest and wave of the turbulent sea and drop anchor at last in the calm waters of her island home. And though we cannot know whether Penelope ever lived and breathed or was merely the magical creation of the poet, the narrative of her graces and character has survived all the mutations of time to make itself an eternal monument to woman, and is just as dear to us as though immutable evidence established the facts of her life and death.

We are here now to do honor to the noble qualities and unselfish character of a man whose courageous and knightly conduct illumines the brilliant chapters of one of the most stirring stories that ever charmed the imagination and enthralled the soul of man—the story of Pythias, upon which is founded our beloved order.

And while there is more authentic proof of its historic correctness, it lacks nothing in its human interest and dramatic setting. To the founders who first came together here, there stood out fresh and sharp upon the canvas of their fancy that glowing picture that was enacted before the Master of Syracuse—a picture that in its making moved and melted the heart of stone that until then had lain cold and pulseless in the breast of the terrible tyrant—a picture that has come to us undimmed by the touch of time, untarnished by the blood of countless wars that shattered kingdoms, crushed empires, and crumbled cities into dust—a picture not painted by a master merely of brush and color—not here the art of Raphael's practiced hand—not here the cold and impassive stone though touched almost to life by the chisel of Praxiteles—not here a picture whose pigments may crack and fade and whose canvas worms may gnaw and destroy; but they looked with enraptured gaze upon a scene that throttled and thrilled with life and action—that charmed and captured their devotion—across the chasm of centuries they beheld Pythias stake his life on faith in his friend—and they saw Damon, to redeem that faith, gently push away the detaining embrace of wife and chubby clinging baby arms, and return to lay his head upon the block.

They believed that there was wrapped up in such a friendship something more than a beautiful poetical conception. They rightly fathomed the future when they sought to apply it to modern human life. They realized that man is a wonderful creature and his sojourn upon earth a great mystery. Somewhere from out of the unfathomed universe he is ushered upon the stage—for a little while he tarries here, struggling with the harsh and cruel adversities, or idling away the fleeting hours in wanton play with the toys that wealth and luxury command; giving the years allotted to him to the service of those about him—making brighter and better and happier the lives that touch his own, or else in selfish greed grappling to his own bosom all the objects of his appetite and desire and shutting out from his heart and life all the comradeship that mellows into love, all the charity that makes the whole world kin.

They did not subscribe to that theory that life is but "a vale of tears" and heartaches and sorrows—that 'tis only "a barren stretch between the mysterious mountains of birth and death." They did not believe that man, endowed with intellect and soul, with courage and conviction and conscience—realizing his relation to his fellow man and to God—has been set here amidst hill and dale, and valley and crag, learned in the chemistry of Nature—understanding how into every perfumed violet and noxious weed and clinging vine and towering oak there is wrapped the romantic secret of Nature's life—how rugged rock and shining sun, mingled with rain and soil in the laboratory of Nature, color the delicate tints that smile from the rose and bulwark with strength the sturdy giant of the forest—is to mockingly pass away his span of life profitless to himself and to his fellow man. They did not believe that he is to reel off the years blinded to all the beauty and grandeur of Nature—with unseeing eyes looking upon the jewelry of the heavens, ignorant of their majestic march and unmindful of his relation and his duties to his fellows. They preferred to believe that there rests somewhere a supreme purpose—that a rich and bountiful Nature has provided man with the comforts and blessings of this life—has surrounded him with teeming thousands of his kind, needful of his help and assistance in their weakness and despair, and misery and want—that in this cosmopolitan universe there is ample opportunity for the exercise of those noble attributes and qualities that ornament and beautify the life of him who is true to his Pythian duties; not that man is thrown across the span of life like the weaver's shuttle but rather that Destiny has fashioned for him a great career, in which he is the captain of his own craft, the pilot of his own fate, and thus cast out on the vast stretches of the sea to make or mar his fortune; that he is left free to carve his name deep upon the annals of his time, to leave in the memory of his fellows the sweet fragrance of good deeds, and to set before the eyes of those about him an example of well-doing and noble sacrifice that shall command the admiration and tribute of all mankind.

It gratifies me to bring the greetings of the grand domain of Texas and with them to bear the tidings that that splendid domain is celebrating the anniversary in a great State-wide meeting.

Our organization and government are representative and modern. The aspirations of the membership are reflected in its laws and policies, and through the whole scope and sweep of its activities there runs the thread of fraternity, its cardinal and compelling motive.

Each year large sums are expended by the order in the relief of suffering and want; not the ostentatious charity that erects monuments to its own vanity in public gifts, but that richer and rarer kind that sheds its fragrance in the dark and dismal and distant corners where misery hides. In nine domains orphans' homes furnish a refuge for the fatherless, and an education to the growing minds of the loved ones of those knights who have lowered their visors and gone out into the night.

This matchless record had its beginning here—the thoughts that wrought into reality that which was but a dream first burgeoned here in the Nation's Capital.

As the Virginian looks to Jamestown as the birthplace of his civilization and the mother of his traditions, as the New Englander with bared head stands in the presence of Plymouth Rock and to the memory of the Pilgrim pays his tribute, as the Mohammedan when from the minaret there rings out the call to prayer devoutly turns his face toward Mecca and with soaring soul makes the vagrant winds the bearer of his petition, Knights of Pythias everywhere tonight look with veneration and affection to this spot as the shrine where were laid broad and deep the foundations of the order that shall perpetuate the friendship of Damon and Pythias.

Neutrality Versus Intervention

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, February 23, 1939

ARTICLE BY REV. JOSEPH T. THORNING, OF MOUNT ST. MARY'S COLLEGE, EMMITTSBURG, MD.

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Neutrality versus Intervention," published in the January 15, 1939, issue of Spain, and written by Rev. Joseph F. Thorning, of Mount St. Mary's College, Emmittsburg, Md.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Spain (semimonthly publication of Spanish Civil War events), of January 15, 1939]

NEUTRALITY VERSUS INTERVENTION

(By Joseph F. Thorning, Ph. D., Litt. D., chairman, department of social sciences, Mount St. Mary's College, Emmittsburg, Md.)

The movement to lift the embargo on arms to Spain rests upon two false assumptions. The first is that the so-called Loyalist Government is the legal government of Spain; the second that a policy of American neutrality has worked to the disadvantage of Barcelona, although favoring the shipment of arms from Germany and Italy to Burgos. These are the two main contentions of those who are straining every nerve to repeal or modify the neutrality legislation of the United States Government.

The first claim of the Leftists is nullified by the fact that whatever shreds of legality the Republican Government may have possessed were scattered to the four winds by the brutal murder of Calvo Sotelo on July 13, 1936. This crime was the climax of chaos, anarchy, and political assassination. During the 5 preceding months 256 persons had been killed, 170 churches, 69 clubs, and the offices of 10 newspapers had been set on fire. Attempts had been made to burn 284 other buildings, including 251 churches. There had been 113 general strikes and 218 partial strikes.

Throughout June and during the early days of July the pages of the newspapers were filled with reports of shootings, strikes, casualties, violent scenes at funerals, riots, arson, destruction. This was the setting for the arrest and execution of Calvo Sotelo, the talented Rightist deputy. It occasioned an emotion of horror corresponding to the shock that would be inflicted upon American public opinion were the morning newspaper to announce the slaying of Charles Evans Hughes with the connivance and help of the authorities.

"Left and Right alike," writes Prof. E. Allison Peers, "were shaken at the audacity of the crime, while the man in the street, dumfounded with horror, saw it as the climax beyond which crime could not farther go. 'This,' he said, perhaps not knowing exactly what he meant, 'must be the end.'" (The Tragedy of Spain, by Prof. E. Allison Peers, p. 210.)

It was the end of the republican regime pretensions to speak of act for the Spanish people. When a government itself becomes the chief lawbreaker its claims to legality automatically cease. A reign of terror, culminating in gangsterdom's murderous technique, loses juridical and moral content. In the calm perspective of history there are none who try to justify the rule of Robespierre. The Spanish Republic from February to July 1936 proved its utter

incapacity for administration, exposing the Spanish citizenry to the caprice and fury of mob rule. The "law of nature and nature's God" imposed an obligation upon the decent elements of the community to reconstruct the State.

This was the origin of the Nationalist movement in Spain. To have delayed beyond July 18, 1936, would have jeopardized the fabric of European civilization. The sole alternative to armed self-defense would have been to witness the death of other Spanish statesmen and passively to accept the Marxist yoke.

Integral to this phase of the question is the actual attitude of the Spanish people. The overwhelming majority of the Spaniards now recognize Generalissimo Francisco Franco as the head of the state. His government controls more than 80 percent of the territory and 75 percent of the population of Spain. From the standpoint of fact and reality this question is swiftly being removed from the domain of academic theory. Openly to take sides against an established functioning regime is no part of the American tradition.

The Leftist contention that Nationalist Spain has benefited by the operation of our neutrality legislation is pure chimera. President Franklin D. Roosevelt himself is on record as stating that "neutrality works." On Friday, April 22, 1938, at his regular press conference the President, in response to questions, declared that he was satisfied with the manner in which the laws had been administered in the Spanish difficulties, considering the many difficulties involved.

Writers on foreign affairs, it was stated in the New York Times (Saturday, April 23, 1938), had "hoped to get the President to take cognizance of criticisms that the Neutrality Act was functioning to the detriment of the Spanish Loyalist cause because of German purchases of munitions in this country allegedly destined for delivery to the insurgent forces."

The President made it clear, said the New York Times in the same dispatch, that "he wanted no unwarranted inferences drawn from his reply to a question that pertained only to Germany and Italy and their part in the Spanish conflict." Asked whether an arms embargo could be applied to these Fascist states, Mr. Roosevelt "quickly lengthened the question by asking 'Or Britain or France?' He then answered in the negative."

Obviously, the President of the United States was perfectly familiar with the fact that Soviet Russia had been shipping as much or more material of war to Barcelona than was being supplied to the Nationalists by Germany and Italy. The records of the British Parliament are available both to the President and to the United States Secretary of State. It may be safely assumed that most responsible American officials were and are familiar with the significant declaration of Capt. Anthony Eden, at that time Foreign Secretary of Great Britain (October 31, 1937), to the following effect:

"Official Soviet Government figures show that Spain now is Soviet Russia's best customer. From January to September of this year Russia shipped to Spain nearly 10 times as much in weight and 4½ times as much in value as during the corresponding period in 1936. During the summer months of this year I could not stand at this box and tell the House that during that period there was more material reaching the Insurgent forces than was reaching the Government forces."

On the same day in the House of Commons (cf. the New York Times, November 1, 1937), in refuting David Lloyd George, Foreign Secretary Eden summed up the results of the nonintervention agreement, as follows:

"The result of Nyon has been to facilitate the arrival of very large quantities of material arriving in Spanish Government ports. Of course, there have been enormous quantities of material arriving at Spanish Government ports throughout the year."

Similar testimony, even more convincingly presented, is given by Sir Francis Lindley, G. C. M. G., C. B., former British Ambassador to Japan. In an article, The Tragedy of Spain, published in the National Review (February 1937), Sir Francis traces the origin of Soviet intervention to its ideology of exploiting every "revolutionary situation." The British diplomat declares: "The plain fact is clear to all who wish to see. The Spanish civil war would have been a purely internal affair had it not been for Moscow. No other power would have had either reason or wish to intervene. Once the Bolsheviks set the example, others were certain to come in on the opposite side."

Edward H. Knoblaugh, of the Associated Press, who was in an excellent position to judge, assures us (Correspondent in Spain, p. 174) that "the foreign assistance Loyalist Spain was receiving was successfully minimized while that given the enemy assumed staggering proportions." The same writer estimated that the Madrid-Valencia-Barcelona Government has about 110,000 Russian, French, German, Italian, American, Polish, English, Czech, and Bulgarian volunteers fighting on its side. Of these, about 35,000 were killed, leaving some 75,000 still fit for service. (Correspondent in Spain, Edward H. Knoblaugh, p. 217.) This estimate is confirmed by Brig. Gen. P. R. C. Grove, of the Observer (London).

Largely through the instrumentality of the Communist Party and communistic affiliates, 6,000 American boys were sent to Leftist Spain. The recruiting for this force properly should be a subject of investigation by some appropriate committee of the United States Congress. Why should 2,000 Americans fight and die in a foreign war? This illegal recruiting and illegal entrance of Americans into Spain during the civil war shows clearly enough the respect for national and passport regulations entertained by pro-Loyalist communistic elements in the United States. Arms were illegally shipped to the Spanish Ambassador in Mexico; airplanes were dispatched to the same destination; moneys were collected to support mercenaries in a foreign conflict. Every breach of American laws in respect to the Spanish war was perpetrated by the Loyalist sympathizers. Nothing of the kind was imputed to those who favored and still favor neutrality. The contrast in the attitude and activities of the two groups is an index to their patriotic spirit. Nevertheless, the Loyalists, who cannot come into court with clean hands, are pleading for partisan action on the part of the Nation whose laws were violated.

How lavishly the French and Russians poured ammunition into Leftist Spain last spring may be learned from the special dispatch of Mr. George Axelsson, whose story was featured on page 1 of the New York Times on April 13, 1938. This highly circumstantial report by an eyewitness reads as follows:

"At the French frontier town of Le Perthus, on the main motor road to Barcelona, this writer has watched for many days a seemingly endless stream of 10-ton trucks crossing into Spain. A customs official told me the daily average was 200 trucks, which the simplest arithmetic will show means 2,000 tons of material entering Loyalist Spain every day. Another customs employee confided to me that he had personally passed a score of airplanes and a dozen whippet tanks into Spain during the past week. They were listed on manifests as 'agricultural machinery' and passed as such, he explained."

This traffic was carried on at enormous expense to the leftist government, which naturally enough is now forced to beg for food from other countries. The gold that should have been husbanded for the necessities of life for the civilian population was squandered upon war supplies that prolonged the war futilely, foolishly. An interesting sidelight upon this phase of the question is afforded by Mr. George Axelsson's further description. He says:

"A great deal of these materials originate at Marseilles, Le Havre, and other ports, whence they are trucked across France. The trucks as well as the drivers are all French. Army drivers, specially selected for their daring, are stationed at Le Perthus and are taking these cargoes south for double pay. As a result, this normally quiet border spot has become a truck-drivers Klondike, where, relaxing after risky trips, the men indulge in champagne and such culinary niceties as snails, frogs' legs, asparagus, and speckled trout."

In other words, the civil populations of Madrid, Valencia, and Barcelona are now starving because the $650,000,000 gold reserve, the property of the whole nation, has been wasted in riotous living for the arms racketeers, gun runners, Russian and French "merchants of death."

Further confirmation of this view is contained in the Washington dispatch of Mr. Hanson W. Baldwin, famous arms expert of the New York Times (April 13, 1938). Mr. Baldwin writes:

"The 'last ditch' defense of the Spanish Loyalists has been unexpectedly bolstered by the receipt of a considerable number of planes and some artillery from abroad, it was learned here today.

"Neither the amount nor the make of the equipment was known, but it was presumed that both the planes and the artillery were of Russian manufacture or design.

"This latest foreign intervention in Spain, unexpected and surprising in view of the apparently desperate plight of the government armies, was not believed to be extensive enough to change the complexion of the struggle or even halt the drive for the sea which the insurgent forces started in northeastern Spain on March 9.

"Despite the receipt of new equipment, it is not believed, however, that the hard-pressed Government forces can long resist the Franco drive, unless reinforced very extensively by outside aid."

That this foreign aid for the Leftists has continued on a large scale is clear from the dispatch by Mr. George Axelsson, headed "Loyalists Still Get Arms Abroad; Ships in Traffic Use French Ports," in the New York Times, February 5, 1939.

Mr. Baldwin's prognosis has been found correct. One year ago the Leftists reported a smashing victory at Teruel. Propagandists in this country, such as Mr. Jay Allen, who visited the battle front, declared categorically that Teruel was "a huge, a tremendous, a decisive victory." Within 4 weeks of this triumphant communiqué the Leftists were in full retreat, a retreat that soon assumed the proportions of a flight. Last summer the Loyalists initiated another offensive. Gandesa was reported to be the objective. Gandesa remained in the power of the Nationalists, whereas the Leftists were thrown back across the Ebro River. This was the first blow in the present Nationalist thrust that has embraced more than half of Catalonia.

In spite of huge war supplies from Soviet Russia, the Barcelona regime is in articulo mortis. Barring a world war or American intervention, the struggle will be concluded before the summer. As Brig. Gen. Henry Joseph Reilly, United States Army, declares, "no army can be beaten day after day and remain in the field." The Loyalist cause, which is the Communist cause throughout the world, is a "lost cause." The frantic efforts of the Left-wingers to stir up trouble, to incite hatred, to embroil the United States, is merely another illustration of the desperate character of their predicament. They know that they are playing their last card in trying to enlist the United States Government on the side of the persecutors and would-be destroyers of Christianity in Spain. The motto of clear-sighted, democratic, liberty-loving citizens everywhere is crystallized in these words: Keep the embargo on arms; keep this country out of war.

Resolutions of New Jersey Farm Bureau

EXTENSION OF REMARKS
OF
HON. W. WARREN BARBOUR
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1939

RESOLUTIONS ADOPTED BY THE TWENTIETH ANNUAL CONVENTION OF THE NEW JERSEY FARM BUREAU, TRENTON, N. J., JANUARY 25, 1939

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions adopted by the Twentieth Annual Convention of the New Jersey Farm Bureau, at Trenton, N. J., January 25, 1939.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

WAGES AND HOURS

Whereas the present definition of "area of production" as set up by the Administrator is a misinterpretation of the intent of the Fair Labor Standards Act of 1938; and

Whereas it works a hardship on fruit and vegetable growers in that it limits the sale of products to the immediate locality to the detriment of the farmer; therefore be it

Resolved, That the New Jersey Farm Bureau requests Congress to amend the Fair Labor Standards Act of 1938 so as to assure to farmers the full benefit and scope of the intended exemptions to which agriculture is entitled, and to grant exemption from the act to all employees engaged in agriculture and the processing of agricultural products.

GRASSLAND SYSTEM OF DAIRY FARMING

Whereas the present soil-conservation program penalizes the dairyman who is putting a larger percentage of his acreage into grassland farming; and

Whereas 100 percent grassland farming is an ideal way of conserving the soils of our rolling dairy farms: Therefore be it

Resolved, That the New Jersey Farm Bureau endorse the grassland system of dairy farming; and be it further

Resolved, That our State farm bureau work through every means at its command to have a premium placed upon 100 percent grassland farming under the present soil-conservation program.

BENEFIT PAYMENTS ON A. A. A.

Whereas under the present Agricultural Adjustment Act there has been a very inequitable distribution of benefit payments, with the result that the State of New Jersey has received but a small part of its per capita share of such funds—for example, while vegetable production comprises 14 percent of the farm value of all crops, vegetable growers are allocated only 1 percent of the funds: Therefore be it

Resolved, That the New Jersey Farm Bureau strongly urge a more equitable allocation of benefit payments to the end that producers of fruits, vegetables, and dairy and poultry products receive a fairer share of the funds distributed.

FEDERAL GAS TAX

Whereas we believe that the Federal gasoline tax should be allowed to expire, and the taxation of gasoline hereafter left to the States for their exclusive use as a means of providing funds for highways: Therefore be it

Resolved by the New Jersey Farm Bureau in meeting assembled in the city of Trenton, State of New Jersey, on January 25 in this, the year 1939, That both Houses of Congress be, and hereby are, memorialized on behalf of the members of this organization to allow the Federal gasoline tax to expire at the close of the present fiscal year, June 30, 1939, in accordance with the declared intent at the time it was passed; that it be not levied again in any way whatsoever, and that the Federal Government permanently withdraw from the field of gasoline taxation and leave to the States exclusively the power and right to tax gasoline sales in the future: Be it further

Resolved, That a copy of this resolution be transmitted to the chairman of the Ways and Means Committee of the House of Representatives to be laid before the members of the committee, and to the chairman of the Senate Committee on Finance to be laid before the members of that committee, and likewise to both Senators from this State and Members of the House of Representatives, urging them to use their utmost endeavors to carry out our desires as expressed in the letter and spirit of this resolution, and thus afford to our members who not only operate motor vehicles on the highway but who also are large users of mechanical farm equipment so necessary to our livelihood upon which the gasoline used for propulsion is also taxed by the Federal Government.

The Anthracite Industry

EXTENSION OF REMARKS
OF
HON. JAMES J. DAVIS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 23, 1939

EDITORIAL FROM THE PHILADELPHIA INQUIRER OF FEBRUARY 19, 1939

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Philadelphia Inquirer of February 19, 1939, entitled "Teamwork Needed to Save Anthracite."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer of February 19, 1939]

TEAMWORK NEEDED TO SAVE ANTHRACITE

The vast complexity of the anthracite problem in Pennsylvania, as well as the pressing need for its early solution if one of the basic industries of the State is to survive, were increasingly demonstrated during the past week.

It was brought out, first of all, that hard-coal production is still falling off, that it dropped 6,000,000 tons last year to a total output of 45,000,000 tons, compared to the industry's peak of around 100,000,000.

At the same time, in contradiction to undetailed reports from Harrisburg pointing to a recession in bootleg coal operations, figures were presented showing a substantial increase in the illicit output.

The report of former Governor Earle's anthracite commission in 1937 estimated bootleg production at 4,000,000 tons a year in 1935 and 1936, with employment of 14,000 workers. The results of a bimonthly check made by coal operators since 1932 and presented to the American Institute of Mining and Metallurgical Engineers in New York Wednesday, pointed to a total bootleg tonnage last year of 8,000,000 tons, with about 23,000 persons engaged in the operations.

In Washington the National Resources Committee, in a report to Congress on the conservation of energy resources, pointed out that measures to aid the anthracite industry have been proposed by State agencies. It made this added observation: "If it finally becomes evident that the Commonwealth cannot cope with the anthracite problem, then it may become necessary to extend the jurisdiction of an appropriate Federal agency to that industry."

In Harrisburg, meanwhile, coal operators meeting with Governor James in the first of a series of conferences on anthracite were unable to reach agreement on first-aid treatment for their sick industry. Some suggested price-fixing legislation. Some urged establishment of a State agency to prorate production. Others blamed freight rates and labor practices for the industry's ills.

Compulsory State regulation was favored by one group; provisions for voluntary compliance were asked by another. Although at a previous gathering of operators a majority was recorded in favor of State regulation, there was evidenced some measure of opposition to State control in any form.

As the Governor remarked after the conference, there was "no uniformity of opinion" on the part of the operators. During the present week, Mr. James will consult the representatives of miners and bootleg labor.

Summed up, the developments show that the industry's condition is not improving, that production is declining and bootleg operations increasing; that Washington is prepared to initiate rescue attempts of its own if the problem remains much longer unsettled; and that thus far no specific solution has been presented from within the industry itself.

Many factors unquestionably enter into the anthracite problem, from high freight rates to high royalty charges, from taxation on coal lands to superfluous coal-land reserves and coal-company overcapitalization; from production costs to differentials favoring competing fuels. But merely cataloging these and all others involved will not revive prosperity in the coal regions. It will not reopen a single colliery or close one bootleg hole in the side of a hill.

Cooperation, business sense, and the helping hand of a Governor who was born and raised in the coal regions, however, may be able to resuscitate the ailing industry, stimulate production, and promote reemployment.

Bootleg coal miners, working for small and uncertain wages under hazardous conditions, would welcome legitimate employment. Bootlegging would die out quickly if the unemployed miners were given a chance at regular work.

To give them that chance, consumption and thereby production must be turned upward again. To bring that about despite the

competition of other fuels, despite labor and production and transportation costs, is no simple task, but there is no reason in the world why it cannot be accomplished by cooperative effort. But cooperative effort is hardly possible without the "uniformity of opinion" that was so conspicuously missing at the Governor's meeting with the operators last week.

Agreement by operators and miners, in conjunction with the State and possibly under some form of regulatory State legislation, on a program to help the industry is the businesslike approach to solution of the problem.

Democratic Convention, Flint, Mich.

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, February 23, 1939

ADDRESS OF HON. EDWIN C. JOHNSON, OF COLORADO, AT DEMOCRATIC CONVENTION AT FLINT, MICH.

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the RECORD the able and interesting address delivered by the distinguished Senator from Colorado [Mr. JOHNSON] at the Democratic convention held in Flint, Mich., last week. In his address the Senator from Colorado discussed in an illuminating manner many questions which are uppermost in the minds of the American people.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FLINT BRIGGS

Chairman Transue, National Committeewoman Mrs. Clara Van Auken, National Committeeman Ed Shields, State Chairman Ed Fry, fellow Congressmen, distinguished guests, ladies, and gentlemen, it gives me a real thrill to come to the magnificent State of Michigan and meet with the brethren of my political party as they assemble for another historic political convention. For many years I have relaxed in a Michigan-made chair, eaten my bread and meat from a sturdy Grand Rapids oak dining table, rambled all over my own beloved Colorado in a Flint-manufactured automobile, and long, long ago tried to give the girls a thrill by a spin in a sturdy Flint buggy; so out of appreciation for the good things which Michigan has given me I gladly come here and pay my deep respects to a great State and a great people and a great party. Perhaps I shall bore you with this long speech that I dislike to make on so festive an occasion, and perhaps you will only listen to it out of your great store of Michigan generosity, charity, and polite courtesy, but it is an American tradition that long political speeches, pointing with pride and viewing with alarm, be made at political conventions.

SENATOR PRENTISS BROWN

I am particularly glad to come here, too, because I am very fond of your astute and kindly junior Senator, PRENTISS BROWN. PRENTISS was sworn in as a United States Senator 6 weeks before I took my oath of office, and when I arrived in Washington was considerate enough to instruct me, a poor rookie from the sticks, in the manners and customs and methods—I almost said habits—of Senators. When I arrived in Washington, Senator BROWN had already mastered all of the tricks. We have been thrown together in many strange ways since. Every major problem coming before the Senate brings us together for mutual study and discussion. During the 2 years in which we have both served, I have developed a high regard for his great ability and a profound respect for his sound judgment. I can truthfully state that no man has come into the United States Senate and in so short a time found so secure a place in the hearts of his colleagues as has Senator BROWN. He already has the confidence of the members of every faction and of every party to a most remarkable degree, for he is truly serving his America in the United States Senate, not as a narrow partisan but as a broad-minded statesman and loyal Democrat.

ATTORNEY GENERAL MURPHY

It was pleasing to me the other day to have the privilege of voting favorably on the Senate confirmation of Governor Murphy to the high office of Attorney General of the United States. I predict that this distinguished citizen of Michigan will measure up to the great responsibilities of that exalted position in the President's Cabinet in such a splendid manner as to make not only Michigan but the whole Nation proud. This appointment was exceedingly complimentary to Michigan, but it was most satisfactory to the whole country.

MURRAY D. VAN WAGONER

I have had abundant opportunity in the past to judge from a distance the excellent work of the Michigan Highway Department. Good highways were my major objective while I was Governor of Colorado, and whenever I went down to Washington in the interest of Colorado I found that your alert Murray D. Van Wagoner, who is well known all over the Nation, had already been there and had carried away Michigan's share. Sometimes I think he got a little more. I know the United States Bureau of Public Roads holds him in high esteem. So I take this opportunity in his home State of not only congratulating him but the Democratic Party in having selected so able an executive. More power to you, Murray. I am pleased to see Congressman JOHN DINGELL here tonight. Some years ago John and I labored shoulder to shoulder in the cause of democracy in Colorado. I have never known a more active or enthusiastic Democrat.

SERVANT OF THE PEOPLE

Tomorrow the Democratic Party, as a servant of all the people of Michigan and acting as a dependable medium of their expression, will render them another notable public service. Once more will this distinguished party give to them a ticket which they can support with full confidence, because the traditions and philosophies and sound doctrines thoroughly impregnated with the lofty ideals and an honest service and with more than 150 years of experience in the operation of democratic government will be back of that ticket and the candidates named upon it. When industry employs a man these days, it demands to know who it is that recomemnds him. Likewise the citizenry will want to know just who it is that vouches for these candidates whom you will name on the morrow, and they will want to know in what policies the candidates believe, for with that information they can determine how an officer will perform his public duties. If, for instance, he is devoted to the goddess of special privilege, and is a worshiper of material things generally, and has no sympathy for the oppressed, and does not subscribe to the doctrine that "a public office is a public trust" and that good service is its own reward, then they will wisely shop around a bit. But you will not tell them that about your candidates because the opposite will be true. It is to clear such matters that our party exists. The Democratic Party unequivocally and emphatically states now that it is a responsible political party and that it guarantees a good service if our candidates be accepted at the polls.

DEMOCRATIC LABEL IMPORTANT

The people will take the party endorsements and the Democratic label seriously, because not only is the Democratic Party the oldest political party in all the world with a long record of fine, constructive service, but for the added reason that this America was a democratic country before there was a Democratic Party and before there was a King George III or a Declaration of Independence. The intangible spirit of democracy which developed and finally took organized form as the Democratic Party was born with the first town meeting in New England and the first assemblage of free men in the Old Dominion.

That democratic urge born under such humble circumstances will never fail the American people, and although frequently in times past it has been severely chastised and defeated by terrific majorities following unpopular reaction to unpopular local issues, the wise have known that it was only a matter of time until that sound democratic doctrine would reestablish itself in the favor of the people and the party would serve again. A political party that can live through such a crisis as the Civil War with its ugly, brutal sectional differences and prejudices and hatreds and with a vivid recollection of the bitter days that followed must be ingrained deeply in the hearts of men. Some political parties have had their origin in men's pocketbooks, in deceptive mirages and in twin garages, but the Democratic Party had its origin, thank God, and it now lives in the hearts of men. Human well-being is its great objective; property and wealth transformed into a medium of human service acting as a means toward the realization of human happiness is its great purpose. Obviously material things have their rightful place in this practical world, and that place is definitely that they shall be the servants of man and not his master. On occasions because of the selfishness and shortsightedness of groups and factions, material things have temporarily occupied the high place of master, and the Democrats have been ordered to take a furlough without pay, but sooner or later human values are restored again and the disciples of Jefferson are recalled. Our party has had its ups and its downs, its highs and its lows, its victories and its defeats, but for the most part it has kept the faith in fair weather and foul, and held steadfast to sound principles and constitutional processes.

DEMOCRATIC QUINTUPLETS

A political party that believes in democracy and the majority rule has no other function, no other purpose than to give expression to the collective will of the people, and it has been the will of the people that the Democratic Party dare to champion and defend the cause of helpless minorities and forgotten groups of American citizens and courageously advocate and demand equal opportunities for all, including the most miserable and humble. President Roosevelt had the vision to apply the idealistic philosophy of Jefferson to practical usages in such a cause and to apply the courage of the militant Jackson to wage a winning war against the forces of greed and special privilege to such an end. In short, he made democracy work. Jefferson, Jackson, Cleveland, Wilson,

and Roosevelt—these quintuplets of inspiring Democratic history—have given idealism, organization, courage, respect, and utility to this magnificent spiritual servant of Americans.

New issues because of new problems constantly appear and must be met. Old issues worn threadbare take their exit, but the fundamental spiritual things upon which this democracy was founded must go on. So I say 150 years of love of country, practical experience, and faithful service will be back of that ticket named tomorrow, and citizens of Michigan will know that if they place their faith in such a ticket, their interests and not the interests of special privilege will be served well.

The majority party in America has a grave responsibility and a huge task still before it. Even the despised four-legged rat stores up its future needs and provides for its own security. We cannot, with our alleged intelligence, be less provident than the beasts of the field. Pointing the way and assisting the American people to provide for their own security is no minor task, nor is it one that can in safety be neglected. Private thrift and private enterprise must be encouraged and fostered, but neither of these virtues can be exercised by the people in this industrial age unless the opportunity be given for that sort of thing by the strong arm of government. Unless government acts, men must be born in poverty and die in poverty. I am sorry that government has that responsibility, but there appears to be no escape.

ECONOMIC CHANGES RAPID

Economic changes have been coming upon us in recent years with great rapidity. America is no longer an agricultural nation; it is today a highly developed industrial nation. Your great grandmothers with a hand loom and spinning wheel made the clothing for the family, and your great grandfathers produced the food and made it ready for the oven on his own farm. In his day 75 percent of Americans lived on farms. The Bureau of the Census today lists 22 percent of all persons who are gainfully employed as agricultural workers, and many of these good folks actually living on farms now purchase their bread directly from the baker's oven, and purchase their butter, their bacon, and all of their clothing from the home-town merchant. When hard times visited grandfather he took another hitch in his belt, passed up a few luxuries, and went about his business. He had security in his land. That was the source of his living. Outside of those States in which unemployment-insurance security is now available, persons losing their jobs and unable to locate others are compelled to beg, steal, or starve. They have no security in land or otherwise. It is not fair to believe that all thrift, enterprise, and self-reliance died with grandfather's generation, proud as we are of his history. Industrial progress has gone forward and left in its wake forgotten men.

FEW TRAINED TECHNICIANS

The educational program of America, too, needs drastic overhauling, so that the boys and girls turned out of colleges and high schools by the hundreds of thousands each year will have the technical training necessary to fill a useful place in society. Can you feature anything more depressing than the disappointment which comes to young America, anxious to take an active part in life, to discover that they are not equipped for the work that is to be done. Ten million unemployed persons in America—and if you had to find a thousand trained technicians, stenographers, mechanics, or nurses among them you could not do so. The W. P. A. must provide pick and shovel work for millions of persons because millions of persons have no technical training to operate a piece of machinery more intricate than a pick or shovel. What a terrible indictment of America's school system.

INDUSTRY MUST ASSUME RESPONSIBILITY

If there were governmental protection of property without governmental restraints and regulation the rich would constantly decrease in numbers but grow richer and richer, while the poor would increase in numbers but become poorer and poorer. The Democratic Party has never advocated equally dividing the wealth of America, for that is a very silly proposal and would need to be done over and over almost day by day until there was nothing to divide; but it has from the days of Jefferson advocated the equalization of opportunity, which is quite a different thing. Encouraging and fostering thrift, private enterprise, and security of every kind for corporations and persons does not mean that our party will ever permit unregulated and uncontrolled accumulations of wealth and economic power to deny opportunity according to his capacity to the most humble. Michigan is a great industrial State. Big business operates in a big way here, and that business is efficient—no lost motion, no waste, no clutter, no outmoded method. Businessmen whom I know personally want to give their employees full opportunities for every good thing of life, but competition of quality and price is so exacting that no industrialist by himself can do so. Only government is powerful enough to make it possible for all business to give all workers security and the opportunity to enjoy the blessings of life, liberty, and happiness. I regret that government should be given so great a task, but if we are to have social stability government must assume that duty. If government would preserve industry and make democracy work well it must compel industry to assume the responsibility of protecting its investors and its employees. It is sound democratic doctrine to perpetuate the ideal which seeks to liberate Americans from arbitrary financial control.

VAST ECONOMIC STATES

Senator O'MAHONEY recently pointed out that there are 30 giant corporations in this country, 12 of them banks and 18 of them industrials or public utilities, each one of which has assets of more than a billion dollars; and that at the same time there are 22 sovereign States of the Union wherein the total value of all the real estate within their borders is less than a billion dollars each. The Senator concludes that many modern corporations have become vast economic states, greater in some instances than the States of the Federal Union, and these great economic states have been made possible by the collective resources of millions of people who are their stockholders but who cannot exercise and do not exercise any power whatsoever over the government of these corporations; and, further, that they employ millions of workers who likewise do not exercise control or direction over them. It is in these States that our political opponents wish to practice "rugged individualism."

RUGGED INDIVIDUALISTS

We justifiably take great pride in recalling the adventures of the strong, sturdy, independent, picturesque, and sometimes heroic characters who pioneered this country. We see them now dressed in fur cap, moccasins, and leather clothing; in one hand a rifle and over a broad shoulder a bulky bundle of animal skins. Theirs was in many respects the ideal life. They were beholden to no one, paid no taxes, their only obligation being to themselves and their immediate families; they neither asked nor received assistance from any source. Such problems as they had were local and personal and their highest law the law of the jungle. Under that system a very few men could have an ideal existence in the State of Michigan provided all you good folks would move out and turn it over to them as a happy hunting ground. I do not know where you would go for contented lives after the happiness that you have found here. But the primitive life has a great attraction for those of us who have a passion for liberty and independence and hate restraints of every character. These early-day pioneers that enjoyed such a privilege were the real rugged individualists.

President Hoover and his crowd love to exalt rugged individualism, but when they apply that term they do not necessarily refer to Daniel Boone and his contemporaries. They realize that it requires a lot of vacant land for that mode of life and that there is no longer such an opportunity remaining in America, all such privileges having long since disappeared. They are not thinking of trappers and hunters and frontiersmen, however; they are thinking of another kind of rugged individualistic privilege. They want an uncontrolled and unregulated capitalistic system with all restrictions and restraints and responsibilities removed, and they themselves want to be the rugged individualists running that system. Unlike the Boones, they will not ask you good people of Michigan to move out and turn the State over to them; they will be satisfied if you just turn the State over. You may stay; in fact, they will want you to stay because they do not plan to skin wild animals; they plan to skin you.

UNREGULATED CAPITALISM

Adherence to the principles of rugged individualism, capitalistically speaking, forms a polite excuse for not assuming social responsibilities and provides an excellent basis for an argument against taxation and regulation. That's what the Hooverites have in mind when they prate about rugged individualism and private enterprise. There are powerful natural impulses pulling us toward individualism, but it cannot be. The aristocracy directing industry that once upon a time enjoyed all the privileges, liberties, and freedom of the early day trapper in his enchanted realm must exist only in the memory and dreams of men of the "horse and buggy" days. Henceforth we shall read about them in storybooks and see them in museums along with the Daniel Boones and the Davey Crocketts. Michigan could not, if it would, return to the irresponsible days of the early pioneers and Michigan would not, if it could, return to the irresponsible days when industry was run for profit alone. The wanton waste that occurred in the devastation of the Michigan forests is something to remember in a discussion of this point. The majority of American voters who have the right to decide such matters will not let America return to the old deal of uncontrolled and unregulated capitalism. They have adopted a policy of shared undertakings, shared responsibilities, shared interests, and shared natural advantages. Too much of everybody for himself with no regard for others has departed forever in America.

SOCIAL REFORMATION SPASMODIC

If social reforms would only come about gradually and continuously, year by year, keeping pace and abreast with changing industrial conditions and economic developments, the shock of adjustment to their new requirements would neither be great nor difficult for society. Unfortunately, however, social reformations seem to develop spasmodically in periodic waves as do grasshoppers. At the close of Wilson's first term in 1916 social reforms took a prolonged vacation and failed to put in another appearance until the inauguration of the present administration in 1932. This irrational development of social progress has been most unfortunate for the desirable tranquility and even composure in the lives and business affairs of our populace. By 1932 pent-up and accumulated reforms that should have long ago been put into effect could no longer be controlled and held in check and so broke loose at

flood tide and went surging over the dams of Republican inertia. When these cumulative social-reform demands finally started on their way they came sweeping down upon the political puppets of that day crushing all before. It was too late then for a carefully planned and blue-printed procedure.

Hoover, who had won world renown feeding the Belgians seemed baffled, bewildered, and helpless with the multitude and the magnitude and the fury of the avalanche of maladjustments of outraged society which had been too long postponed. In a moment of rage and misunderstanding he turned the guns of war upon the hungry, desperate veterans pleading for justice and decent treatment and drove them from the capital. These veterans, in peaceably accepting the President's wrath, proved that they loved their country in that gloomy hour of injustice just as fervently and patriotically as they had loved it when they bared their breasts to enemy fire on the battlefields of Europe a few short years before. I mention this incident merely to show the confused mental attitude of the President toward the terrific social and political storm that was approaching. The Republican administration neither knew what to do about the specter of poverty that was casting its shadow over the land nor did it comprehend the causes of vanished credit sources, bankrupt financial institutions, closed factories, profitless debt-burdened agriculture, unpaid taxes, and stagnant business, and all the other significant manifestations of social maladjustments.

It knew little about the causes and cure of depressions. The Republicans thought that the storm would blow over of its own accord, but it only blew harder. Instead of improving it steadily grew worse. They were too obstinate and too stupid to understand that the unsatisfied demand for social readjustments was at the bottom of all the economic disturbances of that day. They did not realize that social progress must keep pace always with industrial change. The law is that if the one remains static while the other moves forward, painful and dreadful reconciliations must eventually take place. Ours is not, nor has it ever been, the economic problem of production in agriculture or in industry; ours is the political and social problem of distribution and use, so the failure was political and not physical. It was our statesmen who failed and not the agriculturists and the industrialists and the producers of goods.

THE NEW DEAL

The New Deal pictures an industrial and agricultural society, with particular stress on public health in factory and home, both urban and rural, decent prices for farm products, high wages, reasonable hours, no cutthroat and chiseling business methods, no stock juggling and riotous speculating, fair interest rates and honest banking, regulated public utilities and unmonopolized natural resources, taxes high, yes, but a good public service of educational, recreational, and other desirable facilities that must be provided for out of the public purse. In short, the New Deal champions a happy combination of the profit motive with the service motive. Common interests of all the people under it will replace special interests of part of the people. Tolerance imbued with sympathy for the lowly and with an understanding of perplexing social problems will replace prejudice and hate. Cooperation based on mutual recognition of conflicting interests will replace devastating competition. The value of this new social order, if by such a name it may be called, will be measured by the extent to which its advantages will be shared by all the people, and it will be developed for the common good through the regular orthodox democratic processes under the Constitution of the United States of America. Men say this all sounds very well, but it is impractical and it is impossible. Mr. Chairman, it is the only way out. It is inevitable.

STATESMANSHIP

Political party performance in America today must be judged by the degree to which it provides for social betterment in the way of youngster care, mother compensation, and oldster assistance, unemployment and health insurance, housing programs and slum clearance, and in many, many other similar benefits for the underprivileged. Promoting and securing higher standards of living, both rural and urban, and greater benefits from the machines for which the worker must furnish direction and to which he in turn is tied is the true test of twentieth-century statesmanship.

PRESIDENT ROOSEVELT

It might be well to state in this connection that it is my firm conviction that when all current political propaganda, political jealousies and ulterior motives of every nature have been deleted and placed in their proper perspective and when an unbiased and truthful history is written some years hence covering this period, it will unqualifiedly and emphatically hold that the first 4-year term of President Roosevelt was the most brilliant, the most constructive, and the most progressive Presidential term in all the glorious history of America. And I believe that when his second term finds its place upon the pages of history and the tremendous gains in wholesome legislation inaugurated by him have been consolidated and perfected, it will be truthfully said that this earnest man held to the course of a true liberal and guided the Nation safely through the dangerous shoals not only of murderous international strife but that he also corrected grave internal social difficulties by sensible formulas founded upon equity and justice and thereby proved himself the outstanding champion of his century of true liberalism both at home and abroad.

I shall make no effort here to give you a detailed report on the constructive accomplishments of this courageous administration, but I do want to more or less briefly refer to a very few of the things that have been done.

BANK HOLIDAYS

There are events in one's life so terrifying that they cling and seem always as though they happened but yesterday. When I was a child of 4 on one such occasion I was lost, and that awful experience is my earliest recollection. I have another horrible nightmare in my memory that refuses to go away. It happened on the second day of March 1933. I was Governor of Colorado at the time. A few days previous Michigan had started something bad by declaring a bank holiday, and that precedent had been followed by nearly every State in the Union. Colorado was trying to be the one Commonwealth to not join the procession of bank-holiday States. During this time I kept in constant touch with the Colorado clearing house; and as they were meeting night and day, we worried together over the national crisis sweeping the banks of the country. Disregarding bank holidays in other States, they were determined to keep their banks open. It was almost 9 o'clock on this eventful morning. Telegrams were pouring in from all over the State; telephones in my office were ringing frantically. My office was full of excited men.

Runs on the banks were threatened everywhere. Long lines were reported to be standing in the streets in many Colorado cities. Our Colorado banks were unusually strong, but a threatened simultaneous run on all of them is no trifling matter, for, if one happened to go down, the situation might get out of control. The clearing house finally submitted to the inevitable, and my proclamation, prepared hours before, was on the wire and the radio, and Colorado had a bank holiday, too, the last State to admit the complete collapse of Mr. Hoover's administration.

Have you ever studied the faces of men and women making a run on a bank? I wish that some artist with the ability to depict the inner despair of men's souls would some day paint Faith Takes a Holiday. On those tragic days in 1933 faith did take a holiday. Confidence of men in men, confidence of men in their Government, confidence of men in every intangible thing took a holiday and only fear remained to harass the spirit of troubled souls. The Nation's business had capitulated and surrendered, for business is based upon faith and cannot go on without it.

Two days later, on March the 4th, we had a new President and you will recall his first official act had to do with the banking situation. In due time a day was set for banks all over the country to reopen. Bankers were dubious. I was again sitting up nights with the Colorado Clearing House. They expected Statewide runs, and they had great reserves of currency on hand to meet the anticipated withdrawals wherever they might occur. The night before the banks were to open, the President made his first fireside talk to his friends all over the country. He lightened a very solemn, earnest talk with something clever about the "fear of fear." He asked for the cooperation in this crisis of all of his American neighbors throughout the country. It was easily the most convincing and effective and far-reaching speech in all American history. The next day the banks opened and there was a run on them, but it was not a run to take money out; believe it or not, it was a run to put money in! That afternoon the newspapers everywhere headlined the unbelievable story. From every town and city, from Colorado and from Michigan, and from everywhere came the same good news—"A run was made today on socks and mattresses and hiding places and good United States currency was deposited in every bank throughout the country."

That very hour marked the beginning of the recovery. Great metropolitan centers, small unimportant country places, rural and urban communities alike at an identical moment acted in strange unison—not from prearranged schedule but spontaneously. They had regained their faith. That is why I say that the President's first fireside talk was the most effective speech of American history.

FEDERAL DEPOSIT INSURANCE CORPORATION

After a time the Federal Deposit Insurance Corporation came into being and bank deposits were insured and guaranteed. Never again will men retire at night thinking they have financial strength and awaken on the morrow to discover that they are ruined. This is a reform denied to depositors for generations by the party that now claims to be the sensible, practical party of America. During the 4 years of Hoover there were nearly 7,000 bank failures, the deposits involved being approximately $4,000,000,000, with almost complete ruin to many of the depositors. During the first 4 years under Roosevelt 366 banks failed, with only $200,000,000 in deposits involved, and with practically no losses whatever to the depositors. The record during Roosevelt's second term so far as bank failures are concerned has been even better than during his first. Fifty million depositors today have full protection in the Federal Deposit Insurance Corporation. Much has been done by this Corporation to strengthen the banking system and improve the banking practices of the country. Not only that, but the Corporation has met all the expenses of operation, paid deposit-insurance losses from its income, constantly added to its surplus, and kept its original capital stock intact.

It is entirely self-supporting and, all in all, a most successful business venture. As a small-business man, I like that kind of a record. There was no hint of withdrawals during the recession of last year, and there is no evidence whatever of uneasiness on the part of depositors.

SECURITIES AND EXCHANGE COMMISSION

To have cleaned up the unsatisfactory and impossible banking situation should be glory enough for any administration, but per-

haps even a greater service was rendered by the clean-up of the securities and exchange fiasco. For years trusting widows and orphans and gullible men have been victimized and swindled out of their life savings by unscrupulous promoters of fake stocks and by high-pressure salesmen. Terrible scandals were common on the great exchanges caused by riotous speculation, aided and abetted by thieving brokers. To put an end to all such embezzlements the Securities and Exchange Commission was created by the Democratic Congress at the suggestion of the Democratic President. The vigilance of this agency has saved credulous investors millions upon millions of dollars by prohibiting issuance and sale of worthless stocks, by stopping unlawful manipulation on stock exchanges, by compelling holding companies to cease destroying the investment of the public for the benefit of insiders, by requiring complete information about bonds and stocks offered for sale, and by preventing excessive speculation. It has been a most salutary service, courageously performed, and one desperately needed for years and years.

AGRICULTURE

Farmers in the United States have struggled since the World War for the opportunity of placing their industry on a sound and equitable economic basis. Republican Presidents have vetoed the farm bills enacted after tedious consideration by the Congress. With the New Deal came the first real help for American agriculture. Secretary Wallace has tried diligently to find the solution for all agricultural problems with only partial success. He should, however, be given full credit for his earnest and sincere efforts. Many farm-bloc Democrats in the Senate and House—and I am very active in that bloc—are not satisfied with what has been accomplished and are diligently striving to work out a more satisfactory farm program. Our country has always been prosperous when our farmers have had a substantial buying power and depressed when for any reason the farmers' buying power has been curtailed. The American farmer furnishes the finest market in the world for all industry, including the automobile industry and the local merchant.

HON. CORDELL HULL

It is extremely fortunate to America and to the world that at this particular time we have the Nation's outstanding statesman, second only to the President himself in popularity, the great Democrat and former Senator from Tennessee, Cordell Hull, serving his country with great distinction as Secretary of State. The United States in the past has had many able men in that difficult post. None of them, however, have outshone this brilliant, patient, determined, experienced, and seasoned diplomat and statesman. His long public career has given him a background and a keen knowledge of the affairs of this Nation and a grasp of the international situation that makes it possible for him with honor and universal respect to pilot our country through the perilous foreign difficulties that beset it on every hand. No man in our land other than the President holds the confidence and love of the whole American people to a greater extent than does Cordell Hull. He has earned a place for himself in the hearts of his people by the unswerving course that he has pursued in dealing with international problems. His simple, open, honest, kindly but rugged character has typified America's foreign policy as seldom it has been portrayed by the occupant of that high office.

Latin America knows now that we have no selfish motive of territorial expansion back of the Monroe Doctrine, and they will cooperate with us so that no Old World power will be permitted to make any political or semipolitical penetration into any portion or part of the Western Hemisphere. They understand, too, that we not only advocate the good neighbor policy but that we practice the good neighbor policy, and that we did not adopt it for what we could get out of it, but because we believe with all our hearts that it is the righteous way in which to live with our neighbor nations. In this connection, I have been very active in a gigantic plan to construct a first-class automobile highway from Canada to the southern tip of the Argentine. I know of no better way to promote friendship and international understanding than that.

FOREIGN POLICY

Much is being said these days about America's new foreign policy. We have no new foreign policy. George Washington formulated our foreign policy in his time and gave eloquent expression to it in his Farewell Address. It is to have foreign entanglements with no nation, to harbor ill-will toward no nation, to show special fondness for no nation, but to seek friendly cooperative relations with all nations. We will not tolerate any foreign power injecting itself into our domestic affairs nor will we inject ourselves into any nation's domestic problems. We should have learned in the World War to get out of Europe and stay out; we should have learned in that war that our best business is to mind our own business. We are forever devoted to maintaining a democracy here in our own land, but we shall permit every other nation to choose its own kind of government and its own kind of ruler. We have too many obstinate domestic problems begging for solution to concern ourselves with difficulties beyond the seas. It is for us to prove to the world the virtues and blessings of peace.

The United States is fortunate in her natural and political circumstances. Three thousand miles of stormy Atlantic separate us from the quarreling nations of Europe and 5,000 miles of the broad Pacific lie between us and the Orient. To the north we have the finest neighbors in all the world, and the 20 Republics to the south would do us no harm if they could. In fact, while there are wars and rumors of wars throughout the world, America is not threatened, and so long as we continued to mind our own business and maintain a competent national defense, peace will be our lot. Peace, too, thank Almighty God, is a passion with President Roosevelt—second only to his devotion to liberty and independence.

The World War put an untimely end to the social reforms of the Wilson period, and threatened war today with the colossal expenditures indicated for armaments threatens to slow up the unperfected measures of social reform of the New Deal. The billions that we are forced to waste for war machines that will be obsolete almost before they are completed could well be invested in human values that would pay big dividends in human progress and human welfare. Compelling as are the needs for an adequate and competent national-defense program, it must be developed in addition to and not be allowed to interfere with the perfection of the reforms already undertaken by the administration.

SOCIAL-SECURITY PROGRAM

Many Republican Congressmen won elections in 1938 by advocating "crackpot" cure-alls in which they do not sincerely believe, but I know of no officers—Republican or Democratic—who were elected on the basis of advocating a return to the old order or the Hoover philosophy of government; all of them now favor some sort of social security. In fact, the most remarkable thing about the social-security program, the protégé of the New Deal, is that no political party in America advocates its outright repeal. Republicans, Socialists, Progressives, and other minority parties are not agreed as to its stipulations, but they are agreed as to its desirability in some form. As a matter of fact, even the most ardent Democratic supporters of social security realize that the program must be changed, amended, and perfected as experience discloses a need for improvement, but these Democrats are determined that it shall not be sabotaged or weakened.

INVESTMENT SPENDING

I belong to that group of American citizens who are worried about the huge deficits inaugurated during the Hoover administration and their current continuation. I have a genuine fear that unless we can stop the deficits our democracy will in time be lost. It is appalling to me that the interest alone on our Federal indebtedness today amounts to more than a billion dollars a year, a sum of money equal to the total assessed value of all of the property in my own State of Colorado. I hate debts as did my father before me. Federal bonds to me are only an abbreviation of that hated word "bondage." And yet, the picture is not as dark as it may at first appear. All of our huge debt is owed to scattered millions of our own patriotic citizens. It is not closely held. No single Shylock can take his pound of flesh out of Uncle Sam without himself bleeding to death. All of the funds from the indebtedness since March 4, 1933, have been invested in America. The material values of these investments, while not by any means worth all the money expended upon them, are permanent additions to the wealth of the country. Thousands of miles of sewers have been laid; bridges by the hundreds constructed; 10,000 schoolhouses built; libraries, hospitals, athletic fields, parks, playgrounds, docks, wharves, aqueducts, tunnels, railroad grade separations, highways, public buildings, power plants, water systems, and thousands of other public enterprises have been created.

The boys of the Civilian Conservation Corps have built 64,000 miles of telephone lines, 41,000 bridges, 44,000 major-type buildings, 4,000,000 erosion check dams, 120,000 miles of roads and trails, and have planted one and one-quarter billion trees. But why go on?

However, before leaving the subject of investments, I do want to call your attention briefly to another kind of an investment that was made with this money we borrowed. The investment of which I speak is intangible and incalculable. I refer to the human lives and human values salvaged and saved by the spending program, and I state without fear of contradiction that this achievement can never be measured by any physical yardstick, and can never be correctly estimated by any physical device, but hunger, nakedness, and miserable shelter have been evicted by this borrowed money from the firesides of millions of American men, women, and children.

EQUAL OPPORTUNITY FOR ALL

I lose patience with partisan politicians who sneeringly say that the philosophy of the Democratic Party is not sound and that its methods are not practical. Every party in evil times is likely to make mistakes as to methods, and that is especially true of a party full of action and vigor and courage and love for humanity called upon to assume direction in a time of great emergency and stress and crises. You must expect hasty, ill-considered action when the Nation's economy is in complete collapse and when the Republican administration has for a long period carried on a sit-down strike in the Nation's Capital against progressive political action. I will not be challenged when I say that no political party serving in a great democracy can possibly have a more wholesome philosophy and a more salutary objective than to believe in and earnestly strive for "an equal opportunity for all." It is wicked to say that this fundamental philosophy of the Democratic Party is not sound. If any mistakes have been made as to methods, they were not fundamental nor were they serious, and doubtless they have long since been corrected. The Democratic Party has always been the great liberal party of America and it will continue in that role through the future. It will hold fast to the humane, beneficent, sound policies proven successful out of its wealth of long experience, and it will move forward determined to solve each problem of the

American people long before it becomes a chronic and devastating disease. It will ever seek the bright, shining light of true liberalism and courageously proceed with both feet treading upon the solid ground of common interest, common justice, and common sense.

Puerto Rico Wants to Become an Integral Part of the United States

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 22, 1939

Mr. IGLESIAS. Mr. Speaker, Puerto Rico is an organized Territory of the United States under the supreme authority of Congress. Article II of the Treaty of Paris between the United States and Spain, of 1899, provided that the civil rights and political status of the native inhabitants of the Territories hereby ceded to the United States shall be determined by Congress.

The treaty contained no promise or declaration regarding the political status of the inhabitants of Puerto Rico affected by the cession, but left the matter entirely to be decided by Congress.

Congress, as contemplated in the treaty of peace, granted American citizenship to Puerto Rico in 1917, and under the Jones Act created a political body and a civil government composed of American citizens in Puerto Rico owing allegiance to and entitled to the protection of the United States. The island has over 1,800,000 American citizens, and for nearly three generations our men, women, and children and the children of our children have been born under the American flag and have been taught the American ideals of government in the political forum of public opinion and in our schools and courts.

We have rejected all formulas of a colonial government. We consider this formula disgraceful and not compatible with the civil dignity of our Nation, and therefore we proclaim the permanent union of the people of Puerto Rico with the people of the United States to maintain and consecrate socially, politically, and industrially a democratic community with the same rights and duties as any community of our Nation. We want and are anxious to be recognized as an integral part of the States of the Union, to lead our future along that line.

H. R. 147, that I introduced, has the purpose to make Puerto Rico an incorporated Territory of the United States.

The provisions of this act shall apply to the island of Puerto Rico and to the adjacent islands belonging to the United States and waters of those islands.

By section 2 of said act an incorporated Territorial government is established over the island of Puerto Rico, with its capital at San Juan, P. R.

And all persons who had become citizens of the United States in accordance with an act of Congress approved March 8, 1917, shall be citizens of the Territory of Puerto Rico.

The Constitution and all the laws of the United States, including laws carrying general appropriations, which are not locally inapplicable, shall have the same force and effect within the said Territory of Puerto Rico as elsewhere in the United States.

Any part or parts of the act of Congress approved March 2, 1917, entitled "An act to provide a civil government for Puerto Rico," and the laws of Puerto Rico not inconsistent with the Constitution and laws of the United States or the provisions of this act, shall continue in force, subject to repeal or amendment by the Congress of the United States.

The Legislature of Puerto Rico is now studying and considering very carefully all the angles and aspects of this great question of incorporating Puerto Rico as a necessity and preparation to become in the future a State of the Union.

Several attorneys have expressed their legal opinions on this particular matter.

Would the "incorporation" of Puerto Rico necessarily cause the insular government to lose the benefits she now has regarding customs duties, internal revenue, income tax, and other United States taxes from which she has been exempted?

To revert to the growth of our territorial system, the question of waste lands constituted one of the early obstacles to the organization of any government for the common interest of the colonies and afterward of the States.

In October 1777, pending the discussion of the Articles of Confederation, the provision was presented:

> That the United States in Congress assembled shall have the sole and exclusive right and power to ascertain and fix the western boundary of such States as claim to the Mississippi or South Sea, and lay out the lands beyond the boundary so ascertained into separate and independent States from time to time as numbers and circumstances of the people shall require.

The States appear to have resented any interference by the Central Government in the matter and the proposition received only the vote of Maryland.

However, the necessity of providing the Central Government with a means of raising revenue and of providing protection and a government for these lands prevailed, and some of the States ceded territory to the Central Government—Congress—for the "benefit of all the States," and the Northwestern Territory was organized by the Congress of the Confederation.

At the time of the adoption of the Constitution there were many questions pending between States and between States and the Central Government regarding territory, and in the Constitution the question of territories was passed over with the following provision—clause 2, section 3 of article IV:

> Congress shall have the power to dispose of and make all needful rules and regulations respecting the territory or other property of the United States; and nothing in this Constitution shall be construed as to prejudice any claims of the United States or any particular State.

There is certainly nothing in the above provision to prevent Congress from either taxing or exempting Puerto Rico from Federal taxes.

While before the "insular cases" the courts had generally decided that the Bill of Rights amendments to the Constitution prevented Congress from enacting legislation contrary to these provisions in the Territories, these provisions, even if effective in the Territories, have no bearing on the question of the taxes and finance.

The constitutional amendments which by their terms include the Territories are the XIII, XVIII, and XXI. None of them in any way affect our financial questions.

As to whether there are any general provisions of the Constitution affecting the question—in the case of *Loughborough* v. *Blake* (5 L. E. 98; opinion by Chief Justice Marshall), the question was: "Has Congress the right to impose a direct tax on the District of Columbia?" The Court held that Congress was given the right to tax the District of Columbia and the Territories by the general provisions of the Constitution and that the right to tax the District was also given by the special provisions of the Constitution regarding the District of Columbia; but that the provisions regarding the Territories and the District were not mandatory. To quote from the opinion:

> That the general grant of power to lay and collect taxes is made in terms which comprehend the District and Territories as well as the States, is, we think, incontrovertible. The subsequent clauses are intended to regulate the exercise of this power, not to withdraw from it any portion of the community.
>
> The words in which those clauses are expressed import this intention. In thus regulating its exercise, a rule is given in the second section of the first article for its application to the respective States. That rule declares how direct taxes upon the States shall be imposed. They shall be apportioned upon the several States according to their numbers. If, then, a direct tax be laid at all, it must be laid on every State, conformably to the rule provided in the Constitution. Congress has clearly no power to exempt any State from its due share of the burden. But this regulation is expressly confined to the States and creates no necessity for extending the tax to the District or Territories. The words of

the ninth section do not in terms require that the system of direct taxation, when resorted to, shall be extended to the Territories as the words of the second section require that it shall be extended to all the States. They, therefore, may, without violence, be understood to give a rule when the Territories shall be taxed, without imposing the necessity of taxing them. It could scarcely escape the members of the convention that the expense of executing the law in a Territory might exceed the amount of the tax. Be this as it may, the doubt created by the words of the ninth section relates to the obligation to apportion a direct tax on the Territories as well as the States, rather than to the power to do so.

In the case of *American Insurance* v. *Bales of Cotton* (7 L. E. 242), the Court holds:

The treaty with Spain by which Florida was ceded to the United States is the law of the land and admits the inhabitants of Florida to the enjoyments of the privileges, rights, and immunities of the citizens of the United States. They do not, however, participate in political power; they do not share in the Government, until Florida shall become a State. In the meantime Florida continues to be a Territory of the United States, governed by virtue of that clause of the Constitution which empowers Congress to make all needful rules and regulations respecting the Territory or other property belonging to the United States.

Territory ceded by treaty becomes a part of the nation to which it is annexed either on the terms of the treaty of cession or on such as the new master may impose. That Florida, upon the conclusion of the treaty, became a Territory of the United States, and subject to the power of Congress under the territorial clause of the Constitution.

Church v. *United States* (136 U. S. 1, 34 L. E. 490):

The Territory of Louisiana, when acquired from France, and the territories west of the Rocky Mountains, when acquired from Mexico, became the absolute property and domain of the United States, subject to such conditions as the Government in its diplomatic negotiations had seen fit to accept relating to the rights of the people then inhabitants of said Territories. * * * It (Congress) may make a void act of Territorial legislature valid and a valid act void. In other words, it has full and complete legislative authority over the people of the Territories and all departments of the Territorial governments. It may do for the Territories what the people under the Constitution of the United States may do for the States. * * * The people of the United States as sovereign owners of the national Territories, have supreme power over them and their inhabitants. * * * In the exercise of this sovereign dominion they are represented by the Government of the United States, to whom all powers of government over that subject has been delegated, subject only to such restrictions as are expressed in the Constitution or are necessarily implied in its terms.

See also *Boyd* v. *Nebraska* (36 L. E. 103):

The Territories of the United States are entirely subject to the legislative authority of Congress. They are not organized under the Constitution nor subject to its complex distribution of the powers of government as the organic law, but are the creation exclusively of the legislative department and subject to its supervision and control. * * * It (Congress) may legislate in accordance with the special needs of each locality and vary its regulations to meet the conditions and circumstances of the people. * * * In a Territory all the functions of government are within the legislative jurisdiction of Congress and may be exercised through a local government or directly. *Endleman* v. *U. S.* (86 Fed. 456; 30 C. C. A. 186, citing *Cross* v. *Harrison*, 16 How. (U. S.) 164; 14 L. Ed. 889); *Shively* v. *Bowlby* (152 U. S. 1; 14 Sup. Ct. 548; 38 L. Ed. 3331).

The term "Territory of the United States" seems to have applied in the beginning to all land and waters of the United States outside of the States themselves. Later the distinction between organized and unorganized Territories arose, and in 1891 a United States statute was passed which purported to extend the Constitution and Federal statutes not locally inapplicable to organized Territories.

While this arose out of our generosity in trying to extend to the Territories most of the rights and privileges of a State, it raised a number of questions as to just what provisions of the Constitution could be made applicable to a Territory and what Federal statutes were applicable.

The doctrine of "incorporation" as suggested by the concurring opinion of Justice White in Downes against Bidwell, May 1901, and as held in the *Balzac case* (66 L. Ed. 630 (1922)) to apply to jury trials in Puerto Rico would not, I believe, have any effect on the power or right of Congress to continue the present policy of taxation and finance after Puerto Rico should be declared by congressional enactment to be an "integral part of the territory of the United States" or declared to be "a part of the United States."

The power of Congress over the Territories is given by the Constitution, and Congress is unable either to extend or limit these powers given by the Constitution.

American Farm Bureau Federation

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Monday, February 20), 1939

RESOLUTIONS ADOPTED BY THE AMERICAN FARM BUREAU FEDERATION AT ITS TWENTIETH ANNUAL MEETING, NEW ORLEANS, LA., DECEMBER 15, 1938

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolutions adopted by the American Farm Bureau Federation at its twentieth annual meeting, held at New Orleans, La., December 15, 1938. The American Farm Bureau Federation is one of the great national farm organizations of America. Its leadership has wielded a powerful influence in working for a national farm program. Its views, which represent views held by farmers in every State in the Union, should receive careful consideration.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

[From the American Farm Bureau Federation Official News Letter of December 20, 1938]

RESOLUTIONS ADOPTED AT THE TWENTIETH ANNUAL MEETING

The following resolutions were adopted by the house of voting delegates at the Twentieth Annual Convention of the American Farm Bureau Federation at New Orleans, La., December 15, 1938:

Resolution 1

DEMOCRACY AND BALANCE

We renew, with increased emphasis, our previous pledge of loyalty and devotion to the principles of liberty and justice which the founding fathers of our Nation so clearly set forth and so valiantly defended in our Constitution and the Bill of Rights.

The generations which have gone have given lavishly of the treasure and the blood of their young manhood to defend and preserve for posterity the freedom and independence of our democracy. It is the privilege and solemn responsibility of the present generation to carry forward this spirit of conviction and determination, to consecrate itself anew to the age-old struggle to achieve a better day for the great masses of the people.

The world tide is running against democracy. The institutions of free speech and the right of the individual to life, liberty, and the pursuit of happiness which farm people have always supported to the fullest degree, are on the defensive all over the world. The doctrine of the submission of the individual to an all-powerful state is making fearful inroads on democracy.

Even in America numerous groups are taking advantage of our traditional tolerance and our freedom of speech and assembly to work both secretly and openly for the overthrow of constitutional government.

Every farmer knows that the best way to kill weeds is to cultivate and grow such a luxuriant crop that the weeds cannot obtain a foothold.

We believe that the way for America to defend democracy and kill the weeds of all "isms" but Americanism, is to make democracy work better. The foundation of democracy is opportunity—opportunity for young people to get a job, establish a home, and to look forward to getting ahead in proportion to their ability and effort; opportunity for all of us to live in security and to receive an honest day's pay for an honest day's work.

Opportunity has been too much curtailed in America by the insidious growth of special privilege, which has been used by speculators and by monopolistic industry, and later by monopolistic labor, to secure for themselves a larger share of the national income than is justified by their contribution to society.

The extreme present-day practices of certain groups of organized labor to secure unreasonable shortening of hours and increasing of hourly wages leads to an increase in industrial prices and a corresponding decrease in the total consumption of industrial products. The practice of some industries to pyramid such enforced wage increases into the price of their products is even less defensible.

We believe the interest of labor as well as the national interest would be better served through placing much greater emphasis upon

the justice and importance of maintaining an adequate annual income for labor earned through increased production rather than keeping chief emphasis upon an hourly wage. We believe also that industry should recognize that its interest, as well as the national interest, requires placing greater emphasis upon volume production and total profits rather than depending upon the profit on the unit of production.

Organized farmers have always recognized the right of labor to organize as it deems proper for the purpose of collective bargaining with their employers and that workers are entitled to fair wages and reasonable working conditions. Farmers also believe in a reasonable return on honest investment and the security of human rights and the ownership of property. The tactics used by some labor groups to force their demands by ignoring property rights, obstructing an orderly flow of goods and services to groups not involved in their disputes that ignore duly constituted authority; that fail to recognize responsibility and disregard contracts; and the alien and racketeer influences which too often operate in the name of organized labor, all combine to obstruct recovery, and must be quickly corrected if labor is to have the respect and sympathy of farmers and the general public.

Many groups of industry must likewise show a more cordial readiness to respond to peaceful and fair negotiation and decision where the rights of labor appear to have been ignored.

The national welfare requires an immediate adjustment of our economic system so that the masses of the people can absorb or consume a much larger volume of both industrial and agricultural products. This can be accomplished only when prices, profits, and wages are in such fair relationship that one group can buy what another produces.

It is a fundamental truth that when one man gets a dollar that he does not earn, someone else must earn a dollar that he does not get.

Organized farmers under the leadership of the American Farm Bureau Federation have seen clearly the necessity of balance among groups. Our Nation cannot survive, much less achieve an enduring prosperity if it maintains a high price level for industry, a high wage level for labor, and a price level for agriculture on a much lower plane than for the other two major economic groups.

The parity-price concept of agriculture, as embodied in the Agricultural Adjustment Act of 1938 and earlier legislation recognizes the fact that only by the free exchange of goods and services between groups on a fair price-and-income basis can we hope to achieve and maintain prosperity.

America needs an economic balance which will assure security for labor, stability for industry, and parity for American agriculture.

Believing as we do that recognition of these principles by all groups, and translation of such recognition into action, is the only way out of our economic difficulties, we respectfully urge the President of the United States to call together representatives of industry, labor, and agriculture selected from a list of those recommended by the duly selected leaders of the three major economic groups, to discuss a program of action designed to promote economic balance between these groups on a basis that will permit full utilization of our great productive resources, and we further urge that in view of the serious effect of the present maladjustment these representative leaders be kept in session until they have agreed upon such a program.

—

Resolution 2

AGRICULTURAL ADJUSTMENT ACT

The American Farm Bureau Federation endorses and supports the Agricultural Adjustment Act of 1938, which, with the Soil Conservation Act and the Marketing Agreements Act, constitutes a comprehensive national policy and a practical approach to parity income for the producers of farm commodities.

These measures embody the essential provisions recommended at our last annual meeting in the resolution on national farm policy as follows: The opportunity whereby farmers through voluntary effort and cooperation can control the volume of basic commodities marketed in line with demand so as to assure farmers of parity prices; the maintenance of a high degree of soil fertility; the development of a system of commodity loans to enable farmers to withhold seasonal surpluses from market channels in the most economical way, in order to protect producers from violent price declines, to insure ample supplies at reasonable and stable prices to consumers, and to protect the Nation from the dangers of drought, flood, insects, disease, and other disasters; the stabilization of prices through proper governmental purchases of surplus products to be distributed in noncompetitive channels, financed by custom receipts; the establishment of research laboratories to seek new uses for agricultural commodities, and the beginning of a practical program of crop insurance.

We reiterate our emphatic approval and our uncompromising support of these principles which are being translated into action.

With most sections of the country enjoying favorable weather and substantial production of crops, coupled with abnormal carryovers from 1937 of many basic crops, only the A. A. A. of 1938 has saved agriculture this year from a price disaster comparable to that of 1932, and this despite the fact that its final enactment came so late that it could be only partially effective this year.

The present farm program is based on the most comprehensive and effective laws ever written by and for farmers. Its first full year of trial will come in 1939, and we believe that it will do far more for farmers than any of the alternatives that have been suggested. These laws should be kept in effect as a means of controlling surpluses, improving marketing practices, and stabilizing farm prices. They should be amended according to recommendations of farmers who believe in agricultural parity as experience demonstrates the need of changes, and not upon the advice of enemies of these basic laws who have always opposed constructive measures for farm betterment. Administration should be simplified as much as possible, educational work to inform farmers and others about the details and purposes should be intensified, and the fullest responsibility and authority should be put into the hands of local committeemen as is consistent with proper coordination, effectiveness, and equitable treatment of all producers.

Until industrial prices and general wage levels are brought more nearly into parity relationship with farm prices more adequate funds should be provided for parity payments in order to eliminate the disparity of farm income, increase farm buying power, and so provide the balance necessary to full industrial production and employment and to national prosperity.

—

Resolution 3

MONEY AND PRICE LEVEL

The American Farm Bureau Federation has repeatedly urged Congress to exercise its constitutional obligation to regulate the value of money by establishing and maintaining a managed currency, regulated on an index of basic commodity prices, which will maintain a dollar with a constant purchasing and debt-paying power.

The American Farm Bureau Federation urges Congress to create a special congressional committee to study the problem of fluctuating basic commodity price levels and the effect of such fluctuations on farmers, producers of other basic commodities, and the economic life of the country. We urge also that such a congressional committee study the monetary systems of this and other countries in an attempt to ascertain the effect of monetary policy on basic commodity price levels, and based on these studies to propose effective methods of achieving a greater stability in basic commodity prices, and that Congress enact such legislation as will achieve this objective.

Pending the completion of this report to Congress, we urge the continuation by Congress of the President's authority to change the gold content of the dollar.

—

Resolution 4

FARM CREDIT

The farm credit system makes available to farmers, in a cooperative and constructive way, outstanding services in the field of agricultural credit.

Its emergency service during one of the most critical economic periods in agricultural history has been instrumental in assisting many farmers to save their homes and their equities.

Farmers are appreciating more and more that the credit facilities of the Farm Credit Administration are being builded for their own industry and justify a continuing and increasing support as well as a greater participation on their part in the direction and management of these credit agencies. Experience indicates that substantial improvement in these services can and should be made.

The American Farm Bureau Federation commends to the farmers of the Nation a more active interest and participation in the use and operation of these credit institutions.

—

Resolution 5

COOPERATIVES

The American Farm Bureau Federation has given its aggressive support to the development of cooperative marketing associations and organizations purchasing farm supplies cooperatively.

These organizations have demonstrated that they are a real asset to American agriculture and deserve increasing support of all farmers. However, the American Farm Bureau Federation has been forced to recognize in altogether too many cases the fact that these organizations have undertaken functions outside of the field for which they were organized, and as a result have not taken full advantage of their opportunities or improved their respective services to the extent that conditions warranted.

The Marketing Agreements Act has made available to cooperative marketing associations a powerful legal instrumentality for advancing the cause of agriculture in the field of distribution. To obtain the advantages of this act, farmers in many instances must strengthen existing cooperative marketing associations or organize new associations for its effective utilization.

We respectfully urge our membership to zealously guard their cooperative associations in order that they may play an increasingly important part in helping to solve the problems of distribution. Members of cooperatives are urged to do their full part in maintaining and improving the efficiency and the usefulness of their associations through the careful selection of their respective boards of directors and by constructive recommendations to such directors as occasion may justify.

The American Farm Bureau Federation favors a closer cooperation among all such agencies and a clearer recognition of the respective functions of every organization serving agriculture. We renew the pledge of the American Farm Bureau Federation to continue aggressive support of all such farmer-owned and farmer-controlled cooperative organizations.

Resolution 6

FOREIGN TRADE

We reaffirm our support of reciprocal-trade treaties which have been and are negotiated primarily to restore agricultural exports by judicious lowering of industrial tariffs, thus admitting more goods into this country and making it possible for us to sell more of our farm products abroad.

We insist that this principle be adhered to in framing reciprocal-trade treaties and that there be no reduction in present agricultural tariffs on any farm product that would have the effect of holding or reducing domestic price levels below parity on such product.

—

Resolution 7

DOMESTIC AND FOREIGN QUOTAS

During such period of time as curtailed market outlets force American farmers to restrict the production of farm products more than is necessary to be consistent with good farm practice including the maintenance of a high degree of soil fertility, we urge that all Federal policies relating to the importation of farm products should zealously safeguard the interests of domestic producers so as to maintain the widest possible domestic and export markets for American-grown farm products at fair price levels. We urge that all imported agricultural and livestock products meet sanitary standards comparable with those imposed upon similar domestic products.

—

Resolution 8

TRANSPORTATION

American farmers are vitally interested in the maintenance of a highly efficient transportation system. We reaffirm the comprehensive resolution on transportation adopted at the annual meeting in 1936.

We recognize that American railroads constitute an essential transportation agency and believe their continued operation under private ownership will best assure the highest degree of efficient and improved service to the public.

Rules and regulations causing enforced costs entering railroad operations and transportation rates of the railroads should be adjusted to the extent necessary under efficient operations to permit improvement of services and a reasonable return on prudent investment.

On the other hand, the railroads must continue under such reasonable regulation as will assure the public fair and reasonable rates and adequate service; but the underlying purposes of such regulation should be to foster and encourage, rather than to restrict, sound and orderly development and operation, of an efficient and economical railroad system. Reasonable freedom and flexibility should be left to railroad management in fixing rates and in exploring all avenues to economy, including consolidation and elimination, all improvements in service, and every advancement in methods.

To accomplish this end requires immediate readjustment of governmental policies to provide relative treatment of different types of transportation without limiting any natural advantages accruing to any particular type where such advantages are being reflected to the public interest.

—

Resolution 9

STATE BARRIERS TO TRADE

Many States have enacted laws, rules, and regulations and have used the powers of taxation to interfere with free and unhampered trade between States, which are in violation of the spirit of the Constitution, which provides that no barriers be set up to interfere with free interstate trade.

We urge that member State federations oppose the enactment of such barriers in their respective States except those necessary for health and disease control and to safeguard the public and protect public property.

—

Resolution 10

AGRICULTURAL EXEMPTIONS IN WAGE AND HOUR LAW

The exemptions provided in the Fair Labor Standards Act, commonly called the Federal wage and hour law, for agricultural trades and industries have been substantially reduced and almost nullified by the definition of the phrase "area of production" as issued by the Wage and Hour Administrator.

We call upon Congress to amend the law to assure to farmers the full benefit and scope of the exemptions, which agricultural leaders were assured had been provided when the act was passed.

The act should also be amended to provide a limitation on the time when actions may be brought to recover unpaid minimum wages, unpaid overtime compensation, and liquidated damages relating thereto, to a period of not exceeding 60 days, and such a limitation should apply to all other Federal laws having similar provisions.

—

Resolution 11

NATIONAL LABOR RELATIONS ACT

We request Congress to amend the National Labor Relations Act by defining the phrase "agricultural labor" as it has been defined in the Fair Labor Standards Act.

Resolution 12

FOREST CONSERVATION

We believe our natural resources of soil, water, range, forests, and wildlife are basic to the welfare of agriculture and the Nation and that future protection and wise use of these resources must be assured.

We recommend cooperation with the joint committee of Congress appointed to study the Nation's forest resources and we commend to that committee previous recommendations of the American Farm Bureau Federation on land utilization and forestry, to the end that a long-range program properly correlated with other conservation programs may be developed. We further recommend adequate appropriations for a cooperative farm forestry program properly correlated through the Extension Service, early completion of the forest survey, and speeding up of acquisition of forest lands mainly unsuitable for private ownership.

—

Resolution 13

T. V. A. CONSERVATION PROGRAM

We approve the conservation and plant-food program being carried out by the Tennessee Valley Authority as recommended by the American Farm Bureau Federation at its annual meeting in 1936 and urge the continuation and expansion of this program.

—

Resolution 14

MARKETING RESEARCH

We urge that Federal and State agricultural institutions place research, teaching, and extension work in distribution and marketing on a plane equal with that of production, in their expenditure of funds and use of personnel, and we invite the cooperation of all groups interested in distribution to participate in the development of this program.

—

Resolution 15

MONOPOLY

The alarming growth of monopolistic practices and monopolistic controls in industry and labor place a heavy burden upon American agriculture and constitute one of the chief reasons for the inequalities between farm prices, industrial prices, and industrial wages.

We commend the Federal Trade Commission and the United States Department of Justice for instituting a more aggressive and effective enforcement of antitrust laws and urge a continued, vigorous attack upon illegal monopolies and unfair trade practices.

—

Resolution 16

DISCRIMINATORY TAXES

We condemn discriminatory and punitive taxes of all types designed to favor or penalize a selected group. The enactment of such legislation results in further efforts by other groups to obtain special privileges.

Such unnecessary taxes and restrictions have a damaging effect by increasing costs of distribution, increasing costs to consumers, reducing total consumption, and limiting production in agriculture as well as in industry. We oppose all such tax proposals.

—

Resolution 17

FEDERAL SEED LEGISLATION

There has not been a single successful prosecution under the existing Federal laws for the misbranding, adulteration, or false advertising of seeds because of insufficient provisions of law.

We urge enactment at the next session of Congress of effective legislation that will require adequate standards and information with respect to the origin, adaptability, purity, and germination of seeds, and the percentage and variety of noxious weed seeds, so as to assure adequate protection to farmers against misbranding, adulteration, or false advertising of seeds.

—

Resolution 18

FREIGHT RATES ON IMPORTS AND EXPORTS

We request the Secretary of Agriculture to investigate unfair discriminations against American agriculture in the freight-rate structure, that special attention be given at an early date to discriminations in the rates on imported and exported commodities in relation to the rates on domestic movements and on the basis of the facts thus ascertained, to file appropriate complaints with the Interstate Commerce Commission to correct these disparities.

—

Resolution 19

FARM-TO-MARKET ROADS AND RELIEF LABOR

We urge that Federal and local governmental agencies place greater emphasis upon the construction of low-cost, all-weather, farm-to-market roads rather than upon expensive boulevards, so-called superhighways, and the extensive alterations of primary roads. Constructive employment for relief labor can be provided by increasing the construction of farm-to-market roads, drainage, and sanitary projects.

Regulations of the Works Progress Administration should provide for equalization of hours of labor and wages on relief projects

to the custom of the community. Men enrolled on relief should not be penalized for accepting temporary employment by extreme difficulty in returning to the relief rolls.

—

Resolution 20

AGRICULTURAL REPRESENTATION

There are few policies of broad national interest that do not have direct effect upon the welfare of agriculture. We, therefore, urge that in the appointment of all Federal boards and commissions, agriculture be given adequate representation through persons recommended by the duly selected leaders of organized agriculture.

—

Resolution 21

AGRICULTURAL AGENCIES

We reaffirm our support of the United States Department of Agriculture, the land-grant colleges, agricultural experiment stations, extension service, and vocational agriculture, as being essential to the successful administration of National, State, and local programs for agriculture, and we urge the more complete coordination and cooperation of all agencies of the Federal and State Governments serving agriculture with organized farmers in administering all agricultural programs in the States, counties, and communities of the Nation.

—

Resolution 22

RURAL YOUTH

The problems confronting agriculture have created special problems among rural youth. That these issues must be met is recognized by rural youth who realize that the solution of any agricultural problem lies in organization. Previous declarations of policy relative to rural youth are hereby reiterated. The American Farm Bureau will assist in the development, amplification, and correlation of programs of particular interest to rural young people in the respective States.

—

Resolution 23

AGRICULTURAL PLANNING

Agriculture recognizes the need for intelligent long-range planning for the industry. This planning, if it is to be recognized by agriculture, must be determined by those engaged in the industry.

We view with special concern the present national trend to create agricultural planning agencies composed of other than farmers. Such planning cannot be directed or controlled by agriculture. Since such planning offers a direct challenge to farm organizations, the Farm Bureau declares that it will recognize only such planning as is developed and approved by farmers through their farm organizations.

—

Resolution 24

APPROVAL OF RESOLUTIONS OF ASSOCIATED WOMEN OF A. F. B. F.

We approve the resolutions adopted and recommended by the Associated Women, as follows:

I. Rural youth

Since the youth of our rural communities must find a place for themselves, some urban, some rural, since a pleasant memory of life on the farm is an asset to agriculture and agricultural organizations, through creating a desire to stay on the land or understanding rural life, if choice or necessity takes them to the city.

We recommend assistance be given to the rural youth of the Nation which will aid in happy adjustments, broad understanding, and development of the latent powers of leadership.

II. Rural education

A mobile population together with various other contributing agencies makes it no longer the sole responsibility of the local unit to educate its children. We believe the Nation as a whole will prosper to the extent to which it provides equalized educational opportunities for all its citizens.

Therefore, we endorse the principle of Federal assistance on the basis of educational need.

III. Rural health

Since representatives of the American Farm Bureau Federation and Associated Women of the American Farm Bureau Federation attended the National Health Conference, called by the President in Washington, we endorse the principles of the resolutions presented by them at that time.

1. Extension of Public Health Service

Much of the costs entailed by sickness can be averted or reduced by preventive measures. The curtailment of disease is to the betterment of our society but the costs are beyond the economic resources of many of the people: Therefore, be it

Resolved, That the Associated Women of American Farm Bureau Federation hereby approves and urges the extension of all forms of preventive medicine throughout the country, particularly in the rural areas, and that the Associated Women further recommends a greater appropriation of funds under the Social Security Act for this purpose.

2. Rural Hospitals

The protection, conservation, and restoration of the health of the people is a matter in which the Government must be interested for its own welfare. Since adequate hospital facilities are indispensable in the proper care of the sick, and since hospitals are inaccessible to many rural people living in sparsely settled sections of the country: Therefore be it

Resolved, That the Associated Women of American Farm Bureau Federation urges the establishment of hospitalization facilities and provision for adequate medical care, accessible to all of the people at a price within their ability to pay.

3. Medical Care in Rural Areas

It is impossible for the individual to predict the cost of adequate medical care. Attempts to meet this situation are being met by numerous plans providing for prepayment of medical services and hospitalization on an insurance basis. It becomes apparent there is need not only to protect the members of the medical profession from burdensome regulation but to also protect the insured from exploitation: Therefore be it

Resolved, That the Associated Women of American Farm Bureau Federation recognizes this problem and recommends that the several State federations of the American Farm Bureau Federation take action looking forward to the enactment of necessary regulation embodying these principles.

IV. Children's Bureau

We recommend strengthening of the Children's Bureau so that these agencies in the United States and her possessions may provide further extension of maternal and child-health work in all of its aspects of Federal and State cooperation.

V. World peace

We affirm our belief in education through study as a method of building public opinion in our communities, States, and Nation for world peace.

We believe that unless we improve health, economic, social, and spiritual conditions of the world, peace once obtained can never be maintained.

VI. Interest in legislation

Since security for agriculture depends greatly upon legislation, we pledge our efforts to encourage members to take advantage of the franchise, voting for Representatives to the National Congress and their State legislatures, sympathetic to and understanding the needs of agriculture regardless of political affiliations.

Since rural home makers are both producers and consumers, we approve the principles of pending legislation designed to protect producers, manufacturers, and consumers from the unrevealed presence of substitutes and mixtures in spun, woven, or knitted or felted fabrics and in garments or articles of apparel or other articles made therefrom.

VII. Relationship between State federations and associated women

Inasmuch as the program of the Associated Women in many States is in an early stage of development and since they are an integral part of the Farm Bureau, we recommend that the program of State farm bureaus provide a definite plan of coordinated activity.

VIII. Discussion groups

We believe that community meetings offer the best available media to distribute information on agricultural programs. We endorse the discussion-type meeting and pledge our efforts to extend its use in the coming year.

—

Resolution 25

REAFFIRMATION

We reaffirm the resolutions adopted at the nineteenth annual meeting of the American Farm Bureau Federation except insofar as they have been modified or supplemented by the resolutions heretofore adopted by this annual meeting.

———

RESPONSE TO MESSAGE OF THE PRESIDENT OF THE UNITED STATES

We express our sincere appreciation to President Roosevelt for his splendid message addressed to President O'Neal and presented by him to the convention. His expressed confidence in the A. A. A. program for 1939 and pledge of assistance in securing any improvement in the A. A. A. that is needed to bring agriculture into a parity position renews the confidence of farmers, and we pledge our continued cooperation to President Roosevelt and the Secretary of Agriculture to this end.

———

REAFFIRMED RESOLUTIONS

In accordance with instructions by the board of directors of the A. F. B. F. on December 16, 1938, the substance of resolutions Nos. 5, 8, and 10 adopted at the 1937 annual convention of the organization are herewith presented and included as a part of this year's resolutions.

—

Resolution 5

TAXATION

We reaffirm our former position in favor of the creation of a National Tax Commission composed of representatives of the Federal and State Governments and representatives of labor, industry, and agriculture to work out a correlated tax system between the States and the Federal Government. We urge strict economy in the administration of government to the end that the Federal Budget may be balanced at the earliest practicable date. The issuance of all tax-free securities should be stopped either by consti-

tutional amendment or by the refusal of Congress to grant exemption.

We recommend that the board of directors set up a permanent tax committee to continually study the tax situation in order that our group may make great contributions to the equitable adjustments of National, State, and local tax burdens.

—

Resolution 8

RURAL ELECTRIFICATION

We reaffirm our belief that farmers are entitled to the benefits and services of high-line rural electrification power and such loans from the Government as will afford to the States sufficient funds to organize sound projects and construct lines. * * *

Farmers therefore are entitled to have a definite voice in the development and operation of these enterprises. * * * Cooperatives to be successful should be directed by capable men selected by the members of their respective communities. * * * R. E. A. to exercise only such veto as is necessary to protect their investment. * * * Federations or local projects should be permitted to provide efficient accounting, legal, engineering, and other professional services. * * *

Unless the present policy of the administration is changed, unless boards of directors are permitted to cooperate and direct their projects along sound cooperative business lines, farmers would do well to refuse further allotments and loans. If these projects are to be governmentally or bureaucratically controlled, they should not be organized under the guise of cooperatives.

—

Resolution 10

WEED CONTROL

Recognizing the alarming increase of noxious weeds as one of the greatest problems confronting agriculture, we recommend:

(a) That the A. A. A. continue weed control as a soil-maintaining or soil-building practice in the crop and range program under the Soil Conservation and Domestic Allotment Act with sufficient payments to encourage participation by farmers;

(b) That the Federal Government extend reasonable cooperation to and provide for coordination between the respective States in research on weed control and in the use of approved methods for weed eradication;

(c) That demonstrations be conducted by the Extension Service to discover the most practical methods for weed control;

(d) That research be conducted by the Government at hydroelectric plants to determine costs of necessary chemicals for the control of noxious weeds and that should chemicals not be available at prices substantially in line with the cost of producing such materials, that Government take steps to provide them at cost through farmers' cooperatives or by other means best suited to farmers of the respective States.

Shall We Fortify Guam?

EXTENSION OF REMARKS

OF

HON. BERT LORD

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1939

Mr. LORD. Mr. Speaker, in 1935, while a congressional party was in Yokohama, Japan, there was delivered to the rooms of their steamer a little pamphlet, said to have been written by a Japanese farmer. It took up a number of subjects, but finally it came to control of the nations of the world and said that Japan was willing that England should control Europe, that the United States should control the Americas, and that Japan was going to control Asia.

Since that time their acts in overrunning China have shown that they were carrying out what they were presenting to us more mildly at that time. Thousands of Japanese are filtering into the Philippines and to my mind they are going to take over the Philippines by peaceful penetration if possible.

The Filipino people themselves wanted to remain under the control of the United States, but the mixed breeds, who are the political leaders, wanted freedom for their own selfish interests so that they could manipulate the islands and islanders for their own selfish ends.

Eventually Japan will control the islands and I believe will take over the control peacefully, if possible, leaving the Filipinos on the face of it in control. The Philippines are in a very strategic position and when this is brought about and China is well under control, they will remember that the island of Guam was at one time one of the Philippine Islands and they will demand its return to the Philippine group, and if not returned they will take it. This will be done by the Filipinos with the backing of the Japanese. The question is, Will it be worth going to war about and what would the result be if we did go to war with them over this little island?

If we want a base in the Far East, why not keep the Philippines, where Manila and Manila Bay have such strong fortifications, which no foreign power could take for years. Then we would have a real base in the Philippines. But, owing to the fact that we have already given up control, or will in the near future, it seems to me futile to spend $150,000,000 on a little island that we could not possibly defend and would be of no real value to us when the Philippines are delivered over to the Japanese in 1946.

Our good friend from Minnesota, who, I believe, lets his enthusiasm run away with his good judgment, told us yesterday that Japan was not opposed to our dredging the harbor of Guam and preparing a landing base for our planes. Of course, they will not be opposed to our spending all the money we want to there in dredging the harbor, fitting it up in the best possible way we can as a military base, but, remember this, with the shores of the United States 6,000 miles away, we never will be able to defend ourselves on this little island and any time that Japan wants the base after it has been improved they will take it.

Had we seen fit to have kept the Philippines, as some people believed we should, then there would be some sense in fortifying Guam, but without the Philippines it would be the most useless base that we could have for military purposes and will only tend to get us into trouble some time in the future.

I hope that this portion of the bill appropriating money for improving the harbor of Guam will be defeated.

George Washington and the Constitution

EXTENSION OF REMARKS

OF

HON. FOSTER STEARNS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1939

RADIO ADDRESS BY HON. FOSTER STEARNS, OF NEW HAMPSHIRE, FEBRUARY 22, 1939

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on February 22:

Today we celebrate with continuing thankfulness the two hundred and sixth anniversary of the birth of a son of Virginia planters who has been known to every succeeding generation as the Father of his Country. Each year we renew the memory of that noble character and recall afresh the services that he rendered in sustaining the struggle against foreign domination and in establishing the former English Colonies in the New World as an independent Nation.

This present year has another and special significance as marking the one hundred and fiftieth anniversary of the adoption of the Federal Constitution and the inauguration of Gen. George Washington as the first President of the United States. It seems appropriate, then, that our commemoration of him at this time should be less as the great military leader and more in his relation to the organizing and establishing of the new freedom that he had led the way to win. He was indeed "first in war, first in peace, and first in the hearts of his countrymen"; and if his military achievements have entitled him to rank among the great generals of all time, his services in time of peace, if less spectacular, were no less distinguished, and were perhaps of equal importance in founding this Nation.

When peace had been declared and the British Crown had formally renounced all claim to the allegiance of its American subjects, it was a trying situation that faced the leaders of the successful revolution. With the threat from without removed, the jealousy between the different sections had free play, and the

cooperation forced on them by stern necessity was rapidly disintegrating.

The Thirteen Colonies differed widely in size and wealth, in social organization, and even in religious background; while the crude roads, almost impassable in winter and spring, made intercourse and better understanding difficult. There were even those who more than half expected to see a break-up and a return to the allegiance so lately cast off as the only way of controlling the rising tide of anarchy and disorder.

Washington himself wrote to a friend at this time: "I have seen without despondency, even for a moment, the hours which America has styled its gloomy ones, but I have beheld no day since the commencement of hostilities that I thought our liberties in such imminent danger as at present."

On resigning his commission he had retired to his estates at Mount Vernon, hoping to be left in quiet to lead the life of a country gentleman that he loved. Fortunately for the Nation, this proved to be less easy than he expected. Not only did a constant stream of visitors and an enormous correspondence indicate the confidence of his fellow citizens but I think we may be sure that an inner urge prevented him from lightly casting off all responsibility for the new Nation that he had given all his best to create. It was a remarkable group of men that was soon to meet to draw up a Constitution—on that, all historians are agreed. But while some of them may have been more learned in the law than he, not one had so clear a realization of the vital necessity for union, or so wide a vision of the Nation that was to be.

Several things had contributed to this. On the one hand, he had struggled for years for unity in the Army. Himself a Virginian, it was in Cambridge, Mass., that he took command; and in New York, New Jersey, and Pennsylvania he had worked with the local authorities and exerted all his tact and diplomacy to win their cooperation. No one man knew and understood all the varied types that went to make up the America of his day better than he. Then again, he had suffered, more than from the enemy, from the bickerings and jealousies of the Continental Congress. Accustomed to command, and with an inborn belief in the necessity for authority, he knew that the headless, formless, loosely knit organization that had almost lost the war could never command the obedience of its own citizens or the respect of foreign nations.

But beyond all this, he, of all his generation, had caught some vision of the America of the future, of the mighty empire that was to come. As a young colonial colonel he had crossed the Alleghanies and had seen the great fertile lands of the Ohio Valley, and his imagination had been fired by the possibilities for expansion and settlement. The opening up of this vast new territory became a ruling passion with him. With the practical vision that was his prevailing characteristic, he realized that the natural trend of trade beyond the mountains was down the rivers to the Mississippi and so to the Gulf of Mexico, and he came home to Virginia with his mind full of the necessity for establishing trade routes across the mountains that should link these new lands with the ports of the Atlantic seaboard.

All these varied experiences had tended to broaden his outlook, and show him the necessity of a strong central government which could command the allegiance of the people of every State, if the new Nation was to survive its birth throes in the first place, and then go on to the mighty destiny that he could see before it. A private citizen once more, he was admittedly the country's first citizen; and he never ceased to insist, to the visitors who came to him, and to those in all the 13 States who corresponded with him, on the urgent necessity for action. In a letter which he addressed to Congress, and of which he sent copies to the Governors of all the States, he said:

"The honor, power, and the interest of this country must be measured by a continental scale. To form a new constitution that will give consistency, stability, and dignity to the Union, and sufficient powers to the great council of the Nation for general purposes, is a duty incumbent on every man who wishes well to his country."

Things were moving in the right direction; but at first they moved almost imperceptibly. In April 1784 Congress timidly accepted some degree of control over foreign commerce; and Jefferson, in drafting instructions to representatives abroad, spoke of "the United States as one nation upon the principles of the Federal Constitution." "An extension of Federal powers," Washington was writing at this same time, "would make us one of the most happy, respected, and powerful nations that ever inhabited the globe." He was not afraid, as has been said, of the principle of authority in government. When Shays' rebellion broke out in Massachusetts in 1786, a correspondent suggested that "influence" be brought to bear—probably meaning the influence of Washington's own personality. "You talk, my good sir," replied the indignant general, "of employing influence to appease the present tumult in Massachusetts. I know not where that influence is to be found, or, if attainable, that it would be a proper remedy for the disorders. Influence is no government. Let us have one by which our lives, liberties, and properties will be secured, or let us know the worst at once." Words like these, in all their fire and vigor, come to us out of the past and seem to eliminate the years between as if they were newly spoken.

At length his warnings were heeded. A convention was summoned to meet at Philadelphia in May 1787 to consider the question of a form of government. Every sort of difficulty attended its inception. There were some who questioned the constitutional authority of such a body. Others felt that it was too soon to hope that the necessity of union would have made itself felt among the people. In those days of slow and imperfect communications, it was uncertain up to the very day of meeting how many of the States would deign to send delegates.

Urged by his friends and admirers to attend the Convention, Washington showed great reluctance to do so. He gave his retirement as his principal objection; but it is clear that he felt grave doubts of a successful outcome, and he may have thought that if, in case of failure, the people turned to him for leadership, his position would be stronger if he had not been personally involved in the catastrophe.

Whatever the grounds for his hesitation, they were at last overcome; and having decided where his duty lay, it is characteristic of him that, despite travel difficulties, he arrived in Philadelphia before the day set for the opening of the Convention, though many of his colleagues gave the condition of the roads as excuse for their late arrival.

This is not the time for study of the proceedings of the Convention, or the process by which a Constitution was at length evolved for submission to the States. What concerns us today is the role played by Washington in its deliberations. Its actions were secret; and he so far respected this rule that he made no mention of the doings in his diary, so that our knowledge of his part is only fragmentary; and yet, even so, his dominating influence stands out clearly.

Of course, he was elected president of the Convention. Who else should dispute the position with him? As presiding officer, he naturally took little part in the debates; that was the work of Madison, King, Hamilton, and the rest. But unquestionably he was in constant informal conference with the delegates, and it is impossible to think that his influence was not profound. Away back in the days of the second Continental Congress, the fiery Patrick Henry had said of him, "When you speak of solid opinion and sound judgment, Colonel Washington is unquestionably the greatest man upon that floor." How much greater must he have appeared to those who had watched him wring victory from defeat in the years that had tried men's souls.

Students of the Convention analyze its achievements, and attribute this or that part of the result to Madison or Wilson, Sherman or King. No doubt these men, more than Washington, were the authorities on constitutional law, and as such, were competent in drafting and amending. And yet behind them all, working quietly without tumult or oratory, we can feel the presence of that calm, strong character, seeking always harmony and smoothing out friction, till at last the seemingly impossible was accomplished, and a draft was perfected on which nearly all were agreed. It is a wonderful instance of the triumph of sheer character; and whatever the contribution of any other man, it is safe to say that it would have been useless without the cement of confidence in Washington that bound all together. "From the perusal of the records of the period," says one writer, "we rise with amazement at the unshaken patience, moderation, and firmness of Washington."

"It appears to me," Washington wrote to Lafayette, "little short of a miracle that the delegates from so many different States * * * should unite in forming a system of national government so little liable to well-founded objections."

But his work was not yet done. Great as was the achievement of attaining agreement in the Convention, the problem of ratification by the States offered still greater difficulties. Again there began the patient, untiring stream of correspondence—letters to leading men of all the 13 States, letters to his old officers, letters to all who might have influence in obtaining popular approval for the new measure.

Despite the bitter opposition and the flood of articles and pamphlets that denounced the "tyranny" of the proposed government, he remained calmly optimistic as to the outcome. He watched the proceedings in the several States, convinced, as he wrote one correspondent, "that there is no alternative between the adoption of it and anarchy," and confident that the sound judgment of the people he knew so well would recognize this. Delaware led the way; and when, in June of 1788, New Hampshire was the eighth State to follow, success was assured. Virginia, North Carolina, and New York fell into line, and when the new Government was set up in the following year Rhode Island alone still stood out.

The years of war that lay behind had been heroic and decisive; the years in public office that lay ahead were full of trials and harassments, as well as honors; but perhaps there were no years of all that great life more important in their contribution to the history of the Nation than these in which his character and his influence brought the blessing of union to a divided and distracted people.

As there could be no question who should preside over the Convention, so there could be none as to the first President under the new Constitution. His own reluctance was no match for the unanimous voice of the people. And so there came the April day, just now 150 years ago, when he stood on the balcony of Federal Hall, in Wall Street, New York, looking down on a crowd that filled the narrow street as far as eye could see on either hand, and extended away down Broad Street before him. At his side stood Robert Livingston, chancellor of the State of New York. And there,

his hand raised to heaven, he uttered for the first time that oath which the repetitions of 150 years have invested with an increasing sanctity: "I do solemnly swear that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States, so help me God."

For 8 years more he served his fellow countrymen. He saw the provisions of the new Constitution put into practice and helped, despite all factious opposition, to begin the welding of the former colonies into one united people capable of holding its place among the nations of the world. When he refused to retain that power longer, and laid down the burden of his office, he gave to the country, in his Farewell Address, his considered judgment of the experience so far accumulated, and his counsels as to the course to be followed in the future. In it he said:

"Toward the preservation of your Government and the permanency of your present happy state, it is requisite not only that you steadily discountenance irregular oppositions to its acknowledged authority, but also that you resist with care the spirit of innovation upon its principles, however specious the pretexts. One method of assault may be to effect, in the forms of the Constitution, alterations which will impair the energy of the system, and thus to undermine what cannot be directly overthrown."

Since those words were uttered nearly a century and a half has passed. The nineteenth century was an age when democracy became the fashion. One country after another, in the Old World and in the New, adopted the parliamentary form of government, and many of them modeled their constitutions more or less directly on our own. For the United States it was a period of expansion and, in the main, of prosperity. Under such conditions it was easy to be loyal to democratic institutions and there were few to question the proposition that we had evolved the most perfect system of government known to man.

How all that has changed today. Democracy, that seemed to our fathers enthroned forever, has its back to the wall and is fighting for its very life. One country after another is starting new theories of government, and others that were never democracies in more than name are dropping the pretense. Democracy is not an easy form of government; it calls for intelligence and thought on the part of the individual citizen, and its processes often seem slow and unwieldy. Dictators can cut red tape and move swiftly to their objectives, and many of their subjects have only pity for those of us who still think it necessary to go through the forms of constitutional procedure.

In such a world as that we see about us today, what are we going to do? Shall we surrender? Surrender to the spirit of the age, and say that the Constitution is out of date, that it has had its day, and must yield to newer methods?

Or do we really believe that it contains certain principles of human relationship which belong to no one age but are the statement of eternal truths, as important to the well-being and happiness of mankind today as they were in Washington's day? If we do indeed believe this, then we must be prepared to defend our belief. We must recall the world again to the principle of human brotherhood, to the right of minorities to protection, to the predominance of law over the capricious rule of despots.

It is easy for our young people to be led astray by the new theories that come to us from alien lands. It is characteristic of youth to be crusaders, to seek some cause to work for. Can we not bring them to see our American form of government as the world saw it when it was new, as a cause worthy of their enthusiasm and their zeal? Amid the crashing of empires, and the fading of democracies, will they not seize and hold aloft the banner of American democracy as being still what Washington called it, "a standard to which the wise and the honest can repair"?

It is not a question of open attack; all still render lip service to the Constitution. But it is rather the method of laxity and boring from within that Washington so clearly foresaw when he spoke of effecting alterations in its forms "which will impair the energy of the system and thus undermine what cannot be directly overthrown."

Our papers and our radio bring us news of happenings throughout the world within a few hours. We see strife and injustice stalking abroad; and it is not in human nature that we should remain indifferent. We have societies and committees among us championing all sorts of causes throughout the world; and there are many who feel that our Government should exert its influence on behalf of whoever is the victim of oppression. But unfortunately, governments are not like individuals. If I choose to play Sir Galahad, that is my own affair; if I take sides in another's quarrel, it is my personal prerogative. But a government is in the position of a trustee for its people, and must be very careful how it jeopardizes their happiness and prosperity, however good the cause. Furthermore, influence in world affairs rests, in the last analysis, on force; and we shall only make ourselves a laughingstock if we attempt to preach what we are not prepared to support by force of arms if necessary.

Washington, and those who worked with him, were not concerned to reform the world, but to insure happiness and well-being to their own people; and yet their influence on world thought and world destiny has been beyond all calculating. The greatest contribution that we, the American people, can make to a troubled and weary world today, is to set our own house in order, and to give to other nations the spectacle of a free people, moving in a peaceful and orderly manner, under the processes provided by our Constitution, toward solving the problems of this new age, and insuring to every individual who lives under our flag the right to life, liberty, and the pursuit of happiness. We can do no better than to shape our course still, as it was laid down by Washington in the beginning, toward the "consistency, stability, and dignity" of the Union.

A Study in Humanities

EXTENSION OF REMARKS

OF

HON. JOHN W. BOEHNE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1939

RADIO ADDRESS BY JOHN NAPIER DYER FEBRUARY 12, 1939

Mr. BOEHNE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered over the radio on February 12, 1939, by Hon. John Napier Dyer, of Evansville, Ind.:

When 40,000,000 good, red-blooded American citizens are hungry, lack necessary clothing, and sleep in houses with leaky roofs and worn floors, it is about time something ought to be done about it.

I listened in a few weeks ago at a hearing before the Monopolies Committee of the Senate in Washington, and I heard an eminent research engineer, the leading one in the country, say that with men, money, and materials in abundance, some way should be found to avert the economic disaster with which we are immediately confronted.

My contacts with the top men of industry in the past 6 weeks leads me to the conclusion that industrial leaders have but slight appreciation of the importance of agricultural buying power to prosperity to their stockholders and to their workers. In years gone by industrial leaders gave thought only to their stockholders, but the march of progress and recent events have convinced these leaders that the prosperity of their workers is necessary to the prosperity of their stockholders—these two now are business twins. One cannot prosper without the other's prosperity.

Speaking of hungry mouths, my attention is directed to an excellent study made by Hazel K. Stiebling, senior food economist of the United States Department of Agriculture, and by Medora M. Ward, assistant economist of the Bureau of Home Economics. In 1933 the Department of Agriculture published this study as Circular No. 296, in which were given figures showing the needs of the people for food, based upon four classifications of diet, namely: (a) Restricted diets for emergency use; (b) adequate diets at minimum cost; (c) adequate diets at moderate cost; (d) liberal diets.

I will not go into details of the classifications of these various diets—if interested you can get them from the Department of Agriculture—but you will be greatly surprised to know that if we were to feed the American people a liberal diet, especially the 40,000,000 hungry ones, to which they are rightfully entitled in this land of ours so abundantly supplied with all the elements of foodstuffs, it would require 71 percent increased production of beef cattle, 152 percent increased production of veal calves, 187 percent increased production of hogs, 85¼ percent increased production of sheep and lambs, 46¼ percent increased production of poultry, 73¾ percent increased production of dairy cattle.

Surely our people, in this land of plenty, are entitled to a liberal diet. In order to justify a mistaken agricultural policy of restricted production, must they be denied adequate food requirements?

Surely a policy which advocates and puts into effect the opening of the doors of our American markets for the sale of competitive foreign foodstuffs to a value of $1,500,000,000 annually and at the same time advocates the destruction of food crops by plowing under and the curtailment of production by the limiting of acreage is a vicious policy.

Since the beginning of our country never have we dumped a bushel of wheat into the ocean. Every bushel has been consumed either at home or used to feed the hungry in some part of the world. Of corn, it is true in places remote from the market some bushels were burned because corn became cheaper than coal for fuel, but outside of this incident, there is no record where corn has been destroyed in order to dispose of it.

The American people themselves can absorb the entire production of our agricultural fields and with the widening development of industrial uses for the products of the farms—just add 10 percent of industrial alcohol to our motor fuels and you will get a better fuel and consume the products of 30,000,000 farm acres. The time is approaching when the prophesy of James J. Hill will come to pass. He said, "America will see the time when her agricultural production will not feed the teeming millions of her population."

It is well to emphasize the statement I made in the beginning—that one-third of the people are ill-fed, ill-clothed, and ill-housed. The problem which confronts the leaders of our Government is to put together the three factors of men, money, and materials to provide the food, clothing, and shelter for our people. It certainly cannot be accomplished by political logrolling. It can be accomplished by the use of the brains and intelligence of men qualified to cope with the situation.

It has been my observation that when a great industry is in distress, the leaders of that industry call into conference the best brains which money can buy to anniyze the situation and to make recommendations which will put the industry on its feet and make it successful.

The situation today requires something more than political aptitude, although the problem is entirely a legislative one. In Congress there are at present 18 bills to correct agricultural inequalities. Some one of these or a combination of them will undoubtedly serve the purpose of bringing agricultural order out of chaos. It has been proven abundantly that the policy of scarcity will never produce prosperity and the present agricultural scheme of creating scarcity and paying farmers gratuities out of the Treasury for not producing will result in bankruptcy for the Treasury and ruin for the farmers.

Conditions have changed radically in recent years since the World War. In the early days of this country's existence we were dependent upon the exportation of the surplus production of our fields to bring to us the gold with which we might purchase the goods of foreign industries. Since the war we have become the greatest industrial and creditor nation. We no longer need the products of foreign factories and so the conditions have become reversed, and, greedy for dollars, some American manufacturers, seeking to gain an unfair share of wealth, strive to sell an excessive part of their products in foreign markets. In order to do that we must buy from the foreigners and, of necessity, we must buy their agricultural products in exchange for our industrial products because our principal manufacturing industries are protected by a very high tariff.

When you know that the total of our exports never exceed 9 percent of our total production, and that our domestic requirements are 91 percent or more of our total domestic production, you will appreciate the fact that America is the best market in the world for Americans.

Free trade never has produced satisfactory results in any nation which has tried it. Our United States has become the richest nation in the world under a system which protects our labor and our industry, and which must now be made to protect our agriculture more effectively.

A certain degree of reciprocity in foreign trade is entirely essential because there are many things which we in America do not produce and which we use in very large quantities. Coffee, tea, spices, rubber, and a few others are things which cannot be grown in America and we are, therefore, dependent upon foreign sources of supply, but what justification can anybody offer for the importation of wheat, corn, cotton, and almost our entire supply of canned meats and millions of dollars of hog products from foreign countries.

I told you a few moments ago that if we would feed the American people a liberal diet it would require an increased domestic production of more than 150 percent of hogs and cattle alone.

Surely nothing can be gained except the destruction of our America by the persistency of those who seek to foster peace and good will by sacrificing the American agricultural producer in the interest of the foreign farmer. Let me tell you, good people, the moment a black cloud appears upon the horizon in international relationships, the countries whose good will we fostered will sacrifice the good will and we will be left bereft of the facilities for production to meet a condition which cannot be met overnight. Far better for us to recognize the importance of continued increased production of all of our great raw material resources to sell them to American consumers and to a world which needs them to create a vast volume of business which will force us into a condition of prosperity that will tax the facilities of the Nation to supply the needs and the wants of the American people for every conceivable thing they might require in our great democracy.

America first—corn, wheat, and cotton are needed in abundance. Ten million people sleep on boards and shucks, and we have 11,000,000 bales of surplus cotton which we are taught to look upon as a peril, while it is a God-given asset to succor the needy. A part of this cotton can be converted into mattresses to give 10,000,000 people comfortable sleep. Forty million people need clothing. Some of these 11,000,000 bales of cotton can be converted into clothing to clothe the naked bodies of American citizens. Forty million people need food, and the surplus of our wheat and corn will melt away like the snowball in the proverbial hot place when we will have supplied the liberal diet so essential to the human welfare of these 40,000,000 people.

Let America be first for American agriculture and American industry, and when we will have recognized the importance of destroying the connection which fixes the price of our agricultural commodities to a world price basis in the interest of foreign farmers and will have established an American price for American raw products we will have done that which will create an American buying power to consume the products of industry, to create employment for labor, and return America to a realm of prosperity never before reached in the history of the world.

Discussion of the Constitution From the People's Standpoint

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1939

ADDRESS BY HON. J. THORKELSON, OF MONTANA, FEBRUARY 22, 1939

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which was delivered last night by the gentleman from Montana [Mr. THORKELSON]:

Mr. Chairman, brother Masons, and guests, here in the atmosphere of those who established the United States of America and in this historic place I shall, as others have before me, lift the curtain of the past so that we may commemorate a worthy master. Nothing that I may say tonight can add more reverence for President Washington than he now holds in the heart of every patriotic American.

We who are here cannot add to his greatness, but instead to our own by adhering to his advice. I shall, therefore, put aside the turmoil of today as I walk hand in hand with the past.

One hundred and sixty-three years ago a harassed people declared:

"When in the course of human events it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth the separate and equal station to which the laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation."

So came into being the Declaration of Independence, July 4, 1776.

The causes which led to this declaration were the denial of certain inalienable rights—"to life, liberty, and the pursuit of happiness." This small nucleus of men and women desired nothing more than the right to govern themselves, so they and their children could be free.

Complainingly they said: "When a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and provide new guards for their own security."

In order to be clearly understood and fair, they said, "Let facts be submitted to a candid world." And here they are: He has made judges dependent upon his will alone; he has erected a multitude of offices and sent here swarms of officers to harass our people; he has combined with others to subject us to a jurisdiction foreign to our Constitution and unacknowledged by our laws, giving his assent to their acts of pretended legislation for cutting off our trade with all parts of the world, for imposing taxes on us without our consent, and altering fundamentally the forms of our governments. These and many other grievances caused separation from England.

Our forefathers had lived under tyrannical and despotic rulers for many centuries. They had suffered and bled under the despot's whip. They were familiar with the dictator's iron hand, and knew it dealt nothing but misery and suffering to all people. They had suffered from and by religious persecution. They had been victims of intolerable tithes and taxes, enforced by the grinding wheel of the politician. They had not only been subject to persecution by the state but to greater persecution by the church itself. Suffering beyond human endurance had been inflicted upon them, not only at home, but in transit to penal colonies. From this torture their only relief was in death, but their hope was to reach new lands in which they could enjoy the divine right of human beings—to live in freedom and happiness with their own.

This great desire found expression in the Constitution of the United States, and it is, in reality, the ultimate desire of a people embodied in a fundamental or basic law in which they select a government for the general welfare of themselves and all generations to come. So, as the people spoke to their elected representatives, or Congress, 151 years ago, I speak again tonight.

THE PEOPLE'S INSTRUCTIONS TO CONGRESS

This is the Constitution of the United States, and it is for your guide and for the people's protection against Government folly and political greed. Our Nation's security is assured by adhering to it. National disintegration is certainly assured by departure from it. Be faithful to yourself and to your people in preserving, protecting, and in defense of it—so the Nation will always be secure.

You men in Congress are elected to represent us, and we hold you accountable for the Nation's safety. We have delegated certain power to you, but we have reserved the greater rights and power to ourselves. You must not exceed the power we have given to you, and

you must not disparage the rights we have reserved for ourselves. If any question arises as to understanding, let the Constitution be your guide, for you alone are responsible for the Nation's safety.

So spoke a people to Congress 151 years past. It is now time for us to take stock and charge errors to those responsible—to the Congress of the United States.

RIGHTS RESERVED BY THE PEOPLE

The tenth amendment reserves all power to the States and to the people that is not delegated to the Federal Government. The ninth amendment is a warning to Congress and others not to look upon the people's rights lightly.

If any question arises as to the understanding of the Constitution, the benefit of such doubt must be given to the people, the owners of it. Failure of Congress to adhere to these two amendments can only end in disintegration and ultimate destruction of a republican form of government—such as ours.

It follows, therefore, that the States reserve the right of legislation and regulation of all business within the State, and the people reserve the right to operate such business free from competition with city, county, State, or Federal Government. This is only just and right, for inasmuch as business is paying the total government expenses, the right to earn must not be destroyed by government competition.

When Congress allows Federal invasion of the States and Government ownership of business it has betrayed the people. In the passing of the last private business enterprise to Federal ownership the conversion of popular government to a totalitarian government is complete and Congress is no longer needed.

WHAT POWER HAS CONGRESS?

Article I, section 1: "All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives." This is all legislative power granted to Congress and no more. Congress has no right to transfer this power to anyone or to enact legislation which restricts or deprives the people of their rights. Congress or anyone else has no right to interpret the Constitution upon previous decisions but must instead rely for instruction upon the Constitution itself.

It is only reasonable to assume that Congress having the constitutional power to enact legislation should at least possess the ability to determine if it is constitutional.

Article I of the Constitution up to section 8 deals to great extent with organization and regulation. I shall not speak of that tonight but pass on to issues of greater importance to us. In section 8 begins enumerations of certain powers given to Congress. "The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States."

In this section power is delegated to Congress to lay and collect taxes. Such power of taxation may be assumed to permit the levying of taxes on incomes, salaries, tax-exempt bonds, and securities. However, if it is for the general welfare of the United States, exception may be made as Congress believes advisable. Congress must bear in mind that for the "general welfare" means for all the States and not for any particular State or group of people.

The power to lay and collect duties, imposts, and excises, to pay debts, to provide for the common defense and general welfare of the United States, in my opinion, should be considered apart from military defense and general welfare, because it is incorporated in a paragraph of the Constitution which, no doubt, refers to commercial or economic defense and commercial and economic welfare, inasmuch as it refers to duties, tariffs, and payments of debts.

I believe I am further justified in this opinion because the next paragraph is to borrow money and the third is, I quote: "To regulate commerce with foreign nations and among the several States and with the Indian tribes." This gives power to Congress to regulate commerce or trade between different places while in transit. The power is also given to regulate commerce with foreign nations and with the Indian tribes, which is in reality a greater power than that of regulating commerce among the States. Such power of regulation may be assumed to comprise safety of transfer either on land or water. It does not, however, give Congress the right to step within and regulate the capital structure of a private business within a State.

In the next paragraph the power is given to Congress "To establish a uniform rule of naturalization and uniform laws on the subject of bankruptcies throughout the United States." This I shall not discuss tonight.

It is, however, my desire to discuss the next paragraph: "To coin money, regulate the value thereof, and of foreign coin." The power to coin money is not disputed. The power to regulate the value of our money and of foreign coin admits that value exists. The internationally recognized standard of value is gold, so regulation of value refers to that and nothing else. When gold is removed as standard of security for money, nothing of value is left to be regulated.

The Constitution also gives power to Congress "to provide for the punishment of counterfeiting; to establish post offices and post roads; to promote the progress of science; to constitute tribunals inferior to the Supreme Court."

Congress, of course, has the power "to declare war," but Congress cannot always control and maintain peace, so it becomes the duty of Congress to maintain sufficient military forces to assure peace. Realizing the danger of unpreparedness, the Constitution makes it obligatory upon Congress "to raise and support armies; to provide and maintain a Navy; to make rules for the government and regulation of the land and naval forces; to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions; to provide for organizing, arming, and disciplining the militia." These powers are very important for the common military defense and general welfare of the United States. I mention this as a contrast to the economic defense and general welfare. Money expended for military defense is for the general welfare for the United States.

Finally, Congress shall have the power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

It is also well to bear in mind, the Congress has no constitutional power to set aside or appropriate any amount of money except as provided for in article I, section 9: "No money shall be drawn from the Treasury but in consequence of appropriations made by laws, and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time." It is also the duty of Congress to prevent any State from making "anything but gold and silver coin a tender in payment of debts."

The necessity for amendments, from and including the eleventh, is questionable. Some of them are not required; and one, the eighteenth amendment, was distinctly harmful not only to the Constitution but to the Nation.

We must bear in mind the fact that the Constitution can easily be destroyed by too many amendments, because they create antagonism and confusion.

As points for comparison, I quote article III, section 2: "The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority; to all cases affecting ambassadors, other public ministers and consuls; to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more States; between a State and citizens of another State; between citizens of different States; between citizens of the same State claiming lands under grants of different States, and between a State, or the citizens thereof, and foreign states, citizens, or subjects."

Now, the eleventh amendment: "The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another State, or by citizens or subjects of any foreign state." This amendment is slightly confusing, particularly in its exclusion of citizens and subjects of foreign States. One would rather think that in controversies with foreign subjects the Supreme Court would preside.

The twelfth amendment changed the original system of election of the President and could have been corrected without a constitutional amendment.

The thirteenth amendment, the antislavery amendment, is unnecessary, because the Constitution admits equality among all men.

In article I, section 8, paragraph 4, Congress has the power "To establish an uniform rule of naturalization," and article 4, section 2, states that: "The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States." In these words, the Constitution does not provide for slavery but provides instead for freedom and equality.

The Constitution makes no distinction between sex, creed, race, or color, so it may therefore be assumed that the thirteenth, fourteenth, fifteenth, and nineteenth amendments were not really needed. I quote, amendment 10: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." It follows, therefore, the words "or to the people" include all human beings who are citizens of the United States.

I shall quote another example of legal conflict:

Section 8, paragraph 1: "Congress shall have power to lay and collect taxes." For comparison, I quote:

Amendment 16: "Congress shall have power to lay and collect taxes on incomes, from whatever source derived."

It is obvious that the sixteenth amendment does not allow greater taxing power to Congress than it had in article I, section 8. The sixteenth amendment, however, makes it almost obligatory upon Congress to collect taxes on incomes, whether they be tax exempt or not. I speak of this simply as a point of interest, for I still hold that the amendments were not needed and that no other amendments should be incorporated in the Constitution.

In closing I cannot help from reminding you that multitudinous laws create a legal despotism which is destructive to free governments. It was state and church laws that brought about the inquisition and persecution in the early ages. Legal fanaticism is more destructive to liberty and freedom than foreign wars. Costly irresponsible legislation is breaking the back of business today and will, if continued, end in strife. We need revision and the elimination of all laws which are not constitutional or which do not come within the Constitution itself. Then, and not until then, will a true republican democracy rule.

Our trouble today is not due to the obsolescence of the Constitution but is instead due to the indifference to it. The Constitution itself is of greater value today than it was when drafted, and

if the conditions which led to its creation could be reenacted, the same instrument would come forth.

It seems to me that the Constitution provides all necessary basic principles upon which justice can be found and rights established, so perpetuation of free government can be maintained only if we walk shoulder to shoulder in the support of the Constitution.

It is my desire to warn the American people that if they do not insist upon Congress enacting legislation that is clearly within the Constitution, and if they do not insist upon having laws repealed which are now clearly unconstitutional, posterity will pay for their mistakes. It is also the duty of the American people to see that the Supreme Court take cognizance of the Constitution and render its decisions not upon previous decisions, but definitely upon and within the Constitution itself.

Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1939

RESOLUTION OF HOUSE OF REPRESENTATIVES OF THE STATE OF INDIANA

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the House of Representatives of the State of Indiana:

Whereas in the turmoil and strife of life the people of the entire world are worried and grief stricken with war and the rumors of war; and

Whereas how well do we remember the World War, as it was waged to make the world "safe for democracy" with its trail of sickness, disease, death, and distress; and

Whereas we also remember that the World War was directly responsible for the world-wide depression, which we are still in today; and

Whereas there has never been a time since the armistice was signed that the Old World, with its dictators, despots, and tyrants have not kept the countries of Europe in turmoil and revolution, and have not sought to draw the outside world into their troubles; and

Whereas this House of Representatives of the Eighty-first General Assembly of the State of Indiana is convinced and fully believe that we in Indiana have enough to do to attend to our own affairs and keep our nose out of the other fellow's business, and stand shoulder to shoulder for American principles and American Government; and

Whereas we are in the faith that George Washington was correct when he advised against foreign entanglements in any form; and

Whereas as Americans we believe in the Monroe Doctrine in all of its applications and to prepare for defense at home and not for conflict on foreign shores: Now, therefore, be it

Resolved, That this house of representatives now goes on record as opposing entanglements with foreign countries or going to war on foreign shores, and that we stand for peace with the world first, last, and always, and that if war becomes necessary it shall be only for the purpose of protecting our own firesides, our families and loved ones at home and not abroad; and we ask our Indiana congressional delegation at Washington, both in the House of Representatives and the United States Senate, to support the principles that we advocate in this resolution, and that a copy of this resolution be mailed by the chief clerk of this house to each Indiana Congressman and the two United States Senators at once.

Lincoln Protective Club of Kentucky

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1939

ADDRESS BY HON. J. WILLIAM DITTER, OF PENNSYLVANIA, AT LOUISVILLE, KY., FEBRUARY 11, 1939

Mr. ROBSION of Kentucky. Mr. Speaker, I wish to thank the Speaker and the Members of the House for the courtesy of permitting me to extend my remarks and include therein the speech delivered by Hon. J. WILLIAM DITTER, chairman of the National Republican Congressional Committee, at the Lincoln anniversary dinner of the Lincoln Protective Club of Kentucky, Brown Hotel, Louisville, Ky., on Saturday evening, February 11, 1939. I have had many requests from people of my State for a copy of this speech, and no speech delivered in Kentucky by any Republican has been commented on to me so frequently and so favorably. Congressman DITTER paid a most eloquent tribute to Kentucky's most distinguished son, the Nation's first and greatest commoner, the masterful man of the ages. He made a great plea for honesty and economy in Government, and true Americanism. It is a sound presentation of American principles, coming from one of the ablest and most eloquent leaders of the Republican Party in the Nation.

The speech is as follows:

I deeply appreciate the privilege of being your guest on this twenty-fifth anniversary of the Lincoln Protective Club of Kentucky. It is a real pleasure to address such a distinguished audience. It is an honor to have a part in paying tribute to Kentucky's most illustrious son, Abraham Lincoln.

Coming as I do from the "valley of the shadow of that death out of which the life of America rose, regenerate and free," the sacred shrine of Valley Forge, I can appreciate the pride which Kentucky justifiably takes in having borne and cradled America's most devoted defender of its faith, its most courageous champion of freedom.

But while the praise of Kentucky is still on my lips, may I in passing pay a deserved tribute to that company of valiant Kentuckians that, in spite of Federal favors and "My Dear Alben" messages, has held tenaciously to the faith of the fathers, marching to the polls, casting Republican ballots and sending to the Congress as its lone apostle to preach a sound doctrine another of Kentucky's able sons, JOHN ROBSION. May God protect these fearless sons and daughters of Kentucky, and may they follow the Biblical injunction to be fruitful and multiply.

Then, again, I would be remiss were I to fail to acknowledge the gracious hospitality which it has been our privilege to enjoy at your hands. It has both in form and substance lived up to the best traditions of Kentucky, where charming women, courteous men, and good spirits make an almost irresistible trio. We are grateful for the warmth of your welcome and the graciousness of your hospitality.

We gather tonight to pay tribute to a great man, Abraham Lincoln. Nothing we say can add to the luster of his name or to the worth of his achievements. We honor ourselves in paying homage to his memory. It will be to the never-ending glory of this magnificent State that she gave him to the Nation. It will be to the never-ending glory of our Nation that she gave him to the world. In all the history of mankind there is no more beautiful and impressive instance of the lowliness of humility raised to the grandeur of greatness than in the life of Abraham Lincoln. No man had a lowlier birth. In that rude log cabin at Hodgenville this great son of Kentucky was born under circumstances which remind us with a singular poignancy of the birth of another in a manger at Bethlehem, and from the fellowship of their humility there grew the comradeship of ministry as the troubled soul of the President in his hours of travail and anguish turned to the assuring presence of the Galilean Master for comfort and guidance.

The story of Lincoln's birth and boyhood has been recounted so often that it is hardly necessary to repeat it again. It will remain as long as history lasts a never-failing inspiration to those who seek to climb from the depths of privation and hardship to the attainment of their ambitions and ideals. That story proves the worth of individual liberty under our American system of equality of opportunity. It is the thrilling adventure of the individual encouraged by competition to develop the best with which God has endowed him in body, mind, and spirit.

All of us are likewise familiar with the part which Lincoln played in the preliminary skirmishes leading up to the most critical hour in our Nation's history, the hour in which he was destined to take the leading role.

We pay our tribute to him tonight not because of the lowliness of his birth, not because of the rigid requirements of his training, not because of the energy of his endeavors. We pay our tribute tonight to the man—the man in whose heart the Kingdom of Heaven had been born, in whose soul the love of humanity lived, with whose lips the prayer of the helpless was pleaded, and in whose hands were given for safekeeping the yearnings, the hopes, and the faith of freemen to govern themselves.

"His philosophy was as subtle as the multitudinous system of roots anchoring in ancient oak, and he was as simple and steadfast as the oak itself. An oak fastens its roots in the living rock, deep buried in the cool earth; so Lincoln fastened the roots of his being to the eternal rock of truth in the recesses where the storms could not dislodge them. Around the rock of ages entwined the most tenacious tendrils of his soul."

Abraham Lincoln ever clung to the verities. Surrounded by suspicions, jealousies, and the vengeful thrusts of even his closest advisers, and confronted by tasks testing his patience, his courage, and his faith, he never for a moment forsook those ancient truths which are everlasting and yet always new. He clung to the verity of the power of right as he challenged, "Let us have faith that

right makes might, and in that faith let us, to the end, dare to do our duty as we understand it." He clung to the verity of his faith in God and to his faith in his fellow men. He clung to the verity of the power of love and forbearance as he declared, "I shall do nothing in malice." He ever clung to the verity of freedom. To him freedom was a reality—a dynamic power, a tremendous force before which a system of human slavery could not endure. "In giving freedom to the slaves we assure freedom to the free. As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this, to the extent of the difference, is no democracy."

As we pay our homage to the memory of this foremost son of Kentucky, to this great son of America, we catch the vision of a tender heart touching the fevered brow of both the Blue and the Gray; the vision of a godlike soul pouring out its unction to soothe the heartache of the bereaved; the vision of a strong man breaking the shackles that had bound a downtrodden people in servitude and subjection; the vision of a soldier and a saint marshalling an army against secession and yet pleading with infinite tenderness the hope for a united people with the assurance that there would be "malice toward none" and "charity for all."

Lincoln was born that the Union might be saved. Lincoln lived that the Nation might survive. Lincoln died that liberty might endure.

For 6 long years we have engaged in a great struggle to determine whether his birth, his life, and his death were in vain. It is the struggle to retain the right of liberty. It is the struggle of emancipation from a government of men. It is the struggle to avoid a servitude of political domination more humiliating and deadening than the shackles of human slavery. It is the struggle to release the energies and abilities of the individual citizen from the paralyzing dictation of a master, no matter who that master may be or how kind his intention. It is the struggle of a government of laws against a government of men. It is the struggle of Lincoln liberalism against Roosevelt reaction, with the one dedicating itself to free men and the other contending to regiment them. It is the republic of Lincoln against the rulership of Roosevelt.

With this critical struggle upon us, the warning of Lincoln against the ambition of men to rule comes to us with tremendous meaning, for he said: "It scorns to tread in the footsteps of any predecessor, however illustrious. It thirsts and burns for distinction and, if possible, it will have it, whether at the expense of emancipating slaves or enslaving freemen. Is it unreasonable, then, to expect that some man possessed of the loftiest genius, coupled with ambition sufficient to push to its utmost stretch, will at some time spring up among us? And when such a one does, it will require the people to be united with each other, attached to the Government and laws, and generally intelligent to successfully frustrate his designs."

The compelling challenge of this struggle today calls for men, "strong minds, great hearts, true faith, and ready hands" * * * "men whom the lust of office does not kill. Men whom the spoils of office cannot buy. Men who possess opinions and will. Men who have honor, men who will not lie."

The Republican Party answers that challenge today.

Since March 4, 1933, a strange and sinister philosophy of government has been urged as the only solution of our social and economic problems. That philosophy has been heralded as a New Deal. There has been nothing new about it, but plenty of deals in it. Every effort has been made to stamp it with the label of liberalism. It attempts to parade under a banner of progressivism. In truth, that philosophy is as far removed from the spirit of liberalism and progress as the poles are from each other. That philosophy is the reactionary philosophy of the Middle Ages—the philosophy of compulsion; the philosophy of tyranny; the philosophy of one-man government, unrestrained by either legislative independence or judicial integrity. It means the might of a man above the majesty of the law. It is a government of men rather than a government of laws.

The New Deal has sought to impose upon us a form of servitude reaching into every personal relationship and controlling every activity of our national life. Compulsion, coercion, and intimidation have been the order of the day. Flying in the face of precedent and with a disdainful disregard of tradition and established order, the New Deal has sought to fasten upon us a servitude not unlike the slavery against which Lincoln contended. The New Deal must be destroyed if the spirit of Lincoln is to live. Lincoln freed men. The New Deal regiments men. Lincoln fought for the emancipation of men. The New Deal contends for the enslavement of men. The Republican Party opposes the philosophy of a master today just as Lincoln opposed slavery in his day. As the bondsman plodding wearily in his dull drudgery looked with hope to Lincoln, so American freemen look today to the Republican Party with faith.

As a part of this new philosophy of government is the theory that the power of the Executive should be extended entirely contrary to both the letter and the spirit of our fundamental law. The time honored system of checks and balances has been ignored. Efforts have been made by the President to exercise powers which were described by Justice Cardozo as "unconfined and vagrant." This is the most dangerous aspect of the New Deal.

Passion for power is subtle and insidious. It springs from personal popularity and grows with each new grant of authority. Crises and emergencies provide fertile fields for its development until the restraints of law are cast aside and the despotism of a ruler prevails. Well might we ponder today the admonitions of Lincoln when he said, "A majority held in restraint by constitutional checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people. Whoever rejects it, does, of necessity, fly to anarchy or to despotism."

For 6 long years a campaign of vilification and invective, which has no parallel in our history, has been resorted to by the champions of the New Deal to arouse class hatreds and to discredit the motives of those who have been courageous enough to oppose policies of enslavement. Pronouncements breathing bitterness, hatred, and malice have torn into the heart of our social structure, so that dissensions bordering upon the conditions prevailing in Lincoln's day have reared their menacing figures before us. Employer is arrayed against employee. The haves are pitted against the have-nots. Agriculture contends with industry.

What a comfort it would be today if we might have substituted for Torics, economic royalists, and Lord Macaulays the spirit which could break down the estrangement of a civil war with the assurance that there would be "Malice toward none and charity for all." Lincoln sought to heal the wounds. He could never stoop to aggravate them. "Let us remember that all American citizens are brothers in a common country and should dwell together in the bonds of fraternal feeling." But the moral fiber of our people has been weakened not only by the malicious thrusts of hatred and ill will but by the doctrine that the end justifies the means. With this doctrine as the only excuse, the solemn covenants of the Nation have been repudiated, the providences of God for bountiful harvests have been destroyed, and the needs of distressed millions have been auctioned on the block of political expediency.

Our heads hang in shame tonight as we are compelled to admit a national scandal in the administration of relief, a scandal which has no parallel in our Nation's history. But that scandal continues in brazen boldness to flaunt its ugly features before us with only a perfunctory condemnation from those in authority. With pharisaical righteousness there have been shouts for reform in business, industry, and finance, while a gigantic and corrupt public spoils system of relief has been reared which shocks the sensibilities of every decent moral instinct. Lincoln refused to compromise on principles. "You will never get me to support a measure which I believe to be wrong, although by doing so I may accomplish that which I believe to be right." We dare not compromise on principles today. There can be no recovery along material lines until there is a reawakening of conscience which will condemn corruption instead of condoning it, and which will not approve wrong principles to get an alleged right thing accomplished.

Lincoln learned the lessons of thrift and frugality in his childhood. They became part of the fabric of his character. He never forgot them. A lap of luxury was not a part of the frontier life from which he sprang. Economy was the watchword. It had to be. The struggle for existence required it.

What he practiced in private life Lincoln exemplified in his public life. He opposed a loose fiscal policy in the administration of the Federal Government when he said, "For several years past the revenues of the Government have been unequal to its expenditures, and consequently loan after loan, sometimes direct and sometimes indirect in form, has been resorted to. By this means a new national debt has been created and is still growing on us with a rapidity only reasonably to be expected in time of war. Coming expenditures must be met and the present debt must be paid; and money cannot always be borrowed for these objects. The system of loans is but temporary in its nature and must soon explode. It is a system not only ruinous while it lasts, but one that must soon fail and leave us destitute. As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and, next, no one left to borrow from, so must it be with a government."

These words come to us with singular significance today. Billions of dollars are being added yearly to an already staggering mountain of national debt, with no real and sincere effort being made to curtail expenditures or to bring outgo in line with income. Year after year pretenses and promises have been made of Budget balancing, but each year finds us owing more than we started with at the beginning. We have already had requests from the White House this year for appropriations of $12,000,000,000, and the session of the Congress is little more than a month old. Living beyond our means is the new axiom for prosperity. The prodigal son has been made a new national hero. If we were on the road to national bankruptcy in 1932, we must be there by this time. We repeat again the words of Lincoln that a system of borrowing is "not only ruinous while it lasts but one that must soon fail and leave us destitute."

We have heard much in these latter years that changes wrought in civilization have made old-fashioned and obsolete the concepts of the fathers. That is false doctrine. The truths to which Lincoln clung are the truths to which we today must cling. Any departure from the American way, from the way of the Declaration of Independence and the Constitution in the life or the government of the American people, is not a new way; it is an attempt to return to the old way and the old tyrannies which we threw off when those brave men of another day met at Philadelphia to decree the right of every man, however humble, to life, liberty, and the pursuit of happiness.

If there is any single outstanding attribute of Abraham Lincoln that can be chosen as typical of the man, it was his profound belief in the emancipation, and not the regimentation, of men, as the mark of real liberalism and good government.

As we hark back over the past 6 years and mark the trends away from individual liberty, freedom of the press, free speech, and sanctity of property, we realize that that battle for freedom

which was Lincoln's must be carried on by the Republican Party, which was Lincoln's party.

Just as Lincoln, in anguish of soul, finally had to employ the armed forces of his Nation to rescue men from the flailing lashes of the Simon Legrees of his day, so must we as Republicans and as followers of Lincoln employ all of our political force to overthrow the Simon Legrees who now beset us in the guise of A. A. A. regulators and W. P. A. whipcrackers.

Gentle of nature though he was Lincoln knew the necessity of the use of force when battling for the right. He knew that rails could not be split with a tack hammer. They required a maul. So it is that the Republican Party must not flinch from the use of all its political force in battling for the right, always using that force, "With malice toward none, with charity for all."

As Lincoln in his day fought one form of servitude, we Republicans of this day must fight another form of servitude. Political slavery is the most insidious of dangers because its approach is the most difficult for people to perceive. Having its origins in small unnoticed beginnings, it spreads through the body politic undetected until, when its final manifestations become visible, it is so far advanced as to require superhuman efforts by the people to check and repel its onslaught.

Political subjugation of a free people may evolve almost imperceptibly out of crises or emergencies—real or imagined—which temporarily call for the exercise of a centralized control on the part of the Federal Government. When that centralized control is extended beyond the period of the emergency and an effort is made to fix it upon the people as a permanent method of government, it is then that those vigilant for continued freedom become alarmed.

Passion for power is a subtle and insidious malady, and not one of us knows when or where it will affect those in control of government. Regardless of whom it attacks or by what self-delusion or self-justification its operation is condoned by the individual in himself or by his supporters in him, unless it is checked, it always goes on to the complete destruction of a free republic and the enslavement of the people under some form of absolutism directly opposed to those tenets of freedom we of America know and love.

For 6 long years we have seen trends toward regimenting the individual and establishing the State as the master of men. Time-honored and proven precedents have been ignored. Neither the Constitution, the Congress, nor the Court has been overlooked as the effort has been made to establish Executive domination. The road has been a road to tyranny, not a road to liberty. Limitations and restraints have been brushed aside as relics of a bygone day. Experiments have been plied upon experiments in every field of activity while a vacillating policy in charge of affairs has been utterly lacking in direction, method, or purpose. Men have been N. R. A.'d and A. A. A.'d and otherwise alphabetized so that they no longer know why, how, or when. We have had a chaos of plans and a confusion of ideas which leave our economic problems unsolved and our political structure unstable. With the glaring inconsistencies of the New Deal before us, we can appreciate Lincoln's words, "You are united among yourselves in your determination to break with the past, but you are utterly divided as to where you are going."

A troubled and tormented world faces us. Anxiety and apprehension are written on the faces of the men and women of the nations. There are those at home who sense an imminent danger from these volcanic eruptions of hate and jealousy. Reasoned and deliberative judgment must prevail if disaster is to be avoided. Lincoln bluntly put the question as to where the source of danger to the Republic might lie.

"At what point shall we expect the approach of danger? By what means shall we fortify against it? Shall we expect some trans-Atlantic military giant to step the ocean and crush us at a blow? Never. All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth (our own excepted) in their military chests, with a Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years * * *."

Again he said in answer to his own question:

"* * * At what point, then, is the danger to be expected? I answer, if it ever reaches us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of freemen, we must live through all time or die by suicide."

Today, as never before, the Republic needs the spirit of Lincoln. It needs the common sense, the integrity, the forebearance, the ruggedness, the self-reliance of the Great Emancipator. It needs the uplifting force of a dynamic spiritual power which will make conduct square itself with conscience and compel the right to challenge the wrong. It needs a rekindling of the love of liberty which will rebel against servitude and enslavement. The spirit of Lincoln must give the soul of America its rebirth today.

The Republican Party as the party of Lincoln faces a stern responsibility. Its policies must answer the needs of the day. It should insist on the preservation of self-government under our established system of local government. It should insist on a social system which recognizes no class nor creed, and which offers equality of opportunity as a stimulus to individual initiative, individual endeavor, and individual responsibility. It must demand honesty as the only policy in public administration. It must insist upon justice in the controversies arising in the economic, social, and political life of the Nation. It should stand foursquare for the maintenance of law and order and the protection of every citizen in the exercise of his rights of life, liberty, and the pursuit of happiness. It should encourage the resourcefulness of our people to embrace the opportunities of education, science, and invention to provide for themselves a larger and fuller life. It should advocate a philosophy of plenty and denounce the theory of scarcity as a road to prosperity.

Our first concern, as it was Lincoln's first concern, is to restore our own domestic economy to a sound basis. That can mean nothing if it does not mean putting America back to work in productive employment. A normal prosperity can be established only when private industry can provide employment for our people. And private industry can only do so when confidence is restored to encourage capital investments. Millions of dollars lie idle today which would provide the basis for expansion and development were the threats of punitive and penalizing measures removed. The American market should be reclaimed for the American workmen and the American farmers. Instead of the idealistic, yes, and possibly the altruistic, fallacy of trade treaties bringing to our shores the competitive products of foreign countries, the best interests of our own people should be our first concern.

Our financial house should be put in order. Spending specialists, like money changers, should be driven from the temple. We cannot spend ourselves into prosperity any more than we can buy our way into heaven. "A fool and his money are soon parted." There has been a lot of money parted from the Federal Treasury, and it has not taken so long to do it, either. A stupendous national debt, a crushing tax burden, and disastrous deficits destroy all hope for a restored confidence. Every dollar spent must be earned by someone, and every dollar wasted is labor thrown away. Profligacy never made prosperity, and it never will. With true Lincoln liberalism we must point the way for freemen to create and exercise the God-given opportunities which are theirs as Americans for a fuller and a richer and a more complete life.

Many problems confront us as a people, just as they confronted the people of Lincoln's day. We will meet them and conquer them with that stern resolution and high purpose which enabled Lincoln to lead our Nation out of peril, or, as he said, we will die by national suicide.

If there ever has been a time in this Nation when the shining and inspiring example of the humble, great Lincoln was needed, it is now. Only the history of a thousand years can evaluate the worth to mankind of that event in that rude log hut among the green-clad hills of this noble commonwealth, when the first cry of the infant Lincoln fell upon human ears. Only the history of a thousand years can evaluate the worth to the Nation and to the world of his trials and struggles from poverty, privation, and obscurity, up to the highest place of honor and power within the gift of his country.

On last November 8 the American people again said to the party of Lincoln: "We want you to restore and to preserve Lincoln's government 'of the people, by the people, for the people.' Let it not perish from the earth."

That is the challenge.

What is our answer?

Shall we permit the fears and the prejudices, the class hatreds and the sectional jealousies aroused under the New Deal Administration to continue until our people disintegrate into groups warring among themselves and, so disunited, become easy prey to the designs of those who would overthrow our free Government and substitute some form of absolutism? Shall we permit these hatreds and prejudices and fears to be transmitted to the next generation, that in their hearts and their lives may be wrought the fearful havoc of these un-American and undemocratic emotions? Shall we meet this challenge with high resolve and a vision of a restored and happy people, a high purpose that will justify the fidelity and the devotion which Lincoln gave up to that moment when he crossed over to that shore from which no traveler ever returns?

I say to you, the Republican Party will meet this challenge. We will justify Lincoln's faith. We will carry on his work. And if, mayhap, from that far-shining shore he can look back to watch what we shall do, we pray that his gentle soul may know that joy which comes to those great ones of earth who with unselfish devotion struggle in the lowest depths, climb to the highest heights, and take, part of the way at least, their brothers with them.

Hear, Father Abraham, we shall not fail.

Let the Battle Hymn of the Republic be our marching song. Let us rise to the inspiration of the call in that magnificent old hymn:

"He has sounded forth the trumpet that shall never call retreat;
He is sifting out the hearts of men before His judgment seat;
Oh, be swift, my soul, to answer Him; be jubilant, my feet!
Our God is marching on.

In the beauty of the lilies Christ was born across the sea,
With a glory in His bosom that transfigures you and me;
As He died to make men holy, let us die to make men free,
While God is marching on."

A thousand autumns may turn the leaves to red and gold, a thousand winter snows may spread their white mantles over the face of this fair land, a thousand spring zephyrs may kiss to bloom the myriad blossoms of this great State of Lincoln's birth, a thousand summers' setting suns may cast their golden rays aslant the swards and vales and hills of this noble State, and Lincoln's greatness will not have dimmed. So, in his own beautiful words, spoken of Washington, let us pay to him our tribute:

"On that name no eulogy is expected. It cannot be. To add brightness to the sun or glory to the name * * * is alike impossible. Let none attempt it. In solemn awe pronounce the name, and in its naked deathless splendor leave it shining on."

The Tolerance of George Washington

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 22, 1939

Mr. SHANLEY. Mr. Speaker and my colleagues, the history of the world is often obscured and made disappointing by the existence of absolutism and intolerance. It was once said that the acme of that outrageous domination was found in the passionate utterance of the poet Theognis, a man of genius and refinement, who, nevertheless, stated that he longed to drink the blood of his political adversaries. Very often that oppressive rule was helped by the unchanging influence of pagan priests and tremendous armies. That complete scorn for the private interest, moral welfare, and improvement of the masses in Greece and Rome destroyed the basic elements on which the prosperity of those nations depended. The result was the decay of families and the depopulation of the country. Even Socrates had no other effective means of protest against the tyranny of his own day than to die for his belief. It was a remarkable development in the history of civilization when men learned that political science is an affair of conscience rather than of might or expediency.

In our own country we have reached the proudest development of political morality and tolerance. That even the ever-watchful eye of our first President was constantly on the alert to ferret out abuses may best be seen by two extracts from his speeches. It is well that America remember them and to realize that the essence of our democracy as evidenced by George Washington's words is protection for minorities.

As far back as the time of Washington there was obviously still a great resentment among English-speaking people toward Catholics. We see it in two orders from Washington himself, one when he went to take command of the Continental Army and the other in a letter dated March 12, 1790. In the first he says:

> As the Commander in Chief has been apprised of a design formed for the observance of that ridiculous and childish custom of burning the effigy of the Pope, he cannot help expressing his surprise that there should be officers and soldiers in this Army so devoid of common sense as not to see the impropriety of such a step. It is so monstrous as not to be suffered or excused. Indeed, instead of offering the most remote insult, it is our duty to address public thanks to our Catholic brethren, as to them we are indebted for every late success over the common enemy in Canada.

In the other letter he says:

> To the Roman Catholics in the United States, I hope ever to see America amongst the foremost nations in examples of justice and liberality, and I presume that your Protestant fellow citizens will not forget the patriotic part you took in the accomplishment of the Revolution and the establishment of the Government, or the important assistance which they received from a nation in which the Catholic faith is professed.

Pope Pius XI

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1939

Mr. CELLER. Mr. Speaker, I join with men and women the world over in paying tribute to the memory of a great, a good, and a simple man—truly a man of God—His Holiness Pope Pius XI. In a world of darkness he held up a beacon of light. In a world where men and nations have gone stark mad, his word was heard above the din and the clamor, beckoning for peace, for justice, for tranquillity. In a world where the God-given beliefs of religion and morality are being defiled, and the higher aspirations of man are being crushed to earth, he proved himself fearless, unflinching and unyielding in his battle against bigotry, hatred, and injustice.

There have been other periods in the long history of the world when men have flouted and flaunted the word of God, where might has gained the ascendancy over right, and where the forces of evil have routed the forces of good. But seldom, if ever, has there been a period such as the present, when, as in most of the benighted countries of Europe, the strong arm of the ruthless dictator has raised its merciless fist and robbed the child of the faith of his father and destroyed in the young respect for their elders. Amidst all this modern paganism Pope Pius XI protested with all his vigor and heart. No human power on earth could stop him, for his every utterance was inspired by the truth and the justice of God.

For 17 years Pope Pius XI uttered and taught his great message, "Peace on earth, good will toward men," until it was heard around the earth and captured the attention of the entire world. So great an effect for good did his words and deeds have that right-thinking and righteous men in every land and in every clime came to hail him as the great and courageous benefactor of his time—doubly great because of his never-failing simplicity and humility.

We of the Jewish faith have lost a friend and champion. With indomitable courage and fearlessness he denounced in no uncertain terms the persecution of our unfortunate coreligionists. He never hesitated a moment in his lashing out at a Hitler bigotry that sought by pillage, rapine, and plunder to destroy faith in the God of our fathers. Christians of all denominations, especially Catholics, have lost a modern prophet. His very life is epitomized in the immortal words of Micah:

> And what doth the Lord require of thee but to do justly, and to love mercy, and to walk humbly with thy God.

Of Pope Pius XI it may truly be said he did justly, he loved mercy, and he walked humbly with his God.

It is to be hoped that the lessons of peace, of righteousness, and of good to which Pope Pius XI devoted his life and his efforts may lighten these darkened days, and that out of this sad period of chaos and misery there will be returned to us and to our children an everlasting era of peace on earth, good will toward men.

The General Welfare Act

EXTENSION OF REMARKS
OF
HON. FRANK O. HORTON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1939

MEMORIAL OF THE LEGISLATURE OF THE STATE OF WYOMING

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial recently adopted by the Legislature of the State of Wyoming:

> Joint memorial memorializing Congress of the United States to immediately consider the General Welfare Act
>
> *Be it resolved by the House of Representatives of the State of Wyoming (the senate concurring)*, That the Congress of the United States be memorialized as follows:
>
> Whereas the age limits of employment are constantly getting lower and the problem of our aged citizens is becoming more burdensome; and
>
> Whereas the need for a satisfactory national old-age pension program is becoming more evident: Be it
>
> *Resolved by the House of Representatives of the Twenty-fifth Legislature of the State of Wyoming (the senate concurring)*, That we hereby memorialize the Congress of the United States to immediately consider the General Welfare Act with a view of increasing the amount of old-age benefits.

National Solidarity—The First Line of National Defense

EXTENSION OF REMARKS

OF

HON. WILLIAM S. JACOBSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 24, 1939

RADIO ADDRESS BY HON. CLYDE L. HERRING, OF IOWA, FEBRUARY 21, 1939

Mr. JACOBSEN. Mr. Speaker, under permission to extend my remarks in the RECORD I should like to include therein an address of the Honorable CLYDE L. HERRING, United States Senator from Iowa, on National Solidarity—The First Line of National Defense, which was broadcasted over a Nation-wide network of the Columbia Broadcasting System on Tuesday afternoon, February 21, 1939.

The address is as follows:

I appreciate this opportunity to use the facilities of the Columbia Broadcasting System.

A grave responsibility devolves upon the Members of the present Congress to face national and international issues squarely and with that measure of fearless courage which will reassure and satisfy our people, and reveal beyond question our national solidarity.

In 1932 our national income had hurtled from a height of eighty-one billions in 1929 to a low of thirty-nine billions, and the per capita annual income had been reduced from $651 to $372. The enforced change in the living standards of our people was radical indeed, and the remarkable achievement was our speedy and philosophical readjustment.

The incoming administration was charged with two major responsibilities; to solve the problem of unemployment for 13,000,000 men and women willing and able to work, but unable to find work; and to devise ways and means for restoring national income.

The present administration came into power in March of 1933 when this Nation was face to face with a serious industrial and financial calamity. It stemmed the tide of dissolution and restored that measure of personal hope and public confidence which has enabled the American people to carry on.

In the face of a grave national emergency the United States Congress following the advice of the President, members of his Cabinet, and departmental heads, appropriated billions of dollars. This money has been expended in an earnest effort to maintain our national morale, to give that encouragement necessary to the sustaining of hope and ambition, and to restore, insofar as possible, the ability of the American people to purchase new and consumable goods and employ services.

Since 1933 the national income has steadily risen so that in 1937 it reached the substantial sum of $70,000,000,000, and the per capita annual income was raised from the low of $353 in 1933 to $522.

While the national emergency program was one of human salvage and rehabilitation, the work provided and the money spent on various Government projects has served to materially improve governmental plant and structure.

A similar investment on the part of industry to improve its physical assets would certainly be regarded as a sound investment. There is scarcely a community in the land which has not received material benefits by way of physical improvements, which will inure to the benefit of future generations.

Despite all that Government and industry have attempted to do to reemploy in gainful occupation those willing and able to work, a number of circumstances have enforced continued idleness on the part of a goodly number of the original 13,000,000 of unemployed.

There is a sincere desire on the part of most legislators to reduce governmental expenditure, but the present Congress is faced with no choice other than to appropriate additional hundreds of millions of dollars to meet the requirements of the situation.

The conviction is deepening in the minds of many that while we must of necessity vote additional sums to care for the needy and unemployed, other methods must be found to solve the unemployment problem, which is still with us, and to assist industry in its rehabilitation and expansion to the end that workers may be reemployed in private industry.

The painful experience of some European nations with inflation and deflation, with excessive unemployment and excessive taxation reveals to every thoughtful person the wisdom and necessity of avoiding such grave eventualities in this country.

As chairman of a subcommittee of the Senate Finance Committee charged with the duty of making a survey of profit-sharing and extra compensation plans in industry, I have had the opportunity during the past several months to study in considerable detail the operation of various businesses throughout the country.

The point of view universally expressed by businessmen is one of optimism. They believe that conditions generally will continue to improve and that 1939 will be a much better year than any which we have seen in some time.

They feel that there should be a closer understanding between government and industry, both as to their mutual needs and the ways in which they may be of assistance to one another.

Senators and Congressmen are of the opinion that business should be given definite encouragement to resume capacity production and employment.

Seven hundred and fifty million dollars per year has been the average of new capital funds available to industry through the sale of securities over the past 7 years, as contrasted with an investment of nearly $5,000,000,000 per year for the preceding 7-year period.

New enterprises, by the very nature of things, have thus been prevented from developing because of inability to secure adequate financing.

Efforts should be made to encourage the investment of idle money in productive enterprise.

Statistics reveal that the line on the graph showing employment trends follows so closely the line showing the number of going concerns and volume of production as to be almost identical.

If we wish to place 10,000,000 people back to work in gainful occupation, we can only do so by increasing the number of going concerns and by increasing the volume of goods produced.

Profit-sharing offers a possible answer, both as to the division of the fruits of joint effort among those already employed and increasing the national volume of goods produced so as to require the services of at least some millions of idle workers.

Research as to annual income per worker reveals that annual income is only increased as the volume of production of the worker increases. Efforts to arbitrarily fix hourly wage rates and maximum hours have frequently resulted in minimum hours of employment per day with consequent loss of annual income.

The prevailing hourly wage in an industry may be high but the number of hours worked per week may be so few as to actually lower the worker's annual income.

It has already been revealed, as a result of the Fair Labor Standards Act, which went into effect October last, that messenger services at railroad stations and telegraph offices have been materially reduced. Those discharged from such messenger services must seek employment elsewhere.

A similar serious problem has been presented to the independent telephone companies of the country, of which there are 12,000, servicing over 4,000,000 independent telephones, many of which are in farm homes in rural communities.

An acute situation prevails in my State, where we have nearly 800 independent exchanges, servicing 300,000 independent telephones.

In view of these facts, I have proposed an amendment to the Fair Labor Standards Act in Senate bill 1234, introduced on February 9, exempting operators only in exchanges servicing less than 1,000 subscribers.

Employment can be increased only through increased demands for goods and services.

Consumer demand is predicated upon steady work and sustained buying power.

Industry should be given every possible encouragement to expand.

So long as the requirements of our people for the necessaries of life go unsatisfied we cannot argue that the saturation point has been reached in the consumption of goods and services.

It is becoming increasingly apparent that business must be encouraged to resume full capacity production and by that resumption be enabled to reemploy some of the millions now dependent upon Government for existence.

Too high taxes and too severe regulation will "kill the goose that lays the golden egg." Taxes are paid out of profits, not deficits. Employment keeps pace with production volume and consumer demand.

The great industry of agriculture, while occupying a secondary place in our national economy in point of dollar volume, nevertheless is of primary importance to the well-being of all of our people.

A prosperous agriculture means prosperous industry. The farm income of the United States over a long period of years has equaled the total of wages paid in private industry.

The prosperity of the city consumer depends not alone upon his purchasing power, but that of the farmer as well.

The prosperity of the entire Nation is, in large measure, dependent upon the prosperity of the farmer and his ability to consume basic commodities at prices which bear a direct relationship to the prices which he receives for the things he sells.

A price parity between farm products and manufactured goods is essential to sound economy.

There has been considerable misunderstanding with respect to the success of the present national agricultural program.

The Triple A program of 1938 was a long time in the making. It draws the best from several earlier plans, specific provisions of which had been thoroughly tested. Every part has been hammered out on the anvil of farmer opinion and congressional debate.

The program was given to the farmers late last year, long after the 1938 winter wheat crop had been sown, and barely ahead of spring planting.

It is only this year, 1939, that the Triple A program will have a complete test.

The present surpluses of wheat and cotton are due to the lack of an effective acreage-adjustment program during 1936, 1937, and 1938, following the invalidation of the old Triple A by the Supreme Court.

The 1938 act is not only called upon to cope with the present situation, but to handle these huge surpluses as well. This presents a dual problem which is being handled remarkably well.

We are confronted with the task of managing our great farm plant in a manner which will provide the most efficient system of farm management, and at the same time create as great an abundance as possible for this generation, while conserving agricultural resources for the generations to come.

The present program provides for acreage allotments to meet the problem of surplus production which would otherwise threaten the whole price structure. The marketing-quota provision is optional, but it is there for the farmers to use.

The regional farm laboratories are providing new instruments for attacking the surplus commodities problem by finding new uses for farm products.

The soil-conservation program provides for crop rotations from soil-depleting crops to soil-restoring crops.

The problem of low farm income is met by acreage adjustments designed to keep prices from going to the bottom, by payments to help finance the cost of protecting the soil, by parity payments to help bridge the gap between market price and parity price, by loans to farmers to tide them over low-price periods, and by crop insurance.

The entire program is agriculture's guaranty to the cities that the farmer will do his part in supporting full employment, good wages, and industrial prosperity by supplying abundant food and raw products at reasonable prices.

The farmer's problem has not been wholly solved, but let us consider the vast improvement in his situation.

Cash farm income practically doubled between 1932 and 1937. Even in 1938—a year of rather marked industrial recession—cash income to our farm population was still 75 percent above the 1932 low. Of equal importance is the fact that in 1938 farmers had almost three times as much money available for living expenses as they had in 1932. Gross farm income increased much more rapidly than expenses during the period.

What has this meant? It has meant a decline of 50 percent in the number of farm foreclosures during the last 6 years. It has meant a decline of two-thirds in the number of farm bankruptcies during the same period. It has meant that thousands upon thousands of the businessmen and merchants in our rural towns have been able to stay in business because of improved farm-purchasing power. It has meant more business for our manufacturers, more work for those seeking employment. It has made it possible for millions of our farm families to remain on their farms secure in their homes and to maintain a decent American standard of living.

Total loans to farmers during the past 6 years amounted to over five and one-half billion dollars. Three and one-half billions have already been repaid.

Cash income from farm marketings, including Government payments, amounted to approximately $5,000,000,000 in 1933.

In 1938 cash farm income had risen to $7,632,000,000.

What would be the situation in the Corn Belt without this program?

Supposing we had raised 100,000,000 acres of corn last year—as we have so often done in the past—instead of 92,000,000 acres.

In Iowa, my State, I well recall that during the winter of 1932 corn sold for 10 cents a bushel. The midwestern farmers used it for cheap fuel.

Contrast that condition with that of today.

The corn-sealing program of the Government has enabled 100,000 farmers in Iowa to place 100,000,000 bushels of corn under seal at 57 cents per bushel.

Even those who were not eligible because of failure to sign up for participation in the program have benefited.

The farmer's income is improved and at the same time he is helping to fill the ever-normal granary—the Nation's insurance against crop failures such as were experienced in 1934 and 1936.

The record-breaking number of farmers signing up for the agricultural program of 1939 is the best attestation of its worth.

Such achievement and such cooperation can only be the result of a wise agricultural policy.

Adequate transportation is a necessity of modern life upon which agriculture and industry are equally dependent, as well as the Nation, for its national defense.

The railroad industry, which only a few years ago gave occupation to more than 2,000,000 workers, now employs less than a million, and is in grave need of rehabilitation and restoration to prime fitness.

The Interstate Commerce Commission has recently rendered a report upon which the Congress will doubtless act in providing adequate relief for that great and distressed industry.

The program of national defense is one which challenges the patriotism, intelligence, and wisdom of every citizen.

The Members of the present Congress feel with the people of the Nation that a program of costly armament is to be avoided.

Penetration of the Americas economically and politically by European and Asiatic powers however has forced upon us the realization that we must be prepared to defend our shores under the principles of the Monroe Doctrine.

The Congress of the United States is rich in leadership of a high order. The deliberations of the Congress will be consonant with the high ideals and noble purposes of our people, as it moves to a consideration of the Nation's requirements for safety and protection.

Complete unity on this important question, as well as domestic policy, is desirable if we would avoid the disintegrating influences at work in many of the countries of the Old World.

National solidarity has been and will continue to be our first and strongest line of defense.

Sentries of Peace—The Great Unguarded Border

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1939

ADDRESS BY HON. DUDLEY A. WHITE, OF OHIO

Mr. WHITE of Ohio. Mr. Speaker and Members of the House, the Seventy-fifth Congress adopted my joint resolution (H. J. Res. 620) providing for the observance of the one hundred and twenty-fifth anniversary of Perry's victory in the Battle of Lake Erie and the century and a quarter of unbroken peace since that time. The Speaker selected Hon. Dow W. Harter, Hon. John McSweeney, Hon. William R. Thom, Hon. Carl E. Mapes, and myself to comprise the Commodore Perry Memorial and Peace Commission, under whose guidance the observance was undertaken on September 8, 9, 10, 11, 1938. At a later date a complete report on the event will be submitted to Congress by the chairman of the Commission, Mr. HARTER. In the meantime, at the request of my colleagues, I am requesting unanimous consent to have printed in the RECORD the address which I delivered at the official ceremonies as a means of presenting the underlying purpose and significance of the event in light of the circumstances which were just then centering around the developments in Czechoslovakia, and which likewise have application to current problems of world-wide importance.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I stand before you as a person who was one—a very unimportant, insignificant one—of 4,000,000 other Americans in the World War. Two of my brothers and many in this gathering tonight were likewise in that number. Probably every family here was represented in somewhat similar fashion.

We remember those years. As each new year rolls by another veil is dropped between them and us. Even now they sometimes seem like the dream of another life. It is difficult to realize that many of us now have children who were not here then, and who, in young manhood or womanhood today, know nothing of that struggle.

I believe in adequate national defense—in a blind world that has not yet found enlightenment from the heartbreak, destruction, and futility of war—but for defense only. Please God, hasten the day when even this need can be diminished by the mutual confidence and consent of nations.

Three thousand miles away are the boundaries of Europe, chopped up like the blocks of a huge patchwork quilt. Troops are on the march again along those borders. At their side marches greed of conquest, lust for power, selfishness, misunderstanding, the bitterness of boundary disputes, and ghosts of conflicts from the centuries that have gone. Those borders bristle with steel—steel which has grown from the warped minds and twisted hearts of men.

Near this scene is another boundary line. It is as long as the distance between here and Europe. And yet through almost a century and a quarter the only sentries that have been needed to guard its peace are friendship and understanding.

Here is our lesson for a troubled world tonight. Here is the purpose of this observance. With deep and patriotic fervor we honor the courage and gallantry—the historic deeds—of Perry and Barclay and of their men. But if we can stay the grasping hands of warmad men long enough to open their eyes and cleanse their hearts by this living example, then mankind will have received a generous blessing for peace and progress. If they have eyes and see not, if they have ears and refuse to hear, then at least let us, as citizens of the United States and Canada, sense our own rich blessing and ever preserve it.

Submerged Lands of California

EXTENSION OF REMARKS

OF

HON. THOMAS M. EATON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 24, 1939

RESOLUTION ADOPTED BY THE CITY COUNCIL OF THE CITY OF LONG BEACH, CALIF.

Mr. EATON of California. Mr. Speaker, under leave to extend my remarks in the RECORD I include Resolution No. C–6925, recently adopted by the City Council of the City of Long Beach, Calif.

I would call the attention of the Members of the House to the fact that Senate Joint Resolution 24, mentioned in the city council's resolution, is very similar to House Joint Resolution 176, introduced by Mr. HOBBS on February 20, and House Joint Resolution 181, introduced by Mr. O'CONNOR on February 23, and that if the latter two bills had been introduced prior to the date of the passage of the city council's resolution the City Council of the City of Long Beach would have voiced the same opposition to House Joint Resolution 176 and House Joint Resolution 181 as it has to Senate Joint Resolution 24.

The resolution of the City Council of Long Beach, my home city, is as follows:

Whereas the people of California adopted, ratified, and proclaimed a constitution in the year 1849 and presented the same to the President of the United States of America, and asked admission to the Union; and

Whereas the President of the United States, on February 13, 1850, submitted said constitution to Congress and the Congress did adopt an act, approved September 9, 1850, admitting California to the Union on an equal footing with the original States in all respects whatever; and

Whereas said constitution so submitted, and likewise the present constitution of the State of California, provides, among other things, that the boundary line of the State of California shall extend westward 3 English miles into the Pacific Ocean and thence shall follow the direction of the Pacific coast; and

Whereas it has been repeatedly held by the Supreme Court of the United States that the tidelands and submerged lands lying within the boundaries of any State of the Union belong to that State, by virtue of its sovereignty; and

Whereas the city of Long Beach, Calif., is a municipal corporation, operating under a freeholders' charter, adopted and approved by the Legislature of the State of California pursuant to the provisions of the constitution of the State of California; and

Whereas the boundaries of said city, as set forth in said charter, extend 3 miles seaward into the Pacific Ocean; and

Whereas under certain acts of the Legislature of the State of California, as respectively set forth in the Statutes of California, 1911, page 1304; Statutes of California, 1925, page 235; and Statutes of California, 1935, page 974; the State of California did grant to said city of Long Beach and to its successors all of the right, title, and interest of the State of California, held by said State by virtue of its sovereignty, in and to all of the tide lands and submerged lands, whether filled or unfilled, within the boundaries of said city, and situated below the line of mean high tide of the Pacific Ocean or any harbor, estuary, bay, or inlet within said boundaries, to be forever held by said city and by its successors in trust for certain uses and purposes therein set forth; and

Whereas about the year 1937 rich oil deposits were discovered in the southwesterly part of the city of Long Beach under certain of said tide and submerged lands, and also under adjoining uplands, much of which upland area is held in private ownership; and

Whereas the owners of said private property immediately commenced drilling on lands contiguous to said tide and submerged lands and have extracted and are still extracting large quantities of oil from the pool underlying the entire area; and

Whereas although the State of California and others, including said private owners, did heretofore challenge the right of the city of Long Beach to develop said tide and submerged lands for the production of oil therefrom, the Supreme Court of the State of California in the case of *City of Long Beach et al., petitioners,* v. *D. A. Marshall, as Port Manager of the City of Long Beach, Respondent; the People of the State of California, intervener,* the decision in which case is reported in 96 Cal. Dec. 101, did, on the 28th day of July 1938 hold that under said grants of tide and submerged lands from the State of California to the city of Long Beach and under the charter provisions of said city, the city of Long Beach had the right to drill for and extract the oil from said lands; and

Whereas the city of Long Beach is proceeding with all diligence to drill and develop said lands for the extraction of oil, gas, and other hydrocarbons therefrom and is carrying on such drilling operations in such a way that the same will not interfere with the other purposes and uses for which said lands were granted to said city, and is required by the charter provisions of said city to use and is using the proceeds derived from the oil so produced to pay the interest on and to retire bonds heretofore issued by said city for the construction and development of Long Beach harbor, and is so required to and will use the balance of said proceeds for the improvement, operation, and maintenance of Long Beach Harbor and for the promotion and accommodation of commerce, navigation, and fishery; and

Whereas if the city of Long Beach is not permitted to drill and develop or is hindered in the drilling and development of said tidelands for the production of oil therefrom and from the submerged lands adjacent thereto, the oil lying underneath said tide and submerged lands will be rapidly drained therefrom from wells heretofore drilled and now drilling and hereafter to be drilled from privately owned lands adjacent to the tide and submerged lands, and a vast amount of oil, gas, and other hydrocarbon substances will be lost for public use:

Now, therefore, the City Council of the City of Long Beach resolves as follows:

SECTION 1. That the adoption by the United States Congress of Senate Joint Resolution 24, commonly known as the Nye resolution, would, in view of the foregoing premises, be extremely unjust and could only cause more confusion and lead to extended litigation with reference to the oil deposits underlying the tide and submerged lands lying within the boundaries of the city of Long Beach; that in the meantime, and by reason of such litigation, privately owned wells drilled on the uplands adjacent to said tide and submerged lands would drain a great portion, if not all, of the oil underlying said tide and submerged lands, to the loss of the citizens of the city of Long Beach and the general public as well.

SEC. 2. That the adoption by the Congress of the United States of any legislation directly or indirectly asserting that the United States has sovereign title to and ownership of lands under navigable waters or any mineral deposits therein, or authorizing any suits or other proceedings by Federal officers to obtain the possession or use of such lands or mineral deposits without the payment of just compensation, is contrary to law and sound public policy and should be opposed.

SEC. 3. That the city clerk shall transmit a certified copy of this resolution to each Member of Congress from the State of California.

SEC. 4. The city clerk shall certify to the passage of this resolution by the City Council of the City of Long Beach and cause the same to be posted in three conspicuous places in the city of Long Beach, and it shall thereupon take effect.

Control of Noxious Weeds

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 24, 1939

MEMORIAL OF THE LEGISLATURE OF THE STATE OF IDAHO

Mr. DWORSHAK. Mr. Speaker, in my State of Idaho we have a very serious problem which has confronted us for a number of years and has reached a stage of gravity and seriousness at the present time. This problem is in the form of noxious weeds. These uncontrollable weeds of various sizes, types, and descriptions are destroying many acres of ground in our great State, especially in the agricultural districts. The Federal Government has done nothing to control the spread of these weeds on their land and, as you know, winds and other forms of Nature spread weed seeds from acre to acre, devastating acres of land in their flight. Our State and local subdivisions have carried on a program for a number of years of local eradication of weeds, but we cannot, without the assistance of the Federal Government, cope with this increasing problem, and today in my State scores upon scores of productive farms have become useless for agricultural purposes as a result of the continuous reinfestation of noxious weeds from weed lands. In previous sessions of Congress bills have been introduced to provide for the control and eradication of noxious weeds but have not met with

success. On January 16, 1939, I introduced a bill in this House to provide for the general welfare by establishing a system of Federal benefits and by enabling the several States to make more adequate provision for the control and eradication of noxious weeds and to provide an appropriation adequate to put this program into effect. I have here a joint memorial received from the Legislature of the State of Idaho, being Senate Joint Memorial No. 3, which is upon this very subject, and I ask unanimous consent to have it inserted in the RECORD.

The memorial is as follows:

Senate Joint Memorial 3

To the Honorable President of the United States and Members of Congress assembled:

We, your memorialists, the Legislature of the State of Idaho, twenty-fifth session, respectfully represent that:

Whereas noxious weeds are not now controlled on Federal lands, and that the seeds from such weeds are carried by wind and water to farm lands, making control of such weeds and the protection of agriculture an impossible or inordinately expensive problem; and

Whereas the Federal Government and State of Idaho are coordinating with the owners of such land in control of such weeds on agricultural land; and

Whereas the Forest Service alleges it has no enabling provisions permitting it to control noxious weeds on its domain, nor permitting it to cooperate with other State and Federal agencies toward this end; and

Whereas many productive farms in this State are becoming unfit for agricultural purposes as result of this continuous reinfestation from Federal lands;

Now, therefore, we your memorialists, respectfully represent that some Federal program must be provided for control of weeds on Federal domain, from which noxious weeds may spread to agricultural lands.

Be it resolved, That copies of this memorial be sent by the secretary of the State of Idaho to the honorable President of the United States and to the Senators and Representatives in Congress from the State of Idaho.

Control of Venereal Disease

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 24, 1939

SUMMARY OF THE ANNUAL REPORT OF THE SURGEON GENERAL, UNITED STATES PUBLIC HEALTH SERVICE, FOR THE FISCAL YEAR 1938

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of the House a brief summary of the annual report of the Surgeon General, Dr. Thomas Parran:

Dr. Parran stands out as the one man more responsible than any other single person for having awakened this entire Nation to the possibility of largely ridding itself of the great curse of venereal disease. If properly backed by Congress in this effort, it is altogether possible that when the history of this period in our Nation's development is written, the name of Dr. Thomas Parran, Surgeon General of the United States, will be written as large as that of any American of our time.

The question as to how well we are going to back the Surgeon General in his work will be largely determined by the action of the House on the Treasury-Post Office appropriation bill. It is my earnest hope that the fine action of the Appropriations Committee in including $5,000,000 for the battle against syphilis will be sustained enthusiastically by the House and the Senate.

The matter referred to is as follows:

Surg. Gen. Thomas Parran in his annual report said: "A greater advance has been made in public health in the United States during the past 2 years than ever before within a comparable period."

Dr. Parran, reviewing the work of the organization, at the close of the one hundred and fortieth year of its existence, noted developments that have followed the assumption of new responsibilities by the Government in matters relating to public health, particularly with reference to activities made possible through the enactment by Congress of the Social Security Act, the Venereal Disease Control Act, and the National Cancer Institute Act.

GENERAL HEALTH CONDITIONS

Commenting upon health conditions in the United States during the fiscal year ended June 30, 1938, the report states that the general death rate for the calendar year 1937 was 10.9 per 1,000 population, as compared with 11.3 for the preceding year. This favorable condition continued in 1938, when preliminary figures for the first 6 months disclosed a mortality rate of 10.8 per 1,000 population as compared with 11.8 for the corresponding period of 1937.

There was also recorded a decrease in infant mortality from 57.1 per 1,000 live births for 1936 to 54.4 in 1937. The maternal mortality rate continued to decline; 4.6 per 1,000 live births in 1937 against 5.3 during 1936.

As infant, maternal, and general death rates are sensitive indexes of prevailing health conditions, the reduced rates in these fields indicate a decidedly favorable trend.

Tuberculosis mortality resumed a downward course after a slight increase in 1936. The improvement was apparent in the provisional tuberculosis death rate which declined from 51.7 per 100,000 population in 1936 to 49.6 in 1937.

During 1937 lowered death rates were reported for typhoid fever, scarlet fever, diphtheria, tuberculosis, malaria, pellagra, nephritis, and puerperal causes. With regard to smallpox, Dr. Parran said: "During 1937 a total of 11,673 cases of smallpox was reported, as compared with 7,834 in 1936 and 7,957 in 1935. The number of reported cases in 1937 was the highest since 1931. Fortunately the prevailing smallpox is of a mild, nonvirulent type, causing relatively few deaths. The eradication of this unnecessary disease depends upon the intelligent application of vaccination."

The United States suffered minor epidemics of influenza and poliomyelitis in 1937. The number of cases of poliomyelitis, 9,511, has been exceeded only in 4 previous years for which records are available, 1916, 1927, 1931, and 1935.

The leading causes of death in 1937 were diseases of the heart, cancer and other malignant tumors, pneumonia, cerebral hemorrhage and softening, nephritis, accidents (except automobile), and tuberculosis.

QUARANTINE AND IMMIGRATION

The magnitude of Federal quarantine and immigration activities is indicated by the Public Health Service inspection at ports of entry of 1,784 airplanes, carrying 23,172 passengers, and inspection of 15,873 vessels, carrying 789,591 passengers and 1,196,688 seamen. Fumigation of 1,004 vessels was performed, and 5,399 rats were examined for evidence of plague infection. Medical officers at various United States ports of entry inspected 2,447,339 alien passengers and 805,306 alien seamen. Of these, 20,372 passengers and 1,438 seamen were reported as having some certifiable disease or defect. In foreign countries 65,261 applications for immigration visas were examined by Public Health Service officers.

The continued success of so-called radio pratique at New York and Boston made practicable the extension of this time-saving measure to certain vessels entering the ports of San Francisco and Los Angeles.

VENEREAL-DISEASE CONTROL

The most important event in the campaign against the venereal diseases during the fiscal year was the enactment by the Congress of the Venereal Disease Control Act, whereby facilities for the more effective control of syphilis and gonorrhea were placed upon a permanent national basis.

During the year the Congress appropriated $3,000,000 for the purpose of assisting States and their political subdivisions in establishing and maintaining adequate measures for the prevention, control, and treatment of venereal diseases. There were also included provisions for training of personnel and for making studies, investigations, and conducting demonstrations designed to develop more effective control measures.

The use of social-security funds for the training of physicians in the clinical management and public-health control of the venereal diseases was continued in several universities and clinics. A number of State health officers availed themselves of this opportunity to recruit qualified personnel.

Requests more numerous than could be complied with were made upon the Division of Venereal Diseases for articles, addresses, and loans of trained personnel.

The experimental control of syphilis among indigent people of rural areas was demonstrated by the use of a trailer clinic in Georgia. A study of untreated syphilis in a group of male Negroes was continued. "No similar study of the effects of untreated syphilis over a period of years, correlated with the pathologic findings at death, has ever previously been made," Dr. Parran said.

The preparation and dissemination of instructive literature, charts, posters, and exhibit material continued during the year. Measures designed to control syphilis in industry were inaugurated. The control program was favorably received by industrial organizations.

MENTAL HYGIENE

With the completion of the Public Health Service Hospital at Fort Worth, Tex., for the care and treatment of drug addicts the facilities for this specialized work have been materially increased. The hospital at Lexington, Ky., engaged in treating drug addicts and making scientific investigations, operated to full capacity with an average daily census of 949 patients.

The Public Health Service continued to supervise and furnish medical, psychiatric, technical, and other scientific services to Federal and penal institutions. Special studies were conducted in cooperation with the Mental Hygiene Survey Committee to stimulate interest in the adequate care of the mentally ill, to bring about greater equality and wider distribution of facilities, promote uniform policies, and improve the facilities for psychiatric instruction.

A feature of the work of this division was the field studies in mental hygiene for determining the basic nature and factors involved in the production of mental disorders encountered in a typical American community.

MARINE HOSPITALS AND RELIEF STATIONS

The 27 hospitals of the Public Health Service, engaged in the care and treatment of legally designated beneficiaries, and also in scientific clinical research, furnished hospital and out-patient relief at 154 ports, where 566,931 accredited persons applied for treatment. This represents an increase of 211,121 patients over the preceding year. Merchant seamen continued to constitute the largest class of beneficiaries.

Research was continued in pyretotherapy, focal infections, arthritis, and psoriasis. Vitamin D was shown to be valuable in the treatment of psoriasis.

INVESTIGATIONS OF PUBLIC-HEALTH PROBLEMS

The erection of a group of specially designed structures for the National Institute of Health on a site near Bethesda, Md., makes available increased facilities for scientific research into the causes and prevention of disease. The investigative work of the institute covers an increasingly broad field. Continued attention was directed to the control of biologic products, particularly antipneumococcic rabbit serum, antimeningococcic serum, and close supervision over the stability of arsphenamine.

In the field of industrial hygiene investigations were directed to the development of means for the protection and the improvement of the health of workers in various fields of industry among which the pottery, granite, lead storage batteries, fur, and manganese industries may be mentioned.

"The activities of the National Institute of Health," comments the Surgeon General, "are becoming increasingly varied and numerous. Thus one group of workers is engaged in chemical and chemotherapy research while another is directing its attention to studies of such infectious diseases as Rocky Mountain spotted fever, typhus fever, scarlet fever, Weil's disease, leprosy, and poliomyelitis. A special series of investigations have shed considerable light upon the various phases of trichinosis infection and the means of its prevention. Clinical, epidemiological and laboratory studies of heart disease, especially the rheumatic type, have produced valuable information."

The interesting discovery was made that fluorides, which cause mottled enamel, that disfiguring discoloration of the teeth, may be removed from drinking water by treatment with manganese dioxide, a method which gives promise of economical development.

A firm basis for future cancer studies is being laid through grants-in-aid to selected institutions and the training of research specialists. Already a broad field of investigation is receiving attention.

COOPERATIVE ACTIVITIES

Every State and many cities, as well as every department and independent agency of the Federal Government, has received some degree of assistance from the Public Health Service in solving special health problems arising in the course of routine operations. This cooperative work, carried on principally by the Division of States Relations, is one of the most important functions of the Service.

The availability of funds under the provisions of the Social Security Act has made it possible to assist in improving State and local health administration. It is especially noteworthy that whole-time health services in rural areas have been greatly augmented. From January 1, 1935, to December 1937 there was an increase in full-time health units of 96 percent. Facilities for the promotion and supervision of such full-time facilities have been developed in 19 States.

Stimulated by Federal grants-in-aid, the State and local appropriations for public-health purposes have increased $8,000,000 annually.

Cooperation was continued with the States and the Works Progress Administration by providing technical supervision of work-relief labor projects for the construction of sanitary toilets, malaria-control drainage in the South, and sealing of abandoned coal mines. Certification of water supplies used by interstate carriers, a valuable measure in preventing water-borne illness, continued without interruption.

NATIONAL HEALTH PROGRAM

"It is a matter of grave concern," comments Dr. Parran, "that approximately 40,000,000 people in the United States—the lower economic third of our population—are unable to provide themselves with medical care during serious illness. In the country as a whole there is a deficiency of 360,000 hospital beds, including facilities for the care of mental and tuberculous patients."

Fortunately, the national health survey, conducted several years ago by the Public Health Service with work-relief personnel, has furnished a great deal of reliable, even though astounding, information concerning the kinds of illness prevailing in this "third of the population," the ages of the victims, their approximate economic status, their employability, and other facts closely related to their ability to secure adequate medical treatment.

When these data had been studied and tentative conclusions formulated by the President's Interdepartmental Committee on Coordination of Health and Welfare Activities it was obvious that the Federal Government had a definite responsibility in seeking a remedy for this undesirable state of affairs. It was shown, for instance, that despite the improvement of State and local health services resulting from the application of grants-in-aid provisions under title V and VI of the Social Security Act there are large rural areas and many cities in which adequate health service is not yet available. Only a few States have even fairly satisfactory programs for the prevention of mortality from pneumonia and cancer, and there still are serious deficiencies in the control of tuberculosis and malaria. Very little is being done by most of the States in the field of mental hygiene, and there is need for a much greater expansion of industrial hygiene activities.

In closing his report, Surgeon General Parran recommended, among other essentials, the establishment in the National Institute of Health of a unit for wider chemotherapy investigations, additional funds under the Venereal Disease Control Act on an increasing scale until an annual appropriation of $25,000,000 is reached, and the establishment of a neurological institute for laboratory and clinical investigations of mental and nervous diseases.

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 24, 1939

ARTICLE FROM INGLEWOOD (CALIF.) DAILY NEWS OF FEBRUARY 7, 1939

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Inglewood Daily News, of Inglewood, Calif.:

[From the Inglewood (Calif.) Daily News of February 7, 1939]

NATIONAL LABOR RELATIONS BOARD IS FOR WORKERS AND AGAINST EMPLOYERS, CLAIM—EMPLOYER HASN'T GOT A CHANCE, REGIONAL DIRECTOR TELLS INGLEWOOD AUDIENCE; PREDICTS PERIOD OF STRIKES AND UPRISINGS ON PACIFIC COAST

"Abandon hope, all ye (employers) who enter here" might properly be the inscription over the portals leading to the National Labor Relations Board, according to Dr. Towne Nylander, regional director for southern California, who addressed the Inglewood Community Forum last night.

Dr. Nylander made the unqualified statement in the course of his address, "I'll tell you frankly, when we go into a hearing, the employer hasn't got a chance. There's never a scintilla of doubt as to the employer's guilt. Unless they amend the act we will get to the rest of the employers we have not yet been able to reach."

LABOR NEEDS HELP

"Why shouldn't it be that way?" asked Dr. Nylander, and then proceeded to point out that the employers—the 20 to 25 percent who are "cheaters and chiselers"—are able to hire the ablest counsel and to utilize the best tools of industrial warfare, while the employee has heretofore had no representation. Dr. Nylander holds it to be the function of the N. L. R. B., and of his office particularly, to aline itself with the employee and against the employer.

He charitably conceded that the average employer, 75 to 80 percent of them, were fair and upright and did not need such compulsion as was being applied by the N. L. R. B. (aided and abetted by the Wagner Act's teeth) to the chiseling 20 percent. However, later in his discourse he held to the belief that only 10 percent of all employers owned their own businesses and that 75 percent of these were "farmers," so that less than 3 percent of the employers in America owned their own businesses.

STRIKES AHEAD

On the coast we are in for a period of strikes. These will occur largely during 1939; and although there will be no bloodshed and less violence than the coast has known before, there will be plenty of strikes, he thinks. Labor is, for the first time, coming into its own. It has consolidated its position and is now in better position than ever before. Whereas in the past it has had to dissipate its energies and resources against employers who were unscrupulous, now organized labor has had an opportunity to develop genuine and effective leadership.

ANTILABOR BASIS

Many coast industries, notably aviation and furniture, are organized on an antilabor basis, says Dr. Nylander, but the majority of industries on the Pacific coast are, on the whole, nonmilitant, belligerent, or vigilantes. A few of this category dominate the picture, and coerce other industrialists and employers to join with them, much after the fashion of a man being coerced into joining the union, said the speaker.

He castigated the Associated Farmers of California, as a destructive force for evil, claiming that out of all its funds expended in the recent campaign to put over the antipicketing law, only $4.50 was donated by a farmer, the rest having come from other sources. He excoriated the Southern Californians, Inc., as a "high-powered, streamlined version of vigilante," and as an organization standing in the way of progress. With these he coupled the Neutral Thousands and kindred groups, all of which, he said, were tied into large financial groups.

The remedy, he thought, was a comprehensive system of social assurance, under which the poor would not be required to pay the bills, and the first stage of which is destined to be realized as early as 1940. He told of the millions now not included in social security, and gave it as his opinion that we hadn't yet begun to pay the cost of economic security.

COMMUNISM FEARED

It was an amazing thing to him that there wasn't more communism, he said, and he said when the older people, organized labor, and the unemployed form a coalition to demand assurance and security, they had better get it or there will be tragedy.

OLD PARTIES SLIPPING

It was his belief that all parties would have to strengthen their social-security program, and that America was woefully behind in this respect. There is little hope, in any event, for the Democratic and Republican Parties in the future, he thinks. These will be replaced by conservatives and liberals, and those two will be dominated by labor, including both the C. I. O. and the A. F. of L., which will march separate courses, but which will finally attain harmony as two groups.

He predicted a distinct population change. Whereas now there are 130,000,000 in the United States, the peak will be reached by 1950, when there will be 145,000,000. Thereafter there will be fewer each year.

Business growth of the future, in view of this situation, will depend upon higher living standards. In 1921, three and three-tenths million babies were born. By 1938 this had fallen to two and two-tenths million. Within 3 years the high schools and colleges will be overburdened, and shortly thereafter the youngsters will reach a voting age, and will take a decisive and positive stand in national and economic affairs.

POOR ARE PROLIFIC

The bulk of the children in future years will come from the poor and underprivileged classes, and the "poor white trash" belt from Virginia to New Mexico will be most productive, while the groups will continue to decline in productivity.

FAVORS C. I. O.

He was enthusiastic about the C. I. O., explaining that it was created to take care of the mass production of unorganized laborers. He held that the presence of the two organizations had resulted in elimination of the "stuffed shirts" in each, and said he personally hoped there would never be a reunion of the two.

He thought the outstanding result of the New Deal had been the increased organization of workers, and held this to be a hopeful sign for the future welfare of the country. The movement had been essential to the success of the New Deal, and now that the latter was faltering, labor would go on as never before.

He told of the hopelessness in the eyes and hearts of the Dust Bowl refugees who were being exploited by farmers in the San Joaquin Valley, and how it was practically impossible to get them to help themselves by organizing. He contrasted this to the movie unions; here, he said, the workers are better off than nearly any other class, and yet they have the most effective organization in the land. It is easier to improve those already in the upper class or who have had a taste of privilege, believes Dr. Nylander.

FASCISM POSSIBILITY

He held that fascism was a possibility in America, but if labor continued to consolidate its position and to develop leadership, it would save the country from fascism.

There are in Los Angeles nine filing cabinets full of documents which would prove southern California to be comparable to Harlan County, Ky., if there were funds available to fight the southern Californians and expose the vested interests, said the speaker. With the latter group he linked again the neutral thousands and the merchants and manufacturers.

Babson's opinions were inspired in an effort to sell his service, said Nylander in response to a question, and he mentioned that Los Angeles Times by name as being the mouthpiece of the reactionaries and the defender of the "house of have."

There was spirited questioning from the floor, including some excursions into the realm of political science.

Leo De Silva, past president of the Inglewood Lions Club, presided in the absence of Chairman Vernon Spencer.

NYLANDER NIBBLES

Dr. Towne Nylander, director of the National Labor Relations Board for southern California, in an address before the Inglewood Community Forum, made the following statements in the course of his address or in answer to questions from the floor:

"I'll tell you frankly, when we go into a hearing the employer hasn't got a chance.

"A few noisy, violent years are ahead, the first of these being 1939."

"Unless they amend the act (Wagner Act) we will soon get to the rest of the employers whom we haven't been able to reach yet."

"Labor now has an outlook fundamentally uncongenial with both parties."

"Now the New Deal is struggling for its own existence and is being assaulted by traditionally minded Democrats."

"It is not improbable to imagine fascism in America."

"In the meantime, Labor and Roosevelt stand, awaiting for history to make up their minds."

"Our economic system is suffering from a disease which fascism professes to be able to cure, but cannot."

"Resistance to the revolutionary change now in progress may provoke disaster."

"There is no question as to the ability of the people to pay adequate old-age pensions."

"If funds were available, southern California would be exposed as a second Harlan County, Ky."

"This year will be 20 to 25 percent better than last year, but the improvement will be temporary unless social security becomes widespread."

"We haven't yet begun to pay the cost of our economic faults."

"On the Pacific coast we are in for a period of strikes."

"I hope the C. I. O. and A. F. L. never do get together. Each can serve a good purpose by exposing the stuffed shirts in the other organization."

"The new labor movement stands violently opposed to fascism, and that opposition is hastening the day when there will be a clash between them for supremacy."

"I'd like to know how in the world the Dies committee can do $150,000 worth of work on a $25,000 appropriation."

"New Deal and labor are twins. Each needs the other."

National Monetary Conference

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 24, 1939

LETTER FROM NATIONAL MONETARY CONFERENCE

Mr. VOORHIS of California. Mr. Speaker, I am pleased to include with my remarks the following letter from Mr. Andrae B. Nordskog, chairman of the National Monetary Conference:

THE NATIONAL MONETARY CONFERENCE,
228 SOUTH WABASH AVENUE,
Chicago, Ill., February 24, 1939.

Hon. JERRY VOORHIS,
Congressman, California, No. 12,
Washington, D. C.

DEAR CONGRESSMAN VOORHIS: During the past few days, Messrs. Willis A. Overholser, James A. Bell, William M. Gamble, Mrs. Etta M. Russell, and the writer, all members of the executive committee of the National Monetary Conference, have been holding executive sessions in Washington, D. C.

Our committee has had the privilege of a conference with United States Treasury officials, advisers of the President on matters of finance, which conference was arranged through the courtesy of the White House staff. We had an opportunity of obtaining the views of the Treasury on matters of great importance to our people in this Nation.

We also have the opportunity of meeting and talking with a great number of Senators and Congressmen on the subject of money and the question of whether or not Congress has the sole and exclusive power to coin money and regulate the value thereof, and of foreign coin. We have been very happily surprised to know that ever so many of our representatives at the Capitol, in both Houses, are very well informed on the subject of money and its proper functions. We also found powerful proponents of much-needed changes in our currency system. We found those who believe as do the members of the National Monetary Conference, that Congress has the sole and exclusive power to coin money and regulate the value thereof of foreign coin, and to fix the standards of weights and measures.

An able Senator told members of our committee about the great care exercised by the Government in keeping the yard measure at even keel at all times, and then showed how careless we have been in permitting private enterprises to coin money and wildly expand bank credits, creating, perhaps, prosperity for a brief spell, only to cause a rapid contraction of such credits with the scratch of a pen, throwing the Nation into chaos and poverty.

The National Monetary Conference, at its first sessions, held at Northwestern University School of Law in Chicago last November, adopted a resolution setting forth that Congress, and Congress alone, has the sole and exclusive power to coin money and to regulate the value thereof, and of foreign coin; and that Congress may prevent any other agency from so doing. This resolution was adopted only

after our members had read practically every Supreme Court decision since the time of George Washington, for that high tribunal has made it clear that such is the fact.

On behalf of our entire executive committee of the National Monetary Conference, I desire to thank you, Congressmen, for the courtesy you have shown us during our stay in Washington. We deeply appreciate the fine work you are doing along the lines of attempting to stabilize our monetary system in the United States.

Sincerely yours,

ANDRAE B. NORDSKOG,
Chairman of the National Monetary Conference.

T. V. A. and the Farmer

EXTENSION OF REMARKS
OF
HON. HERRON PEARSON
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1939

Mr. PEARSON. Mr. Speaker, in view of the attacks being currently made upon the Tennessee Valley Authority and efforts to block its needed appropriations, I want to urge upon every Member of this House who is interested in the farmers of this country serious consideration of that phase of the Authority's program which has done and is doing so much to solve regional problems of national interest dealing with general improvement of farm life and farm income.

The purpose of this work is to help put conservation of water and soil on a self-sustaining basis. Arresting erosion and restoring soil fertility is a job which must be done largely by the 250,000 or so farmers of the Tennessee Valley region. Merely devising plans and programs of improvement and urging farmers to carry them out will not bring about the necessary changes in farming methods.

Two serious barriers are encountered:

First. A compelling need for new and special types of farm equipment adapted to the hilly terrain of the area and to the characteristically low farm income; and

Second. The fact that increased rural income is required in order to place the program upon a self-sustaining and hence a permanent basis.

Extremely low per acre income from the major crops has been forcing farmers to plant every available acre, irrespective of the ability of the land to endure such treatment. Net family cash incomes of $100 to $300 a year are quite typical. Farmers at this economic level cannot follow improved farm-management practices, which involve investments for terracing, seed, fertilizer, and farm machinery. As it is made possible for farmers to receive increased income per acre, experience shows that the abuse of land is abated.

REMOVING BARRIERS TO A SELF-SUSTAINING PROGRAM

Research and demonstration developments have been undertaken to eliminate the barriers referred to. They are centered upon the problems of the needed special types of farm machinery, new uses for rural electricity, particularly in the processing of the farm crops of the region, and in the improvement of the facilities for preserving and marketing of such farm products. The work has been done largely in cooperation with State agencies having facilities for technical research, including especially the agricultural experiment stations and the engineering colleges. This is the first time that contributions of State engineering experiment stations have been drawn upon for the solution of regional problems of national interest.

These developments constitute an integral part of the Authority's major activities, such as giving greatest usefulness and effect to the supply of rural electricity which has become available. The policy of cooperation with the local agencies has resulted in multiplying the amount of work which it has been possible to do in so short a time. The effects of such cooperative effort are far reaching, in that they enable the existing agencies of scientific research and engineering to contribute greatly to the improvement of the economy of the entire region through a more effective utilization of its resources.

The projects include:

First. Research and demonstrations of special low-cost farm machinery for handling soil-conserving crops;

Second. Research and demonstrations relating to the effective use of electricity on the farm; and

Third. Research and demonstrations in local processing of the region's farm crops.

1. SPECIAL FARM EQUIPMENT DEVELOPMENT

There is a lack of equipment as well as of cash to carry out recommended soil- and water-conservation practices on low-income farms. Farm machinery on the market has been confined to mass-production farming and is not as a rule suited to small hill farms and special farming conditions of regions such as the Tennessee Valley.

Furrow seeder: It has been shown that the fall grain and lespedeza cropping system is an important means whereby private landowners may carry out their part of the soil- and water-conservation program. Under this system, savings of 50 to 100 pounds of nitrogen per acre are obtained, plus cash income of $15 to $20 per acre from the grain. But no suitable low-cost equipment has been available on the market to plant small grains in hard lespedeza sod on hillside land.

The Authority has designed and developed a hillside seed and fertilizer distributor which can be pulled by an ordinary farm team and permits the small farmer to follow the practice of seeding fall grain in alternate strips on legume or grass sod. Demonstrations convinced a southern manufacturer that the machine was practical and that a market for it with the price at less than $25 could be developed. The machine is now being sold by this manufacturer in eight States. There is a potential market for some 75,000 of such units in the valley region.

Legume hay curing: Hay grows well in the Tennessee Valley, but frequent rains make difficult the obtaining of good quality by outdoor curing. Hence, there is often a deficiency of hay production in the region, in some years valued at up to $5,000,000. This deficiency must be made up by the valley farmers from other sources. The Authority, in cooperation with a State college, has developed an electric hay drier that should cost from $300 to $400, which is many times less than the cost of the large commercial driers now on the market and designed for large farms. Hay cured by this means will find a ready market at $2 more per ton, thus promising to encourage increased growth of grass cover crops needed to control erosion.

Other soil-conservation equipment: A low-cost thresher suited to a one-third horsepower electric drive was built and field tests were begun in 1938. The cost of this machine is expected to be under $200. A legume seed harvesting attachment for an ordinary mowing machine is under development. The attachment recovered clover seed valued up to $12 per acre, which formerly had been lost through shattering during cutting. At the same time the hay was being cut for feed enough seed was thus recovered for reseeding the next year's crop.

A manufacturer of seed-harvesting attachments, to which the Authority's experimental work contributed improvements, reported sales of 200 units in 1937. In 1938 orders for 1,000 units were received by this manufacturer.

2. ELECTRICAL EQUIPMENT FOR AGRICULTURE

The electrification section of the T. V. A. Act (sec. 10) directs the T. V. A.—

> To make studies, experiments, and determinations to promote the wider and better use of electric power for agricultural and domestic use or small or local industry * * *.

Rural electricity more than almost anything else can help the farmer carry out soil-conserving farm practices. The comforts attending rural electrification help to keep on the farm the keener type of young people who are going to do the best type of farming. The immediate need, however, is for income-producing electrical equipment. As it is made possible for the farmer to save on his expenses by grinding his own small grain for feed, or to increase his return from

milk by cooling it electrically, he is in a better position to buy the fertilizer and machinery he is going to need in order to build up his land and control erosion.

Rural refrigeration: One of the most important uses of electricity in a rural community is for refrigeration, as a means to conserve commodities for home use. This sometimes helps just as much as increased cash. In the Southeastern States about one-fourth of the pork cured is said to be lost due to lack of proper cooling and curing facilities. Also the lack of farm refrigeration has been an important reason for the unbalanced diet, including the small amount of fresh meat consumed by rural people. Tennessee farm people eat less than 5 pounds of fresh beef per capita as compared with 44 pounds in Ohio.

Livestock production just for home consumption at once suggests an economical method for diverting a considerable amount of hill land into pastures. However, the stumbling block is the simple fact that most farmers in the South cannot have individual refrigerators capable of storing carcasses of beef and pork. To enable rural electricity to meet this need, the University of Tennessee Engineering Experiment Station and the T. V. A. have together developed a low-cost community refrigerator which can be installed at a crossroads store or convenient farm. One community during 1937 reports that they stored 16,000 pounds of meat and other produce. On this demonstration unit the value of the investment was $800, or only $13.11 for each of the 61 participating families. The average gross savings per family as a result of its use was $7.80; the operating costs were $2.88, including depreciation and interest, leaving a net saving of $4.92 per family. This is a good return on a $13.11 share in the investment. Expressed another way, the net total savings from the use of the box for the first year were $300 as against a total capital cost of $800.

Eleven of these units have been demonstrated at various points in the Tennessee Valley States. Three of these have been sold to individuals or groups who had been using them. Nine others have already been started by people who saw the demonstrations.

Sweetpotato storage: Electrical heat for sweetpotato curing has been tried experimentally and successfully tested in the field. More than 5,000 bushels of sweetpotatoes were cured in 1937–38 on an experimental basis in five electrical storage houses in Tennessee, Georgia, and Mississippi.

Electric heating reduces shrinkage losses, making possible savings over ordinary curing methods of $134 a year in a 2,000-bushel house. This will practically pay the cost of the electrical installation the first year.

Other types of electrical demonstrations: Electrical soil heating in hotbeds was demonstrated on farms in Tennessee, Alabama, Mississippi, and Georgia. Brooders of 100-chick and 200-chick size were tested on many small farms throughout the valley. An economical pig brooder that can be made at home for a cash outlay of $2 was developed and six units placed on farms for demonstration purposes.

3. PROCESSING FARM CROPS

In order for agriculture to be able to carry the cost of permanent land management there must be an increase in rural income. The obvious method is not subsidy, but enabling people themselves to create wealth. As a practical matter, the way of bringing this about is through better marketing of the crops they have and by processing them locally before they go to market, thus adding value to them. Hence the T. V. A.'s engineering experiments in processing the crops of the Tennessee Valley. Some of the resulting developments are already in commercial use.

Freezing of farm products: A new quick-freezing process developed and demonstrated in cooperation with the Engineering Experiment Station of the University of Tennessee illustrates the problem and the opportunity. It is the basis for a profitable business. Thousands of farmers could profit; strawberries processed and marketed in this way leave an average of at least 8½ cents per pound in the rural areas, instead of the present average of 4.2 cents, which is realized when the fruit is sold fresh. The income from this crop can thus be doubled in an area having a quick-freezing plant. Thorough market surveys bring reports from food brokers showing that the demand for high-grade frozen products in 1938 was 60 percent greater than the supply available.

The new process and suitable machines have been operated experimentally in a small test plant. Well-known concerns engaged in handling frozen foods have judged the products to be of unusually high grade.

A refrigerated barge equipped for zero storage of frozen fruits was constructed during the past year to demonstrate economical transportation of frozen foods to distant markets by water. The barge has a total capacity of 350,000 pounds of individually quick-frozen fruits and vegetables. Its experimental trip to St. Louis in the fall of 1938 was the first time that a self-contained refrigerated barge shipment has been made on the inland waterway system.

For every acre from which a farmer can get a hundred dollars from intensive cultivation of a high-income crop, such as strawberries, as against perhaps $20 per acre from eroded land in corn, the farmer can afford to withdraw several acres from continuous cultivation and put it in cover crops to rebuild and protect the soil. But before making the cash outlays for better handling of land the farmer must find a profitable and reasonably stable market for such quality products as he undertakes to produce.

Cottonseed cooking: Improvements in oil extraction by use of a pressure-cooking method have been demonstrated for 2 successive years at the experimental cottonseed-oil pilot plant at the Tennessee Engineering Experiment Station. The new method was developed by the station and the Authority, with the Engineering Foundation and the cottonseed-crushing industry contributing to its support.

Increased extraction of 10 pounds of oil per ton of seed, as demonstrated by this year's experiments, would give the average small oil mill an additional income of $7,800 a year at the current market price for oil. The savings during the first year of use should approximately cover the cost of the new cooker. It is estimated that if all mills adopted the new method there would be a potential added value to the Nation's cotton crop of $3,000,000 a year.

With value added to the oil and other products of the cotton plant, less dependence need be placed by the farmer on the price of cotton fiber. This is one approach to a solution of the cotton problem, a matter of great national interest.

Furthermore, this development contributes to soil conservation, since strengthening the position of the small local mill will make possible the return through animal feeding of the byproduct meal—containing all of the plant-food fertilizing elements removed by the cotton plant—to the soil from which it came. Two cottonseed-mill machinery companies are now making and installing this type of equipment under a licensing arrangement.

Results of processing developments: Through such joint projects with the land-grant institutions, the effectiveness of their leadership is increased. For instance, in connection with the development related to improvements in the cooking of cottonseed, the policy resulted in the ability of the engineering college with which T. V. A. cooperated to obtain funds from the State and ultimately substantial support from the industry itself. Whereas 3 years ago the T. V. A.'s contribution to the project was several times that of the university, in the budget year 1937–38 it dropped to one-half that of the university, and in the budget year 1938–39 to one-fourth of the total local funds. T. V. A. work on this particular project is now completed and it is self-supporting, in that no further Federal funds are needed.

The purpose in the freezing development was not primarily to find an improved way of freezing foods, but to determine whether the people of the region can share in the benefits of the rapidly expanding markets for quick frozen fruits and vegetables. If so, agriculture should be in a position to obtain more income from fewer acres and thus to devote more land to uses which result in effective water control in the Tennessee River Basin.

It seems to me that the resulting benefits of these experiments to the farmers of the entire country must appeal to all who are interested in their welfare. It is an integral part of a general program which cannot be blindly ignored or discarded.

Letter to Secretary of State Cordell Hull

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD I include a letter which I have forwarded to Secretary of State Cordell Hull, urging him not to enter into any barter arrangements with Nazi Germany, and, if need be, to have the President invoke a complete embargo of German products:

FEBRUARY 23, 1939.

Hon. CORDELL HULL,
The Secretary of State,
Washington, D. C.

MY DEAR MR. SECRETARY: It is hoped that you will keep your determination (at the sticking point) not to succumb to barter arrangements with Nazi Germany. I quite agree with your suggestion that the United States has everything to lose and nothing to gain through any policy of exchange by barter. The only salutary way out of the difficulty of world trade is by trade agreements which involve the gradual reduction of tariff barriers to enable trade to flow more freely. Supplemental to those agreements should go loans to those deserving foreign countries who are customers of our products and which products they might need.

Efforts are being made through Dr. Wilhelm Tannenberg, first secretary of the German Embassy, and Dr. Horst Fricke, German commercial attaché in Chicago, both representing Hitler, to enter into a deal with certain farm cooperatives here in the United States, to offer Reich farm machinery, poultry netting, and barbed wire in exchange for American wheat and lard. I am informed that the lard which the Reich is purportedly willing to take would be worth about $28,000,000 at current prices.

Such barter arrangements would fly in the face of all your well-tested, successful practices of reducing tariff barriers. Certainly we should pause before attempting to enter into barter deals with nations like the Reich, which has upon its hands the blood of thousands of helpless men, women, and children—pitiful victims of its insane hate and cruelty.

Furthermore, this same nation has been in continuous default upon its sovereign and corporate indebtedness to American bondholders. While in such continuous default, this Reich nation has purchased and repatriated at least one-third of its obligations. It has the temerity to use the money allocated for the payment of interest on its corporate indebtedness to purchase the capital of its corporate indebtedness at greatly forced-down prices. The repudiation of its obligations, while at the same time professing inability to pay interest due, is the lowest kind of international moral turpitude. Certainly it should not be encouraged and repaid by barter arrangements.

Furthermore, the Reich has refused to assume responsibility for the debts of Austria. It has had the temerity to say that it will in part recognize that debt if the United States and other countries would agree to buy an increased amount of German exports.

The Reich has the temerity, also, to offer to release Catholic and Jewish refugees with a portion of their wealth on the condition that their emigration be financed by international loans which in turn would be secured by the seizure of the bulk of the property of these unfortunate and persecuted refugees in Germany. This is sheer barbarism, and is an attempt to hold in ransom hundreds of thousands of helpless men, women, and children.

The Reich is silly enough to believe that the enlightened nations would accept this proposition, despite the fact that it has been estimated that less than 15 percent of the funds so raised would go to the service of the loans, and that the balance would be accrued to Germany in a sort of foreign exchange, which in turn Germany would use to build up its armaments.

Furthermore, the technique of the Nazis in connection with their propagandists in this country is to stir up discord and internal dissension, and then step in and try to dominate the chaos they have created through a German minority which they control in this country. To stir up dissatisfaction in our country, they are attacking democracy and its institutions. They say democracy is on the verge of collapse; that the United States is a rich, vulgar, corrupt, uncultured land, full of criminals and clinging to a degenerate form of government. They seek to split the country socially and undermine our institutions and instill mutual hatred among the citizens. The issues they raise are now inconsequential, but they are like pimples on the body politic. We may not notice or care about them, but by constant rubbing they become inflamed and irritated. Complications may develop and soon the whole body politic may be poisoned.

The Nazis in this country, under influences from Berlin, are generating such pimples and are irritating them, and may, if not punished, create serious disorders and difficulties. Certainly such conduct should not be rewarded with "barter" deals.

The Reich's balance of trade is running seriously against her to the extent of more than 400,000,000 marks for 1938. The Reich is excessively worried about an acute shortage of her foreign exchange. It is a serious threat to her giant armament program and is also demoralizing German industry. The Reich wants us now, and particularly the American farmer, to pull her chestnuts out of the fire.

The Reich is developing a rather extensive trade with Latin America and has become our chief competitor in that market. How has she done this? By mean and contemptible and blatherskite propaganda against us; by unfair export subsidies, barter deals, and artificial exchange restrictions. All of this constitutes discriminatory trade practices within the meaning of section 338 of the Hawley-Smoot Tariff Act of 1930, as well as section 181 of the United States Code. Under these sections the President has the right to embargo all Nazi goods from entering this country.

I am informed that a report has been submitted to the President indicating the right, in his discretion, to impose such economic sanctions against the Reich. Therefore, far from entering into the so-called barter arrangements with Germany, I am inclined to the view that punishment and not advantages should be the portion of Hitler. I would therefore prefer to see the President invoke that embargo. In any event, barter deals should be taboo.

Democracies in the world are in an economic war against the dictatorships. One of our strong weapons would be such an embargo. The Reich would have more to lose than we. We would have more to gain than she. In any event, it is hoped that the weight of your high authority and that of your office will be used against the consummation of the aforesaid barter business.

With assurances of high esteem, I am,

Cordially yours,

EMANUEL CELLER.

Appointment to the Supreme Court

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 24, 1939

RESOLUTION OF THE SENATE OF THE STATE OF ARIZONA

Mr. MURDOCK of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Senate of the State of Arizona:

Senate Resolution 3

Recommending the appointment of Judge Sam Bratton, of New Mexico, to membership in the United States Supreme Court

Whereas a vacancy on the Supreme Bench of the United States has occurred through the retirement of that eminent jurist, Associate Justice Louis D. Brandeis; and

Whereas it becomes necessary for the President of the United States to appoint a successor; and

Whereas it will be the desire and endeavor of the President of the United States to appoint a man who is in every way worthy the distinction, and possessed of those high qualifications demanded of one who assumes the great responsibilities of the office of Justice of the Supreme Court; and

Whereas there is a widespread belief that if such a man may be found in the western portion of the United States it would be fitting that the vacancy be filled by a western jurist; and

Whereas Hon. Sam Bratton, of New Mexico, at present a judge of the United States circuit court, is a jurist of high attainments, judicial temperament, and splendid character, and a man eminently qualified for the exalted post in question: Therefore be it

Resolved by the Senate of the State of Arizona:

1. That it is the sense of this body that the President, by tendering to Judge Bratton the appointment to the Supreme Court of the United States, to fill the vacancy created by Justice Brandeis' retirement, would safeguard the interests of the Nation, insure a continuation of the high repute in which the Supreme Court is held, and do credit to his own judgment.

2. That the Senate of the State of Arizona respectfully recommends to the President the selection of Judge Bratton.

The Political Faith of Our Fathers

EXTENSION OF REMARKS
OF
HON. ANTHONY J. DIMOND
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1939

ADDRESS DELIVERED BY HON. ANTHONY J. DIMOND, DELEGATE FROM ALASKA, AT JUNEAU, ALASKA, JULY 4, 1938

Mr. DIMOND. Mr. Speaker, under unanimous consent heretofore given to extend my remarks in the RECORD, I include the following address I delivered at Juneau, Alaska, on July 4, 1938, on the invitation of the Alford John Bradford Post, No. 4, the American Legion, of Juneau, Alaska:

After a long absence, spent in your service, I am happy to be home. May I first express to the American Legion of Juneau my keen sense of obligation for the honor of having been invited to speak to you today. That honor is a signal one, and I deeply appreciate it.

This is a day of peace. One hundred and sixty-two years ago today, in the quiet streets of a city situated near the seaboard of a then almost naked continent, was heard the sound of a bell, proclaiming a new dispensation in the political affairs of mankind, declaring that all men are created equal, and that all alike are possessed of certain unalienable rights, among which are life, liberty, and the pursuit of happiness.

Equality of birth. And the nations of the world were then founded upon the doctrine of an assumed inequality of birth. Unalienable rights. When in all the earth there was scarce a place where the rights of any man, no matter how sacred, or how naturally inviolable, were not subject to cancelation at the whim or caprice of the autocrat who ruled the land. The more we consider the condition of the times, the more we are lost in wonder and admiration for those great men who dared to be pioneers in political thought, who had the courage to challenge the power of a tyrant king.

And we all know what followed, 7 years of devastating war; 7 years of battle, of privation, of suffering, of death; 7 years, on each day of which the leaders and a host of men unknown to fame reiterated their belief in the doctrine of certain unalienable rights of men, their devotion to the cause of freedom and of justice, in order that they, and that we, their children, and that our children's children may have life not subject to the will of any despot, and may enjoy that life in glory and the sunshine of true liberty.

This is indeed a day of peace, but it is the peace of a man who has beaten his fiercest enemy; the peace of one who has overcome his worst temptation and who is calm and confident in the victory that alone makes peace worth having. This is indeed a day of peace, but the peace is not of defeat or of compromise, but of victory; and a peace not alone of victory, but what is far more important, of justice.

On this day, above all others, we would do well to recall to mind the aims and ideals which were proclaimed at Philadelphia on July 4, 1776, and for which so many have since fought and died. We should here and now, to use the words of the immortal Lincoln, take renewed devotion to the cause for which they then stood ready to give their last full measure of devotion, the cause of freedom and justice.

Freedom and justice. The words are so often on the lips of men that we fail to realize their import. Freedom. What is it? Any dictionary can give us the definition. But the freedom we value is an ordered freedom, an intelligent freedom, a freedom under which all may enjoy life and attain the greatest possible measure of happiness without any restraints except those which bind each person as a member of society, and without any limitations of action or conduct except such as are necessarily imposed upon each individual in order that every other person may enjoy a like measure of freedom. But this freedom does not mean unchecked license, and our devotion to the ideal of freedom ought not lead us to support those who under the protection of the flag of our Nation and the freedom for which it stands seek to tear it down and to substitute for it some other flag, red or black, the emblems, as we know by the terrible examples before our very eyes, of disorder and persecution, of terror and assassination, and of such tyranny and oppression as to shock the minds of civilized men.

And today we should realize that the freedom which we value will not sustain itself; that it requires and demands unremitting watchfulness, and more. Someone has said that eternal vigilance is the price of liberty, but that is only half the truth. Eternal combat is the price of liberty. Our liberty was conceived in battle, born in battle, preserved in battle; and it must ever live by battle; and whenever the people of this land are unwilling to spend the last bit of their substance or to shed the last drop of their blood in the cause of their freedom, then that freedom, which is so justly our proudest boast, will have been doomed to death and oblivion, and this Nation, like many another, will be merely the memory of a blasted hope, a shattered ideal, a noble ambition for the happiness of mankind which has failed of its purpose and its promise.

We may rightly think of that freedom not as a cold, dead insensate thing, but as warm, living, almost incarnate, full of vigor and life and vitality; and because it is alive, and in obedience to the very laws of life, fighting—fighting always that it may live and live only by its power to defeat its enemies.

The freedom of the Nation is constantly assailed both from within and from without. From within by those who enjoy the blessings of that freedom, but like detestable parasites seek to destroy that which gives them life and makes their existence worth while; who clamor loudly for civil liberty for themselves in order that when they attain power they may kill all liberty; and from without by those who mock at and deride the very idea of liberty and believe, with Napoleon, that God is on the side of the heaviest cannon. This day will have failed of its lesson and its meaning if we do not here and now resolve to be eternally vigilant and to eternally do battle with all of the dark and malign forces which openly or covertly assail our freedom.

Nor should we be so unintelligently selfish as we think of ourselves alone. By the highest laws of morality, as well as by the rules of enlightened self-interest, we should give fair and sympathetic consideration to the welfare and aspirations for liberty of others. In modern times every part of the civilized world has its impact, social and political and economic, upon every other part. Common sense suggests that we occasionally look beyond the boundaries of our own village, or city, or State, or Nation, and there, perhaps, to our advantage and enrichment, we may find in other peoples or in other lands something worthy of our admiration or charity or pity, or something so horrible that we shall be more than ever determined to prevent a similar condition from arising in our own land to curse us with its evil.

And then, justice! What is justice?

As we all know, justice, in its universal sense, means rendering to everyone his due. It is in the nature of a great and general law which we are bound in honor and in conscience to observe—to render to everyone his due. It is not sufficient to establish political freedom and rest there, at the same time permitting economic servitude, for the latter is an offense against justice. The justice required is not merely the enforcement of the statute law, for that is a small, almost infinitesimal, part of it. Justice demands that we act in accord with its exact definition to render to everyone his due. It is a great command, of reason as well as of conscience, which we should feel as keenly and hear as clearly as though the voice of the eternal God Himself spoke it to us. That command says to each of us today, "Render to everyone his due, whether his skin be black, brown, yellow, or white, and whatever be his class, creed, or circumstance. Be just!" And as we obey that divine voice, we may confidently hope to be blessed with the peace that passeth understanding; and if we long disobey it, then just as surely as did the tyrants and the unjust of ancient times, just so surely shall we, too, tumble down into the dust.

The fundamental principles of justice appeal to us with particular force today. Partly by reason of a deep and burning sense of economic injustice accompanied by economic insecurity existing among a substantial number of our citizens, and partly by reason of the naked lust for power of some of the leaders, clamorous and insistent voices are heard around us and among us, demanding the abandonment of our traditional principles of liberty; demanding, in effect, under one guise or another, the creation of an all-powerful or totalitarian state, wherein man would no longer be recognized as possessing any inalienable rights. These attacks upon our form of government, and upon its ideals of human liberty, take two particular modes, bitterly hostile to each other, and yet identical in operation and ultimate effect; one of them is generally called Fascist and the other Communist.

Both fascism and communism are enemies of human liberty; one open and avowed, the other secret and insidious and cunning, always boring from within. Fascism presents an ugly and brazen challenge to the very concept of individual freedom. Communism has a different and more deadly approach, seeking first to seduce and then to strangle liberty. It is difficult to say which is the more repulsive to those who love liberty, to those who revere the principles of the Declaration of Independence; but communism works by concealment of its aims, works by indirection, by subterfuge, and by outright falsehood, and may, therefore, be more immediately dangerous. Both are depressing examples of the slave mentality, which would, if it could, create another slave state.

But aside from the leaders, who are generally barren-minded enthusiasts, or ruthless and greedy for power, the followers of those alien and slavish beliefs are mostly those unfortunates who feel themselves oppressed, and many of whom are actually oppressed by the injustice of the world, and who have thus lost confidence in democratic principles and processes, and in the ideal of liberty, and so follow blindly the leaders who promise all things to their adherents, promise the "kingdoms of the world and the glory thereof," and ask in return one thing only—absolute and complete submission and obedience, involving the surrender of all liberty. The conclusion seems inescapable that if fascism with its variant of nazi-ism, or communism, shall ever prevail among us it will be because we have failed to promote and maintain justice, and thus men have become desperate.

How necessary, then, if we are to keep the political faith of our fathers, that we should remove so far as is humanly possible every last vestige of injustice, economic or otherwise, and thus preserve our heritage and prove once more that only in liberty can man truly and reasonably engage in the "pursuit of happiness."

Nor should this day pass without a prayerful thought for those who made the last great sacrifice that this Nation might become and remain free—the dear, the gallant dead. We do not honor them because they are dead. No; they hold high place in our thoughts, and they are deserving of our eternal gratitude, because they fought for a great, a noble belief and ideal, and because they had the courage to die for it. After all, humanly speaking, courage is among the grandest of the things of life, for nothing that is worth while can long survive without it. The value of courage as a motive of the most admirable human conduct is touchingly expressed in verse that was, I believe, written during the World War, in which a mother is made to speak of her dead son. I quote:

"And so I did not cease to build about my splendid boy
Great towers of prayer, that he might fight with courage high;
And that, if need be, he might bravely die.
I prayed that he might fight, if die he must,
Matched man to man, with hope in every thrust;
That in his last encounter he should meet
A man who fought with grave and gallant grace,
And as the blows fell, in the other's face
Be written admiration, so the last defeat
Would not taste bitter from a foe so brave.
This boon I could not help but crave—
Such foolish dreams a mother's thoughts employ—
Surrounded he, a dozen to my boy!
And yet I know, I who love courage so,
That when through the dawn their dim shapes were described,
Thank God, he fought them all, and, fighting, died."

That is what this day means to us. That is what that dear flag symbolizes and typifies: courage and honor; all of our highest and best hopes and aspirations; all of our finest spiritual strivings and endeavors; a union of more than one hundred millions of people, from all the regions of the earth, bound indissolubly into a society where the welfare of one is universally held to be the welfare of all; where if one member suffers, all others suffer in unison; where if one is injured or oppressed, all others will spring to arms for his defense; where freedom reigns, and where justice, the justice of the eternal God, must and shall be made to prevail.

For such a cause, for such a country, for such a faith, for such a flag, we are no longer startled or amazed at the heroism of America's sons at the Belleau Wood or at Chateau-Thierry, at St. Mihiel, and in the dark stretches of the Argonne Forest. But we take it as a matter of course; as the natural and normal conduct of men who in their lives gave that flag devotion, and who embattled, wounded, dying, on the torn fields of France and of Flanders, fulfilled its promise, sustained its tradition, and added to its imperishable glory.

A United Party or a Minority Party

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1939

ADDRESS BY HON. ROBERT H. JACKSON AT TOPEKA, KANS., FEBRUARY 22, 1939

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Solicitor General Robert H. Jackson at the annual State banquet of the Democrats of Kansas on Wednesday, February 22, 1939, at the Masonic Temple in Topeka, Kans.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

George Washington won the first great struggle for a better life on this continent because he stubbornly kept the faith through a bitter winter at Valley Forge. Desertions from his cause when the fighting became hard, conspiracies against his leadership, loss of many who had supported and encouraged him at the beginning of the struggle, and some downright disloyalty from those he had helped, failed at Valley Forge to shake the character of the first great American. And from that day to this no great leader of the people has led them in a fight for better government without having to face a Valley Forge.

What a perfect day to face frankly the situation of the Democratic Party—now camped at its Valley Forge—and to rally for victory in 1940—a victory that can be won, and can only be won, by keeping true to our principles and loyal to the greatest leader of our time.

I am here to talk politics—just plain party politics—as one Democrat to another. I claim no right to speak as a politician, nor because of holding a political position, for my position with the administration is not a political one. It is purely professional. Since I have had no part in the making of appointments and little in the making of policy, I can observe conditions with as much detachment as any member of our party.

My right to discuss the Democratic Party, critically if I choose, is based on a personal and family loyalty which since the Democratic Party was founded has never failed to support its ticket. Humble, loyal followers, such as these, are the backbone of our party. We kept it alive when we were called "Copperheads" for doing so. We kept it alive when we were called "Populists." And, whatever its present plight, we are, and will remain Democrats.

There have been and are millions of such Democrats, but never enough of them to carry a national election with their own votes. Our own strength is sufficient to keep the party from being wiped off the map, but not to give it victory. As the President reminded us on Jackson Day, less than half of our people are Democrats.

This has meant that the Democrats must not only deserve success, but they must convince many disinterested voters that it deserves success, in order to win it. The Republican Party, since the Civil War, has usually had enough strength of its own to win elections whether it deserved them or not. This strength enabled Republicans to ride through eras of administrative incompetence and even of downright corruption which the country would never stand for from Democrats.

I know there are many who scorn party loyalties. But the party system in my judgment has had a great part in making our American democracy work. Only through the machinery of a party has American leadership ever made itself effective. The alternative to our two-party system is the shifting combination of small blocs, class or sectional representatives, and pressure groups. Ably and responsibly led, our political parties give more stable, more competent and less corrupt government that these bargaining groups could give.

The chief merit of our American political party system is that it can furnish the cohesion and the motive for cooperation between an executive and his departments on the one hand and the party majority in the legislative branches on the other, and thus out of the multitude of minds produce a party attitude and responsibility on public questions. And if party loyalty will not knit officials into a unified administration, it would be pretty difficult to find any hopeful basis for one in our system.

Any party in power under our constitutional plan has one leader, chosen by and responsible to the whole people. That is the President. Only the Executive is elected by the Nation as a whole, or has a national constituency or a responsibility to all citizens and sections of the Nation. The President has every citizen of the United States as a constituent, but every Senator or Representative is primarily a representative of a section, however much he may desire to take a national view.

Unless the Democratic Party is willing to accept a national leadership from the President, it can at best have only the leadership of a coalition of local leaders. There is nothing in history to lead us to believe that a coalition of local leaders can produce either a consistent policy or a harmonious one.

This is no time to stir animosities or indulge in recriminations. I will not discuss personalities or try to settle political arguments as to who has sinned and who has been sinned against, and whether there are or are not real individual grievances. From the point of view of the party Democrat and from the effect it has on our party prospects, it probably doesn't much matter.

Our party includes men of strong convictions and diverse views, interests, and experiences. If we are to split, there will be high intelligence and character on both sides. But we are hardly doing ourselves justice if we split over the kind of issues that seem to be causing most of the trouble. It would be idle to deny that certain great problems of foreign and domestic policy are not being adequately and temperately dealt with, and that the time is growing late and the country is growing weary. It would be equally idle to deny that disputes within our own party are largely responsible, and that many of these time-wasting fights are over issues that, whatever their merits, are of secondary importance, both to the country and even to those involved.

I know of few times in the history of this country when the public has been more anxious about great problems and less patient with quarrels over petty ones. Whether we turn to international affairs and behold a world aflame or whether we turn to domestic affairs and behold our unsolved problems of unemployment and relief and lagging private industry, the need of the hour and the search of the hour is for big men. We could, of course, justly answer, What of the Republicans? But it is our record, not theirs, that will be up for examination. It is our party that has the responsibility, and it is our party that has the opportunity.

The greatest danger to the Democratic Party today is in a growing public suspicion that its leaders have become so divided and distracted with personal and local politics that it does not have capacity to agree on policies to run the Government. And also, whether its professions of interest in the problems of the people are the real convictions of the controlling elements of the party, or only invoked for election purposes. So far as it affects our prospects in the next election, it doesn't make any great difference whether these things are really true, if the people come to think they are true. The important thing is whether, within the remaining time of this session of Congress, the conditions of our success in 1940 can be established. If they cannot, we may remember 1940 as a companion year with 1920—a year of disaster—self-inflicted disaster.

Then, too, the suspicion is growing that the promise of a liberal administration represents true convictions only of the President and a small group, and that it does not represent the attitude of

the party as a whole. There are controversies over the meaning of liberal and conservative. Tonight I am not interested in the disputations of the intelligentsia on these abstractions. What I mean by liberal administration is the kind we all joined in 1936 in making the people think they would get from us—and there is no need to quibble about that.

The President's effort to deliver on this party promise is fully in keeping not only with the most honorable Democratic tradition but also in keeping with the only policy on which the party has been able to win a victory since the Civil War. In my lifetime I have seen only two victorious national leaders from our party. The principles, the friends, and the enemies of the New Deal bear striking resemblance to those of President Wilson's "new freedom." I was nourished on the liberal Democratic tradition of Wilson, and it is too late for me to turn back.

Since the Civil War our only party victories have been won by Grover Cleveland, Woodrow Wilson, and Franklin D. Roosevelt. We have almost forgotten that Cleveland ran for President as a liberal and as a reformer. He was attacked as the "enemy of business" because he assailed the tariff, and he responded by denouncing "the communism of great wealth." Only in the later days, when the silver struggle emerged and our party faced defeat, did Cleveland become known as a conservative. And Woodrow Wilson, who fought for many reforms, including the Federal Trade Commission Act and the Federal Reserve Act, was denounced as a reformer, as an enemy of business, and with all of those epithets which are so common in our own day.

No person who reads the political record of the last half century can fail to see that the people turn to the Democrats whenever they are in a mood for liberal government, and that they turn to the Republicans when they are in the mood for reactionary government. This is based on a sound instinct.

From its foundation by Jefferson and Jackson the Democratic Party has been committed to a philosophy of political liberalism and of regard for the common man. Moreover, its following in your State and my State, and in many other States, is such that it must adhere to a policy of liberalism if it is to succeed. Its following is among the common people, now well aware of their political power and unwilling to be ignored.

And we should take to heart no less the plain lesson that when the people are in the mood for reactionary government they never stop with "conservative" Democrats. They turn clear over to the Republican Party. Its record, its leadership, and its financial backing give a guaranty that it will deliver reactionary government.

There are those who cite the Gallup poll which tells us that the electorate—Democrats included—are becoming more conservative. If we could have sampled it then, doubtless we would have found the same movement of sentiment in the days before we nominated Alton B. Parker, James M. Cox, or John W. Davis. But did the relative conservatism of these estimable individuals catch these conservatives? Studies may prove that it will be more difficult the next time to win with our principles, but it hardly needs to be proved that we cannot win without them. No set of figures has yet proved that the Democrats can win by stealing the Republican position and trying to out-Republican the Republicans.

The plain lesson of history is that when the country wants reaction it will take it from Republicans who are experts in reactionism, and when it wants liberalism, and only then, will it turn to the Democrats. The Democratic Party will either be a liberal party or a minority party. If Democrats join Republicans in helping turn the people against the New Deal, they will find that they have also turned them against the Democratic Party and are authors of a ruin in which they will have to share.

I have so far put the discussion on the rather low level of party expediency. I know there are those to whom that argument does not appeal. Our love of the old party—a sort of foolish love perhaps—is not bred in their bone. They welcome a so-called realinement. Some want the party to be completely liberal; others want it to be completely conservative. Liberal or conservative, they recognize that a realinement may mean defeat in 1940. But they believe that even defeat may leave a silver lining. For, in their view, defeat may chasten the party and cleanse it of those who cling to the party only for the power and patronage the party gives them. So far as I am personally concerned, I know of few who could be kicked out of Washington with better advantage to themselves than I. If I were a dependent on party favor, I would not make this speech. And under some circumstances, I might welcome the showdown between power and principle.

But there is a country as well as a party whose welfare is our trust. There are risks to the Nation involved which we do not dare invite. In these times, if we begin wrecking a governing group, as our party is today, we do not know where the wrecking will end.

We know that there is no cohesive, intelligent, or harmonious policy possible from the Republican Party. It talks of a balanced Budget but flirts with the Townsend plan. Its leaders agree upon nothing except opposition to the Democrats. It has no recognized leadership and none can tell who would be most influential in its counsels. While its most recent candidate, Mr. Landon, has, without recanting his disagreement on many points, cooperated in the President's foreign policy, its most recent President assails every policy with the undiscriminating rancor of a man who bungled his own opportunity. Being in power centers public attention on our differences. Nothing but their being out of power conceals even deeper and more bitter division among the Republicans.

But these are times when the whole structure and philosophy of democratic government is under question, when free government is undermined by Communists on the left and overwhelmed by Fascists on the right. If in the presence of this our own party fails, there is no ground for believing the Republicans can succeed. And if both are failing, what then?

The responsibilities upon men in public life today are not ordinary responsibilities. Our comforts, prides, and ambitions must yield to the overwhelming necessity that public confidence in democratic government be maintained and that our unsolved problems do not vanquish us.

In a world unsettled by restless and hateful movements of nation against nation, class against class, and race against race, it is no easy matter to keep our poise and hold to ways that will lead to peace. In the presence of lagging business and widespread unemployment, our little quarrels may well spread to affect industrial peace and social stability.

We cannot become conservatives and strive for maintenance of the status quo. That philosophy had some basis when status quo itself was reasonably satisfactory. Status quo can't stay with us now. To stop swimming is to sink.

Our duty is to apply ourselves without reservation to getting our economic life onto sound foundation and keeping alive faith in the power of free men to solve their problems by the democratic process.

And that duty begins now, fellow Democrats. Our problem is not what to do about a third term; it is what to do about this second term. Our real time of trial is not 1940; it is now. It is today that the record is being made that will decide our tomorrows.

As Democrats you and I have a right to expect our party, now that its responsibilities and dangers are becoming apparent, to meet both. Of course, we must get together. But it will do no good to get together on the wrong things. We must get together on the right things.

A Nation-wide rank and file has chosen the leadership of the President. He could not, if he would, abdicate it to a few or to many, none of whom have a Nation-wide constituency. He has led in the best tradition of our party. If we win in 1940, it will be upon the record and under the momentum of the leadership he has given us.

Of all Democrats of this time he is safely anchored in history, where party strife and personal ill will can do him no harm. It is rather for our people and our party and those who come after us that we should renew our faith in liberal democratic government and go forward to a new day, guided by the lessons we have learned at the feet of the most inspiring and courageous leader given to any people in our day—Franklin D. Roosevelt.

South Dakota Legislative Dinner

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 23, 1939

ADDRESS BY O. L. BROWNLEE AT PIERRE, S. DAK., FEBRUARY 16, 1939

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Mr. O. L. Brownlee, chief editorial writer of the Sioux City Tribune, Sioux City, Iowa, on the occasion of the South Dakota legislative dinner given at Pierre, S. Dak., February 16, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is impossible for an intelligent person to view the situation of the United States today without experiencing a sense of misgiving concerning the future of this country.

Prices are down. Industry is stagnant. Unemployment is general. Business enterprise, especially in the Middle West, is drying up. Mass poverty, like creeping paralysis, is spreading throughout the economic body.

Bank deposits turned over barely 13 times in 1938, whereas in normal years, such as 1926, they turn over about 20 times. In the boom year 1929 they actually turned over 27 times.

Transactions in stocks in 1938 hit a new low since 1924, and the sale of bonds last year was the smallest in volume since 1917.

The flow of money has dwindled to a mere trickle which is largely inducted by the drip, drip, drip and the drop, drop, drop of public funds flowing in and out of a hypothetical pump that refuses to prime because there is no spring at the bottom of the well.

Six years ago this month we had 10,000,000 or more unemployed; and we still have 10,000,000 or more unemployed.

We have tried everything, it seems, except the right thing. We have put grandpa and grandma on the pension rolls and we have sent junior to the C. C. C., sponsored art schools for dishwashers, and theater projects for truck drivers. We have piddled with W. P. A., P. W. A., C. W. A. and fiddled with A. A. A., F. E. R A.,

N. R. A., and a whole host of other alphabetical innovations—but it is all in vain.

In addition to the billions we have squandered on these enterprises we have been compelled to spend an additional $461,000,000 for food and clothing which we have distributed free to keep together the souls and bodies of the hapless victims of depression and recession and our own economic and political ineptitude.

TOWARD A LOW COMMON STANDARD

It is self-evident to any thinking person that the United States cannot continue indefinitely the course it is now pursuing. We are consuming our substance, mortgaging our future, and gradually—and inevitably—W. P. A. is coming to set a common standard for all of us unless we shall be able to arrest the tide that now is running so swiftly against us.

I think that the Republican Party of South Dakota in convention in this city of Pierre last June 27, adequately voiced the thoughts of intelligent Christian Americans everywhere and gave that expression the proper place in their platform, the first paragraph of which reads:

"We call upon Almighty God to witness the distress of this Nation. We invoke His inspiration and guidance in this our country's hour of peril."

I think that you will be interested in knowing that, insofar as I have been able to discover, never before had the platform of any major political party made any reference to the Deity. I think that it was about time that one did—don't you?

Economic leadership has failed us. Business, which we had made our god, is unable to point the way out. Political leadership has proved itself unequal to the challenge of the times.

What is wrong? What must be done? To whom shall we look for leadership? Those questions are on the lips of every thinking person in this harassed land today.

The same God who created us endowed us with an abundance of natural resources of every kind. We still have them—the soil, the minerals, the timber, climate, rainfall, and sunshine. Our great transportation and merchandising systems are intact. We have at our command the greatest pool of money and credit any race or nation has ever known.

Our culture has produced more creative and inventive genius than has that of any other civilization. No other people ever amassed such a store of technical knowledge. These are the flowers of freedom and liberty in the American tradition which, if properly used, would further enrich our lives.

But, in the haste and rush—and, yes, the greed—incident to superimposing a great industrial civilization upon the foundation of an agrarian culture—we did it within the span of a third of a century—we lost sight of some of the fundamental things.

WHERE THE VERITIES PREVAIL

And the place to rediscover and to restate these eternal fundamentals of which I speak is out here in this part of America—at the grass roots, so to speak.

They are not to be found among the lofty spires that limn the skyline of New York nor seemingly can they be correctly reexpressed above the discord of the Babylon that is Washington where men "speak with many tongues."

May it please you to know, ladies and gentlemen, it is my humble opinion that you people of South Dakota, a State whose people still cherish vivid memories of the hardships of pioneer life, have rediscovered and restated these eternal verities with greater force and clarity than they have been expressed by the members of any other group.

Let me refer again to the Republican State platform of 1938. At the bottom of page 2 of that historic document, there appears this declaration:

"We recognize as a fundamental economic fact that the continued prosperity of this Nation and the welfare of its people begin with the production and sale of the products of nature—the annual yield of the farms, forests, mines, and other products of the ground.

"We recognize that the sale of such new wealth products must supply enough money each year so that, when it is translated into other forms of wealth through the channels of manufacture, transportation, and commerce it will amount to a sum sufficient to operate this Nation as a solvent business institution."

There you have stated the broad principles clearly, concisely, and accurately. Volumes could be written that would say no more; in fact I have read volumes that said considerably less.

Our problem is to bring sufficient money into circulation through the sale of the products of new wealth and keep it circulating in sufficient volume and with sufficient velocity to yield prosperity.

Now, there are just three ways by which money can be called into existence or brought into circulation; namely, by producing and selling something; by issue under constitutional authority; by borrowing.

Money of issue actually represents nothing but an instrument of social convenience. That is its true purpose. Borrowing requires dipping into savings or pledging future earnings. Only the money that we bring into circulation through production contributes to sound economic and social progress. That is fundamental.

TWO KINDS OF INCOME

The money which we bring into circulation represents income and income is of two kinds—primary income and collective or national income.

Primary income consists of the money realized from the sale of the materials of new wealth, the products of the ground, the crops, the minerals, the timber, etc.

Collective or national income consists of the combined earnings of all our people from whatever source—the sale of raw materials, wages, profits, interest, etc. And I mean gross, not net, income.

The amount of the primary income depends upon two factors, to wit, the number of units of new wealth produced and the price per unit realized from their sale.

Research conducted by the Raw Materials National Council, of which I have the honor of being director of research, proves conclusively that there is a definite and continuous relationship between primary income, factory pay rolls, and national income.

Since agricultural demand largely determines the market for other raw materials, it is only necessary, for purposes of practical calculation, to express the relationship between agricultural income, factory pay rolls, and national income.

And that relationship is, with only slight variations from year to year, 1:1:7. In other words, $1 of farm income yields $1 of factory pay rolls and $7 of national income.

I wish that I had the time to go into that more fully and to show you charts and graphs which substantiate these conclusions. Suffice it to say that nobody has yet been able to dispute them and in recent weeks they have been substantially confirmed by Dr. Louis H. Bean, Department of Agriculture economist, and others.

Let me give you just one example of how this equation works out in actual practice. In 1928, according to the Agricultural Yearbook for 1935, the total production of all grains—wheat, corn, oats, rye, barley, and flax—amounted to 5,330,000,000 bushels. The 1932 yield of the same grains—the year of the great mythical surpluses—was 5,253,000,000 bushels, about 1 percent under the 1928 yield.

Yet in 1928 farm income was approximately $11,741,000,000 and national income was approximately $82,717,000,000, while in 1932, with a smaller yield and 4,000,000 more people to consume it, farm income was approximately $5,330,000,000 and national income was approximately $37,317,000,000—a net deficiency of about $43,000,000,000.

We produced an adequate number of units of new wealth in both years, but in 1932 we did not receive an adequate price for them.

AT THE BOTTOM OF THE TROUBLE

And that is what is at the bottom of all the trouble. The new wealth that we are producing is not yielding enough money—it is not bringing enough money into circulation—to enable us to buy what we can produce in the way of both raw materials and manufactured goods and thereby operate the Nation as a solvent business institution.

That explains depression. We are accustomed to thinking of the cost of depression in terms of the $20,000,000,000 Treasury deficit incurred since 1933. Actually, however, in terms of national income lost, we have lost more than $235,000,000,000, as revealed by comparing the gross income of the 8 predepression years and the 8 past years.

What are we going to do about it? How shall we proceed to obtain an adequate price for the new wealth that we produce? Let's turn again to the South Dakota Republican platform of 1938, of which section 3, subsection 3, reads:

"That on all imports of competitive and substitute raw materials of new wealth—the basic and strategic products of the ground—there should be levied duties or fees equal to the difference between the actual landed cost of such products and the American parity price of the domestic products which they would displace, plus freight to the nearest rate-basing point, to preserve the competitive position of American producers in supplying the American coastal markets."

That platform also calls for the creation of adequate reserves of basic food crops from surpluses when they occur, adequate credits, disposal of excess stocks of farm crops, new industries to consume large quantities of farm crops for nonfood and nonfabric purposes, and means to develop mineral deposits and other basic products which would create employment for men and capital.

I say to you that not only has South Dakota correctly diagnosed the national ailment, South Dakota has prescribed the cure.

Neither South Dakota nor any of the Middle Western States can capture and hold their proper place in the economic sun until the power of the coastal industrial interests to control the prices of raw materials has been destroyed.

It is a diabolical thing, this monopoly over the pricing of the raw materials of a nation. Those who exercise it hold the power of life and death over vast industries like the agricultural, mining, and forestry industries.

They have decreed high and ever higher tariffs for their favored enterprises and low and ineffective tariffs or even free trade for all raw materials.

Working through both major political parties, they have manipulated tariffs and price controls in a manner that has created disproportions in the exchange value of raw materials and finished goods under which we of the Middle West cannot survive.

AN ECONOMIC DICTATOR

All that they had achieved for themselves under the Smoot-Hawley and other tariff measures has been perpetuated, improved upon, and refined by the very good friend of those interests, Cordell Hull, who by virtue of the surrender by Congress of its treaty-

making powers made him an economic dictator in fact and, in my humble opinion, America's economic public enemy No. 1.

By reason of the controls which this international trading bund maintains over prices and policies they have contrived to let into the United States an ever-increasing volume of raw materials, both competitive and substitute, which last year displaced the normal production from more than 85,000,000 acres of United States farm lands.

Our flax industry has been virtually destroyed. Tapioca and casava from the East Indies now displace the yield of 529,000 acres of American corn in the manufacture of starch. We import 73 percent of our sugar, paying a premium of millions annually on Cuban sugar, which is an indirect subsidy to the Chase National, City National, and Stone-Hayden Banks of New York and the Shawmut National Bank, of Boston.

Last year we admitted nearly 3,000,000,000 pounds of jungle fats and oils, which displaced the equivalent of lard, cottonseed oil, soybean, and other oils, and enough jute to displace 500,000 bales of American cotton.

TRADING AIR AND SUNSHINE

Now, these products represent nothing but the result obtained from the chemical transformation of sunshine, air, and moisture. They are the products of plant life. And plant life consists of about 98 percent air and moisture and about 2 percent of organic matter, principally silicon dioxide—plain sand to you and me.

Why should we trade South Dakota air and sunshine for Philippine, Cuban, and jungle sunshine and air?

I'm reminded of what my good friend Billy Hale, of the Dow Chemical Co., one of the Nation's outstanding scientists, once said about that. He was berating the politicians and industrialists for perpetuating such commercial fallacies. At the climax of his speech, swept by a burst of anger, Bill raised his clenched fists above his head and fairly shouted: "Why in hell can't they see that!"

They can and do see it all right, but they are not guided by motives of sound national economy—only by the dictates of their own greed and self-interest. To blazes with the American miner and the American farmer so long as they can squeeze an extra penny out of their product.

Fools. They know not what they do. They are destroying the foundation upon which they have built their flimsy industrial house of cards and it will tumble down upon the ruins of our raw-materials producing industries when they have destroyed them.

Let me give you an example in point of how this policy affects South Dakota.

This legislature a few days ago passed a resolution petitioning Congress to order an investigation of South Dakota's manganese resources.

Now, it happens that I know considerable about these deposits. And I know that Washington knows all about them, right down to the last test hole that has been sunk and the last pound of available product. The Bureau of Mines has all that information and, moreover, has contributed much to research whereby it has been made possible to work low-grade ore, such as the Chamberlain deposit.

ORES WORTH BILLIONS

That Chamberlain deposit, ladies and gentlemen, contains about 500,000,000 tons of manganiferous-bearing ore. This half billion tons of conglomerate contains about 100,000,000 tons of manganese, sufficient to deoxidize for steel purposes every known ton of iron ore reserves in the United States; it contains, in addition, about 100,000,000 tons of high-grade iron ore, about 100,000,000 tons of recoverable building lime, thousands of tons of cobalt and magnesium and other valuable materials, not to mention the 100,000,000 tons of dry ice that could be manufactured from the carbon dioxide that would be released in processing these ores. I believe I am correct in saying that about 1,700 pounds out of each ton of that deposit has commercial value.

I think I do not exaggerate in estimating that the Chamberlain deposit would yield upward of $5,000,000,000 worth of new wealth. I have been told by competent engineers that the working of this deposit and the chemical industries that would grow up around it would support a population of 250,000 souls.

But it is not possible to develop this treasure and pay an American wage. The domestic industry is in competition with the peon labor of Brazil, India, and South Africa and the impounded labor of "liquidated" Russian kulaks.

The Hawley-Smoot bill put a 1 cent per pound duty on manganese, but the steel industry dropped to 15 percent of its capacity before the American mines could get going, and then Hull came along and cut the duty in two. He did that in the treaty with Brazil, which is not and never was the principal source of supply, but under the unconditional most-favored-nation clause benefits of the reduction were extended to Russia, Asia, and the African Gold Coast. He closed established mines with a capacity of 200,000 tons yearly and stopped all development.

Today 4,000 miles of open sea lanes stand between the great American steel mills and their principal source of manganese supply. Do you understand now why we need a bigger navy?

We need it, among other reasons, to enforce the boycott against American manganese by the United States Steel and the Bethlehem Steel Corporations so they can continue to exchange manufactured steel for raw materials and makes a profit coming and going.

STEEL TARIFFS HIGHER

It requires 14 pounds of manganese to make a ton of steel. To restore the duty on manganese to 1 cent a pound would add 7 cents to the cost of a ton of steel. But the steel industry will not absorb that infinitesmal item of cost, though since 1928 their tariffs have climbed from $8.14 per ton to $14.47 per ton, and last year they bilked the American people out of $731,000,000 in the form of tariff "pap," and in the past 15 years, according to a record compiled by former Senator Tasker L. Oddie, of Nevada, and recently brought down to date by Congressman ANDREW J. MAY, chairman of the House Committee on Military Affairs, they have "rooked" the American public out of $8,408,901,511.

Why, ladies and gentlemen, the total investment of the 21 major companies representing 92 percent of the ingot capacity of the Nation, according to Iron Age of April 1, 1938, was only $4,430,884,614. We could buy up, destroy, and replace the whole shooting match and amortize it out of the tariff "take" in about 7½ years.

This is just one sample of what the internationalist trading bund and the internationalist politicians are doing to the prize suckers of all time—the American people.

AN OBSERVATION ON TREASON

The name of Benedict Arnold will be forever reviled in the hearts and minds of patriotic Americans. Arnold was a petty political traitor. But there is such a thing as economic treason, too, and if there is an especially hot corner in hell reserved for traitors and the perpetrators of treason, I'd hate to be standing in the shoes of some American industrialists and politicians.

I want to tell you another instance. A few months ago "bear stories" began to appear in the press about an impending shortage of phosphates. Congress named a committee to investigate. South Dakota's own good Congressman, FRANCIS CASE, a man whom I greatly respect and admire, served on that committee.

The committee found that we could export phosphate at the present rate of 1,000,000 to 1,300,000 tons per year for the next 2,000 years without seriously impairing the resources of only two States, Florida and Tennessee, and that there still would remain 300,000 acres of proven reserves in Idaho and 2,500,000 acres of unsurveyed reserves.

Here's the thing that was behind those "bear stories." The world market annually takes about 4,000,000 tons of phosphate, supplied by the United States and British interests. The British simply wanted to get us out of the world market so that they could have a monopoly—and apparently they found somebody in Washington who was willing to help them get us out.

After completing this investigation, Mr. CASE announced he would sponsor a resolution in Congress to investigate foreign activities in suppressing American enterprise and the extent to which they have been aided by persons in the service of the United States Government.

I hope that he goes through with it and that your legislature will memorialize Congress to grant his petition and that he may be privileged to call up and question certain gentlemen who are connected with the so-called National Resources Committee, which Senator MILLER, of Arkansas, said "has set itself up as a general staff to superintend practically every Government activity." I hope he may be privileged to question certain members of the Interdepartmental Committee of the Federal Government and some others who served on a special minerals committee and particularly one gentleman who, while serving on it and fighting manganese development, was shown up as having been in the employ of the Steel Institute.

If you'd find another Teapot Dome affair, ladies and gentlemen, remove the veil from the whole raw-materials situation, including the petroleum industry, and you'll be shocked if not surprised by what you will discover!

But I must hasten on. I'd like to discuss with you fully South Dakota's sugar and levulose and power alcohol and other possibilities, your tin, manganese, beryllium, tungsten, and other mineral assets. But I haven't the time.

I want to place before you now something concrete, something tangible in the way of a program of action.

DIAGNOSIS AND REMEDY

As I said before, South Dakota has diagnosed the national disease and prescribed a remedy. It is parity prices, parity tariffs, and, of course, parity wages which would result from the adjustment of the wage scale to the price level.

But South Dakota cannot bring these things about by its own efforts.

All of the 40 raw-materials producing States must be brought into the picture and united on a common program built on a common philosophy of America for Americans and the American market for American products.

On February 8 of this year the House of Representatives of the South Dakota General Assembly memorialized your distinguished Governor, the Honorable Harlan J. Bushfield, to call a conference of Northwestern Governors to consider means to develop and advance the power alcohol industry.

That represents sound procedure and sound economic doctrine, because the fuel-alcohol industry alone can be made to solve the production and employment problems within 5 years.

But I am going to suggest that we go a step further than your assembly has proposed. I am going to suggest that the scope of the assembly's memorial to Governor Bushfield be expanded to authorize him to call a conference of all the Governors of the 40 principal raw-materials producing States looking to the establishment of a permanent interlegislative economic council to conduct a survey of the economic resources and possibilities of each of the participating States and to devise a legislative program

which they would place before the Congress of the United States and which they would unanimously support.

Such a council, supported by a small appropriation by each of the participating States, could quickly assemble this material and reduce it to the form of a comprehensive legislative proposal or proposals.

It could deal adequately and swiftly with all the known factors—tariffs, money and credits, imports and exports, international relations, and the application of the known new technologies.

BACK TO CONSTITUTION

Such a council could quickly devise a real honest-to-God program of production and use that would shortly put America back to work and remake this country into the economic democracy it was intended by its founders to be—an economic and political democracy for Americans—not an international republic nurturing a proletarian fringe that is being driven by desperation to embrace the subversive "isms" that have been spawned in the mass poverty and degradation of war-exhausted Europe and Asia.

The preamble of the Constitution of the United States reads:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution of the United States."

That Constitution, in its very first article, then created the Congress of the United States which it empowered to enact legislation necessary to achieve its purpose. It created an administrative division and a judicial division of government, a perfect system of checks and balances.

But the American Congress, in recent years, has delegated away many of the powers vested in it by the Constitution. Among those powers which it has surrendered are these:

"Section 8, subsection 3: To regulate commerce with foreign nations and among the several States and with the Indian tribes.

"Section 8, subsection 5: To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures."

And with this result: We do not today have domestic tranquillity, the general welfare is not being promoted, economic justice does not prevail, we are not certain that we shall long continue to enjoy the blessings of liberty or be able to preserve them for our posterity.

HAS CONGRESS FORFEITED RIGHTS?

I have wondered at times whether the Congress of the United States has not thoughtlessly forfeited its constitutional right to legislate for the American people.

I think that nothing could be more effective in recalling Congress to a sense of its duties and responsibilities than such an organization of representatives of the various States as I have suggested here.

We must get back to the principles of constitutional government in order that, as Lincoln said, "this Nation, under God, shall have a new birth of freedom; and that the Government of the people, by the people, and for the people shall not perish from the earth."

The Constitution placed no responsibility upon us for the tranquility of other peoples. It plainly specified "domestic tranquility."

Let us plant realization of that fact deep in our hearts and minds and never lose sight of it.

Again I ask you, who's running this country, the Steel Trust, the machine tool, office equipment, automobile, and other mass-producing manufacturers, and the politicians who are making peasants of our farmers and miners and timber workers and grinding common labor down to the level of coolieism, or the masses of the American people themselves?

What I am suggesting is in line with your own platform, which concluded with these words:

"We call upon all South Dakota citizens, regardless of party registration, to join us in a patriotic crusade to obtain the objectives of this platform, and we charge our candidates to be faithful to this platform and to carry it through to achievement without partisan prejudice, to the end that the welfare of the State and Nation may be served."

Thus, in your own words, you charged yourselves with the responsibility of carrying on through the succeeding years in behalf of the economic ideology and the high political principles which you have expressed so boldly and clearly.

Your own statement of purpose constitutes a perpetual challenge to you to engage in a "patriotic crusade"—and that is just what this situation requires—a crusade in the name of and inspired by patriotism.

The eyes of the Nation are upon you, South Dakotans. America needs your clarity of vision, your purposeful courage—America needs your leadership.

May you meet with action your own challenge to yourselves, and may Heaven guide and bless your efforts.

America must not be destroyed by the greed of fools nor the incompetency of leadership. One thing will save us—it is parity: Parity prices, parity tariffs, parity wages.

And, finally, what is parity?

Parity is the word symbol of economic justice.

The essence of the American Constitution is justice—moral, economic, political.

And the essence of the Christian religion is justice—moral, economic, and political!

Thus, parity, which means equality—equal justice—expresses the highest concept of our Constitution and the Christian church!

What your platform advocates is therefore in full harmony with the principles of this Nation's most cherished institutions—the Constitution and Christian religion.

Working together, one for all and all for one, capital, labor, and industry can refashion the United States into a nation of happy and prosperous people and render them secure against the storms of alien philosophies which now beat against the citadels of our nationhood!

South Dakotans, I salute you, and I thank you.

The Railroad Problem

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1939

ADDRESS BY HON BURTON K. WHEELER, OF MONTANA, FEBRUARY 25, 1939

Mr. HILL. Mr. President, I ask leave to have printed in the RECORD an interesting address on the railroad problem delivered by the Senator from Montana [Mr. WHEELER] before the Atlanta (Ga.) Freight Bureau at its annual dinner meeting on February 25, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It pleases me very much to have this opportunity to discuss the railroad problem in the city of Atlanta, which it has been said "owes its existence and development to the railroads." Where Union Station now stands a stake was driven in 1836 to mark the terminus of a proposed State railway, and appropriately this village which grew to be the financial and commercial capital of the Southeast, your great city of Atlanta, was first called Terminus.

With a background and history so closely linked with the railroad industry, with an interest so great in the railroad problem, this city and this group constitute an almost perfect audience for one like myself, who feels that a sound solution of the railroad and transportation problem would be a most important step in the economic recovery of the United States.

For some years the railroad problem has been an acute one. It has occupied the front pages of newspapers for months, and its gravity is recognized by every informed person in this entire country.

The importance of railroads can hardly be overestimated. To those engaged in production and distribution in every State of the Union, the railroads furnish access to the markets as no other means of transportation can. As a factor in the national defense they are irreplaceable. But the importance of railroads is not limited by the indispensability of the services they render. Think of the army of men and women they employ directly and indirectly. Think of the dependence of the heavy industries on railroad purchases. Think, also, of the billions of dollars invested in their securities by individuals in every walk of life as well as by the great savings institutions of this Nation.

No one could or would seek to destroy the railroads, and those who seek to hang crepe on the railways are doing this Nation a disservice. The railroads have not outlived their usefulness; they are not relics of the "horse and buggy" days, nor are they like the trolley cars of the past. They are more indispensable today than they were 50 or 75 years ago. They are our most vital economic arteries, and they will be rendered again healthy.

With one-third of our railroad mileage already in receivership, and with another third tottering helplessly on the brink of bankruptcy, the immediate necessity for constructive thought and action is strikingly apparent. And under such conditions the problem is twofold—their immediate financial difficulties, engendered from lack of business, and the necessary readjustment of the railroad industry to changed and ever-changing economic factors.

Railroads have been guilty of abuses in the past. Railroad bankers, railroad subsidiaries, railroad holding companies, and railroad officials have been guilty of practices which have aroused the public. Their attitude has in too many instances been one of "the public be damned" and their rates have been determined on the basis "of all the traffic will bear." That discriminatory rates have been imposed on the public and upon areas cannot be denied.

At the present time the South definitely feels that interterritorial rates discriminate against this great producing area. Senators and Representatives have introduced legislation which has for its purpose the elimination of freight-rate differentials.

Soon after the introduction of these various legislative proposals I appointed a subcommittee to consider them. Senator HILL, of

your neighboring State of Alabama, is chairman of that committee and hearings on this Southern rate differential legislation will begin February 27.

As most of you know the United States is divided into five areas or territories for the purpose of freight rates. Within each of these territories there are zones, and rates are not uniform between territories or zones. Atlanta is in the Southern territory, and the rate per 100 pounds of first-class freight is $1.91 from Atlanta to Chicago, a distance of 731 miles. Chicago is in the official or eastern territory, and in that territory rates are lower.

The first-class freight rate between New York City and Fort Wayne, Ind., a distance of 734 miles, is $1.38. Though the distance is approximately the same, the difference is 53 cents. The first-class freight rate from Atlanta to Louisville, Ky., is $1.51, and the rate from New York City to the same destination is $1.49, thus the first-class rate in the southern territory is 2 cents higher though the distance from Atlanta to Louisville is 449 miles and the distance from New York to Louisville is 852 miles, or nearly twice that of the Atlanta haul.

The element of discrimination in the above rates would seem to be apparent to even the unobserving.

A number of factors have combined to produce such rate structures. They are essentially the product of evolution and adjustment. Local conditions, carrier policy, Government regulation, competition, and certain costs have all contributed to the establishment of the present rate structures which are even now under examination by the Interstate Commerce Commission as well as the Senate committee.

But even as the South is now heard to charge discrimination, so did the South and West make a fight against rate discriminations arising from the wholesale violation of the long-and-short-haul principle. Congress expressly forbade higher rates for a shorter distance than a longer distance on like traffic over the same line or route in the same direction only after an injured and outraged public had emphatically demanded it. Today we find railroads and various organizations urging the repeal of the clause which prevents a railroad from charging the Montana wool producer a dollar and seventy-five cents to transport a hundred pounds of wool to the market while a rate of $1 is offered the producer on the Pacific coast.

Repeal of the long-and-short-haul clause would mean the reduction of rates between a point served by a competitive form of transportation and certain large points of destination at the expense of the intermediate points. Repeal of the long-and-short-haul clause might increase the volume of traffic handled by the railroads by its diversion from other forms of transportation, but such increase would not be appreciable nor would it warrant the reestablishment of the rate discriminations which were so prevalent in the southeastern and intermountain areas of the United States before the long-and-short-haul clause became a part of the Interstate Commerce Act.

Territories that have suffered discriminations at the hands of the great railroads are not prone to be too sympathetic with the railroad industry at this time. When the railroads constituted a transportation monopoly, they had little sympathy for the consuming public whose aid is now sought in the rehabilitation of a great but sick industry. But at this time the necessity for an early and sound solution of the railroad problem overshadows all such considerations. We must forget abuses and consider the public and national good. We must be unselfish and exert our best and combined efforts to the restoration of a sound railroad system.

You in Atlanta are fully acquainted with the railroad problem. You have observed it, you have felt it economically. You realize its complexity, and you know that in its solution we must move with great caution and with due regard for the public.

In my considered judgment there is no single panacea for the ills of the railroads. They need what every merchant, what every manufacturer needs—an increase in the volume of business, and even that would not be completely remedial if the railroads were to resume certain wasteful practices which the Senate Committee on Interstate Commerce have investigated during the past few years. As chairman of that committee I could enumerate almost without end stupid, costly, and scandalous examples of railroad mismanagement.

I could point out wastes of the stockholders' money in the purchase of stock of other railroads at exorbitantly high prices; wastes in reorganizing; wastes in buying materials at monopolistic prices; wastes in financing and refinancing; wastes in the purchase of property at such high prices that they must be considered as amounting to, and intended in fact to be, rebates; wastes in activities outside the movement of passengers and of freight; and other wastes which have been and are forceful factors in producing the present condition of railroads.

Congress must enact legislation which will in some measure prevent the recurrence of such wastes as have been pointed out. The Congress must enact legislation which will return the control of a railroad to those charged with its efficient operation.

Congress must enact legislation which will facilitate the financial reorganization of railroads on a sound basis.

Legislation must not only be of a reform nature, it must also furnish relief to the railroad industry.

When the Interstate Commerce Commission was created in 1887 it regulated, as its name indicates, interstate commerce. Today for the most purposes it could be more accurately called the Interstate Railroad Commission. Other forms of transportation have grown up and the Commission no longer has the supervision over the bulk flow of goods in interstate commerce. I believe that it should. I believe that there should be coordinated regulation of all forms of transportation, since they compete with and vitally affect each other, by a single independent regulatory body.

Competition from unregulated carriers, whether they be air, motor, or water, have reduced railroad revenues. Their proper regulation would place railroads in a better competitive position, and would give to the public a coordinated transportation system.

Though railroads have been and are being subjected to competition which in many instances is unfair, I do not feel that any existant form of transportation should be destroyed or unduly regulated. We cannot abolish trucks, busses, pipe lines, ships, or barges, but we must recognize the fact that the railroads no longer constitute a monopoly in the field of transportation and are rather only competitive units in a highly competitive field.

In some instances there should be consolidation and coordination of railroad facilities. However, any such consolidation or coordination must be made with due care and regard for the communities served and the workers employed. If coordination, consolidation, or abandonment of certain properties would place a railroad upon a sound basis, they must be considered and they will inevitably and eventually come. Consolidation or coordination of any facilities must not be at the expense of the railroad worker, but he knows that his job and his wages are dependent upon railroad prosperity.

Ever-mounting State taxes upon property which is often not only unprofitable but an actual liability constitutes a real drain on railroad finances. The various States should give consideration to the subject.

Increased rates do not necessarily mean increased revenues. The railroads have learned that since they are no longer a transportation monopoly that merely raising rates will not insure financial recovery. Railroads are geared for mass production. There must be mass consumption of the services they offer. Lower railroad rates tend to increase the volume of traffic and not revenues. This is no theory; it is an established fact in the instance of many railroads.

The problem of the financial reorganization of insolvent railroads is a broad one, and one upon which I plan the introduction of legislation very shortly after my return to Washington.

Companies operating more than 75,000 miles of railway line, or roughly one-third of all railroad mileage, are in such acute financial distress that they have been unable to meet their maturing obligations. They have been compelled to resort to receivership and bankruptcy courts for financial reorganization.

The effect of this unfortunate situation extends directly or indirectly to every member of the public. The problem is a national one of the first magnitude.

The indebtedness and stock of these bankrupt railroads exceed five and one-half billion dollars. The number of persons directly employed by them exceeds one-fourth of a million men.

Moreover the financial distress of the railroads adversely affects the shippers and passengers whom they serve, the workers they employ, and the industries that supply them with equipment and materials.

Because of the sensitivity of our whole economy to the financial stability of railroads, adequate procedures and standards for financial rehabilitation of the insolvent railroads is truly a matter of national concern.

Unless the result of the reorganizations under way will be really sound financial structures, the consequences to our national economy will be dangerous; unsoundly capitalized railroads will find themselves under pressure to skimp on maintenance, with the result that efficiency and even safety will be put at risk; the quality of service available to the public will also suffer from the railroads' financial inability to keep abreast of technological developments; railroad labor, and labor in general, will be adversely affected.

The desire of labor to maintain an adequate volume of employment and to maintain wages at an appropriate level, and the desire of management, if it is burdened by unsound capital structures, to reduce costs cannot be reconciled without friction. The rails and coal and cars and tools which the railroads would be able to buy if given sound financial structures may well make the difference between prosperity and depression for the several important industries whose chief customers are railroads.

Furthermore, reorganizations must be not mere temporary makeshifts but must be permanent rehabilitation. We do not dare put over to another decade and to the shoulders of another generation a responsibility that is ours, and that we must ourselves face unless we are willing to let hang over our financial markets and our economic system a threat that may impair those markets and that economic system itself.

The bitter lesson of the past has been that of recurring cycles of insolvency, reorganization, further insolvency, and further reorganization. With one-third of our railroad mileage now in bankruptcy, and much more of it on the verge of bankruptcy, it would be reckless indifference to tolerate a repetition in the future of unsound and temporary makeshifts. It is no exaggeration to say that such guilty indifference retards progress.

This legislation which I have drafted, and which I will soon introduce, contains provisions designed to insure the soundness of the financial structures that will emerge from the reorganization process. It is likewise designed to expedite and facilitate the reorganization procedure and to eliminate certain unwholesome practices which have occurred during the processes of reorganization.

It is my hope that the Congress can speedily consider this bill on railroad reorganization, for I feel that its early enactment would materially aid in the solution of the railroad problem.

Pending before Congress at this time is another bill which I introduced a short time ago which would give to the Interstate Commerce Commission the power to regulate the issuance of securities and the reports and accounts of railroads. The Commission is empowered by this bill to obtain relevant information from railroad holding companies, associations, banks, brokers, and others with whom railroads deal. This bill would confer upon the Commission the authority to supervise the use of railroad funds for other than strictly railroad purposes though the companies would not be restricted in the investment of surplus funds in a safe manner.

Another phase of the railroad problem in which I am vitally concerned is that of railroad employment. Today the railroads employ steadily only about half the men they have on occasions needed. This unemployment among younger railroad employees is one of the most serious phases of the railroad problem. I receive letters almost daily from men who have been employed 10, 15, 20, and even 25 years but who today through no fault of their own are without employment. And a man who has served one industry for 25 years cannot adjust himself to other lines of productive enterprise. Because so many years must be spent, subject to call but without assurance of work, I have long felt that railroad workers, who are among the most intelligent employees in the United States, are entitled to all they receive when they are able to work more or less steadily.

The restoration of railroad credit is not only necessary for the solution of the ills suffered by that industry; it is necessary before industries which furnish railroads with fuel, materials, and supplies will know substantial economic recovery. In 1923 the railroads spent $1,738,703,000 for fuel, material, and supplies, and in 1938 their purchases of the same goods amounted to but six hundred million. Their average annual purchase of such supplies during the years from 1921 to 1930 was $1,363,517,000, and the average since that time has been $646,113,000, or about half. If an additional three quarters of a billion dollars were spent each year for railroad supplies, their producing and distributing industries would enjoy a substantial degree of economic recovery.

Before I conclude my remarks this evening, let me repeat that the future of railroads is not as black as some pessimistic persons would have us believe. The President and the Congress of the United States realize the gravity of the railroad problem and will spare no effort in attaining its solution. Legislation is being drafted, and we are daily conferring with representatives of the carriers, the shippers, and the regulating agencies in its formulation. No thinking person seeks to destroy the railroads, but rather they seek to aid them. Through unselfish efforts, the railroads, our most important form of transportation, will again attain their rightful place in the economy of the United States.

The Problem of the W. P. A.

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1939

RADIO ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN, FEBRUARY 25, 1939

Mr. McNARY. Mr. President, on Saturday morning last, the able junior Senator from Wisconsin [Mr. WILEY] delivered a radio address over a Nation-wide network, on the subject of the problem of the W. P. A. I ask unanimous consent that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

W. P. A. is a creature of our times. It is the result of a breakdown in our industrial and economic life. The problem that W. P. A. presents is a tragic one. The answer is not found in destructive criticism. It is to be found in bringing into existence a renewal of confidence and business activity, and the resulting jobs, that will remove the need for W. P. A. This means reinvigorating and revitalizing America. It means a new leadership.

The Nation's "biggest business" and its greatest domestic problem continues to be providing relief and assistance to the unemployed and the needy—and this despite the efforts of the present administration and expenditure of billions of dollars. Today there are about 3,000,000 workers on W. P. A. and the total number of persons receiving relief and assistance from public sources is not far from the all-time high set in February 1934. Of course, we have developed new and permanent forms of public assistance to provide for the unemployables—the aged, infirm, and defectives—and they represent a good share of the total number of persons being supported by the public. But there are still some 10,000,000 unemployed in the Nation and nearly half of them are receiving public assistance and support. The crux of the relief problem is handling these unemployed "employables." The eventual solution of the unemployment problem depends mainly upon factors outside of relief administration itself, but until sustained recovery is achieved we are faced with the problem of providing for the unemployed.

The cost of the consistently large relief burden has been tremendous, and the National Government has almost steadily assumed a greater share of it. Since March 1933 approximately $18,000,000,000 has been spent by the National Government for relief and recovery. Better than two-thirds of that amount has been for relief and work relief. During the present fiscal year the relief expenditures of the National Government have been close to $200,000,000 a month. This indeed is a costly program, and a program financed largely on borrowed money.

The immediate prospects for a reduction in relief expenditures are not encouraging. Despite improvement in business and a reduction in unemployment since last summer, W. P. A. pay rolls and expenditures were increased. The President contends that conditions do not warrant a substantial reduction in W. P. A. rolls for some months to come. He has tentatively included $1,750,000,000 for relief in his Budget for 1940, and it is not unlikely that he will ask for more. Considering these factors and recent disclosures about a politics-ridden relief administration, it seems that it is now time to examine the relief problem thoroughly. Congress has already indicated that it is favorable to overhauling the relief set-up. Tonight let us direct our attention to the defects and offer constructive suggestions for improvement.

For nearly 6 years the administration has had a free hand in handling this problem. The Republican Party has taken issue with the administration on many relief policies. It has opposed an assumption by the National Government of the responsibility for relief administration. It has opposed the imposition of an inflexible, uniform program of nationally administered work relief with little or no option for States and localities. It has pointed out that the haphazard division of responsibility between the National Government and the States has prevented the development of a coordinated plan of relief and led to discrimination in relief administration. It has protested against the partisan character of relief administration and the extent to which the W. P. A. and other relief agencies have been used for political pillage.

The primary contention of the Republican Party is that the basic responsibility for the administration of relief rightfully is the concern of States and localities, who best know their needs and how to take care of them. We know, however, that as long as the present volume of unemployment continues, the States will not be able to provide sufficient money for adequate relief. Federal assistance is needed, but it should be provided in the form of grants-in-aid to the States, rather than through direct Federal administration of a part of the relief program. The States, however, must be encouraged to bear a fair share of the burden.

The grants-in-aid device, as a method of providing Federal assistance to the States, is not an innovation in our Federal system of government. It has been used for many decades in connection with highways, education, conservation, and many other public programs with general success. It is true that the grants-in-aid scheme was dominant in the administration of relief under the F. E. R. A. from 1933 to 1935, and that the handling of relief then left much to be desired. But it must be remembered that at that time the agencies entrusted with the task of relief administration, both State and National, were rudimentary and not well organized. Since that time, however, the States have had the time and experience necessary to enable them to develop effective State and local relief and welfare agencies. These agencies are now handling the entire problem of direct relief. The grants-in-aid device is basic to the major part of the social-security program, and the experience in that closely allied field is ample proof that the system can and does work.

Such a system implies that the States meet certain minimum standards of administration and contribution, before Federal aid will be granted. But the present program of centrally controlled and administered work relief would be supplanted by a more flexible system based primarily on State initiative and decision. Each State will decide for itself the type of relief and assistance it will provide for its needy. If it wishes to provide work relief it may do so and adjust the program to the peculiarly local condition with which it is confronted.

One of the outstanding indictments of administration of relief under W. P. A. is the extent to which politics has dominated the whole program. Relief workers have weighed their ballot with their jobs under a politically selected administrative staff while relief money has been allocated and spent for political advantage. That this charge is not mere "propaganda" was clearly demonstrated by the findings and report of the Senate Committee to Investigate Senatorial Campaign Expenditures and the Use of Government Funds in 1938. Although the imposition of prohibitions upon political activities of relief administrators, as provided by new law, will help solve this problem, the Republican Party does not believe that any effective solution can be found, as long as the allocation of funds and the administration of relief, is left in the hands of a partisan organization. Therefore we propose that a Federal bipartisan board be established to administer the grants-in-aid to the States and that its staff be under civil service rather than the present spoils system. To guard against throwing relief administra-

tion into the hurly-burly of State politics—which at that might be an improvement over the present national set-up—we propose that bipartisan boards be set up in the States to control relief administration before Federal grants are made. Such an organization will minimize the influence of partisan politics in relief administration and will offer a far better opportunity for efficency and economy.

We realize that deciding upon the division of support for relief as between the National and State Governments is a different matter. We realize that the establishment of standards to serve as a basis for making allocations to the States is a grave problem. It is not feasible and perhaps it is impossible to write an exact and equitable formula into law. The Board must be allowed considerable administrative discretion in the matter. Allocations to the States should be on the basis of their need as modified by their financial ability to support a relief program. But the standards must be regularized and the Board compelled to report to Congress and the public the basis upon which these allocations are made.

To summarize, then, Republican Party leaders propose that the administration of relief be decentralized; that the States resume their responsibility for the formulation and execution of a complete relief program aided by Federal grants as needed; and that relief be taken out of politics through the establishment of bipartisan relief boards. Such a program will be more economical, more flexible, and more in keeping with the Federal system of government. Yet it will provide more adequate relief to the whole mass of the needy and eliminate many of the inequities and inconsistencies now prevalent in our relief system.

Hearings Before National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1939

EDITORIAL FROM THE ASHLAND (KY.) DAILY INDEPENDENT OF FEBRUARY 26, 1939

Mr. LOGAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Ashland Daily Independent, entitled "Dragging On and On." It relates to a case on trial before the National Labor Relations Board.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Ashland (Ky.) Daily Independent of February 26, 1939]

DRAGGING ON AND ON

The apparently interminable hearings of the National Labor Relations Board against the American Rolling Mill Co. at Catlettsburg are now entering their tenth month.

We feel sure that the public, as well as most of the participants, must be weary of them. One begins to wonder if such a long-drawn-out process is really necessary to attain full information and justice or is a type of harassment directed at the defendant company.

What inclines us toward the latter opinion is a comparison of the hearings against the Semet Solvay Co. at Pikeville with those conducted at Catlettsburg. Here is the record as we have it:

SEMET SOLVAY CASE

Charges under "8–1": Attack on employee representation or "company union."

Charges under "8–2": Alleged antiunion practices of employer.

Charges under "8–3": 90 individual cases of lay-off and discharge.

Twenty individual cases dismissed without hearing for failure of complainants to appear and testify. Five other cases were withdrawn. And the trial examiner heard the remaining 65 cases in full.

The entire hearing on the 8–1, 8–2, and the 65 individual cases were finished in less than 6 weeks.

THE AMERICAN ROLLING MILL CO. CASE

Charges under "8–1," attack on employee representation plan.

Charges under "8–2," alleged antiunion practices of employer.

Charges under "8–3," 33 individual cases of lay-off and discharge.

Seven of the original thirty-three cases have been voluntarily withdrawn, leaving twenty-six cases to be tried.

According to our understanding of the present status at Catlettsburg, the Board has been engaged in the hearing since June 27, 1938, and still has the defense of seven cases to hear, plus evidence for the company on the 8–1 and 8–2 charges to be followed by the Board's rebuttal; also evidence by the intervening employee representatives.

It seems to us that the case is reasonably sure to last 11 months, or possibly 1 year or more.

Another nearby case, that at Haldeman, was also completed in 6 weeks or less. We do not have information on the number of cases, etc., involved there. The record seems to speak for itself, however, on the comparison above and to lend weight to the belief that the local case has been unnecessarily prolonged for some reason or other.

Our Citizens, Our Country, First

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1939

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, FEBRUARY 23, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a radio address which I delivered last Thursday night over the national network of the Mutual Broadcasting Co., entitled "Our Citizens, Our Country, First."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen of the radio audience, one of the great benefits of the radio is that it enables the American people to get first-hand information on issues of vital importance. It also enables them to hear those who bring to the forefront important points on modern issues. Thus it is most gratifying to me to be able to send my voice into your homes and chat with you briefly with regard to what I believe to be several of the most important issues of our times.

One of these is the vital necessity of protecting American opportunities and American resources for the American people. I say this with full appreciation for what naturalized citizens have contributed to our national march of progress during the last century and a half.

And I also say it with full knowledge of the fact that we can no longer supply the demands and the opportunities for our own people, and at the same time be an asylum for the oppressed of the world. I have the utmost sympathy for those who cast their eyes toward the United States and see it as the last stronghold of democracy. But our house is full. We owe it to our own American families to feed, clothe, and find employment for them before we can, with a clear conscience, give thought to the needs of our neighbors abroad.

This particular problem concerns itself with immigration. It has aroused universal interest. Only recently the legislature of the great State of Texas urged the Congress of the United States to rigidly enforce our immigration laws and provide the safeguards necessary to protect America from the rabble rousers of the world. This offers new evidence of the growing interest in the need for keeping our resources and opportunities—and our jobs—for those who have first and a rightful claim to them.

My interest in the enforcement and strengthening of immigration laws is not new. I advocated such a program many years before it was my privilege to enter the United States Senate. Since coming to Congress I have dedicated a large part of my time and my energy to this cause—a cause which, as I have said, I believed right and just before I became a Senator.

During my last 7 years in the Senate I have, of course, had access to many records and facts. These served to convince me that the situation as regarding loose immigration policies and delayed deportation of alien criminals is more serious than I had thought.

I have dared to bring these facts to the attention of the public. In other words, I have dared to speak the truth as I saw it. As a result, while my position has been clearly interpreted and understood by the great masses of our citizens, there has also been some misunderstanding. In fact, I have been subjected to much ridicule and even censure because I have simply urged that the United States give first consideration to its own citizens, including those who have become naturalized citizens.

I welcome this "tempest in the teapot." Frankly, I have not the slightest concern over what is said or written about me personally, so long as it serves to focus attention on the things I advocate—the things, I feel as a Senator, we owe to the American people.

During the last 7 years there has come into my office in Washington many, many thousands of letters and petitions from individuals and organizations pledging support for legislation which I have sponsored. Recognizing that it was desirable to mobilize sentiment for safeguarding America for Americans, it occurred to me that it would be a fine thing to band together individuals and organizations whose interest and support were essential to the objectives I seek.

As a result there was advanced the idea of a national patriotic organization to be known as the Vindicators. This suggestion was immediately labeled as the vanguard of another political party—at a time when our people are already confused as to political trends. I want to say here and now that the idea of the Vindicators is solely to advance Americanism.

As I look back and study the course of our great country, I more and more realize how progressive thought has been challenged by those who favor the old or existing order. As a matter of fact, when the Congress 15 years ago recognized the need for restricted immigration and more stringent immigration laws, there was loud protest against even a partial closing of the gateways to the United States.

Those who opposed the closing of the gates at that time have continued to be active. If we listen to them we would destroy our immigration and quota laws and remain the "melting pot" for the rest of the world. But speaking as an individual and 1 of the 96 Members of the United States Senate I feel that we should prohibit immigration to America for the next 10 years, or until such time as every single employable of the 12,000,000 unemployed Americans has been given a job and a chance at the opportunities we have developed here in our country.

I believe that we should deport the criminal aliens; those who came here illegally; those who came legally and have remained illegally; and, those who are unwilling to accept the principles upon which we function as a Government.

I believe that we should have mandatory registration and fingerprinting of every alien in the United States. This is essential to ascertain how many aliens are now within our borders, where they are located, and what they are doing. It is necessary so that we may check, and check carefully, upon those who forfeit the right to stay here. Such a policy is followed in virtually every nation of the world except the United States.

In brief, the points I have mentioned cover some of the objectives I seek and the program which I am advocating. I am confident that this program of safeguarding America commends itself to every patriotic citizen. And here let me say that no one welcomes the free expression of citizens more than I do. Through letters addressed to me at Washington, I am able to get a cross section of public opinion. It is helpful to Members of Congress, and I want to urge everyone to write me their views on these problems.

In this connection let me say that immigration policies have a vital bearing on all foreign policies. I have no doubt that the activities of aliens did much to arouse sentiment favorable to war 20 years ago. By "aliens" I mean those from foreign lands who have never made application for American citizenship.

Can anyone within the sound of my voice imagine any foreign country on the face of the globe giving police protection to a group seeking to undermine the government of that country? Yet we do it in the United States through maudlin sympathy for alien groups.

Let's be realistic. The Congress of the United States adopted immigration quotas to limit the tide of foreign born coming to this country. Loopholes in our immigration laws have developed. Countless thousands slip across our borders annually. Deportation of criminal aliens has been delayed. Visa permits are abused. All this because some live in the hope that some economic miracle will solve our economic problems and switch attention from the greatest unemployment condition in the world—the lack of jobs in the United States.

Thus I believe that it is high time for the people of America to mobilize behind sound national policies. Adopt a policy of "our citizens, our country, first." Demand that the Congress correct weaknesses in our immigration laws. Stop all incoming immigration until our house is in order. And, finally, recognize that American jobs should go to Americans first.

Another vital problem is that of keeping America out of war. I also believe that we should stay clear of any foreign entanglements and embroilments. We should enact neutrality laws that will keep America out of war. We need only to refer to the past, our whole history of foreign relations, to realize that once we begin to allow the United States to become a wedge in international difficulties, we have paved the way to participation in any war that may come.

Twenty years ago we were told that we must "save the world for democracy." In a war which brought a tragic loss of life and suffering—a war not yet fully paid for, and perhaps never will be—we should have learned that every country of the world gives first thought to its own citizens except the great United States.

Now, after saving the world for democracy, we are told that we must "save democracy for the world."

Those who are in accord with my program are associating themselves into an organization, national in scope, known as the Vindicators. This organization has adopted my program, which seeks to:

(1) Keep America out of war.
(2) Banish all foreign "isms."
(3) Stop all immigration for 10 years.
(4) Deport all alien criminals.
(5) Register and fingerprint all aliens.

If a single word I have said tonight causes a single citizen to reflect seriously on the conditions now confronting us as a nation and join the forces demanding action, I shall be happy.

And in conclusion I wish to thank the Mutual Broadcasting Co. for having provided me with the opportunity to bring to your attention my program, which, I believe, is in the interest of all the American people.

I thank you.

Address by the Secretary of Commerce

EXTENSION OF REMARKS
OF
HON. CLYDE L. HERRING
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1939

ADDRESS BY HON. HARRY L. HOPKINS AT DES MOINES, IOWA, FEBRUARY 24, 1939

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting address delivered by Secretary of Commerce Hopkins before the Des Moines Economic Club in the Fort Des Moines Hotel, Des Moines, Iowa, on the night of February 24, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to be back in Iowa tonight. I was born and raised here. My father and mother spent their lives here. I realize full well that whatever I do and think is profoundly influenced by the way they brought me up. That heritage from my home has always been a source of abiding strength to me.

I have been identified in the public mind with the relief of the unemployed. It is an identity of which I am proud. With every energy at my command I have tried to administer funds made available by Congress so as to protect the dignity of millions of American citizens who were thrown out of work and to assure them the relief which I believe is theirs as a matter of right. I am convinced that in time to come all of us will look back on the past 6 years as the years during which this Nation developed an enlightened social attitude toward people who are poor and out of work—an attitude that gives and will continue to give new confidence to masses of needy people.

I believe that the unemployed should be given work and not returned to the degradation that comes with a basket of groceries and a hand-out on Saturday night. I believe that unemployment is a national problem which only the Federal Government can effectively meet. I do not believe that the decision of whether an unemployed man shall receive work should be left to the good intentions of a local official.

Many people have disagreed with me both as to my philosophy of relief for the unemployed and as to my administration of it. On that I can only say that my philosophy is born of deep conviction, and my administration of it, with its mistakes and successes, is a matter of public record.

In many respects, the job that we did was pitifully inadequate. I have no apologies to make because we tried to do so much. I only wish we could have done more.

Now the President has given me another task. Instead of working primarily for the one-third of the population on the lower rungs of the economic ladder, I consider this job one more closely identified with the two-thirds of the population earning their living by what we consider to be the normal process of our economic system.

I have yet to see an unemployed man receiving a Government benefit, dignified as it may be, who did not prefer private employment. This preference on his part represents a hope essential to the future of our democracy. The placing of far more people on private pay rolls is, of and by itself, a simple statement of our objectives. I have yet to see a businessman who did not prefer to give these men work, if he could, rather than pay them wages in the form of taxes to be expended by the Government. Hence, we have the worker who wants to work, and the employer who would like to hire him, and the Government anxious to see them get together.

I have never belonged to the school of thought which holds that merely dividing up the present national income would provide a decent living for all. If new jobs are to be provided, the national income must be increased. It is only by increasing the national income, and increasing the number of people who receive their income through through private wages, that we can hope to attain anything resembling security in America. A rising national income—just a cold phrase in itself—is an objective worth striving for, because, to me, it means good homes, a decent education, and a genuine security for the families of America.

I propose to discuss some of the specific problems related to Government and business whose solution would insure substantial progress on our road to economic recovery.

The difficulties of business no longer swing with the fortunes of battles in the legislative halls where broad policies were being formulated, and no one would be sure what would come out of the hopper. What difficulties there are now are difficulties of administration in relation to broad policies which are formulated and known.

Among many businessmen there exists a widespread lack of confidence. I am prepared to accept that premise, nor would I underrate its importance. Lack of business confidence is and has been a hard stubborn fact, and may be as real a deterrent to restored business health as any we have to deal with. For that reason, if for no other reason, I do not propose to ignore it.

If we study the question of confidence closely—not merely business confidence, but confidence in general—we see at once it is a state of mind—a mode of behavior—a psychological condition affecting our conduct and actions. We see further that confidence is present when the world is a familiar world, when most actions can be performed by habit and when the future is substantially ignored. The future is taken for granted as an inevitable and acceptable uncertainty. The perils of a familiar world can be met with confidence even though they may be far greater than the perils of a strange world. Habit and confidence make us unafraid and enable us to overcome the new difficulties that are the normal processes of a changing world.

It is not surprising that business confidence has been affected by the events of the past decade. Economic developments alone were sufficient to disturb the sleep of any businessman. Add to that the revolutionary developments in other countries—add to that the legislative reforms and new Government activities and you have the reason why many people have lost their confidence.

Old methods of doing things were changed; the old setting was replaced by a new one—new laws, new procedure, new precedents. Inconsistencies and conflict were magnified, reassurances were ignored, and some lawyers, by their short-sighted counsel, added greatly to the uncertainties of businessmen.

And yet there are few today who are not glad that this great program of social reform is on the statute books. If we look back at the reform of the past 20 years, taken as a whole, it is by no means startling in the amount of scope. That laws had to be passed in a short period is regrettable, but that was the price we paid for the past when previous administrations sold the Nation short on long overdue social legislation. Is it not, therefore, better to have a program of reform substantially completed than to have to look forward to important changes not begun? With the emphasis shifted from reform to recovery, this administration is now determined to promote that recovery with all the vigor and power at its command.

As part of this drive for recovery, it is important that there be a proper recognition of the value to business of Government expenditures made in the proper way, in the proper amount, and at the proper time. I would ask that the problem be examined seriously and not in any narrow partisan way. I ask you to read not only political speeches, but what other serious and thoughtful people write on this subject. I would ask you to consider such careful analyses of governmental spending as are found in the current issue of Fortune magazine. If you read that discussion, please remember it was written by 11 active and well-informed men, most of them in business.

If I were to state our position on Government spending in relation to private profits, it would be this: A responsibility of Government with respect to the health of business is to make sure that business, as a whole, is properly sustained. At many times and for considerable periods business is well able to provide its own nourishment. These are the periods of capital-goods expansion, stimulated by increasing population, new basic inventions, and important new products. They are the periods when producer and consumer credit is expanding, and the resulting purchasing power keeps men employed, wheels turning, and overhead costs low.

But there are other times when business self-nourishment is insufficient. The result is idle men, idle machines, high overhead costs, low profits. When this occurs Government must help.

Until the 1929 depression, we always had a pump-priming supplement to private enterprise that did not cost business anything in visible taxes. That support to private enterprise was free land that came out of the public domain, high protective tariff for the industries of the East, or an extraordinary business stimulant during the war days, paid for in the war debt, or foreign-trade stimulation before 1929 paid for in investors' losses in foreign bonds.

From 1921 to 1929, business proved self-nourishing, although the nourishment was of such a character as to result in rather acute illness. Since 1929, business has been inadequately sustained, and, in consequence, has not been able to perform in terms of sound assets, good profits, or fair wages.

The President's policy has significance from a number of points of view, from that of conservation of our natural resources, protection of the welfare of the unemployed, or of balancing the Budget without resort to sharply higher taxes. Then from the point of view of business, this policy has a special interest, in that it aims at restoration of business health through increase of business activity.

Businessmen and industrialists will understand the policy more readily than will editors or even bankers. Businessmen know that a minimum volume is necessary to break even on fixed expense. Prices can be raised only so much; expenses can be cut only so far; the answer is found in volume.

That is the significance of the President's quota of an $80,000,000,000 national income. It is in no sense an argument for a permanent unbalancing of the Federal Budget. It is an argument based on the realization the Budget can be balanced and the debt retired out of taxes coming from this increased national income, rather than substantially increasing taxes at this time or reducing necessary expenditures.

While I feel there should be no general rise in Federal taxes this year, I believe any Federal taxes which tend to freeze the necessary flow of capital should be amended. If necessary, such taxes can be replaced by increasing other taxes which do not have the same deterring effect.

One of the substantial avenues for private capital in the near future can be the field of public utilities. That being the case, it is extremely important there be a meeting of minds between the utilities and the Government relative to the appropriate spheres of action of Government on the one hand and privately owned and operated utilities on the other.

There is peace between the Government and the utilities in the Tennesseee Valley, which, I believe, ends the era of great litigation.

I do not think anyone outside of the Government can realize how much freer Government can operate in its relations with business, such as the utilities, now that both seem to be rid of the incubus of that self-styled, big-city constitutional lawyer. I am convinced most of our difficulties in this field originated with some fancy lawyers who advised their clients not to work things out with the Government, on the theory that these lawyers would be able to defeat the Government in the courts, so that no working out of things would ever be necessary.

It gives me no little satisfaction to note that the net results of all these constitutional struggles have been to prove that the most unconstitutional thing in the United States was the constitutional lawyer.

It cannot have missed the eye of any businessman how much has been accomplished in solving the utility problem within 2 weeks after the constitutional lawyers of the utilities had finally been told that they did not know what they had been talking about.

I believe that electricity should be in the home of every family. The rules under which that electric power is to be generated and distributed—the place of government in the whole vast enterprise—are questions that surely can be resolved.

I find some utility executives convinced that much of the past development within the industry was thoroughly bad, and they are anxious to see eye-to-eye with the Government on a permanent policy.

There has been no indication that Government wishes to own and operate all the utilities of this country. Rather do I see the Government determined to write rules adquately protecting all the people, to help make cheap electricity available to everyone and to ban unholy profits from watered stock. In making the T. V. A. peace the Government demonstrated its good will by settling on generous terms. It struck a peace that will be a lasting and good peace, because it is a generous peace.

I realize fully how often a gesture of practical concession by the Government will time and again be seized upon by a minority element as the sign that the Government is on the run. We will have to expect some such bad manners, but we will take them in our stride because that is part of the job of being a public servant.

This country cannot be in good health, and the democratic principle cannot be safe, until men go back to work. For this reason, I am glad the utilities question is reaching a solution.

Also of primary importance to business is the labor problem. I want to make it perfectly clear that I believe in labor unions. I believe they are the best protection against the unfair treatment of labor. I believe that collective bargaining establishes conditions of work on a more decent basis than does individual bargaining.

Many problems of industrial relations are yet to be solved, but the advances made in recent years have given us the fundamental principles on which to work. It now remains to put these principles into action. Business should accept in good faith the approach and the machinery of collective bargaining. Labor on its own side faces responsibilities and obligations. The Government has strengthened labor's position with new laws not only as to wages and hours, but also to guarantee collective bargaining. Labor's contribution to a rising national income must be tolerance and fairness in reaching just agreements with employers. Labor must fully realize that under our economic system, businessmen have to make money to hire workers.

It is up to employers and employees alike to make collective bargaining work; that means extending every effort toward peaceful settlement of controversies. Both business and labor want to move toward prosperity, but nothing can stop this more surely than widespread and prolonged labor conflict. Prosperity means production, and production stops during either strikes or lock-outs.

I do not share the view of those who believe that it is to industry's benefit to keep the labor movement divided. I feel it is quite as much to the interest of business and industry as it is to the workers themselves that those two great labor organizations, the A. F. of L. and the C. I. O., reconcile their differences. Surely, there is a common meeting place for these two groups to move forward as one in the interest not only of their own membership, but for the general good of our whole population. Even with the best of good will toward collective bargaining, business finds it difficult to progress in face of a divided labor front.

I should not leave the subject of labor without commenting upon the new outlook of the businessmen with whom I have talked on the question of labor relations. For the most part, they are looking at wages, hours, and bargaining in the spirit of today rather than in the spirit of a generation ago.

For many decades business as a whole has been insensitive and unsympathetic to the problems and aspirations of the farmer. In spite of the distressed condition of agriculture in the twenties, the contribution of business and government was negligible. Since 1933 there has been much sincere effort with business cooperation to tackle the problems of the farmer. No simple or final solution has been found, and we must recognize that, although there has been great improvement in the relative position of agriculture since 1932, nevertheless, people living in many sections of rural America are less well off than people living in cities and towns.

The prosperity of agriculture is more important than just the matter of products and markets. The increase in our population is now coming largely from the Nation's farms. Our farm homes receive less than 10 percent of the national income, and on that they must bring up about 30 percent of the Nation's children. Here is the most important crop raised on the farms. What it will amount to depends in part upon the economic resources available to the homes in which these children live.

My experience has convinced me that there can be no solution to our problem of unemployment in the cities until the farmer regains his proper economic position in relation to the rest of the Nation's population.

There is one form of Government aid to business to which I take particular exception. I have had some experience with special-interest groups seeking to obtain Government favor by the application of pressure, brute or delicate. This is an inevitable characteristic of a democracy, but the fact remains that Government action can only be justified when it is in the general public interest. The Government should not be asked to lend its powers to the promotion of legislation designed by one group of businessmen seeking to profit at the expense of another group. Legislation should be confined to protecting certain types of business from the unfair practices of others. The competitive battles of business should be waged in the market place under rules which will safeguard business health. Business enterprises should progress by seeking the favor of consumers, not the partisanship of legislators or administrative officers of the Government.

On the other hand, certain types of enterprise need sympathetic aid by the Government. For many years we thought of steel as being a most reliable barometer of business conditions. Today we have what is perhaps a better guide—the operations of the so-called small-business men. In cities and towns and villages the hundreds of thousands of small enterprises constitute the very backbone of our national, industrial, and economic life. Upon the combined thinking and planning and action of those men depends to a large degree the prosperity and welfare of America. It is upon their vision and ingenuity and confidence and their ability to merchandise and promote and sell that much of our manufacturing, mining, and transportation depends. Their operations affect the number of workers which any manufacturer can employ. Therefore, one of my principal interests as Secretary of Commerce will be to see that the resources of the Government are particularly directed toward aiding these small enterprises.

I would like to start my discussion of foreign trade and business by saying that the reciprocal-trade treaties negotiated by Secretary Hull provide an admirable framework for the extension of our foreign commerce.

In the last analysis, there are some very simple propositions that are at the root of foreign trade. One of these is that we cannot sell unless we also buy. All of the learned phraseology on the subject can be boiled down to this: Trade, domestic or foreign, consists of swapping things that we have for things that we want. Other things being even, anything that encourages trade is a good thing, and anything that discourages trade is a bad thing. I repeat that this is a simple and easy analysis of the matter, but, like many simple analyses, it leaves many things that are difficult and troublesome.

We must recognize that today foreign trade is being used by some countries as a vehicle to support political and cultural penetration. Unless we acquiesce in such penetration we must be prepared to meet quality, quantity, and price on such a basis as to get the business. Competition of this character is a cherished tradition of American business, and I suspect we have both the talent and energy to apply it in the new setting of the international scene.

Events all over the world are strengthening day by day the President's prediction that this generation has a rendezvous with destiny. What the American people hold in their hands today is the destiny of our democratic way of life. In this tradition there are values and forces and possibilities which cannot be measured in any system of business accounting. I am referring to faith, to love of country, to the realizable dream of a still greater Nation which can, if we will it so, find, through mutuality and fair play, a prosperity and happiness that will be the marvel of the world. Such a nation might in fact be the example that would lead the world back to sanity and peace.

The ancient stoic philosophers had a saying, "No man is so like unto himself as each is like to all." That seems to me to be the essence of the democratic principle. Above all, it is the essence of the American system. Whatever difference may exist between Americans cannot obscure our fundamental unity—our unity of purpose and unity of action.

At a time when reason and mutual respect seem to have fled from large areas of the earth, it is well for us to remember our national unity and be grateful.

We have all dedicated ourselves to the maintenance—the successful maintenance—of our American system of free enterprise. We believe that no other system is compatible with the dignity of human life and that no other system can long enlist the devotion, the talents, and the resourcefulness of all the people. America is as rich in these resources of the mind and spirit as she is rich in the resources of the soil. At no time in our history has the need been greater to conserve all of our resources—human and material. And so the preservation of our system of free enterprise is no longer simply the American dream; it is the American imperative. It is imperative that freedom of opportunity be maintained for all who can contribute to our national well-being. It is imperative that the responsibilities, and the benefits as well, of our industrial system be broadly shared, so that the success of the system will enlist the loyalty, the energies, and the capacities of a free and united people.

It is clear to me that a returning increase in production cannot be accomplished without a substantial increase in private investment. I have tried to indicate tonight that the Government is desirous of doing everything it can to create an environment in which private investment is encouraged.

If there had been the time I could have indicated fields other than utilities—such as private housing and railroads—which offer substantial opportunities for the use of capital goods. I say it is our desire to create an environment in which private capital will be encouraged to invest. I further state that I am convinced that this environment can become a reality without compromising the great reforms which stand as the hallmarks of this administration's enlightened program.

If I were to sum up the Government's attitude toward business, it would be to repeat a statement that I made last summer, when I said: "I can say from personal knowledge that the Government is not, and never has been, opposed to business. It has no desire whatever to harass or punish business. It fully realizes that business must succeed, and must be able to work with Government, if our economic system is to be preserved. It seeks an understanding and a meeting of minds, not only as to present points of conflict, but as to methods which will assure for the future, on the one hand, justice and fair dealing to all the people, and on the other, the confidence, success, and legitimate profits of legitimate business enterprise. It has no quarrel with business merely because it is big; but big or little, it—the Government—intends to prevent practices which do violence to the effective working of our economic system."

I have attempted tonight to indicate very briefly some of the important relationships between Government and business.

I have tried to state as forcefully as I can that it is our determination to make every move we know how to promote recovery and get people back to work on private jobs.

That is the beginning and end of our problem. To solve it we must attack realistically and at once certain specific phases whose adjustment will tend to move us on our way.

I have indicated that, insofar as the relation between private utilities and the Government can be clarified, I and other members of the administration are desirous of doing everything we reasonably can to make such clarification possible.

We wish to be fair, we wish to be reasonable, and we believe that with good will on both sides we can accomplish our twin objectives—getting more and cheaper electricity to the American people and putting more men to work in the utility industries.

I feel that competition from the highways and airways has diverted traffic from our railroads and has made the problem of the rehabilitation of these roads immediate and pressing. The railroads are and must be sustained as essential arteries of commerce and must be ready for use as part of our national defense.

Rehabilitation of the railroads and relating them to our present and future economy is not a simple matter. Indeed, it is probably one of the most difficult of all problems to solve; but I am firmly convinced that, until it is solved, it is difficult to hope for anything like a complete recovery in America; therefore, the solution should be explored and explored at once in the interest of labor, the investor, management, and the public.

While we have made splendid progress in breaking the jam of housing, we have a long way to go. Hundreds of thousands of homes need to be built, and surely we have the resourcefulness and imagination to develop plans to build them. I am firmly convinced that if we could find a way to break the log jam of private investment in the field of utilities, railroads, and housing, we will have gone a long way toward taking the essential steps to ultimate recovery.

The Government earnestly wishes that these things be accomplished, and we ask that labor, the farmer, and businessmen join us, not across but on the same side of the table, to accomplish our common purpose.

Some people may think we can maintain a democracy in this country indefinitely with 10,000,000 unemployed. I don't. If I had no other motivation other than my deep love of freedom, I would want to do everything in my power to try to solve the problem of unemployment.

While we want confidence in our businesses and in our jobs, far and above that we want the confidence that comes with the assurance this Nation is strong, courageous, and unafraid.

Confidence finds its dwelling place not only in the assurance that our inalienable rights—our liberties—will be maintained but in the conviction that our economic security will be assured. To that task

the Nation is dedicated. To its accomplishment we must pledge our determined effort.

I well know of the deep and abiding determination of the President to help make this country a nation in which all people shall dwell in harmony, security, and peace. His abounding faith in the future of this democracy is shared by all of us closely identified with his philosophy and serving under his matchless leadership.

And, finally, I would say this personal word: This country has treated me very kindly—it gave me the security of a happy and contented home in childhood; it gave me a reasonably good education; in adult life it has given me an opportunity to earn a living; it has given me the opportunity to have a host of friends. I say this to you because, now that I have the opportunity to serve as a member of the Cabinet of the President of the United States, I have every reason and desire to continue serving that country well.

Speculation and Depressions

EXTENSION OF REMARKS
OF
HON. M. M. LOGAN
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1939

ARTICLE BY W. HUME LOGAN, OF LOUISVILLE, KY.

Mr. LOGAN. Mr. President, I ask unanimous consent to have printed in the RECORD an article prepared by Mr. W. Hume Logan, a leading industrialist of Kentucky and president of the firm of Logan & Co., of Louisville, Ky., on the question of speculation and depressions.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Speaking of speculation and depressions, psychology teaches that speculation is a malady that attacks the financial cells of the human brain. It is dangerous because it is highly contagious. The success of one speculator is passed on in conversation and over the radio, and attacks the victim through the ear, or, it travels in print and inoculates the victim through the eye. Speculation thrives in prosperous times; the greater the prosperity the sooner speculation becomes an epidemic.

Like any other disease it is sometimes confined to a single city or to one State, like the Florida epidemic in real-estate speculation in 1926, or, the epidemic may extend all over the United States just as the real-estate speculation spread in 1893. This was so severe that we called it a panic. The industrial-stock epidemic in 1929 we called a depression.

We did not blame the original owners of real estate for the 1893 panic. We placed the blame where it belonged, on the speculators, but, when it came to the 1929 depression, the labor leaders and New Deal politicians passed by the speculators and laid the blame on the owners and managers of industries because the speculators had gambled in industrial stocks and lost at their own game of "get rich quick," with which industry itself had no more to do than did Uncle Remus's rabbit. It was the speculators themselves that set the market price and raised it from day to day until it became top-heavy and toppled over, affecting not only the speculators themselves but the innocent passers-by.

Industry could not prevent the skyrocketing of its stock. If one speculator wanted to sell and another wanted to buy at a certain price they did so without consulting the industry's manager. The only thing the industry could do was to transfer the stock on its books.

Any man who bought a share of stock at more than its intrinsic value as shown by its ability to earn, helped to make the market top-heavy and bring on the crash that caused the depression. This is true no matter whether the purchaser knew he was paying more than the real worth of the stock or not.

As is common with this disease, when it becomes an epidemic, the purchaser in 99 cases out of 100 paid no attention to what the stock was earning. He simply knew, for instance, that the stock was selling for $145 per share yesterday, that it was selling for $155 today, and he said to himself, "I must buy quick; that stock has been advancing steadily, and I'll be able to sell it tomorrow for $165, or if I hold it a week, for $175." He had no thought of holding the stock as an investment and making his money by the dividend route. When the crash came the speculators holding stocks, as well as those who had bought for investment, saw that the value of their holdings was going down from day to day, making them poorer every Saturday night than they were the Monday before. This continued until they lost their optimistic, buoyant feeling that this disease in its early stages always produces, and instead became pessimistic; then they all wanted to sell, and because there were no buyers the stocks went lower and lower.

This same thing happened in real estate in Florida in 1926 and with real estate all over the United States in 1893.

As stocks went lower and lower after the 1929 crash, the holders of the stocks, forming a large part of the consuming public, began to curtail their purchases of everything they had been consuming when stocks were going up. The merchants had their stores well stocked with merchandise, and the falling off of their consumer trade caused them to cease buying from the factories and to reduce their stock as fast as possible.

The factories held on to their employees as long as they could, but when they had filled their warehouses to overflowing and could not induce merchants to buy they were compelled to reduce their number of employees. This they did gradually and slowly, hoping each month that the following month would bring improvement, but in this they were disappointed and were compelled to lay off additional employees.

Naturally these employees who were laid off reduced their consuming purchases to a minimum, and not having any sale for their products factories quit buying raw material. This material had been supplied to them by other factories, mills, and mines, so that they in turn had to lay off many of their employees. Then the depression was on in earnest.

People who had borrowed money on their collateral found in many cases their collateral could not be sold for half what they owed the bank. They pleaded with the banks not to sell them out, hoping for an early return of prosperity, but matters got worse, and pessimism prevailed from coast to coast.

No one can deny that American industry made this country the greatest on earth; our standard of living way above that of any other, England being the nearest approach to ours. In riding from end to end of England one finds that the same worker who rides to his job in an automobile in America rides to his job on a bicycle in England. The way industry has been managed in America has made this difference and has made us the haven to which workers in all countries would flock if our immigration laws would permit.

Notwithstanding this, the New Deal politician in his eagerness for votes began at once to berate industry because the speculators had lost in gambling with industrial stocks. They began to hamper industry with so-called New Deal reforms, rules, and regulations, undertaking to plan and regiment at Washington industries that had been well and successfully managed by their owners and their executives. Notwithstanding this, industry as a whole accepted the President's agreement and undertook to carry out as best they could what they understood to be emergency measures for recovery, but when it was announced that these proposed recovery measures would be made permanent and call it a new deal, industry rebelled at the permanent feature. When a man breaks his leg he is willing to use a crutch until his leg is strong and well; but if the doctor should insist that because the crutch helped him while he was crippled that he must use it the rest of his life, he would not stop with throwing the crutch at him, he would break it over the doctor's head.

Because of this sentiment and his desire for power, our Chief Executive, Legislator, and Supreme Judge has professed a great love for the laboring man in industry and the farmer, while exhibiting his animosity toward industry and its management in his broadcasts and his legislative halls.

I had been in this business 9 years before the panic of 1893, which was too severe to be called a depression. At that time we had no Federal Reserve banking system, no Reconstruction Finance Corporation to help banks and other corporations. We had no P. W. A. workers supported and petted by the Federal Government, and no Federal money wasted in political relief, but I saw no one naked, nor did I hear of anyone starving to death. Each community took care of its own unemployed. There is not a community in these United States today that would let any of its people go naked or die of starvation. The American people are not built that way. We were practically over the 1893 panic in four years and a half, both men and machines coming again into demand. Prosperity was gradually and surely spreading over the whole country, and our Federal Government had not added twenty billions to the national debt to be paid by us, our children, and our grandchildren by heavy taxes, not alone on industry but on every consumer in our once free and glorious land.

The Frontiers of the United States

EXTENSION OF REMARKS
OF
HON. ERNEST W. GIBSON
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, February 27, 1939

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE OF FEBRUARY 14, 1939

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the New

York Herald Tribune, by Mr. Walter Lippmann, in regard to the United States' frontiers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of February 14, 1939]

THE FRONTIERS OF THE UNITED STATES

(By Walter Lippmann)

It will not be easy to regard the occupation of the island of Hainan by the Japanese Navy as no more than an incident in the war in China. With this strategic outpost to the west and the naval bases in the mandated islands to the east, the Philippines are surrounded. But what is even more important, at Hainan Japan obtains an advanced base within 1,500 miles of Singapore.

The timing of this new aggression cannot be ignored: The Japanese have acted at the moment when the Spanish civil war is ending, and the diplomatic struggle for the naval control of the Mediterranean and the eastern Atlantic is approaching a crisis. It has been the Japanese method to begin each new phase of conquest by testing out the resistance that might be offered. Thus, before the Japanese decided to invade China proper in the summer of 1937, they tested out the Russians by sinking a Russian gunboat on the Amur River. When the Russians showed they were incapable of doing anything the Japanese began their invasion of northern China. A year later—that is, last summer—when the Czech crisis was developing in Europe the Japanese made a second test of the Russian power. There was a Russo-Japanese battle on the Manchurian border. The test convinced them that they need not fear the Russians, and so, while Britain and France were preoccupied in Europe, the Japanese invaded southern China, took Canton, and struck down the British power at Hong Kong.

Once again they are, it would seem, testing out the resistance before making another great advance. This time they have seized a strategic island which lies within the French sphere of influence and is of extraordinary importance to the whole British position in the East Indies and even in Australia. They have chosen a moment when the naval power of Great Britain and France is anxiously preoccupied in European waters.

Their action places the British and French in an ugly dilemma. If the British send enough ships to the Far East to check the Japanese advance, they will become too weak in Europe to check the Italian advance which would then, because the risks were reduced, almost certainly obtain much more active backing from Germany. And if they do not send ships to the Far East, the Japanese are in a position to establish naval control of the western Pacific, and to command the immense resources of the Dutch East Indies, the Philippines, and Australia. Once established in this vital center of world power, the Japanese Empire cannot be dislodged without a great and exhausting war.

Whichever way one looks at it, the situation is too serious to be regarded with indifference by the United States. The seizure of Hainan at the moment when Britain and France are so vitally concerned about Majorca and Morocco and the independence of Spain does not have the air of coincidence. It looks very much like concerted action.

For that reason it makes the situation in Europe much more critical. If the Japanese war party demonstrates at Hainan that the road to Singapore is open, the hesitation of the Japanese moderates will almost certainly be overcome. The chances of a major military-diplomatic offensive on three fronts—in northern Europe, in the Mediterranean, and in the Far East—will be measurably increased.

If that offensive is successful, the European Fascist powers will have broken through into the Atlantic, establishing themselves in Spain and in Africa, and the Japanese will be masters of Singapore, which is one of the two controlling points, the other being Panama, in the Pacific. The United States, which has only one Navy, though it has to defend itself in two oceans, will then find that it is isolated in a way which no isolationist will like.

The United States cannot be indifferent to a situation which threatens, perhaps within the next few months, to establish in both oceans at once, and at the strategic points which control the two oceans, an alliance of highly armed powers bent on the conquest of empire. This is no question of our intervening in the affairs of Europe and Asia. This is a question of preserving our security in the two oceans amidst which the American continents are placed.

Nor is it a question of our going to war in Europe or Asia. It is a question of using our diplomatic power effectively and promptly to prevent the development of a situation which will lead either to a world war—not a European war but a world war—or to a greater Munich, in which the strategical control of the Pacific and the Atlantic is transferred from friendly and unaggressive nations to aggressive and not very friendly ones.

Resolute diplomatic action, if well conceived and supported by Congress and American public opinion, can at this juncture avert both the danger of a world war and the danger of a complete overturn of our naval position in the two oceans.

The main lines of that diplomatic action are clearly indicated by the situation. We should inform the Japanese that the establishment of naval positions anywhere in the Pacific, at Hainan, or in the mandated islands is contrary to the meaning of the third treaty signed at Washington in 1922; and we should invoke the consultative clauses of that treaty which obligate Japan to explain to us, to the British, and to the French what these encroachments by its navy signify. To strengthen our diplomacy in this action, Congress should authorize at once the fortification of Guam. Japan's response to the invitation to consult and negotiate should then determine whether or not we actually proceed to fortify Guam.

At the same time we should clarify our position in Europe by making it plain that, having scrupulously refused to help either side in the Spanish Civil War, we regard it as an American interest that Spain should be an independent and neutral power. This is what General Franco declares to be his interest, and there is no reason to doubt the sincerity of his professions. He can unite his country and reconstruct it only if Spain is able to disentangle itself from European-power politics and to enjoy a long period of peace.

Though General Franco needed Italian help to win the civil war, he now needs British and French help to win and to preserve Spanish independence. He will get that help. It is an American interest, as a matter of basic naval security, that he should get that help. For with Spain independent, the dangers of a European war would at once be greatly reduced and the security of the Atlantic Ocean greatly improved. The most effective way to contribute to this result would be to open our markets in war, as well as in peace, to the governments—which now include General Franco's—that have a vital interest in maintaining the existing naval position in the Atlantic.

The alternative to such a twofold diplomatic action in the two oceans is to do nothing and to pretend to believe that our frontier is at the 12-mile limit. Our frontier is not on the Rhine. Our frontier is not at Hankow. But our frontier is in both the great oceans, and if we do not maintain that frontier by diplomacy today, tomorrow we shall have to defend it by building another Navy.

War on Poverty

EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1939

ARTICLE BY BENJAMIN C. MARSH

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Benjamin C. Marsh, executive secretary of the People's Lobby, Inc., entitled "Americans Must Win War on Poverty or Be Kidded Into Foreign Wars."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICANS MUST WIN WAR ON POVERTY OR BE KIDDED INTO FOREIGN WARS

A nation's internal or domestic situation profoundly affects its foreign policy. America is today in almost the worst condition of its history.

OUR DEBT ABOUT EQUALS NATIONAL WEALTH

The report of the Twentieth Century Fund, Debts and Recovery, covering the period from 1929 to 1937, states:

"Total debts aggregate, with allowance for debts not measurable, over $250,000,000,000, divided roughly as follows: Corporate, $50,000,000,000; Government, $53,000,000,000; mortgages, $35,000,000,000; short-term debts owed to banks and corporations, $30,000,000,000; deposits of commercial banks, $40,000,000,000; deposits of mutual savings banks, $10,000,000,000; cash value of life-insurance policies, $20,000,000,000; withdrawable shares of building and loan associations, four billion to five billion dollars."

The Federal Government is several billions more in debt than in 1937.

The Social Security Board reports the following average monthly payments for relief:

1933	$87,408,000
1934	145,431,000
1935	177,471,000
1936	218,328,000
1937	194,562,000
1938 (11 months)	247,671,000

It states that relief expenditures alone by Federal, State, and local governments from the beginning of 1933 to the end of November 1938 were $12,600,000,000.

It estimates that in November last year 21,300,000 people, or about one-sixth of our population, were receiving one or more forms of public relief.

RELIEF NEEDS GROW WITH INCREASED NATIONAL INCOME

In spite of the increase in employment, the increase in national income, the spending of billions of dollars to prime the pump of private industry, the payment of hundreds of millions of dollars in farm benefits, in spite of the enormous increase in profits of many major corporations, and in the number of persons receiving from $5,000 to $100,000 and over net incomes—the average monthly expenditure for relief increased every year from 1933 to 1937.

Even in that year of alleged prosperity the total expenditure for relief was almost $2,400,000,000.

Last year, 1938, the total relief bill was almost $3,000,000,000, or approximately three times as much as the bill in 1933.

In spite of these relief expenditures and partly because they are largely financed by taxes upon people in the lower brackets, or with substandard incomes, the standard of living of the masses of the American people is gradually but surely worsening.

TOO MANY PRODUCERS FOR PRODUCTION FOR PROFIT

At least a million farm families are on relief or need help.

We have at least 2,000,000 surplus employables for our economic system.

In 1935, 742 corporations, about one-sixth of 1 percent of the corporations reporting, had—

Over half of all cash, close to half of all notes and accounts receivable, less than three-tenths of inventories, nearly two-thirds of tax-exempt investments, nearly two-thirds of non-tax-exempt investments, nearly half of all capital assets, and approximately two-fifths of other assets.

Most of these corporations, including major railroads, were and are heavily overcapitalized.

NEW DEAL SUBSIDIZES INSTEAD OF SQUEEZING

The New Deal, through pump priming and other extension of Government credit to water-logged corporations, has increased the tribute they exact from consumers, and entrenched monopoly for the few and poverty for the many, just as old-guard Republican policies did.

In 1929 the capital assets of corporations engaged in mining and in manufacturing of metals and of utilities were $68,808,000,000; in 1935 such assets of nearly one-sixteenth fewer such corporations reporting, were still $62,173,000,000—though Government should have brought down such valuation to not over $12,000,000,000 to $15,000,000,000.

Secretary of Agriculture Wallace in his annual report for 1938 states:

"Rent paid by farmers in the United States to nonfarmers in 1935 is estimated at $699,000,000, in 1936 at $743,000,000, and in 1937 at $829,000,000."

This is mostly for farm lands, as buildings on rented farms are largely shacks.

The rent tenant farmers pay to nonfarm landlords is jumping fast, to the $1,110,000,000 paid in 1929.

CAN ANYTHING BUT PRODUCTION FOR USE MEET AMERICANS' NEEDS?

Americans are now in the grip of the world's worst dictators—the one-tenth of the people who own most of the means of production, distribution, and exchange of everything the American people need to eat, to wear, to live in, to work in—and to enjoy a decent American standard of living.

About a third of Americans can't get by on what they are permitted to produce, another third can barely get by, but can't put anything by for old age or unemployment or sickness, and only a third live high or near-high the big owners and their hangers on.

Don't blame big or little business if you believe in Government!

Government has made laws which let a few people determine what most of us can have, and only Government—that is Congress chiefly, and State legislatures, can change laws, so people can produce and consume what they need.

Can Government make private owners of factories, oil wells, and mines produce peoples' needs?

Government can meet those needs when Government owns factories, oil fields, mines, et cetera, and taxes land speculators so people can rent land to raise crops.

The untaxed value of land in New York City is over $7,000,000,000.

The net ground rent at 5 percent is $350,000,000 a year, which the private owners collect and keep—while the government officials of this World's Fair City pass the hat to Uncle Sam, and get scores of millions of dollars in relief funds every year for New York's unemployed.

New York pays up to $20 a month just for rent, for unemployed.

LOSING WAR ON POVERTY HERE LEADS TO WARS ABROAD

Appeals to patriotism are Governments' favorite way of getting people's minds off the pangs of their poverty.

Don't be fooled by the Government's talk about lining America up with the "democracies" against the "aggressor" nations.

The war to make the world safe for "democracy" failed.

Can a war to save imperialist "democracies" work any better?

Don't you need to be protected from the system we helped save in the World War, which denies you a job, and refuses you a hand-out when you can't get a job from it?

War is supposed to make us forget our poverty and is apt to make it a jail offense to mention it.

Lt's get the low-down on the "have-not" recent aggressors and the "have" old-time aggressors, for Great Britain is the mother of imperialism.

FOR WHOSE MINERALS SHOULD WE FIGHT?

Dr. Charles K. Leith, of Wisconsin University, outstanding geologist, and vice chairman of President Roosevelt's Planning Committee for Mineral Policy, is a scientist—not an alarmist.

At the meeting of the Geological Society of America in December, he warned of the economic bases of the threatened world conflict.

He said:

"The acquirement of Abyssinia, Austria, Manchuria, and large parts of China and Czechoslovakia have done little to meet the mineral requirements of the 'have-not' nations.

"Real appeasement by this method would require the passing over of considerable parts of the English-speaking, French, and Russian domains, as well as parts of the supplies controlled commercially by the English-speaking people outside their borders."

He holds that substitution by the "have nations" of force for appeasement, "before redistribution of the world's natural wealth goes much further," is "a safe assumption."

"The United States cannot avoid the issue. It is part of our domain that is ultimately at stake. The United States is the world's largest producer, the largest consumer, and the largest distributor of minerals and their products. The frontiers of our mineral industries, including sources and markets, extend to nearly all parts of the world. * * *

"The United States and England together control in about equal proportions nearly three-fourths of the world's production of minerals and, not less important, they control the seas over which the products must pass.

"Any approach to equalization by gaining new territory means a shift of sovereignty on an unthinkable scale. Nearly 90 percent of the world's industrial power is concentrated along an axis extending from the Great Lakes in the United States eastward through central England and west central Europe, and most of the mineral resources of the world are tributary to this power axis."

How much of the mineral resources of America do you own, and how much do you want to fight in South America for bauxite for the Aluminum Trust, for copper for the Anaconda Co., for tin in Bolivia for the Tin Plate Trust, or in Mexico for oil, for good old "Standard"?

You will get a job training or dying if we go to war—which won't settle anything any more than the last one.

You can also get a job—doing work, so you won't be out of a pay slip—when Government owns monopolies and basic industries, and operates them to meet consumers' needs—instead of stockholders' greeds.

Let's win the war on hunger and misery here at home.

T. V. A. Helps Coal Industry

EXTENSION OF REMARKS

OF

HON. NOBLE J. GREGORY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

Mr. GREGORY. Mr. Speaker, in the discussion relative to the development of the T. V. A. much has been said with reference to the coal industry, and I am disposed to feel that those who are interested in the coal industry are unduly alarmed.

The problems of the coal industry antedate by many years the conservation projects of the Federal Government, such as the Tennessee Valley Authority. And if these projects were wiped out tomorrow, the problems of the coal industry would not be solved or ameliorated.

The ground lost by the coal industry has not been lost in the courts or Congress or the legislatures but in the competition of business and in the advances in the art of converting fuel into power. Railroads, as an example, have steadily reduced their consumption of coal for locomotives since 1917 from 133,000,000 tons to less than 81,000,000 in 1936. Part of this reduction was the result of competition by other means of transportation, and a large share of it was due to the increased efficiency of locomotives in using this fuel. This is but one of many examples.

This trend toward increased technical efficiency has been at work in the electrical industry also. The Federal Power

Commission reports that whereas in 1919 it took 3.20 pounds of coal to produce a kilowatt-hour of electricity, in 1937 it took but 1.43 pounds, or less than half as much.

The fact is that the coal industry has not been harmed by the activities of the Tennessee Valley Authority. If anything the reverse is true. Coincident with an increase in the use of power which outstripped the increase in the Nation, the consumption of coal for production of power has grown greatly.

In 1937 the seven Tennessee Valley States used 2,569,700 tons of coal for production of electricity, an increase of practically 40 percent over the 1,837,500 tons used in 1929.

In 1937 the consumption of coal for generation of electricity in the Nation had not yet reached the 1929 level, 44,934,000 tons being used in 1929 compared to 44,766,000 in 1937.

In this same period, 1929–37, use of electricity in the Nation increased only 22 percent while use of electricity in the Tennessee Valley States increased 43 percent.

The facts indicate clearly that no coal generation in this area will be replaced by hydro. The Federal Power Commission, in a report issued in 1935, predicted that a large proportion of the territory faced a serious shortage of power when demand reached its 1929 level. Subsequent events are bearing this out. At the present time generating facilities of large systems in this area are hard pressed. The total sales of three large private utility companies in the area, which have considerably reduced their rates, increased almost 60 percent between 1933, the year the Tennessee Valley Authority was created, and 1937.

The Authority has been selling its surplus power to cities and cooperative associations in the Tennessee Valley for resale to domestic, commercial, and industrial customers. In the three of these cities and cooperatives which have operated over the longest period, Tupelo, Miss., the Alcorn County Electric Power Association, and Athens, Ala., there has been an increase of more than 200 percent in the consumption of electricity between 1933 and 1936. They have been selling electricity at low rates, far below the level of the industry as a whole, and they have been markedly successful financially.

There is little need to labor the point. Such an increase in consumption of electricity, spread over the entire valley area, would make necessary substantial increases in generating capacity in addition to that currently furnished by the Tennessee Valley Authority and that which will be furnished by its projects now under construction. From some other source this increased capacity would have to come.

Upon a Nation-wide scale this demonstration of increased consumption under low rates is of even greater significance to the coal industry. It is simply this: If the same low rates which have so greatly increased consumption in these limited areas in the Tennessee Valley were applied throughout the Nation, the resulting demand for electricity would make necessary a tremendous expansion in fuel generation.

The interests of the coal industry, in view of these facts, seem clear. There is a vast potential demand for electric power in the United States, a demand which is pressing closely upon the existing capacity to supply it. The way to development of this market has been pointed out, both by cities and cooperatives selling T. V. A. power in the Tennessee Valley and by private utility companies which have progressively reduced their rates and promoted increased use. Power is essential to the development of industry, especially in the electrochemical and electrometallurgical fields. Homes in the United States can use much more electricity than they now consume. Less than one-fifth of the farms in the United States have electric service, and in the South the proportion is less than one-tenth.

So far as its electricity markets are concerned, the interests of the coal industry lie obviously in the direction of developing and satisfying this great potential demand for electricity. No mines will be kept open nor miners put to work by fighting a rear-guard action against this development, or against the broad development of this area and its natural resources, including its coal. The interests of the coal industry lie rather in the direction of the electrification of America.

I wish to submit from reports of the Federal Power Commission and the United States Geological Survey the following table, which reflects interesting facts in connection with this subject.

Coal used in generating electric energy for public use in the 7 Tennessee Valley States

[Short tons of 2,000 pounds]

	1929	1930	1931	1932	1933	1934	1935	1936	1937

Neutrality or Participation in Time of War

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1939

STATEMENTS BY BERTRAND RUSSELL, CHARLES A. BEARD, JOHN DEWEY, JOHN T. FLYNN, AND HARRY ELMER BARNES

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD statements by Bertrand Russell, Charles A. Beard, John Dewey, John T. Flynn, and Harry Elmer Barnes on the question "If war comes, shall we participate or be neutral?" All of these statements appeared in the magazine Common Sense.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

IF WAR COMES, SHALL WE PARTICIPATE OR BE NEUTRAL?

THE CASE FOR UNITED STATES NEUTRALITY

In America, as in England and France, bellicose opinions have become typical of the left, while the right has become more and more favorable for peace at almost any price. Similar situations have existed at other times: In France during the revolution, in America in the disputes leading up to the War of 1812, and throughout Europe in the days of the Holy Alliance. But throughout the long period from 1870 to the rise of Hitler, it was liberals and radicals who favored peace. I think that their reasons for abandoning this position are fallacious, and that they are mistaken in imagining that the next war will be a holy war; It will be fought, as other wars have been, for imperialistic aims, such as the control of the Mediterranean and the oil of the Near East. In common with the immense majority in England and France, I wish to see this war averted. But it becomes increasingly clear that it can only be averted at a great price, and that England and France, at some point, will refuse to pay this price. I think, therefore, that, in spite of Munich, war in Europe will come, and probably soon.

War comes only when the opposing forces are roughly equal, for if there is an obvious preponderance on either side the other

side gives way. The next great war, therefore, like the last, will probably be long and bitter—more bitter than the last, though perhaps not so long. Whether America is a belligerent or not, air attacks on England and France will effect a vast destruction of life and property, generating a mood of panic rage which can only be kept in order by a severe military dictatorship. Economic hardship in Germany and Italy, if Italy is on the side of Germany, may lead to revolution, but the successful rebels will be fierce men, and are not likely to establish any regime more tolerant than the one that they will have overthrown. In all the belligerent countries of western Europe the population will be enormously diminished, large-scale industry will be destroyed, and orderly government, if it survives at all, will survive only in the form of tyranny rendered savage by the fear of murderous anarchy. A war for democracy cannot but end with the disappearance of democracy in Europe, except possibly in Scandinavia.

America, if a belligerent, will not be able to protect the western democracies from air attack during the first weeks of the war, which will be those of greatest peril. And when peace comes, America, inflamed by war passions, subject, at least for the time, to a governmental autocracy created as a means to victory, will have neither the wish nor the power to secure a sane and liberal treaty; all the mistakes of Versailles will be repeated, but in an intensified form, because the war will have been more destructive and more bitter. Any reconstruction which is attempted will be vitiated by the passions of the war and by refusal of justice to the vanquished. An impoverished and barbarized Europe will start again on the tragic cycle that has led from Versailles to the horrors of the present day and to the still worse horrors that are to be expected in the near future.

All this will happen because men will have allowed hatred to obscure economic and psychological understanding, as it is already doing among vehement anti-Fascists throughout the Western World.

If, on the other hand, America preserves neutrality and therefore remains politically a democracy, there is a considerable possibility that the influence of the United States may be paramount in the reconstruction. Radical war mongers always speak as though there were good reasons to fear a triumphant victory of the Fascist powers. I think this comes of an underestimate of the destructiveness of the next great war. It is not to be supposed that the air forces of Germany's enemies would be idle. The industrial regions of the Rhineland would almost certainly be devastated. With luck, we might succeed in destroying all that is most worthy of admiration in Milan, Venice, Florence, and even Rome. The Russians, from the east, would punish the industrial regions of Silesia. Hunger, as before, would undermine the health of German children and the morale of their fathers in the trenches. The nominal victors, almost as much as the vanquished, would be so weakened and destitute as to be completely unable to resist a power able, as America would be, to relieve distress and aid in reconstruction.

The best hope for the world, if Europe plunges into the madness of another great war, is that America will remain neutral, but will, when the fighting is over, use economic power to further sanity and liberalism, and to restore to the parent continent as much as possible of the civilization that the war will have temporarily destroyed. Europe will be in so desperate a plight that it will be easy to impose political conditions on American aid in reconstruction. Last time, such conditions were not imposed, and the money involved was lost. I do not see any other way in which, in the event of war, American liberalism can help Europe; for if America becomes a belligerent, the first effect will be the complete eclipse (at least for the time being) of liberalism, democracy, and free thought in the United States. What will the world gain by the defeat of the Fascist powers if, in the process the Fascist form of government becomes everywhere triumphant?

BERTRAND RUSSELL.

—

AMERICA CANNOT "SAVE" EUROPE

Although it is my firm conviction that the United States should stay out of the next war in Europe and all the wars that will follow the next war, I do not rest my case upon the assumption that by staying out we shall "do more good" than by getting into the fray. I rest my case solely on two grounds: (1) That by no process can the United States "settle" European affairs, make the peoples of Europe prosperous, happy, and good, make human nature in Europe anything else than it is and will be, and close the long and bloody history of Europe by the beatitudes; and (2) that by getting into the next war and the following wars the United States will suffer incalculable damages, material, intellectual, and moral.

If Great Britain, France, Russia, and the Balkan countries so immediately threatened by the Fascist menace cannot make use of the preponderant power which they undoubtedly have, or will not make use of it, why should the United States try to make up the deficiency? I see no reason under the sun. Nor do I think that it is within the power or the intention of the Government of the United States to effect that combination of European interests necessary to save Europe from its own history. Surely it is no mean and contemptible undertaking to seek the maintenance of peace in this hemisphere and it will take all the talents we can command to do that much, perhaps more talents. As for myself, I am not impressed by the rattle and clatter of those who feel sure that they know Europe and that the United States can, if it would, "save Europe." And I deem it no crime against mankind to have smaller ambitions.

CHARLES A. BEARD.

—

"NO MATTER WHAT HAPPENS—STAY OUT"

I have rarely found myself in agreement with Herbert Hoover. But as I read his prediction that if the United States is drawn into the next war we shall have in effect, if not in name, a Fascist government in this country, I believe he is completely in the right. The dire reaction that took place in the early twenties after the World War was mild in comparison with what would occur another time. It would begin earlier, be more rigid, and endure no one knows how long. We are forgetting that the years before the last war were a time of growth for a strong and genuine progressivism in this country, and that if its career had not been interrupted we should have made whatever gains have been accomplished by the New Deal much earlier and in a much less costly way.

It is quite conceivable that after the next war we should have in this country a semimilitary, semifinancial autocracy, which would fasten class divisions on this country for untold years. In any case we should have the suppression of all the democratic values for the sake of which we professedly went to war.

The discouraging thing is that the very persons who a few years ago were sure that they would not allow themselves to favor our entering another great war, and that we had been deceived by propaganda in entering the last one, are now thinking and talking as if it were inevitable that we should again go in. This attitude is a precursor of an event that is in no way necessary. If we but make up our minds that it is not inevitable, and if we now set ourselves deliberately to seeing that no matter what happens we stay out, we shall save this country from the greatest social catastrophe that could overtake us, the destruction of all the foundations upon which to erect a socialized democracy. At the same time we shall destroy the means by which we can be of use to a stricken Europe after the end of its attempt at suicide.

JOHN DEWEY.

—

"NOTHING LESS THAN A CRIME"

If one may not indulge in downright prophecy of war in Europe this spring or summer, one may certainly assume that it is highly probable. And if war does come in Europe, growing out of any of the issues which can be at this moment detected, the United States will be guilty of a crime against its people and its destiny if it permits itself to be drawn in.

What are the visible causes of war in Europe? Primarily, of course, the drift of war is inherent in the dictatorships and in the Fascist organisms of Germany and Italy. It may be said that these two nations have built their economic systems upon war as the great fundamental industry. To demobilize that industry would produce in those countries much the same effect as suspending the automobile industry, the electrical industry, the textile industry, and some others in the United States. To suspend the war industries in Germany and Italy would be to bring on a complete and disastrous economic collapse. Therefore the war industries must go on functioning, and this in turn means that the dictators must stimulate them by heavy taxation, forced government loans out of savings, and vast drafts upon the central banks. As this means sacrifice, the inevitable necessity is that the people must be continually whipped up into frenzies of hatred and fear of Germany's and Italy's enemies. These peoples are hopelessly caught in the moving machinery of the war industry which drives inevitably toward war.

Where the machine will lead these hapless multitudes, of course, will be determined by the interests of the economic systems involved and the judgments of the dictators as to the lines of least resistance. I do not believe that either Mussolini or Hitler wants war. I believe that preparation for war, and hence war moves and war scares, are essential to them. But as they cannot keep this up forever without war, they will send their legions along the path of least resistance. And that path now would seem to be the road to the east. Hitler has, with the conscious cooperation of Mr. Chamberlain, succeeded in isolating Russia. It seems at this moment at least possible for him to foment a fraudulent uprising in the Ukraine, with the aid of Ukrainian emigrés and German troops, which would be the occasion for sending German armies into the Ukraine. No one supposes that, having opened the way to within a few miles of the Ukraine, he will pause now in this quest.

Nothing has happened, save the fulminations of Mussolini about Tunisia, Savoy, and Corsica, which for the most part may turn out to be a smoke screen, to induce anyone to believe Hitler has abandoned his great objective within sight of the goal.

If the blow is struck in the Ukraine, does anyone believe that Mr. Chamberlain or any considerable party in England will favor going to the aid of Soviet Russia? If events turn out this way we may see a war in Europe which will involve Russia and Germany with England and France left out. And can we imagine that any appreciable element in our own population will clamor for sending troops to Europe or even applying economic sanctions on either side of this quarrel?

If, however, France and England are drawn into war with Germany and Italy, what will the war be about? Will it be because Germany and Italy plan to invade England and France and seize their territories or will it be because England refuses to release

to Germany her old African colonies and because France refuses to part with Tunisia to Italy? Of course, it will not do to minimize the fact that the struggle will be a clash between two sets of populations dominated by widely differing cultures and political objectives. But will it not be first of all a battle to determine whether England or Germany shall rule Somaliland and whether Italy or France shall own and exploit Tunisia?

For my part I can see no reason why this country should take any part in such a struggle. Of course, I know the argument will be made that, whatever the immediate and proximate issues, the contest will be in fact one involving the very existence of the democratic forms in England and France and the Fascist pattern in Germany and Italy.

This whole argument I believe to be fallacious. If war should come between England and France on one side and Germany and Italy on the other, so far as democracy is concerned in England and France, it will make no difference whether these two nations win or lose. The war itself—win, lose, or draw—will destroy their economic systems and throw them into the arms of either fascism or communism. I think it entirely correct to say that the United States by putting itself on the side of England and France can insure victory for them. But it cannot insure victory for their democracy.

As for us, fascism in Germany and Italy is not a menace to the United States. Fascism is indeed a menace, but that menace originates in our own society and grows out of the disintegrating forces which devour our economic system. We cannot fight fascism here by going to war with Germany. If we go into a war and subject our economic system to the further disturbance which will be the inescapable consequence, we will have brought the Fascist menace nearer by the very means embraced to end it. The way to protect our democracy is to safeguard our economic system from further strains, and war will be the most destructive strain to which we can possibly expose it.

At this moment, with 11,500,000 unemployed, with our industrial and financial structure fatigued by 10 years of depression, and a wave of reaction rolling in from every corner, it will be nothing less than a crime to ask our people to take their eyes off our own grave problems and turn them to Europe. The suddenly whipped-up war scares which have emanated almost entirely from official agencies, including the White House, which has personally directed the disgraceful spy scares, are designed to divert the attention of the people from our seemingly insoluble domestic problems and to unite them behind a leader who finds in those domestic problems no magic for commanding the support and applause of the voters.

America will do well to confine her salvaging energies to the mess within our present frontiers, and not seek to enlarge and multiply the problems and the mess by extending the frontiers from the Rhine to the Yangtze.

JOHN T. FLYNN.

A WAR FOR "TORY FINANCE"?

While on our guard against foreign propaganda likely to involve us in war, we must also be thoroughly alive to the dangers inherent in the propaganda of those Americans who wish to get the United States immediately involved in another war to make the world safe for democracy. Specifically, we have reference to the blandishments of the undoubtedly well-meaning "common front boys." No sane person can have any objection to a common moral front in standing against the forces of dictatorship. But this is something quite different from engaging in a second world war to discipline foreign States whose political system we do not happen to like.

The common front philosophy was indefensible even before the Munich conference, but it is utterly ludicrous today. Who are we to be "common" with in standing for democracy? About the only democratic States which remain are a few small countries, determined beyond all else to maintain their neutrality to the last ditch. To line up and shed our blood in company with Tory Britain and a France led around by the nose by means of Tory finance would be as absurd as it was in 1914–17 to promote the cause of democracy in the company of the czar of Russia and his armies.

There are not a few who prefer the forthright brutality and aggression of a Hitler to the smug double-crossing and sanctimonious hypocrisy of Britain's umbrella-bearer. A war by the side of Britain today would not be a war for democracy, but a war in behalf of British imperialism and Tory economics. Whatever the nobility of our proclaimed ends, we would wind up with no greater contribution to humanity than making the Pacific Ocean safe for the British Empire, at the cost of billions of dollars and with the loss of an unpredictable number of American lives.

The aggressive common-front philosophy is just as indefensible in its domestic aspects and implications as it would be in its foreign involvements. If the United States were to enter a world war, however sincerely, in behalf of democracy abroad, the first and inevitable result would be, as we have seen, the speedy extinction of all democracy in the United States. This would be crushed out rapidly and permanently. At the very worst, it will be decades before we can ever lose our democracy at the hands of some foreign dictator who overruns our shores. But we shall lose our democracy within a month if we are beguiled into launching a war against the dictators abroad. And in the loss of our democracy the "common-front boys" will be among the first to suffer, and they will suffer most extensively. Their present zeal for totalitarian gore will quickly be forgotten by the militaristic bureaucrats into whose hands will be confided the destinies of our country upon the outbreak of war.

HARRY ELMER BARNES.

United States Participation in Foreign Wars

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1939

EDITORIAL BY JOHN P. HARRIS IN HUTCHINSON (KANS.) NEWS-HERALD OF FEBRUARY 19, 1939

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an editorial published in the Hutchinson (Kans.) News-Herald of February 19, 1939. The editorial was written by John P. Harris, one of the ablest and clearest thinking of younger Kansas editors. I may say that the position he takes in opposition to the United States participating in European disputes represents the sentiments generally of the Great Plains area, though not in all cases for the same reasons given by Mr. Harris. I earnestly represent to my colleagues in the Senate that this editorial is well worth reading and hope it will receive their careful consideration.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Hutchinson (Kans.) News-Herald of February 19, 1939]

I DON'T WANT TO DIE

(By John P. Harris)

I'm 37 years old. If war comes, the boys in their twenties will be shoved into uniforms first, but my health and circumstances are such that I'll be subject to the second-draft call.

I love my country, but I love living more. I don't want to get poison gas in my lungs. I don't want a piece of shrapnel in my stomach. I don't want my legs riddled by machine-gun bullets. I don't want maggots crawling in my brains that have been laid open by a splinter from an aerial bomb. I don't want to die.

Because I am 37 and want to live, I hate those who have brought the United States closer to war today than it was in 1915. I wasn't old enough to fight then, but I was old enough to watch the war hysteria being roused until it tempted the United States into a ruthless struggle for power in Europe. And I was old enough to see what it cost us then and since.

That's why I hate those who today are deliberately stirring emotions in favor of one side or another in that bloody European conflict which again is on the verge of breaking out of council chambers and onto battlefields. Officials of our Government who already have taken sentimental sides, members of Communist and Fascist organizations alike, those with munitions to sell, open and secret agents of other nations, professional busybodies, and all others in this country who have been knowingly rousing passions I damn alike, because I do not want to die.

THEIR WORK WELL DONE

These passion rousers have done their work well. There are tens of thousands whose dreams tonight will be filled with field-gray-clad legions marching down through Canada to spread desolation in their wake, with skies black with bombing planes, and with battleships flying the flag of the rising sun shelling the whole west coast. In waking hours they fear secret agents of foreign powers are about to poison the water they drink, or are busy raising armies of hyphenated citizens which very soon will ravish their wives and daughters and make them slaves. They are almost ripe again for that old catch phrase, "making the world safe for democracy." These I do not hate; I pity.

Because there are so many with such thoughts as these I am personally afraid. I fear their emotions have betrayed them so far there is no turning back. If that isn't true, there is only one thing that will save them and me. One thing alone can stop all of us from repeating even more tragically the tragic mistake of 1927. That is some rational thinking.

How can any idiot think the United States is in danger of any sort of direct attack? Who would attack us? Half of the other nations don't want to, and the other half can't under any stretch of the imagination.

Sure, Japan has a powerful navy. But it would be 5,000 miles from its nearest base of supplies in operating on the coast of the

United States. It might barely be able to drop a few shells into Hollywood, but who wants to defend Hollywood? It would be more formidable in American waters than would the assembled battlecraft of Mexico. It could no more menace the United States than our own Navy could menace Tokyo.

The thought of an attack by Italy's best is only amusing under the slightest of analysis. Ditto Russia.

WHAT COULD GERMANY DO?

Germany is different. But what after all could Germany do? Assume that the British Navy stood passively by and that Canada was supine. It would take an army of 5,000,000 men to dare an attack on the United States. Germany has them. But even if Germany operated every boat she has at top speed it would take her a year or more to transport that many soldiers across the Atlantic. It would take that much longer to bring over the necessary planes, tanks, cannon, and shells. By that time, even if Germany should be so foolhardy as to venture on such an exploit, the United States would have raised an army of 10,000,000 to wipe the invaders off the face of the continent.

Maybe you question this. Well, assume in your nightmare that such an attacking force were transported to the borders of the United States overnight. How would they be kept in beans and bullets? Did you know that in no single day during the World War did the United States land enough supplies in Europe to give its own soldiers full knapsacks and cartridge pouches for that day? It's true and I as one who would have to die, emphasize it for your attention.

That leaves airplanes. Even they are no reason for this country to hide under the bed. Germany and Italy together today might have 5,000 planes they could load with bombs and send on a mass attack on New York. Half of them would get across the Atlantic. The other half would drop the bomb or two apiece they would be able to carry above their gasoline loads. The explosive would cause a momentary commotion. As many persons would be killed as die in New York each year from untreated syphilis. That would be all.

But Germany and Italy aren't going to make any such quixotic attack. Their planes after flying the Atlantic and dropping their bombs wouldn't have any gasoline left to fly home on. The aircraft would have to come to earth and be captured and the totalitarian nations' chief source of power in their great game of bluff would vanish leaving them stripped and defenseless with nothing accomplished. Hitler and Mussolini are power-crazy fools, but not such fools as that.

Logic explodes the fear the United States can be directly attacked by the totalitarian nations which by a national hysteria have been placed in the role of our enemies. Even if military logic didn't, political logic would. Germany, Japan, and Italy, singly or collectively, have goals to gain nearer home which will take them half a century if not to eternity. Only after they have grabbed the things before their eyes and absorbed them can this country conceivably come within the range of their ambitions.

IS WORLD TRADE WORTH IT?

But it is not enough to stop with exploding the myth of direct attack. The clamor has become so great that millions of supposedly intelligent Americans now are convinced their country must arm and eventually fight to preserve its world trade. Well, is world trade worth fighting for when even in 1929 it amounted to only 8.2 percent of our total business? The cost of a war for a year would be more than the profits on the world trade for a century, to say nothing of the dead.

Suppose, though, that world trade were worth the protecting. How can armament do the job? Battleships can no more support the existing commerce of this country and cause it to increase than a corner cop can protect the trade of the corner grocery against which he leans.

Granted the Fascist nations are up to funny things in Central and South America which are gaining them new markets at our expense. By barter and by enlarging their number of personal contacts they will probably increase their commerce still further in those directions at our expense. But battleships are no defense against it. These battles are to be won not by tactics of generals but by those of traveling salesmen.

If American industry had thought South American markets were worth the having, it would have cultivated them in the same intelligent fashion an implement manufacturer does the Wheat Belt. The markets are still there for the cultivation whenever this Nation wants them. For geographical reasons if nothing else they are as remote from occupation by any European nation as Mars.

Of course the nations south of the Rio Grande are the object of an intense propaganda campaign. But what is propaganda? The building of good will. And what is the answer to propaganda? Counter propaganda, not bombing planes and cruisers.

Forget these imaginary alarms. The menace to those of us who must die to preserve misconception remains. The President and his advisors have decreed that the United States must play the role of big brother to England and France for a second time. They, Washington has decreed, are our first line of defense and we, a sister democracy, must see they have whatever it takes to hold it. It sounds well, but as one of draft age, it is a death thrust.

IN THEIR OWN INTEREST

Yes, France and Britain are the first line of defense of the United States if you want to call it that. But their defending is not in our interest but in their own. They're scared. The specter of the bombing of London and Paris haunts them constantly. It caused their venal sacrifice of Czechoslovakia last fall. It causes them ignominously to grasp at any aid the United States has to offer them. But that's all.

France and Britain are not our first line of defense by choice but by accident. They hold it not in our interest but in their own. From our standpoint, to subdue the United States, any other nation must subdue England and France first. From their standpoint, they come first, and whatever there may be after doesn't matter.

If these first-line defenses of ours could make one, do you think they would hesitate 10 seconds to accept a Fascist offer of peace and their present possessions in return for their noninterference with a German drive on this country? Their answer would be yes before you could take the furl out of Chamberlain's umbrella.

France and Britain are our first defense, to be sure, but it is a geographical accident. We owe them no more for it than we do to the Atlantic and Pacific Oceans which place insurmountable barriers between us and any possible adversaries. If there's any owing, it's the billions our late allies still have due us from the last time they tricked us into coming to their aid.

Our Government has so missed this point that it is trying to persuade its people that the United States has an obligation to furnish our sister democracies planes, guns, and other war supplies to whatever extent is necessary for them to hold the line. We salve our conscience by placing the transactions on a strictly cash and carry basis, but the result is the same. If the emergency comes, the supplies must include me and a million or two other men who don't want to die, but will.

No one who watched the World War through can doubt the sequence. The United States that time began supplying the France-British alliance. There's good money in it. Then our friends ran out of money. We continued the business on credit because for domestic political reasons we hesitated to swallow the pill of hard times the abrupt cessation of the munitions trade would create. Our emotions rose with our business profits. The first thing anyone knew, we were in whole hog. For some it meant going without sugar on Tuesdays. For those from 18 to 45 it meant charging nests of machine guns.

Read Frank Simonds' Can Europe Keep the Peace? and Can America Stay at Home? or Walter Millis' The Road to War. Refresh your own memory of what happened in the 'teens. It's on the way to happening all over again.

A FOOL'S PARADISE NOW

It's a fool's paradise now, but let Europe plunge over the abyss again. Let the propaganda start in which the British are such past masters and the Germans such dubs. Let the cards begin falling against the miscalled democracies. Does anyone in his right mind think that the United States as supplier-in-chief to the gang can remain aloof? We who must fight know better.

I saw a hillock in France once that covered less than a quarter section. On it four times as many picked youths as there are men, women, and children in Reno County died ugly deaths between 1914 and 1918. What happened once is on the way to happen again. The thought terrifies me, because I do not want to die.

The United States is still pretty dumb as far as European politics are concerned. It continues to be a push over for the old ones about preserving civilization and protecting democracy. Then, without a catch in its conscience, it begins considering Russia the other great menace—as one of its playfellows in the battle against fascism. Europe hasn't any such illusions. Its only delusions are those it has to sell the United States.

What's stirring Europe today is the same old struggle that has been going on since before the days of Napoleon. There is no moral defense for any of the participants. Democracy, fascism, communism, and the rights of individuals and minorities are utterly beside the point. It is unrestrained lust for power with no holds barred.

Over and over again they have been fighting to determine whether France or Germany shall be top dog in Europe. Each time England plays off one against the other to maintain her strangle hold on world trade. The little nations are sacrificed ruthlessly according to the dictates of any moment. To the chief battlers in this endless struggle the United States is only another little nation.

NOT OUR FIGHT

It's none of our fight. Those of our young men who may be sent to take part in it will have died in vain. As a nation we have nothing to win and infinitely much to lose. We were played off the last time we rushed in and we are in a good way toward being played off a second time today.

Sure, the Germans are a bunch of bums and their treatment of the Jews and other minorities is bestial. Sure, the Italians are victimizing Spain. Sure, the French are nice fellows for "frogs." Sure, the British are our cousins and it's a lot simpler to fight on the side of someone who speaks your own language. But pleading as one American citizen who has no desire to fertilize the poppies in Flanders' fields, why fight?

I hate nazi-ism and all it stands for, but it's none of my business and I don't like my Government trying to make it my business. The British Empire is a fine thing and its future is threatened, but its fall is none of this Nation's affair. Why, then, should my country be leading with its chin in a dirty business of which it doesn't know the first rules?

The officials of our Government who are issuing inflammatory statements, those who talk of boycotts, the ones who promote demonstrations against one foreign nation or another, the Joe Doaks who already are taking sides in a fight on the other side of the world that isn't any of their business, and the misguided zealots who are spreading hate in press, pulpit, and rostrum are guiltier of treason than Aaron Burr. Treason to those of us who may have to die.

It's a troubled world, and the United States can't isolate itself from the strife. But its defense isn't planes and battleships, or soldiers having their heads shot off on some other continent. Its only safeguard is to get so busy finding jobs for its ten millions out of work that it won't have any time for its neighbors' unconscionable quarrels. That alone will protect the American system and America's millions of young men of draft age.

They don't want to die Nor do I.

The Silver-Purchase Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, February 27, 1939

EXCERPTS FROM LETTERS IN REFERENCE TO INVESTIGATION OF THE SILVER-PURCHASE PROGRAM

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from letters with reference to pending legislation proposing an investigation of the silver-purchase program.

There being no objection, the excerpts were ordered to be printed in the RECORD.

The following excerpts from letters received from various parts of the country with reference to S. J. Res. 1 and S. 785 supplement those previously inserted in the Appendix of the RECORD, pages 205, 254, 352:

From a letter from Santa Barbara, Calif.:

It has come to my attention that Senate Joint Resolution No. 1, introduced by you, provides for a joint committee to investigate the silver program. In my opinion such an investigation is highly desirable in order to put the Congress in possession of facts which it is necessary for them to know if they are to give intelligent consideration of the question of continuing, revising, or abandoning our present silver policy.

From a New York City correspondent:

I am gratified that you have the courage to oppose the Silver Purchase Act. If this is not the greatest swindle, and most stupid one, of all time, outstealing Tammany 100 times, then I do not know what would constitute such.

We are deliberately paying insane prices for worthless silver, but paying it to our defaulted debtors, thus, paying for them, their debt to us, but they keep the change. We pay it to Mexico, which appropriated American investments. Mexico in turn supplies their oil to the aggressor nations. This crazy administration has been guilty of all manner of folly, including insanity that we can spend ourselves rich which we can no more do than this monstrous administration can drink itself sober. If it ever tries to unload this silver, it will, at great hazard, disrupt the economy of the world again as it has done right along. As one authority said, "It is the damnedest foolishment of history."

Why don't they go the whole way and give the farmer $10 per bushel for turnips and onions, instead of using public funds for election purposes?

From a Portland, Oreg., resident:

Although not one of your constituents, I wish to express to you approval of Senate Joint Resolution No. 1, and the hope that this will prove to be the beginning of the end of the venal and stupid silver program. It certainly gets under the hide of an American citizen, who has had to work and save for every dollar he has, to realize that part of his money has been used for political expediency and a still greater part for the benefit of foreigners who play Uncle Sam for the sucker he is.

From a New York correspondent:

I understand that your Joint Resolution No. 1 is soon to come up for consideration, and I take this opportunity of heartily endorsing its purpose.

In my humble opinion if there was ever a piece of legislation that should be corrected, it is the Silver Purchase Act. Every man or woman who has had to work and save money is outraged at the idea of a commodity being bought way above the market price not only in this country but in Mexico and abroad, and then stored in the ground where it does no one any good.

It is laws such as this one that discourages the private individual who foots the bill and the repeal of some of these acts would do much to restore confidence in the average investor and start the wheels of industry moving again. Until private capital gets a fair return for the risk it runs, you will not see any sound revival in business.

I hope your resolution will be passed and that a committee will be formed to investigate this program.

From a South Pasadena, Calif., resident:

We are strongly back of you and wishing you success in your efforts to stop the Government's silver purchases and to bring us back to sanity in our economic affairs.

From a New Yorker:

Permit me to express my appreciation of your activity in introducing Senate Joint Resolution 1. Our hectic experience under the silver program calls for a thorough and definite examination of the silver program at as early a date as possible and I think that your introduction of this resolution renders a distinct public service.

From a Brooklyn, N. Y., correspondent:

Congratulation on the silver bill introduced by you.

Of all questionable procedure indulged in by the administration this silver act and the gold-purchase act seems the most pernicious.

I hope you will follow up with a common-sense plan relative to gold.

From a resident of McKinney, Tex.:

I desire to commend you on the introduction of Senate Joint Resolution No. 1.

It seems to me that we are spending a lot of money from a deficient Treasury to subsidize a few silver miners and furnish profitable dump for many foreigners and at the same time increasing our inflation hazard.

From a Chicago, Ill., manufacturer:

The following is copy of a letter sent to various Members of the Senate and is self-explanatory:

"The letter is to urge your support of Senate Joint Resolution No. 1, introduced by Senator TOWNSEND, of Delaware.

"For years all reputable economists have been in agreement as to the unsoundness of this country's silver activities. Taxpayers' money has been squandered to enrich some small class of mine owners and international speculators. Silver has been bought at twice its value to create unwanted reserves that eventually can do nothing but shake public confidence in the Nation's money. It is high time that we brought an end to political meddling in economic affairs. Hoping you will use your influence in this direction, I am."

From a Great Neck, Long Island, correspondent:

I am glad to note that you have introduced a bill to revoke the President's authority to purchase silver. In the first place, I agree with you that it is unsound policy; in the second place, this has been called to my personal attention for the last several months. I am employed in downtown New York, and I have noticed for the last several months, the Government has been shipping silver from the Subtreasury here in New York to a storage place near West Point. There is an army of policemen, sailors, and other officers devoting their time to trucking this metal to West Point. Not only is there a great loss to the people of the United States in the purchase of this silver from Mexico and other places at a ridiculously high price, but millions of dollars are spent by the Government in handling the silver after its purchase. It seems to me a most unsound proceeding, and I hope that you and other Members of Congress will do everything you can to stop this waste of public funds.

I am sending a copy of this letter to my Congressman and also to Senator VANDENBERG, and I think they will give this matter their attention also.

From a Beaver Falls, Pa., manufacturer:

We are heartily in accord with your efforts to bring about a change in the laws regulating the purchase of silver, and we are writing our representatives asking them for their support for your resolution.

From a Boston, Mass., lawyer:

I have been following with a great deal of interest the legislative history of our monetary policy during the past 7 years and am very much impressed with the wisdom of the adoption of Senate Joint Resolution 1, now pending before the Senate.

It seems to me that, having experimented widely in the monetary field during the confusing days of the depression, the time has now come when we as a nation should have the courage to discard those experiments which have proved ineffective in curing the ills of the times but which still offer barriers to the rebuilding of business confidence.

The resolution above referred to seems to me to be a wise and necessary step toward a return to more orthodox methods of handling the delicate and intricate question of monetary policy.

Commercial and Military Value of Colonies

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1939

Mr. THORKELSON. Mr. Speaker, it is now the 27th of February, and we have been in session for 35 days, operating in a semicomatose state. During this period many questions have been propounded to me, and I shall mention some of them today. What has Congress accomplished? Nothing but its regular political duties, which consists of appropriating money and passing legislation. Could the same have been accomplished without Congress? Yes, very well indeed; but the Constitution provides that the House shall appropriate money and Congress shall enact legislation. What are the duties of Congress? To regulate and operate the Government of the United States, including all of its Departments. To provide for national security by establishing a national policy for hundreds of years to come, so that our Nation and posterity may survive.

Who are and what are the duties of Congressmen? They are statesmen, or rather they are supposed to be statesmen, with a broad and intimate understanding of our own and foreign governments, with a wide international perspective and ability to envision the future and our position among other nations.

These and many other questions have been asked and, like other Members of Congress, I have not escaped criticism. One paper seems to misunderstand me—

The Honorable Mr. J. THORKELSON is a new Member of Congress from the State of Montana, but he knows his stuff. He has just introduced a bill which would instruct the Farm Credit Administration to cancel immediately all crop and production loans made to farmers in the drought areas.

My reason for introducing this bill was to prevent foreclosure proceedings by the Federal Government upon a group of farm producers who, by no stretch of imagination, are responsible for our present chaotic state. When the Federal Government permits free importation of farm products until it beggars our own farmers and so destroys an important national industry, relief must be given by those who are responsible for this deplorable state, and that is Congress. My friends in Providence should not worry, because if the present fiasco is not corrected now, mass repudiation cannot be avoided; in that Rhode Island will share.

Our forefathers stipulated in the Constitution the only manner a free government such as ours could possibly survive, and it is: Each State must regulate its own affairs and everything within the State. The States must not only be free from Federal invasion but each State must maintain and protect its sovereign rights. To perpetuate such form of free government, the States must elect men to office who not only understand the basic principles of our Government but who will also preserve, protect, and defend such principles or the people's rights.

When these men reach Washington, district or State identity is set aside. After their oath or affirmation they become the Congress of the United States. Congress represents all States, Territories, and colonies as one unit not only among themselves but also in the international family of nations.

A republican democracy such as ours can only live and perpetuate itself by adhering to the basic principles as set forth in the Constitution.

It is not my intention to tire my colleagues with an extensive discourse upon government, but I cannot refrain from warning the Members of this House that if we follow the plans which have been in vogue in the past complete collapse of our industrial structure may be expected in the near future.

I shall from time to time read into the RECORD certain principles which I believe are sound. In doing so I fully realize the scope of my discussion. The Members of this House may and should question the soundness of my statements, and I shall abide by and welcome such interrogation. In other words, I invite criticism by every Member in this House should I fail to adhere to sound principles.

As a prelude to the main subject of my discussion, which is commercial and military value of colonies, I am constrained to call congressional attention to pertinent facts. In 1898 as a result of the Spanish-American War the United States became owners of the Philippines and other islands which were captured by our Navy and Army at that time. We paid, I believe, $25,000,000 to Spain for the Philippine Islands, and in addition to that the cost of the war. These Spanish colonies became the property of the United States, of which it is an integral part.

There is no constitutional power given to Congress to dispose of property which belongs to the people and Congress has no right to set up and create foreign states upon such property. This was done in Cuba, and provisions have been made for the independence of the Philippine Islands in 1946. I question the right of Congress or the Federal Government to consummate this transaction for it is clearly a violation of the Constitution and an invasion of the people's rights.

Who sponsored the agitation for the independence of Cuba—was it the majority of the people? Certainly not. It was instead big business in the United States which can operate with greater profit under an independent Cuba than they can with Cuba as a State in our Union. Is it the majority of the Philippine people who are sponsoring the independence of the Philippines? Certainly not. It is sponsored by large business in the United States and particularly oriental interests which can operate with greater ease and larger profits in the Philippines and in the Orient with the islands independent than they can with the Philippines as a colony of the United States.

The moment we step out of the Philippines our trade with the Orient is lost and that should be the main concern of Congress today. Have our people been consulted in respect to the transfer of this property? Certainly not. We are simply told that colonies are not profitable and for that reason undesirable to us. Is that a true picture? No. It is the most contemptible deception perpetrated on our people. Congress alone is responsible for this unwarrantable procedure and should in justice to our own industries correct and prohibit importation of sugar and other commodities that can be produced in other tropical possessions now owned by the United States. Why should we favor large industry by allowing importation of sugar nearly duty-free and leaving our own producers in distress on our own farms? Congress in allowing this to go on is responsible for the poverty of our own farmers and producers. This should be corrected by enforcing duties on all imports. Why should the Government allow a trade to exist which enriches foreign producers at the expense of our own people?

We are developing round heels bending backward in our good neighborly policy. First, the Mexican Government confiscates American property and kicks our industries out of Mexico. Yes; kicked out by the Communists in the Mexican Government and upheld by the good neighbors in our own Government. As we recover from this affrontery Congress in abject fear goes into shock because the Navy requested $5,000,000 to build a breakwater and provide a safe harbor at Apra, Guam. Yes; a little island in the Pacific which in 1937 paid its own expenses, earned a profit over $14,000, imported three-quarter million dollars worth of merchandise of which we received $275,000 for our exports.

The harbor is to provide safe mooring for merchant ships so cargo can be unloaded on lighters in safety. To further provide safe landing for passengers and crew in commercial and naval aircraft. Five million invested in a harbor which may save life and cargo and so encourage more exports from our farms and finished productions.

The spineless attitude of Congress furnished courage and built the prestige of Japan in the Orient, and we lost face.

I quote, "Japanese hail abandonment of Guam base. House action 'saved America from folly,'" newspaper asserts. The newspaper Asahi said the United States was to be congratulated on rejecting the Guam plan, which "has saved America from the folly of throwing salt into the Pacific."

I do not believe any Member of Congress is silly enough to believe that Japan cared one bit if we built a breakwater in the harbor of Guam. No statesman could ever believe that. What pleased Japan was our congressional phobia, because it increased her prestige in the Orient 100 percent.

It was an admission on our part that we were afraid of Japan, which she, of course, will use to the full limit.

What Japan dreads, however, is fortification of the Philippine Islands. In the event that we fortify the islands Japan will be compelled to leave trade in China open to the American producer, and that is one thing Japan objects to more than anything else. Fortification of the Philippine Islands is a checkmate for Japan, and if there are any statesmen in Congress, I hope God will open their eyes so that they will be able to look further than at the end of their nose.

Let us now rediscover the value of the Philippines:

The Philippines constitute a group of tropical islands between 5° and 22° north latitude and 117° and 127° east longitude. The total number of islands is more than 7,000, of which only 462 have an area of 1 square mile or more, and only 2,441 are of sufficient importance to have names. The two largest are Luzon (about 41,000 square miles) and Mindanao (about 37,000 square miles). The total area of all the islands is about 114,000 square miles.

The Philippine Islands cover an area about equal to the British Isles, or the islands constituting the Japanese Empire before the war with China. They consist generally of vast alluvial plains, or mountain ranges with an abrupt transition from one to another. The plains are of the very richest soil, and two or three consecutive crops a year are frequently raised. The mountains are covered with a dense, impenetrable growth of forest trees, for vegetation here has no winter sleep but continues to grow every day during the year. The islands are producing great quantities of rice, corn, tobacco, sugar, hemp, and copra. They are capable of producing and are beginning to produce rubber, coffee, and countless other food and medicinal products.

Of the physical aspect of the islands there is little knowledge in America. It is a beautiful land. Its deep tropical forests, its broad and level plains, its mountains, its beautiful rivers and the ever-changing vista of the restless surrounding sea, its hundreds of ever-green islands, of all sizes and shapes, with white beaches and coral reefs, interest the traveler to an absorbing degree. There is no country in the Orient which displays so many and variegated marks of beauty and grandeur.

Being entirely within the Tropics, the Philippines has but two seasons—the dry and the wet. In most parts of the islands the dry season lasts from November to May and the wet season from June to October. In the southern islands the seasons are less marked, the rainfall being more equally distributed. The coolest months are December, January, and February; the hottest, April and May. The early mornings, late afternoons, and nights are invariably cool and agreeable. Even in the hot season, the temperature rarely reaches 100° F. and the heat is tempered by the monsoons which blow 6 months from the northeast and 6 months from the southwest. The weather in the lowlands is continuously warm, although not oppressively hot. The hot season, like that of all other tropical countries, is enervating but statistics show that the climate does not exert a particularly letal influence on the health of the inhabitants.

Natural resources: The total land area of the Philippines is approximately 73,215,000 acres. About 57 percent of this area consists of forest lands and about 43 percent of agricultural and other lands. Nearly 85 percent of the total land area still remains a part of the public domain, to be administered or disposed of by the Philippine Government. The remainder is privately owned or leased.

The Philippine Government owns 97.5 percent of the country's forest lands. Approximately 81 percent of the total forest area is classified as being of commercial value. The Philippine Bureau of Forestry estimates the existing stand of timber to contain almost 465 billion board-feet. A wide variety of hardwoods is found in the islands. These provide the raw material for an important domestic and export industry. Stands of timber are well distributed throughout the archipelago but Mindanao contains more commercial forest than any other island.

Land available for agriculture amounts to 29,257,000 acres, or 40 percent of the total area. Of the agricultural land, only 9,928,000 acres or about one-third, is under actual cultivation. Approximately 50 percent of the cultivated land is on the island of Luzon, primarily in the central plain and Cagayan Valley, although substantial areas are under cultivation along the northwest coast and in southern Luzon. The Visayan Islands account for approximately 30 percent of the total cultivated area in the Philippines. (The Visayan Islands are located in the center of the archipelago and include the islands of Samar, Masbate, Leyte, Bohol, Cebu, Negros, and Panay.) The remaining 20 percent is distributed among the other islands in the archipelago. The Province of Davao in Mindanao occupies a prominent position in this latter group.

In addition to forest and agricultural resources, the islands have substantial mineral deposits among which gold is of chief commercial importance. Most of the deposits of gold are found on the island of Luzon where both lode and placer mining are carried on. The largest lode claims are situated in the mountain province of northern Luzon, particularly in the Benguet district.

Placer mining is being developed in southern Luzon in the Province of Camarines Norte. Gold has also been discovered in the Provinces of Zambales and Bulacan and on the islands of Masbate and Mindanao. In recent years gold mining has become one of the major industries of the islands. Production in 1934 totaled $11,851,000 and in 1935 reached $16,012,500. Some silver is produced as a byproduct in the mining of gold.

Deposits of chromite exist on Luzon in the provinces of Camarines Sur and Zambales. Claims are being developed in both areas and one company in 1935 expected that it would export 25,000 tons annually, beginning in 1936. Iron ore has been located on the islands of Luzon (Camarines Norte and Zambales), Mindanao (Surigao Province), and Samar. One company exported 305,000 tons of ore in 1935 and planned to ship 450,000 tons in 1933. The Philippines also possess deposits of copper, but their inaccessibility has operated to retard their exploitation. Manganese ore and coal are also found in the islands, but commercial exploitation on a large scale has not been undertaken. In 1935 and 1936 there was marked activity in the prospecting and leasing of oil lands; however, no wells have as yet been developed. Cement is produced by two companies, one on Luzon and one on Cebu. They manufactured 640,000 barrels in 1935, primarily for the insular market. Other minerals are known to exist in the islands but thus far they have not proved to be of commercial significance.

JOINT PREPARATORY COMMITTEE ON PHILIPPINE AFFAIRS, REPORT, MAY 26, 1938, VOLUME 1

THE UNITED STATES MARKET FOR PHILIPPINE PRODUCTS

Philippine exports to the United States in 1937, as shown in table 2, were valued at $122,755,000. This constituted over 80 percent of the value of the aggregate Philippine exports to all countries. In the preceding year Philippine exports to the United States amounted to $107,534,000, or 79 percent of the total to all countries.

Sugar has been for a number of years by far the most important export to the United States. Of the total value of all exports from the Philippines to the United States, sugar accounted for $57,611,000, or 47 percent, in 1937, and for $61,927,000, or 58 percent, in 1936. Practically all Philippine exports of sugar products, with the exception of small quantities of molasses, sirup, and alcohol, go to the United States.

The United States provides both absolutely and relatively a somewhat smaller market for Philippine coconut products than for sugar products. Practically all of the coconut oil and desiccated coconut and about two-thirds of the copra exported from the Philippines generally go to the United States. The proportion of copra sold in the United States in 1937 was exceptionally high, amounting to 90 percent of the total. About one-half of the total exports of copra cake and meal have been sold in the United States in the last few years, principally because of the shortage of feedstuffs in that market; in earlier years, the bulk of the cake and meal was exported to Europe. Philippine exports of vegetable butter (margarine) and vegetable lard to the United States have also increased in recent years, although the shipments of the latter were less in 1937 than in 1936; and the proportions which these shipments constituted of the total exports of the two products to all countries were less in 1937 than in 1936, being 22 percent for vegetable butter and 27 percent for vegetable lard in the former year.

The Philippines has exported to the United States in recent years a relatively constant share of its total exports of abaca and a declining share of its total exports of cordage. In 1937 it shipped to that market 32 percent of the value of its abaca exports and 35 percent of the value of its cordage exports, as compared with 59 percent for the latter in 1934. Practically all exports of Philippine embroideries have always gone to the United States. Exports of tobacco products to the United States in recent years have varied from about one-half to two-thirds of the total value of such exports, the share being 66 percent in 1937.

Other Philippine exports for which the United States provides a relatively large market are canned pineapples, timber and lumber, chrome ore, hats, cutch, pearl buttons, and gum and resins. All, or practically all, of the exports of canned pineapples, cutch, and pearl buttons regularly go to the United States. In 1937, 32 percent of the total value of lumber and timber exported, 82 percent of the hats, and 61 percent of the gums and resins, went to the United States. Iron ore, maguey, hides and skins, buntal fiber, and molasses and sirup are the only Philippine exports of any considerable importance for which the entire, or practically the entire, foreign market is outside the United States.

The above-mentioned products accounted, in 1937, for 96 percent of the total value of Philippine exports to all countries and for 99 percent of the total value of the exports to the United States, the remaining exports consisting of a wide variety of miscellaneous products. The corresponding figures for 1936 are, respectively, 95 percent and 96 percent.

Table 2 shows the principal exports from the Philippines to all countries and to the United States in 1936 and 1937.

The United States purchased from the Philippines in 1936 goods valued at $101,715,365, or 4.2 percent of the United States total imports. In that year the Philippines ranked seventh in importance among United States suppliers. Of the United States total imports of the following specified commodities from all countries in 1936, the Philippines supplied, on the basis of value, 99 percent of the major coconut products, 80 percent of the tobacco manufactures, 38 percent of the sugar, 87 percent of the sawed cabinet woods (partly dressed and other than mahogany), and 98 percent of the embroidered cotton wearing apparel. (Preliminary 1936 general imports, foreign commerce and navigation of the United States. This figure does not correspond with that given above for Philippine exports to the United States, inasmuch as this latter was obtained from Philippine statistics. United States import data for 1937 are not yet available.)

THE PHILIPPINE MARKET FOR UNITED STATES PRODUCTS

Imports into the Philippines from the United States in 1937, as shown in table 3, amounted to $63,302,000, or 58 percent of the total value of imports from all countries. The principal import from the United States consisted of iron and steel products, valued at $14,071,000, or 22 percent of the total value of all imports from the United States. These imports also represented about 73 percent of Philippine imports of such products from all countries. The second largest import from the United States consisted of cotton goods, amounting to $7,658,000 and constituting 44 percent of the value of all imports of cotton goods. Mineral oil ranked third in importance, and the United States supplied 75 percent of the total imported from all countries; automobiles and parts (exclusive of rubber tires) ranked fourth, with the United States supplying 99 percent of the total imported from all countries. Tobacco products were next, the imports from the United States accounting for 99 percent of the total from all countries. Electrical machinery, rubber and manufactures thereof, unprinted paper, chemicals and drugs, and wheat flour ranked next in importance among imports from the United States. Other important Philippine imports of which the United States was a major supplier in 1937 were leather and manufactures thereof, silk and rayon manufactures thereof, dairy products, fruits and nuts, vegetables, fertilizers, meat products, fish products, and glass and glassware. Vegetable fibers (other than cotton) and manufactures thereof constituted the only important import of which the United States was not a major supplier.

The above-mentioned articles accounted in 1937 for 79 percent of the total value of Philippine imports from all countries and for 82 percent of the total value of the imports from the United States. The corresponding figures for 1936 are, respectively, 79 and 83 percent. Table 3 shows the principal imports into the Philippines from all countries and from the United States in 1936 and 1937.

The Philippines ranked ninth among the principal export markets for United States products in 1936, exports to the Philippines in that year having been valued at $60,243,754 or 2.5 percent of the total exported to all countries. On the basis of the United States Foreign Commerce and Navigation's group classifications of commodities, the Philippines ranked as follows among the world customers of the United States in 1936. (Foreign Commerce and Navigation of the United States, 1936.) It occupied fifth place as a buyer of animal and vegetable products, except fibers and wood (groups 00, 0, 1, and 2 combined), of which it purchased $14,869,799 for the year. These goods are composed largely of manufactured or processed farm products. As buyer of all types of textiles (group 3), of which it purchased $7,950,872, it ranked tenth. It was the fourteenth most important buyer of wood and paper products (group 4), of which it purchased $1,754,685; the fourteenth, of nonmetallic minerals (group 5), $6,155,527; the ninth, of metals and manufactures, except machinery and vehicles (group 6), $7,761,678; the fourteenth, of machinery and vehicles group 7), $11,928,165; the fourth, of chemicals and related products (group 8), $5,741,371; and the fourth, of miscellaneous products (group 9), $4,081,657.

In 1936 the Philippines ranked first or second among the export markets of the United States for the following articles or groups of articles, exports of which to the Philippines were valued at $100,000 or more for the year (the Philippines also ranked first or second among the export markets of the United States for a large number of other products, the value of which ranged between $50,000 and $100,000 in 1936; these products were: Boots and shoes, cut outer soles; pickles; ketchup and other tomato sauces; chocolate; roasted coffee; confectionery other than chocolate; paper boxes and cartons; sanitary closet bowls; plaster-of-paris manufactures; iron or steel sashes and frames; cast-iron screwed pipe-fittings; cast-iron soil pipe and fittings; woven-wire fencing; woven wire-screen cloth; steel castings; enamelware of iron or steel; sheet-metal filing cases, shovels, spades, scoops, and drainage tools; padlocks; electric sockets, outlets, etc.; centrifugal pumps; woodworking sawmill machinery; marine engines, Diesel and semi-Diesel; cold and cough preparations; calcium carbide; pianos; pencils, other than mechanical; shot shells; and toothbrushes):

This is a brief description of the Philippine Islands and some of their resources. No one can visualize the extent and possibilities of trade which may develop with the islands. I am fully convinced that it will in time run well toward $500,000,000. The most important value of the Philippine Islands is their strategic, or geographic, position, for being situated as they are, within a few hundred miles of the China coast, they are well adapted as a distributing center for our merchandise. China, India, Australia, Borneo, Siam, Sumatra, Java, and Japan can easily be reached from the islands, not only by steamboat but by air transportation as well. The Philippines will keep an open door in China to the United States, and our trade should be developed in the Orient because it is a natural market for us. Its proximity to the United States, and distance from Europe, should not be overlooked by Congress in future disposition of the islands.

South America will never be a real market for us, for the people in South America are not adapted or receptive to trading with us. The South American trade will favor Italy, Spain, France, Germany, and England, and not the United States. Many reasons exist for this, which, of course, I am not going to discuss at this time. It is not even good business to import from South America, when we are producing the same merchandise in our own colonies. The orientals are receptive and friendly to us, and there are 400,000,000 of them in China alone. The total population in the Orient is nearly a billion people, and each and every one of those countries is a potential customer of the United States.

We will lose this trade when the Philippines are free, and it is the only market open to us in which we may establish a favorable trade balance. We will never have to send one of our boys or one of our naval ships to protect the Philippine Islands if they are properly fortified. The army in the Philippines should be made up entirely of natives. It is the only manner in which any colony can be ruled and regulated on an economical basis. The native Filipinos are accustomed to one standard of living, entirely different from ours, and they should not be deprived of that. It is not only a better standard than ours but it costs less to support it. That is an item which must be taken into consideration in colonial administration.

Japan would not care, as I have said, about building a breakwater in the harbor of Apra, Guam. The expression in the paper in respect to that was for no other purpose than to fool Congress. What Japan fears is the arming and fortification of the Philippine Islands, because such procedure on our part is a checkmate for Japan. It will not only keep the door open to China but it is a marvelous protection for the west coast of the United States, not only for the protection of commerce and trade but for military protection of the coast itself. Japan nor any other nation is going to send a fleet against the Philippine Islands when they are fortified, because the losses sustained would be so great that any power that attempted such a foolhardy venture would leave itself open to destruction. No nation in the world can afford to lose a fleet in order to take the Philippine Islands or Guam. Japan knows that, and it should dawn upon Congress.

The Philippine Islands fortified means the same to us as our departure from the islands would mean to Japan. It is not a gesture of throwing salt in the Pacific, as Japan said in one of her papers. It is instead a very useful venture, because the Philippines fortified will provide nearly absolute protection of the west coast of the United States, and permit our fleet to remain on the Atlantic side, where it is needed at the present time. The Jap fleet cannot pass up a fortified Philippines or Guam, and if attempt is made to attack either of the islands, it will be a very definite notice to the United States to get ready, and prepare itself if the same attempt is made on our own coast. Fortified Pacific islands will dissuade Japan or any other power from establishing bases in countries adjacent to the United States, because they leave themselves open to attack in the rear, and at home.

So let Congress not be deceived by Japan or anyone else, for the danger is not in fortifying the islands. The danger is instead in their defenseless position without fortifications. We need a market for our products. That is what our

farmers want, and it is also what our manufacturers want. Let us keep such markets open by using our heads and foresight, instead of spending the rest of our lives in contemplation of our mistakes. Our Nation is entitled to that much consideration and forethought, by the Members of the Seventy-sixth Congress, and our children will appreciate our statesmanship in providing them with greater markets for national security.

The Gilbertsville Dam

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 24, 1939

Mr. MANSFIELD. Mr. Speaker, the Gilbertsville Dam was recently stricken from the independent offices appropriation bill in the House, but the Senate, following its usual course, has again reinstated it. When the matter came back in conference last year under like circumstances it was submitted without debate and the Senate action was sustained by a small majority in the House.

This action of the House was largely due to a brief sent here by T. V. A. attorneys just a day or two before the vote was taken. No one had an opportunity to reply to this brief, or even investigate it. It purported upon its face to consist largely of extracts from the findings of a three-judge Federal court at Chattanooga, sitting on the T. V. A. cases, and extracts from the testimony of engineers and other witnesses who testified in that proceeding. The brief admitted that this testimony was not then in print. Consequently no Member of the House had an opportunity of seeing the testimony of the witnesses as a whole, or of cross-examining them. Arguments and statements from this brief are still being inserted in the RECORD by the advocates of the Gilbertsville Dam.

I have had no opportunity of checking the brief as a whole, the witnesses named not being in or near Washington, and their testimony not being available. But, from the few references that are made to public documents that are available here, I find that this brief is almost entirely inaccurate and wholly misleading.

On page 3 the brief refers to the fact that no difficulties have occurred in navigating Lake Pepin, or of the Wilson Dam pool, and then says:

> In this connection it might be noted that Wilson Dam is much higher than Gilbertsville.

The annual report of the T. V. A. made available a few days ago shows on page 21, that the height of Gilbertsville Dam is to be 150 feet. The height of the Wilson Dam is only 137 feet. It is an undisputed fact that the Gilbertsville Lake will be 184 miles long, and deep enough at the upper end to afford a 9-foot passage over the miter sill of the Pickwick Landing lock. The Wilson Lake is only 15½ miles long and that is in the mountain region extending over Muscle Shoals to Wheeler Dam.

If the T. V. A. attorney had been familiar with the history of navigation on Lake Pepin he certainly would have made no reference to it whatever. The records show that Congress and the Army engineers have been working on harbors of refuge there since 1882. Shipping by barge or in small boats has sustained many losses, notwithstanding the fact that the Government is maintaining three harbors of refuge there on a lake which is less than one-half the size of the proposed Gilbertsville lake. The destruction of the steamboat *Sea Wing* on Lake Pepin in 1890, with its attendant loss of about 100 human lives, was pronounced by the contemporary press to have been the greatest marine disaster occurring in this country up to that time. These newspapers are now on file in the Congressional Library.

The T. V. A. attorney devotes more than a page of his brief to the upper Ohio and lower Kanawha River improvements where he claims that low removable dams are being replaced with high dams. He claims that the dams which are being abandoned on these rivers are of the type which Army engineers recommended for the low-dam navigation on the lower Tennessee, while he seeks to leave the inference that the high dams taking their place are of the Gilbertsville type.

If the attorney will refer to the last annual report of the Chief of Engineers on pages 1235 and 1310, he will realize how thoroughly he has been misinformed in regard to the Ohio and Kanawha River dams. Three new dams have been installed on the upper Ohio, and one near Gallipolis below the mouth of the Kanawha. None of these are high dams, though they are a few feet higher than the deteriorated dams that were torn out.

When the Committee on Rivers and Harbors was conducting hearings in 1924 on the pollution of these waters, it was shown that acids from the great industrial districts had practically destroyed much of the metal works in all the older dams in the upper Ohio. A few years later it was found necessary to replace a number of them. They were very inadequate from the beginning, being built under the high-pressure political methods which unfortunately prevailed at the time.

Dam No. 1, below Pittsburgh, had a lift of only 3.1 feet. No. 6, at Beaver, had a lift of 5.7 feet. The lifts in dams 2, 3, 4, and 5 ranged around 7 and 8 feet. The wonder is that they succeeded in accommodating the growing traffic as long as they did. They have been replaced by three higher dams—one at Montgomery Island, with a lift of 19.4 feet; one at Emsworth, with lift of 18 feet; the other at Dashields, with lift of 10 feet. All of these are low dams, and the highest one is still a removable dam, a type the T. V. A. attorney seems to abhor. However, he took a leap in the dark and gave his blessing to all these dams.

There is also a new dam at Gallipolis, which has a lift of 26 feet. It is also of a removable type, like the new roller dams being installed on the upper Mississippi. This dam was planned and built by Army engineers but with funds furnished by the P. W. A. It was a part of the Kanawha improvement. All the backwater from this and other new dams on the Ohio is well within the natural river beds, and no wide or hazardous lakes have been created. The old locks and dams on the Kanawha were authorized 64 years ago, and for a 6-foot channel. Their replacement at this time for the dams suitable for the newly adopted 9-foot channel seems to have inspired in the mind of the T. V. A. attorney an argument for Gilbertsville.

As a member of the Committee on Rivers and Harbors, I favored all these new dams. I would not have favored them if they had created large and wide lakes that would have menaced the operation of barge lines, which is certainly the most practical type of navigation that has developed on our inland waters up to the present time.

The T. V. A. attorney, on page 5 of his brief, gives a partial quotation from General Markham's statement in Document No. 306, Seventy-fourth Congress, with reference to the replacement of dams on the upper Ohio. The quotation he gives is as follows:

> The dams on the Ohio are generally of the Chanoine wicket type, with submerged moving parts, and the locks constructed in the early period of the work do not meet modern standards of concrete construction and are subject to progressive deterioration over a long period of years. The general plan for the most effective improvement of the main stem of the river is the execution of betterments to the existing system and the progressive replacement of the old locks and dams with a less number of higher lift dams as the replacement becomes necessary because of a deterioration of the old structures, or warranted because of the superior facilities afforded to navigation.

By stopping this quotation where he did, the T. V. A. attorney doubtless thought he could have General Markham's statement construed as an endorsement of dams "such as Gilbertsville." He very adroitly failed to include the last

line and a half in the paragraph of General Markham's statement, which is as follows:

> The pools of these new dams still would be far below ordinary high water stages.

This last line and a half of General Markham's statement completely kills the contention the attorney was endeavoring to make. In order to cut it out, he even had to stop his quotation near the middle of the line as the printed document itself will show.

From General Markham's statement as a whole it is plain enough to see that in the upper Ohio he wanted the best dams possible to serve the practical needs of commerce and navigation. At the same time he was just as careful to have the Ohio continue to flow in its natural beds, and not erect fantastic dams costing hundreds of millions to submerge and destroy the adjoining valley lands and create in their place large and wide lakes and pools that would be detrimental if not hazardous to barge-line transportation.

The T. V. A. brief seeks to show by the findings of the three-judge court at Chattanooga that theoretically, navigation by high dams is superior to navigation by low dams. The testimony quoted is all theoretical, all in reply to hypothetical questions. Gilbertsville Dam was not in the picture at that time, and consequently not mentioned. As shown by the quotations in this brief, no competent witness has ever said that the proposed Gilbertsville Lake will be safe for the operation of the Ohio River barges during rough weather. It might be suitable for the operation of certain types of boats, but those are not the boats that are making a success in river traffic under present conditions.

One of the reasons assigned by the Chattanooga court in favor of a high-dam over a low-dam system is that with the high dams there would be fewer lockages, and consequently a saving of time. Now let us see how much would be gained by this on the lower Tennessee. With Gilbertsville there would be one lockage. With the proposed low dams there would be four, to cover the same section of the river. Consequently, Gilbertsville would cut out three lockages.

The War Department advises me that a tow small enough to pass through in one section requires only 20 minutes to pass one of the Ohio River dams. The same time would be required on the Tennessee locks, as they are to be of the same standard. Consequently, the low dams might cause a loss of 60 minutes' time on a 184-mile stretch of the river, embracing a 2 days' run. I am not surprised that the three-judge court was shocked at the thought.

But I am reminded by high authority that the high lift at Gilbertsville might frequently require as much time as all four of the low dams combined. It, of course, takes longer time to raise or lower the water in the high locks. Then, the navigator in high lifts always uses extra precautions to avoid accidents or mishaps.

In this connection I will call attention to the fact that the British have been the world's greatest maritime people for many centuries. In constructing the new Welland Canal, they divided the 327-foot fall from Lake Erie to Lake Ontario into seven separate lifts, all within a very short distance. They are navigating the canal very successfully. In our treaty on the St. Lawrence Seaway, we are proposing to pay to them a very large sum of money for the privilege of using these same locks, and have made no demand to have them reduced in number in order to save time, or appease the wrath of the three-judge court at Chattanooga.

Another argument assigned for the Gilbertsville Dam is that it will afford a much larger lake, over which boats can take a more direct course and avoid the meanderings of the natural stream. When confronted with the proposition that such a lake might be hazardous to barge craft, they tell us that it is really a narrow lake except at two or three points where tributaries enter into it. That being the case, boats could not expect to gain much time by supposed direct short cuts over the submerged terrain, and their argument on that point falls of its own weight.

We have spent many millions in recent years to secure uniformity in inland waterway transportation conditions. We are about to bring that program to a successful culmination. We now have several thousand miles of connecting channels on which loaded barges can be towed without a shift of cargo. Why should we disrupt this program by throwing a monkey wrench in the machinery? The railroads have long since discovered that connecting lines cannot be successfully operated if one has a standard gage and the other a narrow-gage track.

Perhaps the most damaging feature of the Gilbertsville proposal is the announced intention of the T. V. A. to seek to have Congress extend the dams on across the Cumberland at its mouth, and continuing across the Ohio at Dog Island. All this is shown on pages 68 to 72 of the booklet issued by the T. V. A. in March 1936 entitled "The Unified Development of the Tennessee River System."

On page 71 of this booklet the project is denominated "The Gilbertsville-Dog Island Project." In view of the fact that the T. V. A. would have to secure further authority from Congress before constructing the Dog Island Dam, they decided that the logical course would be to construct the Gilbertsville Dam first, as they had undisputed authority for that part of the program under existing law.

Dr. A. E. Morgan, Chairman of the T. V. A., in an article in the Engineering News-Record of August 12, 1936, reviews the investigations made by the T. V. A. for a dam across the Ohio in the vicinity of Paducah. He then says:

> But investigation indicated that the most feasible over-all project would include two dams, one across the Tennessee at Gilbertsville and another across the Ohio at the Dog Island site, above the mouth of the Tennessee but below the mouth of the Cumberland.

Commenting upon this subject in the Engineering News-Record of April 7, 1938, Mr. Bock, Assistant Chief Engineer of the T. V. A., on page 497, says:

> The flood plain along the lower Tennessee River is comparatively wide, and subsurface conditions are complicated by ancient river channels in the underlying rock, so that feasible dam sites are not readily available. All of the sites investigated present difficulties of design and construction. Conditions at Gilbertsville proved to be somewhat more favorable than those encountered at the other sites. Further, the location of the Gilbertsville site with respect to the Ohio and Cumberland Rivers and possible future projects that may be developed on those rivers has been the largest single factor in the location of the dam.

Here Mr. Bock tells us that the "largest single factor" in determining the location of the Gilbertsville Dam with its location with respect to the Ohio and Cumberland Rivers, and possible future projects that may be developed on these rivers. The T. V. A. booklet on page 69 gives a map of the proposed lake that would be formed in all the rivers involved. On page 68 it says:

> It would create long stretches of clear channel so that no lockage would be necessary for about 175 miles upstream on the Ohio River, for 184 on the Tennessee River, for 150 miles on the Cumberland River, and for about 50 miles on the Wabash River, a total distance of slightly over 550 miles.

The cost of this entire program would doubtless exceed a half billion dollars, as the Dog Island Dam alone, with its attendant damages, is estimated at $392,000,000. The farm lands to be submerged on the entire project will exceed 1,000,000 acres. But, it would have the effect of eliminating some seven or eight lockages on 550 miles of channel, and upon that ground the T. V. A. attorney would doubtless seek to have it approved by the three-judge court.

The scale in connection with the map shows that the large lake that would be formed on the Ohio would be approximately 20 miles wide for a great distance. The Army engineers have already stated that this reservoir would require extensive changes in the transportation system of the area. It would cut the Ohio River transportation into three sections—one for barges on the river below this lake, one for the same type above the lake, then one for a new type of boat of some kind to be hereafter worked out, to navigate this central section. It would be somewhat like a standard-gage railroad at both ends, with a 175-mile narrow-gage

section in the middle. The whole scheme is represented as being a navigation project. Doubtless a sage might exclaim, "Oh navigation, the sins that are being committed in thy name."

Knowing the War Department, as well as the T. V. A., has made thorough studies of the proposed dam at Dog Island, as well as at other points on the Ohio, I applied for information. I was advised that the project provides for a high dam across the Ohio and Cumberland Rivers at Dog Island, near Smithland, Ky., with an auxiliary dam across the Cache River divide, near New Columbia, Ill. The estimated cost was as follows:

Construction of dam and locks	$82,000,000
Power plant (300,000 kilowatt installation)	25,000,000
Flowage	285,000,000
Total estimated cost	392,000,000

The result of the surveys shows that at normal pool level—elevation 358—the reservoir would overflow about 468,000 acres of land, and at maximum pool level—elevation 375—a total of about 921,000 acres, situated in Illinois, Indiana, Kentucky, and Tennessee. About 650,000 acres of this land is in cultivation, and quite valuable. The cost of the farm lands is estimated at $115,600,000.

Sixty-four towns would be affected, 33 of which, with total population of 27,000, would be abandoned or relocated. Thirteen additional towns would be partially submerged, and 18 others would require protective measures and sewer adjustments. The total population of the area to be submerged is about 200,000. The cost of urban property affected is estimated at $24,700,000.

The proposition involves the abandonment of 275 miles of State and Federal highways; relocation of 159 miles of other roads, and the raising and protection of 27 additional miles of highway. It also involves the abandonment of 194 miles of railroad, relocation of 81 miles, and the raising of 49 additional miles. The cost of highway and railway abandonments, including bridges, is estimated at $14,482,000 and $22,085,000, respectively.

Natural resources affected would include numerous coal mines in the Harrisburg, Ill., and Tradewater, Ky., fields, estimated at 4,800,000,000 tons. Fluorspar deposits totaled about 12,000,000 tons.

A map showing the over-all proposal is in the Engineering News-Record in connection with Mr. Bock's article. It shows the location of the Gilbertsville Dam, together with the Dog Island Dam extending across from the north side of the Ohio River to Dog Island, then angling down across the south channel, and continuing across the Cumberland. A canal is shown, connecting the Cumberland with the Tennessee above Gilbertsville. This will place the Tennessee, the Cumberland and the Ohio with their tributaries, in one continuous lake extending into four States.

The effect upon navigation on the Ohio and Cumberland is stated on page 77, of the record data, as follows:

> The navigation benefits accruing to the Ohio River would consist mainly in the elimination of the present cost of operating and maintaining locks and dams Nos. 46 to 51, inclusive. (These navigation works are serving present commerce in a satisfactory manner.) Navigation benefits on the Cumberland River could better be achieved, considering the present type of river craft, by modernizing existing navigation facilities.

On page 78 is the further statement:

> The wide expanse of the reservoir would require extensive changes in the present transportation system of the area.

So far as navigation on the Ohio is concerned, I will say it is now functioning in a manner that is nearly ideal. If any changes or improvements should become necessary, the Army engineers can propose them to Congress for its attention. It would certainly be a misfortune to have a divided authority, placing different types of structures in the river, especially types that will not be consistent with each other. The Dog Island Dam would certainly be antagonistic to safe navigation.

As soon as Gilbertsville dam is an assured fact, Congress will be called upon to extend the authority of the T. V. A. to the Cumberland, and nearby section of the Ohio, in order to complete the designated "Gilbertsville-Dog Island project," as described in the T. V. A. booklet entitled, "The Unified Development of the Tennessee River System." That last word, "system" has a significant meaning.

Gilbertsville is now heralded as a great flood-protection project. The Tennessee has already had about $200,000,000 expended upon it, very largely for that purpose, according to those in charge. We have many other rivers where the flood menace is much greater than on the Tennessee, that have not been so fortunately taken care of. Upon those rivers the Budget is cutting the appropriations to a minimum, even after they have been authorized by Congress on the recommendation of the Army engineers and the able Committee on Flood Control.

I was a member of the Committee on Flood Control in the Sixty-fifth and Sixty-sixth Congresses. We never heard the Tennessee mentioned as making any material contribution to the flood damage on the Mississippi. High waters, if any, from the Tennessee usually reached the Gulf far in advance of the damaging floods from the upper Ohio.

When the Tennessee was under consideration by Colonel Watkins, Gen. T. H. Jackson, president of the Mississippi River Commission, wrote favoring the low dams recommended in Document 328. He considered that any works on the Tennessee would have but little effect on the Mississippi floods. He said:

> No reduction in the cost of flood control or navigation of the Mississippi would result from the works proposed, except possibly some reduction in the cost of dredging and channel maintenance. Benefits to the lower Mississippi may be considered as practically immaterial. The estimated damage from floods in the Tennessee Basin is comparatively small. (Doc. 328, pp. 101–102.)

Payments to State and Territorial Homes for the Care of Veterans

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

Mr. McCORMACK. Mr. Speaker, recently I introduced a bill, H. R. 4042, now pending before the Military Affairs Committee, to increase the annual payments to State and Territorial homes maintained for the care of veterans to the rate of $365.

My colleague, the gentleman from Mississippi, Hon. JOHN E. RANKIN, introduced a measure of similar character, identified as H. R. 2287, under date of January 11, 1939.

My purpose in introducing a bill of this nature was not only to endorse the principle of the Rankin bill but also to have before the proper committee a substitute proposal which I believe should be given consideration. The difference between the Rankin bill and the McCormack bill is merely a difference in the rate which the Federal Government should allow these State homes. Mr. RANKIN's bill favors the payment of approximately 67 cents per diem for each veteran maintained, whereas my bill would direct the payment of $1 per diem.

It will be understood that the purpose of both bills refers to domiciliation only of those veterans who are unemployable by reason of chronic or incurable disease or disability. If a veteran admitted to a State soldiers' home does not have such disablement, Federal aid, under the provision of these bills will not be authorized. That is to say, the Veterans' Administration will not reimburse the State concerned for the care and maintenance of a veteran who does not come within the terms described.

For the information of the House, I am listing herewith those States which maintain homes for the care of disabled veterans. It will be noted that the State of New York is

not included in this list. In explanation it should be recalled that the State soldiers' home at Bath, N. Y., was deeded to the Federal Government in 1929 and is now operated as one of the national homes. Incidentally, this former State soldiers' home, within the last few years, has been the beneficiary of a new 400-bed hospital. I might also point out that the State of New York is well provided for with the splendid Veterans' Administration facilities at Batavia, Canandaigua, Bath, Sunmount, Beacon, Bronx, and Northport. In another bill which I introduced recently I asked for authorization for a hospital at Boston, and on a future occasion I will discuss the merits of that bill.

STATES MAINTAINING SOLDIERS' HOMES

California: Veterans' Home of California, Napa County.
Colorado (women admitted): Colorado State Soldiers' and Sailors' Home, Home Lake.
Connecticut: Fitch's Home for Soldiers, Noroton Heights.
Idaho: Idaho Soldiers' Home, Boise.
Illinois (women admitted): Illinois Soldiers' and Sailors' Home, Quincy.
Indiana (women admitted): Indiana State Soldiers' Home, Lafayette.
Iowa (women admitted): Iowa Soldiers' Home, Marshalltown.
Kansas (women admitted): Kansas Soldiers' Home, Fort Dodge.
Massachusetts: Massachusetts Soldiers' Home, Chelsea.
Michigan (women admitted): Michigan's Soldiers' Home, Grand Rapids.
Minnesota (women admitted): Minnesota Soldiers' Home, Minneapolis.
Missouri (women admitted): State Federal Soldiers' Home of Missouri, St. James.
Montana (women admitted): Montana Soldiers' Home, Columbia Falls.
Nebraska (women admitted): Soldiers' and Sailors' Home, Grand Island.
New Hampshire: New Hampshire Soldiers' Home, Tilton.
New Jersey (women admitted): New Jersey Home for Disabled Soldiers, Menlo Park; New Jersey Memorial Home for Disabled Soldiers, Sailors, Marines, and their wives and widows, Vineland.
North Dakota (women admitted): North Dakota Soldiers' Home, Lisbon.
Ohio: Ohio Soldiers' and Sailors' Home, Erie County.
Pennsylvania: Pennsylvania Soldiers' and Sailors' Home, Erie.
Rhode Island: Rhode Island Soldiers' Home, Bristol.
South Dakota (women admitted): South Dakota State Soldiers' Home, Hot Springs.
Vermont: Vermont Soldiers' Home, Bennington.
Washington (women admitted): State Soldiers' Home, Orting; Washington Veterans' Home, Retsil.
Wisconsin (women admitted): Wisconsin Veterans' Home, Waupaca.
Wyoming (women admitted): Wyoming Soldiers' and Sailors' Home, Buffalo.

Recently General Hines, Administrator of Veterans' Affairs, testified before the Committee on Appropriations, and on page 652 of the hearings on the independent offices appropriation bill, 1940, he testified as follows:

The next item "2200—grants to States and other political subdivisions," involves an estimate of $770,760 for 1940.

Under the provisions of the act of August 27, 1888, as amended (U. S. C., title 24, sec. 134), reimbursement is authorized to the various States at the rate of $120 per person annually for the veterans cared for in State soldiers' homes when eligible for admission to Veterans' Administration facilities for domiciliary care. During the fiscal year 1933 an average of 6,018 eligible veterans were cared for in State homes involving a total reimbursement of $772,000. Under the provisions of Public, No. 2, Seventy-third Congress, and veterans' regulations issued pursuant thereto, the eligibility for domiciliary care was greatly restricted with the result that the number of veterans in State homes was reduced to an average of 4,357 during the fiscal year 1934 and to 4,160 during 1935. The liberalizing provisions of Public, No. 141, Seventy-fourth Congress, and Public, No. 312, Seventy-fourth Congress, restored to eligibility a considerable number of these veterans. Since the passage of these acts there has been a steady upward trend in the number of Veterans' Administration beneficiaries being cared for in State homes.

During the fiscal years 1936, 1937, and 1938, the number of veterans cared for in the State soldiers' homes increased to an average of 4,733, 4,932, and 5,694, respectively. It is conservatively estimated that an average of 6,218 and 6,423 will obtain in 1939 and 1940, involving estimated obligations at the statutory rate of reimbursement in the amount of $746,160 for 1939, and $770,760 for 1940. The latter amount represents an increase of $24,600 over the expected obligations for 1939.

In a way, Mr. Speaker, this measure may be considered as closing an epoch of local and sectional feeling, which has been manifested from time to time since the original measure was passed in 1888. It was realized years ago that $120 was an insufficient amount to adequately assist the States in the maintenance of State homes. Effort after effort was made to increase such amount. These efforts were unavailing because of the feeling then existing in the minds of some Members that if Federal funds were to be provided for State institutions that the homes provided for Confederate veterans likewise should be given similar aid. The results always were the same—no legislation. The situation has now changed. The survivors of the Spanish-American War and of the World War constitute the bulk of the veteran population in these homes. I can see no reason, in the cases of those homes which were originally built for Confederate veterans and are utilized in part for the maintenance of Spanish and World War veterans, why this bill should not be beneficial in the same degree as it is for the homes in the States heretofore mentioned.

It is more than a gesture of good will on the part of the gentleman from Mississippi [Mr. RANKIN] that I pay deference on this occasion. His act in introducing H. R. 2287 effectively closes a matter of unfinished business which has plagued the Congress for many years. The ranks of the valiant Blue and Gray are very few but the ranks of the Spanish-American War veteran, and particularly the World War veteran, are numerous.

General Hines stated before the House Appropriations Committee, as shown in his testimony, previously quoted, that during the fiscal year 1933 an average of 6,018 eligible veterans were cared for in these State institutions, involving a total reimbursement of $722,000.

At this point I wish to show the cost of maintaining a veteran in domiciliary barracks by the Veterans' Administration. The figures available to me are for the month of July 1938. During that month of each year, I am informed, the veteran load in these facilities reached its lowest ebb; likewise it is the month of the year when local produce is most readily available to these various facilities, thereby curtailing maintenance costs. Hence the month selected is adequate for the purposes of comparison.

Veterans' Administration Facilities, domiciliary section, month of July 1938

	Number of beds		Analysis of per diem				
	Capacity	Used	Salaries	Material and supplies	Contract service	Less credits	Total
Togus, Maine	1,157	800	$0.51	$0.44	$0.12	$0.03	$1.04
Bath, N. Y	1,202	899	.47	.49	.05	.03	.98
Kecoughtan, Va	1,564	1,334	.43	.37	.11	.02	.89
Mountain Home, Tenn	1,590	1,634	.39	.37	.09	.03	.82
Dayton, Ohio	2,339	1,900	.51	.44	.03	.04	.94
Wadsworth, Kans	1,386	1,261	.55	.39	.10	.03	1.01
Hot Springs, S. Dak	484	372	.80	.47	.08	.03	1.32
Los Angeles, Calif	3,943	3,132	.38	.40	.07	.02	.83
Biloxi, Miss	793	652	.48	.38	.09	.03	.92
Bay Pines, Fla	440	346	.65	.43	.11		1.19
Wood, Wis	1,691	1,595	.46	.38	.08	.04	.88
Boise, Idaho	38	97	.73	.60	.39		1.72
Total	16,627	14,022	.47	.40	.08	.03	.92

It will be noted that the Veterans' Administration, during the month under discussion, had but 2,600 beds vacant scattered throughout the country. Accordingly, it cannot be said that there is room in our Federal homes for the maintenance of those veterans maintained in State homes. On the contrary, it clearly shows that the States are rendering a very definite service in sharing responsibility with the Federal Government, otherwise much additional construction would be required.

Let us see just how much this means to the Federal Government. In General Hines' testimony before the House Appropriations Committee, he stated that the various States were entitled to reimbursement of ony $772,000 for the care of 6,000 veterans. Using the cost analysis furnished by the Veterans' Administration, it will be seen that for maintenance alone, exclusive of any hospital care which these

veterans may require, were they hospitalized in Federal homes, we would have had to appropriate in excess of $2,000,000 as compared with $722,000.

I am informed of the costs of maintenance of the home and hospital maintained by the Commonwealth of Massachusetts. I am appending herewith a table furnished me by Hon. Lawrence F. Quigley, the commandant of that home, showing the costs over the last 50 years, broken down in a manner which will evidence very well the increasing costs to our State.

Massachusetts Soldiers' Home—Analysis of operating expense per diem[1]

Year	Total cared for	Daily average present	Personal services (wages)		Food		Medical and general care		Miscellaneous		Total	
			Amount	Per diem	Amount	Per diem	Amount	Per diem	Amount	Per diem	Amount	Per diem
1888	296	128	$6,719	$0.143	$8,505	$0.182	$1,111	$0.024	$7,428	$0.160	$23,763	$0.509
1898	700	346	17,790	.141	19,111	.151	1,714	.013	22,373	.173	60,988	.478
1908	734	437	44,536	.279	37,582	.236	5,015	.032	32,221	.201	119,354	.748
1918	755	425	60,412	.389	58,195	.375	2,791	.018	53,583	.346	174,981	1.128
1928	947	355	101,013	.780	77,979	.602	9,739	.075	60,383	.464	249,114	1.921
1938	2,816	496	184,889	1.021	92,719	.512	28,062	.155	62,355	.344	368,025	2.032

[1] These costs include hospital and domiciliary activities.

The foregoing table is particularly illuminating and carries conviction to my argument that the rate allowed State homes should be in approximate relationship to the maintenance cost. It will be noted that in 1888 when the original legislation was passed on this subject that the per diem cost was $0.509. This, compared with the $0.33⅓ then granted, would evidence the disposition of Congress at that time to share equitably and liberally in the expenses of operation. No legislation, of course, having been passed since 1888, we find that the per diem cost in 1938 amounted to $2.03, including, of course, expenditures of hospitalization in the State home.

It might be well to consider a hypothetical case. Let us assume that Pvt. John Jones is today at the Massachusetts Soldiers' Home. At that place he is being maintained at an expense of slightly over $2. Of this amount 85 percent is being borne by the Commonwealth of Massachusetts. Now, for appropriate reasons, he applies for and is accepted as a member in the National Home at Togus, Maine. Upon arrival there, the cost to the Federal Government jumps from $0.33⅓ to $1.04 per diem, an increase to the Federal Government of 300 percent. Now, let us assume that after 2 weeks' domiciliation at Togus, this veteran becomes ill and is in need of hospital care—a very possible contingency. His expense to the Federal Government now jumps from $1.04 per diem to $4.31 per diem, using the July figures which were previously quoted. It will be seen then that while this veteran has been maintained at Chelsea, the Federal Government has been indeed a beneficiary of the Commonwealth of Massachusetts. The ratio of comparative expense to our 27 State homes is well evidenced by this illustration.

At this point I would like to include an abstract of the analysis of operating expense per diem for those hospitals which are attached to the soldiers' homes mentioned in a preceding table:

Analysis of operating expense per diem, Veterans' Administration facilities, hospital section, month of July 1938

	Number of beds		Relief days	Salaries	Material and supplies	Repairs	Contract service	Operating credit	Total
	Capacity	Used							
Togus, Maine	294	191	5,926	$4.03	$1.09	$0.01	$0.09	$0.91	$4.31
Bath, N. Y.	403	332	10,283	2.90	1.03	------	------	.48	3.45
Kecoughtan, Va.	516	487	15,083	2.71	.75	.01	.08	.45	3.10
Mountain Home, Tenn.	556	473	14,648	2.57	.90	------	(.10)	.50	2.87
Dayton, Ohio	1,050	914	28,344	2.46	.71	------	(.03)	.46	2.86
Wadsworth, Kans.	734	560	17,365	2.52	.85	------	.10	.56	2.91
Hot Springs, S. Dak.	186	104	3,226	4.84	1.04	------	.20	1.28	4.80
Los Angeles, Calif.	1,720	1,644	50,960	2.45	.67	------	.12	.54	2.70
Biloxi, Miss.	207	193	5,983	2.86	.80	.01	.26	.52	3.41
Bay Pines, Fla.	195	195	6,053	3.35	.93	.01	.22	.57	3.94
Wood, Wis.	1,178	952	29,517	2.64	.71	------	(.03)	.46	2.86
Boise, Idaho	227	144	4,466	4.67	.98	.06	.08	.76	5.03

In seeking this new legislation Congress must have in mind that we are legislating only for domiciliation of veterans. The original construction of the word "domiciliation" largely means that the veteran is furnished food and shelter and occasional out-patient care in an infirmary. That is hardly an up-to-date appreciation of that which actually occurs in these various State homes. These home hospitals are State institutions and as such come under the jurisdiction of State hospital regulations, and treatment must conform to State government standards. For example, the State hospital at Chelsea has a grade A rating by the American Medical Association. It is only natural then to understand that as our veterans are hospitalized by the State that there is a corresponding increase in cost in these State homes, just as it occurs in a Federal home. The ratio of increased expense, however, is not apparently as great in the State facilities, which is to their credit.

As an illustration in my own State, I find that the statistics of the Massachusetts Soldiers' Home at Chelsea show that during the last calendar year there were 656 operations, of which 553 were major operations; further, that there were 2,700 discharges during that year, evidencing very possibly the fact that these homes should be, in fact, more adequately described as general medical hospitals with convalescent barracks attached, rather than our old conception—homes with attached infirmary.

All of these considerations, I think, tend to prove that the States involved are entitled to additional consideration, assistance, or relief from the Federal Government. There is no reason why the Federal Government should not more equitably demonstrate its responsibility. Of course, our present appropriations are based upon legislation passed 50 years ago. As has been pointed out, the amount allowed them, based upon the cost experience of the homes at that time, was not only adequate but was liberal. Today we know that such is not the case. It is overwhelmingly demonstrated, I believe, that these State homes have assumed a great burden and are successfully and most adequately accomplishing a purpose which the Constitution definitely placed as a responsibility of the Federal Government.

I do not want any words of mine to be construed that I believe that the Veterans' Administration has been at fault in this matter. Neither do I wish to indicate that the Veterans' Administration has been uneconomical in operating its facilities. The contrary we all know to be true, but in using its cost experience as a yardstick, I merely accentuate the disparity existing between the appropriations made by Congress for purely Federal facilities as compared with the appropriations granted to the State-operated facilities.

I have no doubt but that General Hines will appreciate the justice of the measure which I have introduced. I am also sure that he appreciates and values the excellent character of service rendered by the various State homes. I can speak of the Chelsea State home of the Commonwealth of Massachusetts. There is no institution anywhere that enjoys a better reputation. The veterans who have had to use the facilities of this home speak eloquently of the care and treatment

rendered. It is fair to assume that other State homes enjoy a similar reputation.

It is true that if the bill that I have introduced is enacted into law that it will increase the item now in the Budget, and the amount of appropriations, from $772,000 to approximately $2,300,000. In these days when we are rendering manifold assistance to the States in matters which are not under normal conditions direct responsibilities of the Central Government, we should not and must not overlook the fact that the care of the veteran is our primary responsibility, in which the State acts only in a cooperative manner.

It is 50 years since the existing law was passed. Since that time expenses of all kinds in the maintenance and operation of State homes, as well as the care and treatment of veterans, have increased, but the contribution of the Federal Government has not increased. It is time that this long-delayed matter should be considered and acted upon favorably. The bill which I have introduced should be enacted into law. It simply brings down to the present day the considerations with reference to Federal contribution to the expense of State homes that was contemplated and given by the Congress in the passage of the act of 1888. The passage of the pending bill will simply give to the several States the equitable considerations that should have been given to them years ago.

The T. V. A. and Flood Control

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1939

Mr. SPARKMAN. Mr. Speaker, the control of flood waters in the Tennessee Valley is absolutely vital to control of floods in the lower Ohio and Mississippi Rivers. Gilbertsville Dam is the most important link in the whole T. V. A. system and Army engineers rely upon its construction in their revised plans for control of the Mississippi.

To understand the vital part Gilbertsville Dam will play in bringing security to the vast Mississippi Valley it is necessary to review the efforts which have heretofore been made to control its floods.

The menace of floods in the Mississippi Valley has been constant throughout recorded history. Equally constant have been the efforts of agencies, both public and private, throughout the years to curb this ever-present threat to the economic well-being of what is conceded to be the richest river valley in the world. Before the War between the States levees were raised along the banks. Later the Corps of Engineers of the United States Army took up the task and raised the levees higher. Miles and miles of levees have risen foot by foot, and as the levee system developed, the Army engineers gained fuller understanding of their task. Their techniques improved accordingly.

Yet the floods came down. The disasters of 1897, 1912, 1913, and 1922 were added to the record. In 1927 about 20,000 square miles—two-thirds of the lower Mississippi Valley—were submerged, proving conclusively that levees were not the complete answer. The Army engineers planned again. Floodways were established. But these, too, do not complete the pattern of control.

The degree of protection now existing for the so-called protected area of the lower Mississippi Valley is still unsatisfactory. All authorities unite in stating that the margin of safety against complete disaster during the most extreme floods is very slight. During the 1937 flood, the largest on record in the upper part of the valley, thousands of men were kept at work for weeks building temporary barriers and mud boxes from lumber and dirt along hundreds of miles of seriously menaced levee. Thousands of people were evacuated from such danger areas because of the fear that the levee system was going to break and inundate the region. Tremendous amounts were spent for the relief of fugitives and in the maintenance of levees and in their temporary strengthening.

Various Army reports have contained the statement that the present levee system is not high enough to produce a satisfactory degree of safety. The residents of the valley desire and need a greater degree of assurance of safety. It is commonly stated that the levee system should be perhaps 2 feet higher to have a safe freeboard in the biggest floods.

But physical difficulties militate against making the levees higher. In many places the soil can scarcely support the weight of the existing levees. During flood stages the water level in the river is from 15 to 20 or more feet above the surface of the adjacent land, and at many points water seeps through the ground under the levees and appears in such quantities as to cover adjacent fields. The saturated levees sometimes slump and fail without being overtopped. At Cairo, for example, during the last flood there was considerable danger not only from overtopping of the flood walls but from seepage and sand boils within the town caused by the tremendous pressure exerted by the water outside.

These are very practical restrictions. Yet the Federal agencies are not without hope. The lower Mississippi Valley is worth fighting for, and American engineering genius has marshaled its forces and reached a solution that brings into play every known method of control. Maj. Gen. Julian L. Schley, Chief of Engineers, United States Army, outlined that solution in his address before the Nineteenth Annual Convention of the Mississippi Valley Association in St. Louis, November 22, 1937. He said in part:

> I cannot refrain from presenting a possible ultimate plan of development as seen by those of us who are willing to let our vision expand. The soil of the alluvial valley of the lower Mississippi River is fertile almost beyond imagination. It will support a population and capitalization many times greater than at present. People of vision can see in the future a valley with a greatly increased development, with every acre needed for agriculture (including the present backwater swamps) producing its maximum crop. They visualize the river flowing from Cape Girardeau to the Gulf in a fairly direct alinement, but sinuous with easy curves, carrying the maximum amount of water at the lowest possible stages; the banks paved from Cape Girardeau to the Gulf with our new asphalt pavements, so that there is no caving of soil and levees into the river; at Dog Island, Gilbertsville, Commerce, Little Rock, and Denison huge multiple-use reservoirs with surcharge spaces for floodwaters grinding out continuous power. They visualize on the tributaries many smaller reservoirs restraining floodwaters, some producing electricity, and most of them providing recreation facilities for their neighborhoods; every household in this great valley equipped for, and supplied with, cheap electricity to lighten the drudgery of household labor; mills, cotton gins, compresses, etc., operated by electricity and innumerable boats traveling up and down the rivers carrying the enormous production of this great valley from the fertile soil of which its teeming millions will extract a living on a standard far higher than under present conditions. Who can say that this picture is too visionary?

Who, indeed, can say that this picture is too visionary? No plan is visionary when the goal is obviously worth while and the means of fulfillment are at hand.

The Tennessee Valley Authority has from the outset cooperated fully with the Army engineers, for, obviously, control of the Tennessee River means added control of the Mississippi.

The Gilbertsville project as planned by the Tennessee Valley Authority, therefore, has dual significance. It improves not one valley but two. Not only is it the biggest link in the Authority's system of development to bring the Tennessee Valley into economic contact with the rest of inland America—it is one of the most important of those great reservoirs recommended by the Corps of Engineers to create the margin of safety so necessary to the development of the lower Mississippi Valley.

The problem of whether construction should or should not continue on Gilbertsville Dam rests, therefore, not on an appraisal of the T. V. A. program alone but also upon whether the Army engineers' plan for control and development of the Mississippi Valley is to be carried out. Gilbertsville Dam is essential to both.

Just how essential Gilbertsville Dam is to the Mississippi Valley can be shown both in feet of flood reduction and in dollars and cents of property protected.

The Gilbertsville Dam will create one of the longest reservoirs in the world—184 miles of navigable channel. In this

184-mile-long reservoir there will be approximately 4,600,000 acre-feet of flood storage. Engineering studies indicate that the Gilbertsville Reservoir storage will reduce flood heights on the Mississippi by at least 2 feet from Cairo to the mouth of the Arkansas, and by at least 1 foot between the Arkansas and the Red.

In May and June 1936 a member of the T. V. A. engineering staff made a thorough study of the value to the lower or alluvial valley of the Mississippi of the reduction of flood heights by 2 feet. The 2-foot measure of reduction was chosen because this would increase the margin of freeboard on existing levees to 3 feet and would be comparable to other plans for providing the same protection.

The Authority's representative inspected levees and levee districts, floodways, backwater areas, farm lands, highways, railroads, cities, and towns, and discussed flood conditions with property owners, drainage district officials, engineers, local and State officials, representatives of the War Department and the Mississippi River Commission, and various interested citizens. It is probably the most comprehensive survey of this kind ever made.

The benefits to the lower Mississippi Valley from reducing flood heights by 2 feet were reported under nine different headings: (1) Cities, (2) railroads, (3) highways, (4) unprotected marginal areas, (5) backwater areas, (6) floodways, (7) reduced levee maintenance, (8) reduced seepage damages, and (9) protected agricultural area.

For the first three groups the benefit was estimated by an alternative-cost-avoidance method; that is, where protection is considered justifiable, the actual cost of procuring it by the cheapest alternative method was estimated. For the next five groups the probable annual damage from future floods was determined, and this amount was capitalized to obtain the estimated benefit. For the last item, the protected area, the increase in market value of the land that would accrue from such assured protection was estimated.

On completion of the study it was concluded that the value of reduction of flood height by 2 feet in the lower valley of the Mississippi could reasonably be appraised at as much as $381,000,000, broken down as follows:

1. Cities:		
Cairo	$1,000,000	
Memphis	2,000,000	
Helena	200,000	
Greenville	500,000	
30 small towns	3,000,000	
		$6,700,000
2. Railroads		10,550,000
3. Highways		1,500,000
4. Unprotected marginal areas—reduction in frequencies and heights of flood will reduce average annual farm damages capitalized at 6 percent:		
Kentucky and Tennessee	$4,035,000	
Mississippi and Louisiana	2,147,000	
		6,182,000
5. Backwater areas—reduction of average annual damages by reduction of 2 feet in height of flood crests capitalized at 6 percent:		
St. Francis backwater area	6,390,000	
White-Arkansas backwater area	6,475,000	
Yazoo backwater area	10,711,000	
Red River backwater area	8,664,000	
		32,240,000
6. Floodways—reduction of average annual damages capitalized at 6 percent if to individuals and at 4 percent if to Government property:		
Birds Point-New Madrid	2,990,000	
Eudora	4,823,000	
Atchafalaya	3,491,000	
		11,304,000
7. Reduced levee maintenance—reduction in annual levee maintenance capitalized at 4 percent		5,290,000
8. Reduced seepage damages—reduction in annual seepage damage to farm lands capitalized at 6 percent		7,612,000
9. Protected agricultural area—benefits to protected agricultural land due to more assured safety, estimated increased market value at $25 per acre on 12,000,000 acres		300,000,000
Grand total		381,378,000

As this survey was conducted prior to the 1937 flood, the original report was reviewed and brought up to date in the light of this flood. It was found during the review that the 1937 experience so closely confirmed the observations made the year before that it might in fact be said to supply a basis for the report itself.

From the point of view of flood control alone, therefore, the Gilbertsville project more than justifies its cost. From the point of view of economic development, it means that the people in two valleys can begin planning for the future on a safe and stable basis.

Lt. Zebulon Montgomery Pike's Original Maps

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

VALUABLE ORIGINAL MAPS, TOGETHER WITH METEOROLOGICAL OBSERVATIONS, TRAVERSE TABLES, COURSES, AND DISTANCES MADE EACH DAY BY LIEUTENANT PIKE ON HIS TWO EXPEDITIONS TO THE SOURCES OF THE MISSISSIPPI AND TO THE INTERIOR OF THE LOUISIANA PURCHASE, 1805–7, SHOULD BE REPRODUCED IN FACSIMILE AND PUBLISHED AS A GOVERNMENT DOCUMENT

Mr. LEWIS of Colorado. Mr. Speaker, maps drawn from day to day by Lt. Zebulon Montgomery Pike, of the United States Army, on his two celebrated expeditions in 1805–7, taken from Pike when he was arrested in Spanish territory in 1807, lodged by the Spaniards in the archives in Mexico City, their whereabouts forgotten for a century, discovered by an American scholar, returned by the Mexican Government to our Ambassador, lodged in the War Department archives, long misfiled but found again—all these maps and other of Pike's papers should be reproduced in facsimile and published as a Government document.

February 26, 1807, 132 years ago yesterday, Lt. Zebulon Montgomery Pike, after whom Pikes Peak is named, was arrested by a detachment of 100 Spanish troops at his stockade on the Conejos River, a tributary of the Rio Grande del Norte, in what is now Conejos County, Colo. He and six of the men under his command were escorted by the Spanish troops to Santa Fe. The remainder of his force of 15 men, also under Spanish military escort, followed. In Santa Fe the Spanish governor, Col. Don Joachin del Real Alencaster, examined Pike's maps and other papers, which were contained in a small trunk. This trunk and contents were, on March 4, 1807, put in charge of the officer in command of a detachment of Spanish troops, who escorted Pike and his party to Chihuahua to appear before Brig. Gen. Don Nimesio Salcedo, commanding general of the Interior Province of the Kingdom of New Spain.

When Pike arrived at Chihuahua on April 2, 1807, his papers were examined and retained by General Salcedo. In answer to inquiries by the Spanish officials as to what Pike and his armed force were doing in Spanish territory, he explained that he had erroneously believed that the Conejos was a tributary of the Red River instead of a tributary of the Rio Grande del Norte, and that he had, therefore, believed he was in American territory—a part of the then recently acquired Louisiana Purchase.

The only document which Pike saved was the manuscript of his journal. This comprised daily entries made on his first expedition from St. Louis to the headwaters of the Mississippi, and also on his second expedition from St. Louis to the Arkansas River and up that river to its headwaters and thence across the Sangre De Cristo Mountains to his stockade on the Conejos.

This journal which was saved from the Spaniards, as the fortunate result of it having been secreted under the clothing

of one of Pike's men, was the basis of that part of the "account" of his two expeditions up to the time he arrived at Santa Fe. The daily notes of Pike's trip from Santa Fe to Chinuahua and from Chihuahua to Natchitoches—to which place on the Red River, then marking the boundary between Spanish and American territory he arrived, under Spanish military escort, July 1, 1807—were made on scraps of paper which were secreted in the barrels of the guns which his men were permitted to retain.

The papers confiscated by the Spanish authorities, receipt for which was given to Pike by General Salcedo, included numerous orders, letters, and memoranda, and, most important of all, a book in which Pike had recorded various meteorological observations, traverse tables, courses, and distances and maps made from day to day on each of his two expeditions.

These records, of which the maps were the most valuable and the loss of which Pike repeatedly deplored in reports to his superiors and in the account—first published in Philadelphia in 1810—of his two expeditions, were not recovered for over 100 years. Their whereabouts was unknown.

Finally, Dr. Herbert E. Bolton, of the Carnegie Institution of Washington, D. C., while examining the archives in the National Palace in the city of Mexico, located these papers, including Pike's original maps. Dr. Bolton published an article in the American Historical Review for April 1908, referring to his discovery. In the issue of that quarterly for July 1908 he published an inventory and transcripts of these documents.

Dr. Bolton also notified the American Ambassador in Mexico, Henry Lane Wilson. At Mr. Wilson's request the Mexican Foreign Office, on July 15, 1910, delivered Pike's papers, including the book containing the maps, to the American Ambassador, who, in turn, transmitted them to the State Department in Washington. As these were records relating to expeditions undertaken by an officer of the United States Army under orders of his superiors and with the knowledge of President Jefferson, the papers were then, on August 5, 1910, turned over to the Secretary of War for deposit in the archives of the War Department.

Subsequently, doubtless as an incident to the moving about of valuable War Department records during the World War, the Pike papers again became misfiled. Mr. Richard H. Hart, of Denver, an enthusiastic member of the Colorado State Historical Society, made inquiry on April 20, 1925, and again on October 24, 1927, November 23, 1927, and December 7, 1927, concerning these papers, but they could not be found. After long search they were finally located. Mr. Hart was so notified by The Adjutant General in letter dated February 28, 1928.

These papers are now kept in a safe in the Old Records Division of The Adjutant General's Office in Washington. Frequently they have been examined and some have been copied by the ordinary photostatic and photographic methods. The valuable maps have not heretofore been accessible, except in Washington. All reproductions heretofore published have been, as are the originals in their present condition, so dim as to be practically illegible.

Mr. Stephen Harding Hart, of Denver, a son of Mr. Richard H. Hart, made a careful analysis of Pike's journal in the light of these maps in connection with a treatise entitled "Pike's Recovered Maps," which won for him the George Washington Eggleston prize at Yale University in 1929. In this treatise Mr. Hart completely refuted the suspicions of some earlier historical students that Pike was in any way implicated in the treasonable conspiracy of Aaron Burr. Subsequently Mr. Stephen Harding Hart collaborated with Mr. Archer Butler Hulbert, of Colorado College, at Colorado Springs, in "Zebulon Pike's Arkansaw Journal," published in 1932 by the Stewart Commission of Colorado College and the Denver Public Library. As illustrations to this book, seven of Pike's section maps relating to the western expedition were reproduced. The total number of maps for both expeditions cover 47 pages of Pike's original memorandum book.

Unfortunately, during the 130 years and more since these maps were drawn by Pike they have become so faded that they cannot be copied, by ordinary photographic processes using ordinary light, in such form that they can be clearly reproduced for printing.

Fortunately, however, in the last few years, and particularly in the last 5 or 6, the technique of copying faded documents has been greatly improved. The process of copying such almost illegible documents by the use of ultraviolet rays and infrared rays has been perfected by the technicians working under the Archivist of the United States to the extent that it is now possible to make copies of old and faded documents, bringing out clearly what to the naked eye is practically invisible. From such copies plates for printing in fascimile can be made by the ordinary well-known photoengraving and zinc-etching processes.

I have had all these Pike documents, including all the maps, copied at my own expense by The National Archives under the personal supervision of Dr. Vernon D. Tate, the technical expert on the latest improved methods of copying faded documents. It is my hope that all these maps and other papers may be published as a Government document in order to render them available to students of history, and especially to those interested in Pike's celebrated expeditions.

Violation of Veterans' Preference Laws

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

Mr. ALEXANDER. Mr. Speaker and Members of the House, I request unanimous consent that the attached letter addressed to me from Mr. J. M. Jorgensen, the Department of Minnesota liaison officer of the Veterans of Foreign Wars, be inserted in the CONGRESSIONAL RECORD of this date. My purpose in so doing is to bring forcefully to the attention of the Members of the Seventy-sixth Congress, and especially the 182 Members who are veterans of one or more of our various wars, the need to do something about the charges which are made in this letter regarding the violation of our veterans' preference laws, and especially the implications which may be inferred from the methods evidently being used to set up "labor camps" in this country apparently patterned after those in Germany, Russia, and elsewhere.

The letter is as follows:

VETERANS OF FOREIGN WARS OF THE
UNITED STATES, DEPARTMENT OF MINNESOTA,
St. Paul, February 24, 1939.

Hon. JOHN G. ALEXANDER,
Congressman, State of Minnesota, Washington, D. C.

DEAR SIR: We are writing you on a matter which is very important and should have immediate action, as it is more or less an emergency. We have written Millard W. Rice, V. F. W. representative, Tower Building, Washington, D. C., explaining the situation to him and are sure that he would be willing to assist you in every way.

About the middle of January the Minnesota W. P. A. found it necessary to drop a great many single men from the ranks of the W. P. A. employees in St. Paul and Minneapolis for the purpose of completing their personnel in work camps throughout the State of Minnesota. These camp projects were depleted of personnel because a great many aliens were dropped from the rolls, and in order to continue these projects it was necessary that men be sent there, and especially single men who were more or less unattached. A great number of single men in Ramsey and Hennepin Counties working on various W. P. A. projects were given mimeographed letters asking them to report to their respective assignment offices for instructions. When arriving at this office a great many of them were told that they were to be transferred from their present projects in the county to these work camps which are situated in different parts of the State. In this call for men a great number were single veterans, many who had obligations such as dependents, and should really have been treated as having some attachment which would necessitate keeping them in their own county. After receiving the ultimatum from the assignment office of either accepting this employment or later on being dismissed from their project, many of these veterans decided to refuse to go to the camps. A great number of

these veterans have called at our office stating the reasons they gave for not desiring this camp work and we feel that they were justified in many cases in refusing to go.

We called upon Mr. Linus Glotzbach, State administrator's office, about a month ago relative to this matter and were told that veterans' preference did not prevail nor had they in any way violated veterans' preference because these men were not being dismissed but rather were being offered employment on another project even though it were outside of their own county. We explained to these gentlemen that we felt it was an injustice to the veteran, considering his age and his long residence in the county and his affiliations, and we also felt that as long as younger men were being retained on W. P. A. employment in the county we could see no reason for picking out these veterans. We feel that W. P. A. work is just about the only recourse any veteran has at the present time, considering his age, while younger men can, because of their youth, obtain employment in commercial lines or at least be given more consideration by the present-day employers.

We feel that veterans' preference has been violated in that these men are forced to accept positions that pay $44 per month in the camps, while in their own county they can be paid a minimum of $60.50 as laborers. We had an expression from our previous administrator, Victor Christgau, that whenever terminations or transfers are to be made because of reduction in forces or otherwise, veterans whose work is satisfactory should be retained, and by reducing these men's earnings we believe that veterans' preference has been violated. While working in these camps the men are paid $44 per month, $20 of this being deducted for room and board. The employee must purchase his own clothing, and if he should be taken ill in the camp and a doctor called from a nearby town he must also pay this doctor for his services. Should he elect to leave the camp before he is transferred, he must pay his own mileage back to his own town. These camps, we have been told by men who have left them, are not comparable with the C. C. C. camps in that the food is not as good nor the privileges the same, and I am sure that if these veterans would elect to leave their county that the men rather have been inducted into a C. C. C. camp.

We have interviewed a great many of these veterans who have now been dismissed from W. P. A. and we find that many of them have set up light-housekeeping rooms, owning their own furniture, while others are living home with members of their families, these families being more or less dependent upon them for the money they receive for room and board. We are keeping a list of all the men who have been given 403's or dismissed from W. P. A., that have called at our office and if we are given a favorable opinion from our national V. F. W. legislative representative, we will insist that all these unemployed veterans be reinstated and given immediate employment on projects in their own county. We hope that you will contact the national Administrator relative to this matter and that you will do everything possible to protect these men who are now dismissed as well as all other veterans who are now employed.

Thanking you for immediate attention and with kindest regards, I am,

Yours respectfully,

J. M. JORGENSEN,
Department Liaison Officer.

The situation described in the above letter has been brought to my attention on several occasions and it is probable that a similar situation exists in other States. It seems to me that it is a matter which should be given immediate attention by the Members of Congress and that we should insist as a body that these practices be either stopped or modified so that both the letter and the spirit of the veterans' preference laws be observed by prominent officials and appointees.

The Lewis and Clark Highway

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1939

RESOLUTION OF LEGISLATURE OF THE STATE OF OREGON

Mr. ANGELL. Mr. Speaker, the Lewis and Clark Highway follows a low-elevation water grade from Portland, Oreg., across the States of Oregon, Washington, and Idaho, crossing the Bitter Root Range through Lolo Pass to Missoula, Mont. This highway will be of great value as a military and commercial route and is greatly needed. It has been completed, with the exception of approximately 50 miles lying within the national forests of Idaho, and forest funds available are wholly inadequate to provide for its completion. The Pacific Northwest does not have proper military protection and is cut off from the east by the Bitter Root Mountains. This highway would afford great relief to Oregon, Washington, Montana, and Idaho in the marketing of their products.

The Lewis and Clark Highway has been designated as eligible for Federal aid. It is a project worthy of consideration not only to accord the facilities above described but to give relief to the great number of the citizens of this area now unemployed. The Congress should provide the necessary legislation to make possible the early completion of this highway. The Oregon Legislature on February 6, 1939, adopted House Joint Memorial No. 7, addressed to the Senate and House of Representatives of the United States, urging that the Congress pass such legislation and make the necessary appropriations to provide for the complete construction of the unfinished portion of the Lewis and Clark Highway. The resolution is as follows:

House Joint Memorial 7

To the honorable Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Legislature of the State of Oregon, respectfully represent that—

Whereas there exists within the Pacific Northwest a condition of economic distress which has caused widespread unemployment, creating much suffering and want of necessities of life among a great many of the people of said area; and

Whereas the Pacific Northwest is without proper military protection, in that said section is wholly cut off from the East by the Bitter Root Mountains, with only one passage through said range from the Canadian border to Bannock Pass, a distance of some 800 miles; and

Whereas it has become the public policy as well as the urgent need of the United States to take affirmative steps to relieve the conditions aforesaid; and

Whereas the Lewis and Clark Highway follows a low-elevation water grade from Portland, Oreg., across the States of Oregon, Washington, and Idaho, through the Lolo Pass, the lowest pass in the Bitter Root Range, and which is centrally located, to Missoula, Mont., and will provide an adequate military and commercial route which is so badly needed; and

Whereas the Lewis and Clark Highway has been completed with the exception of only 50 miles which lies wholly within the national forests of Idaho, and appropriations for forest roads in national forests, which in Idaho cover 34,000,000 of its total 53,000,000 acres, are inadequate to provide for completion of said highway from that source; and

Whereas these national forests are of the largest, most beautiful, interesting, and valuable of the national forests, affording unsurpassed recreational opportunities for the people of the entire Nation, and not accessible either by rail or national highway; and

Whereas this highway would be of great benefit to the States of Idaho, Montana, Washington, and Oregon to facilitate marketing of their products; would provide adequate military protection to the Pacific Northwest; would provide adequate employment to reduce the critical effect of the present economic distress in this area; and would stimulate national trade and commerce; and

Whereas the Lewis and Clark Highway has been designated as eligible for Federal aid: Now, therefore, be it

Resolved, That the House of Representatives of the State of Oregon (the senate concurring):

Do most respectfully urge on the Congress of the United States that the said Congress pass such legislation and make the necessary appropriations to provide for the complete construction of the unfinished portion of said highway above mentioned, and that the Forest Service of the Department of Agriculture and/or the War Department and/or the Department of the Interior of the United States be authorized and directed to begin immediate construction thereon; be it further

Resolved, That the secretary of state of the State of Oregon be authorized and is hereby directed to immediately forward certified copies of this joint memorial to the Secretary of Agriculture, the Secretary of War, the Senate and House of Representatives of the United States, to Senators and Representatives in Congress from the States of Idaho, Oregon, Washington, and Montana, and to the President, Franklin D. Roosevelt.

Freight Rates

EXTENSION OF REMARKS

OF

HON. ANDREW EDMISTON

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF WEST VIRGINIA

Mr. EDMISTON. Mr. Speaker, the following resolution is self-explanatory, and, in my opinion, the House of Representatives will take the same attitude as has been expressed by the House of Delegates of the State of West Virginia on this very important legislation:

House Resolution 25

Opposing the enactment of H. R. 188, S. 126, S. 138, and S. 158, now pending in the Congress of the United States, pertaining to freight rates

Whereas there have been certain bills introduced into the Seventy-sixth Congress—namely, H. R. 188, S. 126, S. 138, and S. 158—which, if passed, would be harmful to labor, agriculture, and industry in West Virginia; and

Whereas the primary object of these bills is to compel by legislative action the establishment and maintenance of freight rates from one rate territory to another on the rate per mile that applies within the destination territory which in turn would provide a substantially higher rate in one direction than in another over the same rails and between the same points; and

Whereas the United States has been naturally divided into several rate territories because of differing costs of transportation, caused primarily from the fact of differing volumes of tonnage produced and available for transportation in the various sections of the country; and

Whereas West Virginia is located in what is designated official territory, and being that territory lying east of the Mississippi River and north of the Ohio and Potomac Rivers, and recognized as one of the greatest industrial sections not only of the United States but of the entire world, and because of this fact it provides the greatest number of tons per mile of transportation, and consequently the lowest cost of operation for the railroads in that territory in the United States; and

Whereas one of the purposes of establishing the Interstate Commerce Commission was to create a body which could coordinate all the interstate rates applying to all sections of the country, the effect of which, after more than 50 years of functioning by the Commission, has been to remove many inequalities and discriminations in the rate structure of the country as a whole and to remove unfair advantages which one section of the country might have over other sections differently situated; and

Whereas the Congress of the United States is not equipped to make thorough investigation of rate structures, or to study them, whereby such laws as the proposed legislation can only result in the vicious circle of affecting one part of the United States adversely by attempting through legislation to assist another; and

Whereas these bills, or any of them, if enacted into law would require the Interstate Commerce Commission, regardless of the facts, evidence, equity, their better judgment, or otherwise, to disregard differing costs which form the basis for these different rate territories, and arbitrarily make from official territory to all other territories rates which would be materially higher than would be charged shippers in these other territories for shipping the same or similar articles the same or similar distances into West Virginia, to the serious disadvantage of and discrimination against West Virginia; and

Whereas such a prejudice to West Virginia and preference of these other territories would not only seriously restrict the marketing and consequently the production of articles of commerce in West Virginia, to the substantial and grave loss to its labor, agriculture, and industry, but even more seriously would induce substantial removal of manufacturing operations from West Virginia to these more favored localities to the disadvantage of all its citizens: Therefore be it

Resolved by the house of delegates, That West Virginia Senators and Representatives in Congress be earnestly requested and urged to not only vote against these bills and any other similar bills or amendments to or provisions of bills which have the same purpose, but to also use their efforts to convince their colleagues in both Houses of Congress of the unfairness and impropriety of such legislation; and be it further

Resolved, That the clerk of the house of delegates is hereby directed to forward a certified copy of this resolution to each West Virginia Senator and Representative in Congress.

Lift the Spanish Embargo

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

PETITION OF FACULTY AND STUDENTS OF THE EVENING SESSION OF THE SCHOOL OF BUSINESS OF THE COLLEGE OF THE CITY OF NEW YORK

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I am inserting the following petition, signed by 40 members of the faculty and 1,000 students of the evening session of the School of Business of the College of the City of New York:

PETITION TO THE PRESIDENT AND CONGRESS OF THE UNITED STATES

Two years ago the Congress of the United States considered that the peace of the United States would be best served by remaining neutral in the war which had broken out in Spain 6 months previous. Acting in commendable haste, in view of the fact that they deemed the matter of such vital importance to the people of the United States, the Congress rushed through as its very first piece of legislation the present Neutrality Act.

This act was passed in the belief that in so doing we were cooperating with the major nations of Europe who had formed the nonintervention committee for the proclaimed purpose of limiting the Spanish conflict and not embroiling other nations.

Since that time it has become very evident that at least two of the nations of the nonintervention committee have been openly aiding with money, men, and material one side of the Spanish conflict—the rebel side.

In view of such scrapping of the nonintervention agreement, for us to continue the stand which we have been following for the past 2 years has but one result—to aid the rebel side as against the Loyalists.

Since the rebel side is openly allied with Italy and Germany (the past few days have seen the most striking confirmation of this), and since the activities of Germany and Italy on the international scene endanger not only democracy in Spain and Europe, but also the peace and democracy of the Western Hemisphere, especially through their inroads in Latin America, we assert that it is against the national interest of the United States to continue to aid in this manner the rebels against the Loyalists in Spain.

The evidence is not far to seek. Mussolini has declared that Italy's frontier is in Panama. Both Germany and Italy have widespread propaganda agencies in many Latin American countries; Germany's spies are active in the United States. The same interest in the welfare of the American people which goaded Congress into speedy action in January 1937 calls for speedier action now to correct a long-standing wrong against the Spanish people, against democracy, and against the interests of the American people.

We believe that it is not too late. The war in Spain is now being fought in the realm of international affairs as well as on the battlefields. Chamberlain and Daladier are now considered as allies of Franco and will be so labeled by history. Our country must act at once if it does not wish to share a similar fate, as well as to share in the responsibility of having helped to weaken the forces of democracy and peace throughout the world.

We, students and faculty of the evening session of the School of Business of the College of the City of New York, in meeting assembled February 23, 1939, therefore urge that Congress and the President of the United States take immediate action to lift the embargo on the legal Loyalist Government of Spain.

Copy of this petition to be sent to Representative at Large CAROLINE O'DAY and Senator WAGNER.

This resolution has been endorsed by 41 members of the faculty and 1,000 students. Copies of the petitions were handed in to Senator PITTMAN.

Where in the World Are We?

EXTENSION OF REMARKS
OF
HON. B. J. MONKIEWICZ
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1939

RADIO ADDRESS BY HON. ALBERT E. AUSTIN, OF CONNECTICUT, FEBRUARY 23, 1939

Mr. MONKIEWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered over the Columbia Broadcasting station WJSV by my colleague, Hon. ALBERT E. AUSTIN, of Connecticut, February 23, 1939:

A bit over 2,000 years ago a Roman consul stood in the Senate at Rome and conscious of the perils threatening his republic and surrounded by uncertainties, cried, "Ubinam gentium sumus?"—"Where in the world are we?" I wonder how many of our fellow citizens with the same consciousness of imminence are not asking themselves today in this democracy, "Where in the world are we?" A moment's reflection gives us the answer. Going around in circles for the last 6 years, circling from right to left with all direction marks pointing to the left, always led on by the flickering will of the wisp that we call the reform of the New Deal. Did I say that we are now traveling in a circle? No longer, for with a Congress made up of a number of conservative Democrats and a militant Republican minority, both nailing up signs that point to the right and no longer to the left, the road begins to lie clear before us. There has been a certain luring voice during this circuitous journey with social appeal, with a smile in it and the sympathetic tone of one now known to be a false prophet. He has sung the song of the sirens, but that song is now being lost in the overwhelming chorus of an army of democracy on the march.

There have been certain elements in the present administration which have produced this dangerous uncertainty. In recounting them nothing new is offered. They are mentioned again only in the belief that by constant reiteration of these mistakes and errors of procedure can universal realization on the part of our people prevail. The constant dripping of the drops of water will finally smooth away the roughest stones.

The most talked-of issue today before our people is our foreign policy. With no definite announcement from him from whom it should come, with secrecy to a disturbing degree surrounding every move, with no certain knowledge as to the distribution of our stabilization fund, with questionable possibilities as to the ultimate purpose of our import and export banks, one can have only hesitant doubt. The Presidential pronouncements of the last few months have not been such as to define, in unmistakable terms, what our future is to be with the Governments of Europe. Words not meant to induce friendship but rather to imperil, words sure to inflame already inflamed minds, words of provocation too frequently have fallen from Executive lips. Intended actions, perhaps, speak louder than those words and a fortification of Guam might be the flaming brand to touch off an international conflagration. The challenging sentences of our Chief Executive on the opening day of Congress brought again to distressed ears war and the rumors of war, and before our eyes the tragic destruction of another World War disaster. Fortunately, because experience has taught, most of us realized the skillfully made fabric of another smoke screen made by the master artist, attempting to hide from his fellow citizens today's actualities and the circuitous course we have been pursuing. There is only one expression to define our foreign policy—billions for defense, but not one dollar for aggressive armament. There is only one duty for us to discharge—so to defend our shores by sea and land and air that no other nation, though guided by the mad frenzy of a dictator, dare approach the confines of our country. Our policy further defined is a warning to all nations that the provisions of the Monroe Doctrine must and shall be defended at all costs and at any expense. The sooner we realize, and the sooner the Chief Executive declares that the military policy of this country is not to exercise police power over others, is not to act as judge of the conduct of others, but is simply and solely now and at all times strictly to mind our own business—the sooner will the world at large understand that the United States is our sacred ground forbidden to dictators, forbidden to every foreign nation, forbidden to enemies of a free people.

Capital, labor, and industry within the past few days have once more heard the luring words, intended to lull into the deep sleep of security and content. Another breathing spell is promised, together with cessation of hostile act and attitude; cooperation is mentioned, so far removed from the speech in Madison Square Garden in '36. But all the while plans are being laid for future taxation, and procedures are being mapped out for further Government competition with private enterprise in spite of declarations to the contrary. How much assurance has been given to business and industry when men have recently been suggested for official key positions who possess neither the experience nor ability in ordinary days at a time when we are living in extraordinary days. The spoiled child fears the rod and a frustrated Executive resents the voice of authority. Political reward must not go too far, nor should the injured feelings of candidates defeated for public office be assuaged at the expense of efficiency. The unrest of labor, the realization that its spirit of fairness is dulled by certain provisions of the Wagner Act, and partisan and partial interpretations given by the National Labor Relations Board, these have anything but a salutary effect in settling the problems of capital, labor, and industry. Why cannot we all see that a successful solution of the whole problem lies in the realization that "more success means less failure," that the freer and more unhampered within legal limits is business, the more employment there is bound to be, the more jobs are open to ready and willing and seeking workers.

How futile and imaginative are those words to us now, "we have turned the corner, * * * we planned it that way," when we realize that the problem of relief and unemployment is still with us and the number of eager and willing men who are walking the streets and for whom there is no waiting factory where they may work and pay their own way in the world is every day increasing. How could it be else? But even after bitter experience a repetition of the same methods is insisted upon, methods which have been decisively grouped as impractical and destined to failure. With millions after millions of the taxpayer's money wasted upon squandering projects and in profligate spending, used in the prostitution of the poor and the needy and the distressed, criminally expended in influencing votes and elections to such an extent that Maxey exclaimed that "priming the pump has become a mere euphemism for pumping the primaries," how can we expect to get results?

An economy-minded Congress, both Houses, after careful thought and consideration, reduced by $150,000,000 the demand of the Chief Executive, and with keen realization of defects of the system proposed its entire reorganization. The President of the United States within a few days after the passage of the bill requested in no uncertain terms the restoration of this amount. Apparently overnight the crisis of the emergency had so quickened his mind that he saw before him in the still watches 3,000,000 souls wasting with starvation and freezing in the bitter cold of winter. Is this the only time when frustration has beclouded clear and accurate vision? And I wonder if the millions of dollars mounting to hundreds of millions requested for the Passamaquoddy project of ancient history and the Florida ship canal under the pretext of defense were the aftermath of this bitter night. No man in his right mind can believe that now or at any time will people freeze or starve in these United States whether there be unemployed or jobless or needy or distressed. Such cannot and will not happen. But what we demand is relief of those who are actually in need. What we demand is the application of ordinary everyday business sense and business methods to the problem, and what we further demand is a return of investigation of those eligible and a distribution of relief funds to the individual States where and only where they belong. Under such conditions the taxpayer's money will be more efficiently and economically expended and under such conditions those who deserve relief will get it, and those who are unworthy or are thereby enjoying ill-gotten gains derived not to alleviate actual suffering but as political reward will not get it.

Such an assignment to the States would be along the line of what must be done in other ways as well, and that is a return to the sovereign States of their sovereign rights. It will be a sign that centralization of power is to be no longer the theory of our Government. It will signify a return of government in this country founded upon, directed by, and subservient to the Constitution of the United States. It will end definitely and for all time the false proposition recently nurtured and nourished that the people exist for the state and not the state for the people, which is but another way of saying that interpretation lies with the people and not with the President. It means that the restoration to Congress of the prerogatives which belong to it is a certainty in the near future. It means that you and I still live and will live in a democracy under a written Constitution and not under a dictatorial power.

With the Congress as at present constituted a beginning is to be made. Yes legislation and must legislation are now things of a storied and unfortunate past. Country is still above party and partisanship. Nineteen hundred and forty will see a return to office of Republicans and conservative Democrats whose actions will restore what has been lost and make solid the foundations of the newer building; and just as surely 1940 will see a relegation of the New Deal to the archives of buried experimental and destructive legislation. Then will we be no longer traveling in a circle with direction signs pointing left and with luring voices heard in the twilight. Not again will we say "Where in the world are we?" We will know, for we shall see ourselves on solid and substantial ground supported by the Constitution of the United States, once more furnishing to the world encouragement, hope, and inspiration, the final example of a triumphant democracy where the people are the state and officials the servants and not the master of a people.

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1939

MEMORIAL OF THE LEGISLATURE OF THE STATE OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial adopted by the Legislature of the State of Montana:

Senate Joint Memorial 2

Memorial to the Congress of the United States for the passage of an act incorporating the principles of the Townsend national-recovery plan substantially as set forth in a bill entitled "H. R. 4199," introduced into the House of Representatives in the first session of the Seventy-fifth Congress of the United States on February 2, 1937

To the honorable Senate and House of Representatives of the United States in Congress assembled in the Seventy-sixth session:

Whereas the problems of unemployment and social security are two of the most vital economic issues now confronting the people of the State of Minnesota, as well as all other States of the Union; and

Whereas the United States Government has incurred an enormous debt in providing a bare subsistence for several million unemployed persons; and

Whereas it will be impossible to continue such relief appropriations indefinitely without serious injury to the credit of the Nation; and

Whereas the economic problems of unemployment and social security cannot be properly handled by individual States but are national problems involving the general welfare of the whole Nation; and

Whereas the Townsend national-recovery plan, as set forth in the General Welfare Act of 1937 (H. R. 4199) introduced in the last session of Congress, provided for the collection of a 2-percent tax on business transactions and the pro rata monthly distribution of the proceeds to persons over 60 years of age who agree to retire from gainful employment and expend their monthly allotments for the products of American capital and labor; and

Whereas it is the purpose of such plan—

(1) To retire from active employment some four or five million persons over 60 years of age and provide jobs for several million persons under 60 years of age.

(2) To decrease, if not eliminate, expenditures for relief.

(3) To eliminate the necessity of hoarding to provide for needs incident to advancing age.

(4) To stimulate trade and industry by increasing the purchasing power of persons of advanced years.

(5) To relieve the present stagnation of money and credits by providing a market for products of American capital and labor: Now, therefore, be it

Resolved by the Senate of the State of Montana (the house concurring), That we do hereby petition the Congress of the United States of America for the enactment of the Townsend national-recovery plan into law, the said plan being deemed just and equitable to all persons in the United States; and be it further

Resolved, That a copy of this memorial be transmitted by the secretary of state of Montana to the President of the United States, to the Senate and House of Representatives of the Congress of the United States, and to the Senators and Representatives in Congress from the State of Montana, and they and each of them be requested to use all honorable means within their power to bring about the enactment of the Townsend recovery plan into law at the earliest possible time.

Social Security

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1939

ADDRESS BY HON. HENRY ELLENBOGEN, JUDGE OF THE COURT OF COMMON PLEAS OF ALLEGHENY COUNTY, PA., AT CHICAGO, ILL., FEBRUARY 12, 1939

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Henry Ellenbogen, a former Member of this body:

The problem of establishing social security for our people is long-standing. But the phrase "social security" has acquired a more concrete significance in the last few years, when the Committee on Economic Security was appointed by President Roosevelt to formulate a plan which evolved what is now known as the Social Security Act. The approval of that act on August 14, 1935, marks a milestone in human history.

Almost 4 years have since passed. Two and one-half million needy old people, needy blind persons, and dependent children are now receiving public assistance to the extent of one-half billion dollars a year. Three million eight hundred thousand unemployed have received nearly $400,000,000 in benefits under the unemployment-insurance laws. No one can deny that important gains have been made. But social and economic security for our people has not been achieved.

NEARLY 25,000,000 PEOPLE DEPENDENT ON PUBLIC ASSISTANCE

Counting children and dependents, nearly 25,000,000 people are now receiving some form of assistance through public funds. Mass unemployment is continuing, and in this unemploymet lie the roots of our social insecurity. It has jeopardized the health and happiness of at least 30,000,000 men, women, and children. There are men who have been unemployed for 6, 7, and 8 years. They, their wives, and their children have gradually become accustomed to living as public wards on public funds. There are hundreds of thousands of young men and women who have graduated from high schools and colleges, prepared to assume their place in the economic world, who have been looking in vain for a job. These long years spent in search of employment have discouraged and disillusioned them.

WE MUST END UNEMPLOYMENT

The undermining effects of persistent unemployment have depreciated our manpower and poisoned the outlook of at least one-fourth of our people. Let there be no mistake about this. We must wipe out mass unemployment before it endangers the existence of our democratic form of government.

We must provide useful work for the men and women who are able and willing to work. The right to life, liberty, and the pursuit of happiness means the right to an opportunity to provide for a decent life and a measure of happiness for one's family.

If private industry is incapable of creating employment opportunities, government must find a way to put the unemployed to work. The budget which must be balanced is the budget of our human resources.

Millions of idle men in the face of idle capital of billions of dollars constitute a wholesale waste of our human resources.

We are told, by a responsible authority, that since 1929 the depression has cost us nearly $200,000,000,000, and there is no end in sight. The greatest task before our Government and before our people is to find a way to end this colossal waste. Not until that is done can there be economic, social, or political security for any of us. As long as there are millions of able-bodied men and women unemployed, the safety, the welfare, and the security of all of us is endangered.

OLD-AGE PENSIONS MUST BE INCREASED

Old-age pensions must be increased. At present, the maximum paid in most States is $30 a month. This amount, insufficient as it is, is actually being met only in an insignificant portion of the total number of cases. It should be increased to an amount that will permit our old people to live in some decency and comfort.

Conditions for granting old-age pensions should be liberalized. In hundreds of thousands of cases, a pension has been refused, and the burden has been placed upon children or other relatives who are unable to provide a decent livelihood for their own families.

The age limit in some States, including my own State of Pennsylvania, is still 70 years. Such an age limit makes this a graveyard pension and not an old-age pension.

UNEMPLOYMENT INSURANCE SET-UP REQUIRES CHANGING

The system of unemployment insurance in vogue in our States is desperately in need of substantial overhauling. The benefits which are being paid in a large number of cases are ridiculously small and, in many instances, less than the unemployed would receive on relief. Too, the delays and the red tape involved in obtaining unemployment compensation are totally unnecessary.

PRESENT UNEMPLOYMENT INSURANCE SYSTEMS DEEPEN THE DEPRESSION INSTEAD OF CUSHIONING IT

As of December 31, 1938, the States collected and deposited with the National Government, unemployment-compensation taxes totalling $1,460,423,479.06. These deposits have earned interest of $18,134,532.69, making a total deposit in the Federal Treasury of $1,478,558,011.75. As of the same date the States had withdrawn for the payment of unemployment-compensation benefits $406,275,000, leaving an unused balance in the Federal unemployment-trust fund of $1,072,283,011.75.

The Budget submitted by the President for the fiscal year ending June 30, 1940, estimates that unemployment-insurance taxes or contributions of $748,900,000 will be collected and deposited by the States in the Federal unemployment-trust fund, and that withdrawals for the payment of benefits will amount to $500,000,000. This will add a further unused balance of about $250,000,000.

The purpose of the unemployment-insurance system was to build up reserves during periods of prosperity, to be paid out as unemployment-compensation benefits during periods of depression. This purpose has not been realized. At a time of mass unemployment, such as we have today, the payments for benefits should greatly exceed the income from contributions. Only in that manner can unemployment insurance perform the function for which it

was created of serving as a cushion during periods of depression. Far from doing this today, it appears that we have an unused reserve of $1,000,000,000. Instead of decreasing this reserve and thereby providing needed purchasing power at a period of unemployment, such as we have today, this reserve will be increased by another $250,000,000 during the next fiscal year. Unless changes are made the unemployment-insurance system will become a failure, because it will be used, to a large extent, for the purpose of raising general revenues.

It is my particular task now to discuss with you the need for a health program and the form such a program should take.

THE FULL USE OF AVAILABLE MEDICAL RESOURCES WAITS ON GREATER PURCHASING POWER

In times of prosperity and in times of depression illness is an important cause of poverty, destitution, and of dependency. It is a major factor of social and economic insecurity. The array of economic and social statistics which may be marshalled to prove this is almost endless.

The cost of illness and premature death in this country amounts to about $10,000,000,000 a year. That includes the cost of health services and medical care and the loss of wages through disability or untimely death. On an average day of the year there are 4,000,000 or more persons disabled by illness. Every year 70,000,000 sick persons lose over 1,000,000,000 days from their work.

These conditions do not result from inadequate knowledge on the part of medical science; they come from the fact that we cannot today make medical science available to those who need it most. This condition strikingly parallels our general economic setup. We have splendid means of production, but a miserable lack of purchasing power, and consequent inadequate distribution. While hospitals are only partially occupied and thousands of doctors are idle for long periods of time, millions of needy sick people are not being cared for. It is clear that the full use of our available resources of preventive and curative medical services waits on greater purchasing power by the masses of our people.

The great progress which has been made in preventing and curing diseases is shown by the fact that the death rate has declined from 17.6 per 1,000 population in 1900 to 11.5 per 1,000 in 1936. This represents a saving of about three-fourths of a million lives every year. But this reduction in the death rate has taken place mostly in childhood. No significant improvement has been made in the mortality rate of persons of mature and advanced age. The life expectancy of a person of 50 today is about the same as it was 40 years ago.

In fact, the death rate from certain chronic diseases such as cancer, diabetes, diseases of the heart, blood vessels, and kidneys have increased. For instance, the death rate from cancer in 1900 was 63 per 100,000 population, while in 1936 it was 111 per 100,000.

Proper medical care of children is vital if our Nation is to progress. In that respect I remind you that from one-half to two-thirds of maternity deaths are preventable, and that the death rate of infants in the first month of life can be cut in half. These are of tremendous importance to our 2,000,000 births a year.

THERE IS A DEFINITE ASSOCIATION BETWEEN ILLNESS AND LOW INCOME

The maternity mortality rate in the United States is high. In 1936 the rate was 57 per 10,000 of live births—double that of Sweden. In the United States it varies from 40 in New Jersey to 90 in South Carolina. Some light is shed on these figures when we learn that more than 1,100,000 births occur every year in families who are on relief, and that in 1936 nearly a quarter million women in the United States did not have the care of a physician at the time of delivery.

These figures could be increased tenfold. They are, however, sufficient to implement one all-important fact: There is a definite association between illness and low income. A responsible survey shows that in recent years, in families with annual incomes under $1,200, there was a disability of 8.9 days per person, whereas in families of $3,000 and over the disability was only 3.8 days. Disabling illnesses in the relief population occurred at an annual rate of 47 percent higher for acute illnesses and 87 percent for chronic illnesses than the corresponding rate for families with income of $3,000 and over.

The annual days of disability per capita in the relief group are found to be three times as great as among higher-income families. Too often the final outcome of sickness is unemployment. For instance, in 1934 in New Jersey, in 61 percent of the families on relief, the persons of employable age were unemployable because of illness or injuries.

It has been definitely established that the lower the income, the more sickness and the less medical care. This is a vicious circle. Illness and its consequent loss of wages bring poverty, and poverty aggravates the sickness because of inability to obtain adequate medical care.

Notwithstanding the fact that the poor have more sickness and disability, and consequently need more medical services, they receive less medical care than those with larger incomes. Three times as many persons among the poorer classes go through a year of life without medical care than do those in the higher income classes. Even in 30 percent of serious disabling illnesses among relief families and in 28 percent of such illnesses among families just above the relief level, no medical care was received. The conclusion is inescapable that the lower the income of persons, the more sickness they have and the less medical care they receive.

THE EXPENSE OF ADEQUATE MEDICAL CARE HAS BECOME AN ECONOMIC HAZARD

Estimates indicate that adequate medical care for a family of four costs from $100 to $200 a year. Even if we take the minimum of $100, it is clear that this expense is beyond the means of one-third to one-half of our people. For in the year of prosperity, 1929, about 12,000,000 families, or more than 42 percent of all the families in the United States, had incomes of less than $1,500. And it was estimated last year that probably more than 40,000,000 persons—one-third of our population—comprise families whose annual income is less than $800.

Included in this group is an estimated total of 22,437,000 people on work relief or direct relief as of November 1938. To these must be added 2,500,000 people who receive old-age pensions, blind pensions, or aid for dependent children, making a total of nearly 25,000,000 people who depend on the Government for food and shelter, and who depend on public funds or private charity for medical care.

It is estimated that in this group of 40,000,000 medically needy persons, approximately 20,000,000 cases of disabling illnesses occur a week, of which at least 8,000,000 cases entail disability of at least 1 week. Under the conditions prevailing in 1935, about 2,000,000 of these—the more seriously disabling illnesses—receive no medical care at all.

Families of small income must spend their earnings from day to day or week to week. They are not able to save for days of illness. The result is that when a serious illness occurs no medical care is obtained, or where obtained, the family is burdened with large expenditures and burdensome debts which it cannot hope to meet. The expense of adequate medical care has become—like unemployment or death—an economic hazard against which most persons require protection.

BURDEN OF MEDICAL COST IS UNEVEN AND UNPREDICTABLE—AVERAGES ARE MISLEADING

Even families who are otherwise self-supporting are not able to purchase adequate medical care, because illness is uneven and unpredictable.

On an average, families need 4 to 5 percent of their income for medical care. While many families with good incomes may be able to afford such average expenditures, even they are faced with burdensome expenses when serious illness comes. In that case the expenses which must be incurred to obtain adequate medical care are far greater than the average expenditure per family. Averages are meaningless for individual cases. Illness comes to an individual family with unequal severity and unequal length.

PROGRAM OF THE INTERDEPARTMENTAL COMMITTEE TO COORDINATE HEALTH AND WELFARE ACTIVITIES

The Interdepartmental Committee to Coordinate Health and Welfare Activities, appointed by the President, has worked out a program to meet the medical needs of the people of the United States which, on the whole, is splendid, and which deserves our full support.

This program was submitted to a representative gathering of the general public and of interested groups at a national health conference held in Washington on July 18, 19, and 20, 1938, in which conference it was my privilege to serve as a delegate.

On January 23, 1939, the President of the United States transmitted this program to Congress for careful study, but without definite recommendation. The interdepartmental committee recommends the following program:

First. (a) An expansion of the public health service in the Nation and in the States and local communities under title VI of the Social Security Act. These public-health services are to make a direct frontal attack on the eradication of tuberculosis, venereal diseases, and malaria; the control of mortality from pneumonia and from cancer; and on mental hygiene and industrial hygiene.

At its peak this program would require $200,000,000 annually to be expended by Federal, State, and local governments.

(b) The expansion of maternal and child health services (under title V of the Social Security Act), including provisions for medical and nursing care of mothers and their newborn infants. The objective sought is to make available to mothers and children of all income groups, and in all parts of the United States, minimum medical services essential for the reduction of our maternal mortality rates and death rates among infants, and for the prevention in childhood of diseases and conditions leading to serious disabilities in later years.

This program should gradually expand until in its tenth year it would reach annual expenditures, in addition to those now being made, of $165,000,000. It is suggested by the committee on health that one-half of this be paid by the Federal Government.

Second. The expansion of hospital facilities and the construction of 500 health and diagnostic centers in areas inaccessible to hospitals. The total average annual cost is estimated to be $146,000,000, one-half of which, it is recommended, be borne by the Federal Government.

Third. It is proposed that the Federal Government, through grants-in-aid to the States, implement the provisions of medical care for two groups of the population:

(a) To those for whom the State and Federal Governments, jointly or singly, have already accepted some responsibility through the public-assistance provision of the Social Security Act or through work relief and direct relief.

(b) To those who, although able to purchase food, clothing, and shelter from their own earnings, are unable to procure necessary medical care.

The committee proposes the allocation of $200,000,000 to the States for this part of the program.

There is little organized opposition to these three of the five-point program. Organized medicine, as represented in the American Medical Association, is not opposed to it. The problem of its realization is a financial one. This depends on the willingness of the Federal Government and the States to assume additional financial burdens.

The realization of these three points—the expansion of the Public Health Service, and of medical care for mothers and children, and the provision of some medical care for those living at an emergency level of existence—is of great importance to the health and vitality of this Nation.

But it is not as important as the remainder of the program, which deals with a general program of medical care for self-supporting persons of small means. It is this part of the program, consisting of recommendations IV and V, which has met with the opposition of organized medicine. I shall deal with it in somewhat greater detail.

The fourth recommendation of the technical committee contemplates a general comprehensive program designed to provide adequate medical services for the entire population. It suggests that this may be done either through compulsory health insurance or through gradually expanded public health services, or through a combination of both.

COMPULSORY HEALTH INSURANCE IS THE KEYSTONE

It is estimated, as I have said, that adequate medical care would cost on the average 4 to 5 percent of income. Families who would be able to meet such an average cost often find that in case of serious or long illness, the expenses for adequate medical care are unbearably high. If these costs were spread over the population as a whole, they could be readily met, and the vigor, health, and productive capacity of the entire nation would be increased.

For decades attempts have been made to spread the cost of medical care. Nonprofit group insurance, group hospitalization, and other voluntary schemes have been promoted. The fact that after decades of these efforts only about 2,000,000 persons in the United States last year received substantial medical care through voluntary insurance arrangements is, I submit, conclusive proof that mere voluntary effort cannot meet this truly gigantic problem. Competent studies show that at least 100,000,000 persons in the United States need provision for adequate medical care. This can be offered only through compulsory health insurance. It is the keystone of any proper health program.

Medical costs for the individual family cannot be determined in advance. They are burdensome because of their uncertainty and variability. The insurance principle which permits our people to spread the risks for the economic losses sustained by death, accident, fire, or unemployment applies with equal force to economic losses sustained by illness. Only through compulsory health insurance can the cost be spread over the entire population and be thus reduced to a small and bearable portion of the family's income.

The opposition of the American Medical Association to compulsory health insurance is based on unreal fears and on imaginary evils. Experience has shown that the insurance procedure is entirely compatible with the freedom of all physicians to participate in the insurance plan, with free choice of physicians for the patient, and with wide latitude left to physicians as to the method of their remuneration.

The right to live one's life in health is as much an inalienable right as the right to political freedom and individual liberty. Compulsory health insurance is the key to the realization of that right. Compulsory health insurance must come, and the sooner it comes the better for the future, the vitality, and the productivity of our Nation.

I invite this conference to determine upon a relentless campaign of enlightenment in every section of the United States, until we are able to give to the people of the United States the blessings of good health, which comes with a sound program of compulsory health insurance, accompanied by a fulfillment of the other parts of the health program.

It is estimated that compulsory health insurance could be accomplished at an average expenditure of $20 per person per year. It should be developed by the individual States with assistance by the Federal Government.

INSURANCE AGAINST LOSS OF WAGES BY SICKNESS

On an average day of the year there are at least five to six million persons who are temporarily or permanently disabled by illness. The length of such illness varies from a few days to a whole year, and, in some cases, to a whole lifetime.

It is estimated that in 1929 the wage loss due to disability was nearly $2,000,000,000.

As in the case of illness, the average extent of disability is misleading. The significant thing to remember is that there will be some disability and some loss of earnings by sickness. Whether the sickness and the disability will last a day, a week, a month, or a year, or the balance of one's life depends upon factors which no individual can foresee.

The effects of temporary disability are similar to the effects of temporary unemployment. Each causes the loss of income for the worker and his family for a limited period of time. The effects of long-continued or permanent disability are similar to the effect of old age. It forces the retirement of the worker from the productive field.

As stated, five to six million people are disabled by illness on an average day; perhaps one-half of these are suffering from temporary disability and the other half has some permanent or total disability. Of those suffering from total disability, about four-fifths, or nearly 2,000,000, are under the age of 65. If we take into account the dependents of those who are permanently disabled, we find that about eight to ten million persons a year are directly affected by their permanent disability and loss of earning capacity.

We have workmen's compensation laws to compensate workmen for loss of earnings due to industrial accidents. We have unemployment compensation laws for the compensation of employees for loss of wages or salaries by unemployment. We must have appropriate laws to compensate for loss of earnings by illness.

SEPARATE SYSTEMS OF TEMPORARY AND FOR PERMANENT DISABILITY RECOMMENDED

The President's committee recommends that two separate systems be established, one to deal with temporary disability and the other with permanent disability. It is recommended that insurance against temporary disability be patterned after unemployment compensation and that permanent disability be treated like old-age retirement. It is estimated that temporary disability compensation with a reasonable waiting period and reasonable benefits (calculated at 50 percent of wages for a maximum of at least 26 weeks) would cost approximately 1 percent of wages.

FINANCING OF TEMPORARY SICKNESS DISABILITY BENEFITS

In view of the recommendation of the President's committee that temporary disability benefits be treated like unemployment compensation benefits, or as a part of the unemployment compensation system, I propose that the payment of temporary disability benefits be financed entirely by the Federal and State Governments. It is my suggestion that the Federal Government should pay in the form of grants-in-aid one-half of the expenditures incurred by each State for the payment of temporary disability benefits on condition that the State appropriate the other half of such costs without the imposition of any special taxes.

As an alternative method of financing temporary-disability benefits, I suggest that the cost be imposed upon the present Federal old-age retirement system.

The recommendation of the President's committee that permanent disability be treated similarly to disability by old age is sound. I hope that this conference will endorse the recommendation of the interdepartmental committee that permanent disability be cared for by the introduction of invalidity benefits into the present old-age insurance system. The cost of such a system would probably be 0.1 percent to 0.2 percent of wages at the beginning, and may be expected to rise to between 1 and 2 percent in 20 years. The taxes which finance the Federal old-age insurance system and the contemplated reserve of that system are large enough to absorb this cost. I therefore propose that these invalidity benefits be paid to all persons who are covered by the Federal old-age insurance system and who become disabled by illness without any additional expense to them and without any special taxation.

CONCLUSION

The lawyer can perform an important part in the campaign to bring economic and social security to every man, woman, and child living in the United States. He can perform a real service to the people of the United States by explaining to them the need for a sound health program and the methods by which it can be attained.

Let us determine to wage a vigorous campaign for health insurance and for a significant improvement in the operation of the entire social-security system in every part of the United States. Through such a campaign we can fulfill the noble task of the lawyer to fashion our legal and administrative machinery and to obtain the passage of laws to meet the problems of our day and to improve the lot of mankind.

Citizenship Status of Harry Bridges

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF CALIFORNIA

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Assembly Joint

Resolution 23 of the Legislature of California, relative to action by the Secretary of Labor regarding the citizenship status of Harry Bridges. This resolution was passed by both the Assembly and the Senate of the California State Legislature January 24, 1939.

It was sent to me by Mr. Don Field, its author.

I thoroughly concur in the substance of the statements contained in this resolution and ask this House to give it that consideration of which it is eminently worthy.

Assembly Joint Resolution 23

Relative to action by the Secretary of Labor regarding the citizenship status of Harry Bridges

Whereas during the past 4 years the Department of Labor of the United States, under the direction of the Secretary of Labor, Frances E. Perkins, has been conducting intermittent inquiries or investigations as to the citizenship status of one Harry Bridges, a well-known Pacific coast labor leader; and

Whereas it has been a matter of common report that the said Harry Bridges is either not an American citizen or that he has espoused political and economic doctrines inimical to and incompatible with the American theory of government and such as to justify and require the forfeiture of his rights as a naturalized American citizen, if such he is; and

Whereas prompt completion of the said investigation and inquiry by the Secretary of Labor, and the making public of the results thereof will contribute materially to industrial peace on the Pacific coast: Now, therefore, be it

Resolved by the Assembly and Senate of the State of California, jointly, That the Secretary of Labor of the United States is hereby respectfully urged to settle the existing uncertainties as to the citizenship status of the said Harry Bridges without further delay by making a full report upon this subject to the President and to the Congress of the United States, and to instigate in the matter such appropriate action, if any, as may be indicated to be proper by the findings set forth in such report; and be it further

Resolved, That the Governor of the State of California is hereby requested to transmit copies of this resolution to the President of the United States, to the Secretary of Labor of the United States, and to each Senator and Member of the House of Representatives from California in the Congress of the United States, and that such Senators and Representatives from California are hereby requested to take such action as may expedite the making of such a report and the taking of appropriate action in connection therewith.

When the Devil Was Sick

EXTENSION OF REMARKS

OF

HON. BRUCE BARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, Fcbruary 27, 1939

Mr. BARTON. Mr. Speaker, Mr. Harry Hopkins went out to Des Moines on Friday night and tried to deliver a Republican speech. Is this fair? Is there no honor among politicians? Should he not have told his listeners that whatever sound ideas were in the speech were ideas which the Republican Party has been urging for 6 years as essential to recovery?

Mr. Speaker, what miracles are wrought by the magic of the election returns! With what lightning rapidity is the character of a statesman transformed! Only last summer the political correspondent of the New York Times summed up the philosophy of Harry Hopkins in the arrogant boast: "We will tax and tax, and spend and spend, and elect and elect." Then came the November elections; and now behold a simple Iowa country boy making his soft advance to business, a big red apple in his hand.

Mr. Speaker, this repentance comes too late. The people have seen too many of these breathing spells, these periods of appeasement following the New Deal reverses. They know the significance:

When the devil was sick, the devil a saint would be;
When the devil was well, the devil a saint was he.

Reorganization of the Government

EXTENSION OF REMARKS

OF

HON. LINDSAY C. WARREN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

EDITORIAL FROM PHILADELPHIA INQUIRER OF FEBRUARY 27, 1939, AND ARTICLE BY GEN. HUGH S. JOHNSON

Mr. WARREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Philadelphia Inquirer and also an article by Gen. Hugh Johnson:

[From the Philadelphia Inquirer of February 27, 1939]

A BETTER PLAN FOR REORGANIZATION

The prospect of some action at this session of Congress on the highly important subject of Government reorganization has been appreciably brightened by the compromise bill of the special House committee. Administrations in Washington have been attempting in vain to effect this reform for the last 30 years.

If there was need for overhauling the governmental machinery a generation ago, eliminating overlapping and duplicating agencies that clutter up the Capital and drain the taxpayers' pockets, it is 20 times as great today. Bewildered strangers, trying to transact business with the departments and bureaus, need a professional guide to lead them through the Federal jungle. Even experienced officials are hampered by the complicated, confusing, and wasteful system, or lack of system.

The once familiar story of the three bears—each species under the guardianship of a different department—may be no longer true. But there are half a hundred separate legal divisions in Washington, each with its army of Government attorneys, 34 agencies which have to deal with the acquisition of land, 16 official bodies concerned with wildlife conservation, 10 with construction, a round dozen with home and community planning, 9 with credit and finance, and 24 with lending the taxpayers' money.

These are some of the agencies and commissions that are falling over themselves in the District of Columbia. Federal branch bureaucracies all over the country—not counting post offices, customhouses, and regular Government buildings—occupy leased office space equivalent to 52 structures the size of the Empire State Building.

The need for a comprehensive plan of mergers, transfers, and eliminations is plain. How can this be accomplished without doing violence to American principles of government? Clearly Congress cannot decide on each of the multiplicity of details. The spadework must be done by the Executive branch, which is much closer to the situation. And yet there are natural objections to entrusting full authority for this virtual remaking of a large part of the governmental machinery without some check by Congress.

The answer may be supplied by the Cochran bill, which empowers the President to submit plans for transfer, consolidation, or abolition of Federal agencies, with certain necessary exceptions, but retains the veto power of Congress through a concurrent resolution not requiring Executive approval.

Thus one of the chief objections to last year's reorganization measure, which required an act of Congress subject to Presidential veto to nullify an Executive order shuffling agencies and bureaus, is removed at the outset.

The successful opposition of the last House to that measure was also based on the proposals to do away with the valuable position of the Comptroller General and to substitute for the present bipartisan Civil Service Commission a single administrator, appointed by and solely responsible to the President and removable by him.

Replacement of the Comptroller General by an Auditor General would have meant substitution of postaudit for preaudit—in other words, simply telling where the money had gone instead of preventing expenditures not plainly authorized by law.

As for the proposed change in the civil-service set-up, the House visualized possible political control of the merit system, which might destroy its value.

Both proposals are wisely omitted from the new measure. The numerous quasi-judicial commissions, whose value depends on their independence, subject to reasonable congressional regulation, are also expressly exempted.

These improvements on the negative side should substantially strengthen the prospect for sound reorganization legislation at this session. But the new bill also contains an outstanding affirmative provision that will be heartily welcomed by those that pay the high cost of government—and that means all of us.

This provision requests the President in submitting his reorganization plans to specify what reductions in expenditures are likely to result from his recommendations. Economy was the forgotten word in connection with last year's reorganization bill.

Cutting out the deadwood and the duplicating activities must be designed for economy as well as efficiency. Administration spokesmen have just been giving encouraging assurances of an easing of the tax burden. But the salaries of thousands of unnecessary job holders and the cost of maintaining expensive office space and equipment constitute a heavy tax on the people.

Congress will want to scrutinize the renewed proposal for six administrative assistants to the President, and the new bill contains other provisions requiring examination. But as a whole it represents a practical, reasonable approach to eliminating evils of gross waste and inefficiency which would not be tolerated by any private business organization for a moment.

ONE MAN'S OPINION

(By Hugh S. Johnson)

It is a pleasure and a relief to be boosting, rather than knocking, a policy of this administration. There has not been time to study Representative COCHRAN'S new streamlined bill for Government reorganization for hidden jokers, if any, and, to that extent, I keep my fingers crossed. But there is no reason to assume any such thing. On first reading the bill seems to ring true in every clause.

It covers an urgent need. It avoids every principal objection to the bill which was sidetracked in the last session of Congress. In the new and highly intelligent strategy of the Republican minority to support the good and oppose only the bad in the administration, it should be approved and become a law without disheartening delay.

The bill gives the President the initiative in proposing reorganization and regrouping of Federal agencies to simplify the great Washington hodge-podge, to save money, and to increase efficiency. It requires the President to submit his plans to Congress and if Congress does not, by concurrent resolution, veto them within 60 days they go into effect. Under last year's plans, if Congress wanted to veto what the President proposed it had to do so by a law or joint resolution which the President could in turn veto. That meant that Congress could not effectively disapprove without a two-thirds vote. The President does not have power to veto a concurrent resolution. Since Congress, in delegating these legislative powers, can impose its own conditions, Representative COCHRAN'S new bill has removed the biggest bug in the old bill.

It removes all the other bugs also. It exempts the partly judicial, partly legislative commission from the Executive power to reorganize. It does not put civil service under a political Pooh-Bah. It does not destroy the office of Comptroller General, and it avoids any "resources and planning committee"—which was objected to largely because it was feared that it was a device to take river and harbor work away from the United States Corps of Engineers.

The urgent need for a thorough reorganization of Government has been recognized for more than a quarter of a century, during which time President after President and commission after commission have proposed plans to do it. But a bureau has more lives than a cat and is as resistant as a rock. It has been quite clearly demonstrated in all these years that if any reorganizing is going to be done both the planning and the execution must be in the executive department under very broad powers.

During the war I was given the seemingly simple job of centralizing purchase and preventing conflict in the War Department among at first five, and later nine, bureaus which were competing with themselves. General Pershing had the same problem in France. He was 3,000 miles away with the powers of a commander in chief. He did it. We were in Washington under the shadow of Congress. With all the war powers of the President we were resisted at every step and never really succeeded in anything more than name.

From that experience, and many others, I know that Mr. COCHRAN'S bill is an absolute necessity; and I do not see any good ground for objection to it except in minor details that can be, and no doubt will be, threshed out in debate. There is not space to discuss them here.

It may strike another snag, however. This is no Executive "must" bill drafted by the White House janissariat as part of some jig-saw puzzle of centralized Executive control. It is the work of the Reorganization Committee of the House, and I am told that nobody in an executive department ever saw it before it was introduced. Maybe Tommy Corcoran won't stand for that.

The Beet-Sugar Industry

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

MEMORIAL OF THE LEGISLATURE OF THE STATE OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of the State of Montana:

Senate Joint Memorial 5

Memorial to the Congress of the United States of America requesting it to assist the beet-sugar industry in Montana

Whereas only 29.5 percent of domestic-sugar sales are allotted to domestic producers at present, Cuba has practically the same amount and our insular possessions 41.5 percent. American producers are rightfully entitled to all of the domestic market that they are able to supply; and

Whereas the import quotas of raw sugar as set at the present time have brought the farmers, the workers in the beet-sugar factories, and the laborers in the beet fields in direct competition with the poorly paid labor in the sugar-producing territories outside of continental United States; such competition has the direct result of lowering the standard of living of these farmers and laborers to a level incompatible with the American way of life; and

Whereas sugar beets can be effectively grown at a reasonable profit in this State and there is no food more valuable to the consumer in nutritive worth even at a much higher price than at present; and

Whereas the production of sugar beets provides employment at good wages for many times as many workers as the same acreage of other crops adapted to this latitude and any control of the expansion of sugar-beet acreage means more unemployment and more relief clients who could otherwise make a living in this industry; and

Whereas there is grave danger that the present policy, if continued, will result in many now employed in this country losing their means of livelihood, thereby further increasing the already tremendous burden of unemployment; and

Whereas our beet growers, if permitted to make a reasonable amount of money, are, due to their higher standard of living, many times better customers for eastern industry as are foreign sugar laborers and planters; and

Whereas an orderly and sound expansion of beet plantings in accordance with the development of suitable land and the building of new factories to take care of the increased production is a reasonable and necessary process to the building up of this State and should be encouraged; and

Whereas the expansion of the domestic production of sugar should be encouraged as a problem of national economy and defense, the acute shortage of sugar during the World War demonstrated our need for a much higher domestic sugar production in time of emergency; and

Whereas because of the high altitude of this region, there are practically no substitute crops for sugar beets and the restriction of the beet industry means the throttling of our agriculture by eliminating the best cultivated crop in a proper rotation for maintaining soil fertility and weed control; and

Whereas the development of profitable agricultural operations is so vital to the business of all of Montana as well as of the entire United States, and should be given most serious consideration by all individuals and law-making bodies; and

Whereas the Beet Growers' Associations of Montana, supported by the Montana Federation of Labor and Montanans, Incorporated (the State Chamber of Commerce), have given serious and careful consideration to the present sugar quotas and the above facts have been definitely established: Now, therefore, be it

Resolved, That it is the prayer of your memorialists, the Twenty-sixth Legislative Assembly of the State of Montana, that the Congress of the United States should, by proper legislation, right the wrong suffered by the farmers, processors, and wage earners engaged in the growing and manufacturing of beet sugar, by immediately raising the domestic sugar quota to permit the unrestricted production of sugar within the continental limits of the United States, and to maintain the protective market by quota reductions and adequate tariffs on foreign sugar; be it further

Resolved, That a copy of this memorial, duly authenticated, be sent by the secretary of state to the Senate and House of Representatives of the United States and to each of the Senators and Representatives of Montana in Congress.

The Unemployment Problem

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Monday, February 27), 1939

RADIO ADDRESS BY HON. JAMES F. BYRNES, OF SOUTH CAROLINA, FEBRUARY 27, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by the distinguished Senator from South Carolina [Mr. BYRNES] during the National Radio Forum, February 27, 1939. The subject of the address is The Unemployment Problem.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is my opinion that under our form of government we must continue to look to private enterprise to provide jobs and look to government for assistance only to the extent that private industry is unable to provide employment.

The surest way to relieve unemployment is to inspire you with the hope that you can invest money in a business providing jobs with a reasonable hope of earning a profit, and that you will be permitted by governments—Federal and State—to retain a reasonable amount of the profits earned.

Time does not permit me to discuss what governments should do or undo, in order to furnish that inspiration. Such a discussion would make it impossible for me to comply with the request to explain the provisions of a bill which I have introduced, amending provisions of the Social Security Act and creating a Department of Public Works. That bill has to do not with the causes of unemployment nor the encouragement that might be given to individual employers but with the methods by which governments shall aid those who are unable to secure employment in private enterprise.

Unemployment is our most serious domestic problem. It is a national problem. It is a permanent problem. Whether you approve or disapprove of what has been done by Federal and local Governments during recent years you may as well realize that an overwhelming majority of the people of this country believe that the granting of assistance to those in need is a public duty and primarily the duty of the Federal Government.

We cannot ignore this problem. Idle men not only do not produce, they do not consume. Their failure to buy because of the lack of wages results in the unemployment of other men who would normally produce the goods they would consume. As unemployment increases, the national income decreases. As the national income decreases, the revenues of Government decrease.

Some persons ask how these millions of people who are today the recipients of Government assistance got along before that assistance was rendered by governments. The fact is that in many instances they did not get along. When they exhausted their savings those who were unable to secure assistance became shipwrecks upon the sea of life. When no one came to their rescue, they were simply "sunk." Some were rescued. The young worker out of employment, as he looked for a job, drew upon his savings until they were exhausted. Then he gave up his home and the little family either went to the home of the parents of husband or wife, or to the home of some other relative or friend. Those who had no relatives or friends willing to share their homes and food were helped by charitable organizations and churches. They did not try to live as you live. They fought merely to exist.

Unemployment assistance by Government is not a new question. As early as 1894, ex-President Benjamin Harrison demanded that the Federal Government set up a work program to fight unemployment. In a speech in February of that year he said:

"It is generally accepted now as a right principle that our city councils, our county commissioners, our State legislatures, should legislate to create work for the unemployed. The Republican theory has been all along that it was right to so legislate as to provide work, employment, comfort to the American workman. We believe that the National Government has a duty to perform in this respect as well as the city council and the board of county commissioners."

The principle of public work was first brought before the National Congress on January 21, 1919, by Senator Kenyon, of Iowa, who introduced a bill to create a United States Emergency Public Works Board. The bill was dropped after extensive hearings.

In 1921, at the instance of Mr. Hoover, then Secretary of Commerce, a conference on unemployment was held in Washington. As a result, bills were introduced in the Congress but nothing was accomplished.

Improved business conditions lessened the demand for Federal legislation, but from time to time during the years that followed, bills on the subject were introduced in the Congress. In 1929—our so-called boom year—the national income was $80,000,000,000 and yet we had 3,000,000 unemployed. With that national income today the number of unemployed would be greater than in 1929 because of the technological changes. The levying of a pay-roll tax tends to encourage these changes, because the tax levied is upon workers and not upon machines. Then, too, to an extent we did not anticipate in 1929, women have entered industry seeking an independence that comes with earned income.

At late as 1931, when Congress finally made an appropriation to the States to aid in caring for the unemployed, more than 100 mayors, in response to an inquiry, declared that Federal assistance was unnecessary. Can you conceive of such an answer being made at this time by a dozen mayors? Regardless of whether you believe it to be right or wrong, the fact is that this problem is here to stay.

You can gather some idea of the extent of our relief efforts from the fact that in the calendar year 1937 Federal and local governments spent for public works and relief grants of various kinds, excluding loans, the sum of $4,300,000,000. During the calendar year 1938 the total expenditure was greater. This sum was in excess of the total expenditures of the United States Government for all purposes in any year during peacetime prior to 1925. This vast sum has been spent through the W. P. A. and the P. W. A., the R. F. C. and the C. C. C., the F. H. A. and the N. Y. A., and all the other alphabetical agencies created at different times and with different objectives. The emergency required that they be created hurriedly and without relation to other agencies. There was no opportunity to view the whole picture and to coordinate the emergency efforts. But now the time has come to consider the whole question and standardize and coordinate the methods of assistance.

We should look first to unemployment insurance; second, to public assistance; and third, to public works.

Unemployment insurance is a shock absorber. To date we have not had an opportunity to fully test its effectiveness, but we have had an opportunity to discover the weaknesses of the existing system. The laws of the States vary. In all States there has been too much delay in the worker receiving his compensation benefits. In some cases he has given up in disgust. In other cases the worker at the end of a long period of waiting received a check for three or four dollars, or some other sum so inadequate that he immediately made application for a job on W. P. A. projects.

The bill I have introduced has for its objective the payment of more liberal benefits and the simplification of the law. It provides for a minimum payment of $5 per week; reduces to 1 week the period a man must wait for his benefits; provides that if he is eligible he will receive payments for at least 13 weeks if he continues unemployed, and by simplifying the method of determining eligibility avoids delay in making payments to workers and lessens the burden of reports by employers.

Let us see the effect of this change. Of the 52,000,000 gainfully employed people of the country 27,000,000 are now covered by this system. The only large groups not covered are the agricultural workers, the domestic workers and those employed in establishments having less than 8 employees. Approximately 60 percent of the industrial workers are covered. Therefore if there is a recession in business, 60 percent of the industrial workers who lose their jobs will after 1 week receive compensation benefits. Because of the increased benefits promptly paid they will not be trying to get on the relief rolls. It will improve the morale of the individual. The worker feels that he is entitled to unemployment compensation as a matter of right, because of his contribution through the pay roll tax. He prefers it to registering for relief. Relief means being subjected to investigation by social workers to determine his need, and once he has been placed upon the rolls, being the object of the jokes of the people who rejoice in ridiculing W. P. A. workers.

Today we have an Employment Service. While in many States it is in the same office with the Unemployment Insurance Bureau, the Employment Service is under the Labor Department, and the Unemployment Insurance Bureau is under the Social Security Board. Employees in these local offices receive funds from the different departments and from the State. The department that supplies the funds insists upon its right to issue regulations to control expenditures. Because no man can serve three masters, the local officials have a difficult time accounting to State officials and then to two departments in Washington.

I want these services consolidated in the States and consolidated in Washington. I want the worker, who has an opportunity, to walk in a door, file a claim for insurance, and in the same office register for a job, giving a statement of his work experience and the name of his employer. I want that official to get busy finding a job for the worker. Through the same office, the worker should apply for a job on public works when his benefits are exhausted and no private job is available. I have provided that the Employment Service be transferred to the Social Security Board because it administers unemployment compensation. However, as long as the two services are united I do not care in what department the consolidated service is placed, provided it is placed where it will command the confidence of employers. If an Employment Service does not command the confidence of employers, it cannot be of service to the man without a job.

The necessity for a minimum payment per week is that when a man does receive compensation benefits he should receive enough to remove him from the ranks of those seeking relief. The increase in the payments out of that particular fund is more than justified by the reduction it will permit in the cost of work projects where the annual average expenditure is $1,000 per man. That fund has a reserve collected before payments commenced. As long as the payments do not exceed the amounts collected each year, the increase is wise. It is better to pay to the unemployed worker a more liberal allowance out of this fund already collected from the people than to pay so small an amount that he refuses to accept it and goes to work projects for which additional taxes must be levied or money borrowed to be ultimately paid by taxes. We should either make it of service to the worker or abolish it and provide W. P. A. jobs for all unemployed.

The bill provides for more liberal payments to the aged. The payments now made by States run from $35 per month to $7.50 per month. It is useless for the Federal Government to tell some of the States that it will pay one-half of $30 if the State pays that much for old-age assistance. You might just as well offer to pay one-half of $100 per month. Many of the States simply have no means of raising revenue to make such payments. The Federal Government has usurped the field of taxation. Local governments must rely chiefly upon taxes levied upon real estate. It is poor judgment to lend money to a young worker to build a home and at the same time force the State governments to levy such high taxes upon real estate that the man cannot keep his home.

To remedy this condition, the bill provides that in a State where the per capita income is less than the average per capita income of the United States that the contribution by that State shall be reduced by the percentage by which its per capita income

is less than the average income. In return for this, however, it is provided that the average amount paid by a State, including its contribution from the Federal Government, shall not be less than $15 per month.

Payments to dependent children are likewise increased with the same provision as to the financially weak States. Through this provision for dependent children, mothers are cared for and are removed from the lists of those who now seek relief employment.

The old-age insurance benefits, which under the existing law would be first paid in 1942, would be paid in 1940. To the credit of this fund there is in the Treasury at least a billion dollars. It is collected from a pay-roll tax, which is a deflationary tax. If the payments are made earlier the increased purchasing power will lessen the deflationary influence. At the same time, if we make it possible for a man of 65 years to retire we provide a job for a younger man.

I have provided for a new category of grants to the States where a State provides assistance for handicapped persons who, because of physical or mental disability, cannot secure employment in private enterprise or on public works and who are not entitled to help under the provisions for old-age assistance or assistance to dependent children. The Federal Government would match on a 50-50 basis such expenditures by a State. In every State there are persons who are not sick enough to be entitled to hospitalization by a State or local government but who are not well enough to do efficient work. They just cannot get a job and cannot get assistance. In many instances sympathetic local officials charged with establishing the eligible list for W. P. A. workers place these people on rolls. When they are unable because of their physical or mental handicap to render efficient service they arouse the criticism we so often hear of W. P. A. workers. The fact that the States must put up 50 percent of the payments provides a brake against abuse of this system. Because it is restricted to the handicapped it does not place the Federal Government in the position of contributing to general relief.

There is no reason why the Employment Service, functioning in the same organization with the unemployment compensation, should not advise Washington, at least once a week, of the number of unemployed in the State. The Congress and the people will then know each week the number of unemployed in the Nation, with the exception of the unemployed domestic servants and agricultural workers. If in a particular section an increase in unemployment is noted for several weeks Government should come to the rescue of that section with public-work projects.

I provide for a public-works department. The establishment of such a department was urged last year by President Roosevelt, and, from time to time, has been urged by leaders of both political parties. By advance planning that department should have on hand approved plans for Federal projects and for non-Federal projects. When in a particular section it appears that unemployment is increasing, it should immediately give the order to start work upon these projects. Prompt action may prevent a general recession of business. If the recession spreads, then the public-works program should spread. The provision that in no case shall the contribution of the local government be less than one-third will tend to insure essential projects of value to the public.

The department could have a division in control of heavy construction which should be contract work, and a division for work which can be better and more quickly handled by force account. That question of organization must be left to the administrator. But our public works will be controlled in one department and not scattered all over the lot as at present. Today, when the official of a State or city comes to Washington, if he is interested in securing a United States post office or courthouse, he goes to the Treasury Department, to the Public Buildings Division. There the Government puts up 100 percent. If he does not get the courthouse, the official can take a taxicab to the Bureau of Public Roads and try to secure funds for a cement highway. There the projects are financed on a 50-50 basis. From there he can take a taxi over to P. W. A. to seek funds for a schoolhouse, and he is asked to put up 55 percent and get a grant of 45 percent. Then he can take a taxi over to W. P. A., and whatever he did not get elsewhere he can apply for there, where the average contribution is 17 percent and the Federal Government puts up 83 percent. My bill provides that they shall all be placed into one department. I want to stop competition for projects by Government departments and stop shopping for Federal funds by local officials. Today a local official will file with P. W. A. an application in which his government agrees to put up 55 percent of the cost of the project, at the same time advising W. P. A. that his county or city cannot put up more than the average of 17 percent required by W. P. A. Under the proposed plan this official will have to present his request for public works to one department and will have difficulty in reconciling such varying statements.

Heretofore when an appropriation has been made for public works, Congress has not legislated as to how it should be allotted as between States. That has been left to the discretion of the administrators. I believe that the time has come for the Congress to say how it shall be allotted. The appropriations for public roads are by law allotted to States upon a formula having three factors—population, area, and highway mileage. It has worked so satisfactorily that the subject is seldom discussed and is known to few people. It is done mathematically and is removed from political pressure. In the absence of a specific formula in the law, P. W. A. bases its allotments to States upon population and the number of persons in need of employment as determined by W. P. A. W. P. A. determines the number in need, the number certified by local agencies, the number receiving direct relief, general conditions, and the recommendations of State administrators. Officials of that organization believe it desirable that the law should provide a formula. I believe it essential. Under the present plan making the number certified by local officials the principal factor, we offer a premium to the community that pads the rolls and we penalize the community where public sentiment discourages such action. There is too much opportunity for the officials who make the loudest squawk to get the most money. It encourages in too many people the attitude that "as long as it is going to be spent, we might as well get our share."

The establishment of any formula is a difficult proposal. I have provided that the appropriation shall be allotted to the States on the basis of population and the number of unemployed, as determined by the Census Department and by the report of the Unemployment Service, which, working in connection with the Unemployment Compensation Bureau, should be able to give us fairly accurate figures. It will not be exact but will be a great improvement.

One objection urged against a public-works department is that it will provide for another member of the Cabinet. While I do not think it so all-important whether the organization be called a bureau with an administrator, or a department with a secretary at its head, I do not share the fear about there being another member of the President's Cabinet. In this bill there is no mention of a cabinet. In no act of Congress is there a mention of a cabinet. The President can select whom he pleases as members of his Cabinet. I think it was President Harding who first invited the Vice President to be a member of the President's Cabinet. Last year President Roosevelt made the Director of W. P. A. a member of his Cabinet. Therefore, for a year we have had as members of the Cabinet the head of P. W. A. and the head of W. P. A. If any person objects to the head of a department of public works being in the Cabinet, he should at least agree that when the W. P. A. and P. W. A. are combined, in this respect it will be just half as objectionable as it has been heretofcre.

Public-works projects are not as effective in agricultural sections because there are few suitable projects. In practice, it means almost exclusively road projects. It is not wise to encourage the removal of farm workers from rural sections to a city for employment upon projects in the city. The unemployed farm workers must be employed upon projects that will permit them to remain in the community where they reside. And effective assistance to these workers must come from other plans yet to be developed.

This is a statement of the purposes sought to be accomplished by the bill I have introduced. Because it affects the work of a number of departments, it is certain to arouse opposition. The officials of a Government department are just like all other human beings. Once granted power, they are, as a rule, opposed to any proposal that would possibly lessen their power or decrease their income. They fear any change. But this is not true of all officials. There are many patriotic public servants who forget selfish interests and consider only the welfare of the individual for whose benefit the organization is established. In this matter the assistance of pressure groups will be sought. For the opposition various reasons will be assigned. Before you concur, make certain that the opposition is based upon the welfare of those we seek to serve and not upon the fears of men who hold desirable appointments that they will lose power or pay. It is not the purpose of this bill to help Government officials. Its purpose is to help the American worker and the American taxpayer.

The vast majority of people make no effort to present their views to legislators. The pressure groups and the officeholders never fail to do so. However, from my long service in the Congress, I believe that the people share the views expressed by that great American, Champ Clark, when he made the statement which was later inscribed upon his tombstone:

"No man is fit to be a lawgiver for a mighty people who yields to the dictates and solicitations of the few who have access to his ear and is unmindful of the great multitude who may never hear his voice or look upon his face."

Peace and Plenty

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Monday, February 27), 1939

ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA, FEBRUARY 25, 1939

Mr. LODGE. Mr. President, last week the able Senator from Pennsylvania [Mr. DAVIS] delivered an address in North

Adams, Mass., on St. David's Day, February 25, and as it is a very thoughtful contribution, I ask unanimous consent that it be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Welsh spirit in America has been the essence of vitality. From this spirit has flowed a new quickening of life for the entire Nation, for although we have been comparatively few in numbers we have been steadfast in our ideals. We have been persistent in our loyalty to the blessed memory and tradition of our guiding star, St. David, and we have brought honor and glory to America in his long-respected name. What we have given America we have given freely and from the heart. We have claimed nothing in return but the advantages of liberty through which we have ever sought to add more and more to the noble stature of the American people.

Wherever Welshmen gather together the prevailing mood is that of poetry and music. We are forever under the sway of the songs and prayers we first heard from our blessed mothers. Naturally and intuitively we pray the Gorsedd prayer: "Grant, O God, Thy refuge; and in refuge, reason; and in reason, light; and in light, truth; and in truth, justice; and in justice, love; and in love, the love of God; and in the love of God, all blessedness; God in all goodness." This is the Welsh spirit in America which has bid us carry a song on our lips and in our hearts. We know within ourselves that when all else apparently fails there is One who never fails and in whom we shall ever find our lasting peace and deathless consolation.

I have made many trips back to the place of my birth, and it was with the same glad longing that I returned there this last December. I took advantage of this opportunity to visit my birthplace at Tredegar in South Wales. For it was but natural that I should desire to see again the little stone house in which I was born. I wanted also, if possible, to find the birth certificate of my father. The accuracy and permanence of the records of that little community are attested by the fact that I was able at this late date to find my father's birth certificate and to learn that he was born there nearly a century ago.

In my father's day the area surrounding Tredegar was one of the most prosperous and thriving industrial sections in all Great Britain. Millions of tons of coal were there extracted from the depths of the earth and factories and mills were humming. Now the mills are as quiet as the grave. Today several of the surrounding towns that were once thriving communities have been reduced to an economic and industrial no-man's land. In these towns there is desolation and despair born of long idleness and little hope for the future.

Out of this distressing scene I returned to Cardiff to participate in the dedication of the National Temple of Peace and Health at the invitation of its beneficent founder, Lord Davies. It is a beautiful building, inspiring to behold, and unique among all the structures of Great Britain, in that it is the first monument ever dedicated to the challenge of the future. Peace and health are still to be achieved, and this new temple is the beacon light summoning to new pioneer efforts for human happiness. The United States needs a similar inspiration. What could be more fruitful of recovery than a national movement in behalf of peace? What does more to create uncertainty than the constant fear of war? In these days of wars and rumors of war we may well be thankful that we are carrying on the Welsh tradition in America of peace and freedom. Ours is a peaceful nation, and we have literally demonstrated the words of the Scripture, "Nation shall no longer rise against nation; neither shall they learn war any more."

The most important issue before us today and in the days that are to come is the maintenance of peace. Confronted as we are by the pressure of many unsolved political and economic problems within our own borders, we cannot afford to be plunged into the maelstrom of war. America is moving forward valiantly in the interest of military, naval, and aerial defense, but we have yet to learn that the truest national defense comes not from new bombing planes or unique torpedo boats, but from economic and industrial efficiency. If our country is not economically efficient and industrially prepared, we shall lack the basic elements of national defense should we ever be forced to the test of a national emergency.

Long years ago I read a book by Dr. Orison Swett Marden entitled "Peace and Plenty," and the ideals then instilled from that reading have persisted to this day. Once again as a nation we are coming to understand the definite relationship which exists between scarcity and war on the one hand and abundance and peace on the other. We see the terrible devastation of war afflicting those parts of the world where men clamor by the millions for lack of enough food, raiment, and shelter. And we see peace prevail to the largest extent where men have the necessary elements of a decent human existence. We know that war has its economic causes, and we are not so blind as to attempt to bring peace without seeking to deal with the basic causes of war. This is of vital significance to our own land today. We must bring our best intelligence to this way of thought and life before it is too late.

America's unemployed millions is a constant mark of failure in any practical plan for national defense. If our millions of useful workers are not fully employed, they constitute in themselves a vast army of potential discontent from which may quickly come the incendiary passions of war. For men who are constructively busy at their tasks find contentment in peace and work. Moreover, a national emergency which might find us with unemployed millions would in itself cause us the greatest grief, because the lag of unemployment would handicap us just at the time when we should be free-handed and ready to move forward with industrial efficiency.

The Brookings Institution has estimated the direct loss of wealth since 1929 at $200,000,000,000, due to idle factories, idle farm lands, idle labor, and idle capital. This loss could have been avoided by the intelligent utilization of our natural, mechanical, and human resources. We possess the raw materials, the natural resources, the inventive genius and manpower, money, and supply of credit here in America to create and enjoy the greatest era of peace, prosperity, and happiness in the history of the world. Science and research are presenting limitless new frontiers for the production of increased wealth and opportunity which far surpass the opportunities which were offered by the vanished frontiers of bygone days. Our full productive capacity has increased to such an extent that in 1939 it is probably 50 percent greater than in 1929. We have learned how to produce; now we must devote equal intelligence to learn how to consume, so that a practical balance may be found between production and consumption. This is the war of peace and plenty.

For the first time in many years conditions are now developing which give a fair hope of economic recovery in this country. For the first time in this decade Congress shows a determined spirit to restore leadership to industry. This view is now reinforced by constructive statements from the executive committee of the American Federation of Labor. People as a whole are coming to see that the mere enactment of a law is not enough to make America productive, and in some instances the enactment of law may impede recovery. Obviously this is a time when every opportunity should be given business to go forward. Business should be given the green light to go ahead. We have been saying this for a long time. Now the prospect for a genuine advance looks favorable. It is time to quit grumbling and complaining and get ready for a prosperous spring and summer. Let us quit listening to people who try to frighten us into war, and let us settle down in the American way to put our people to work and make our factories and workshops hum. America wants peace and plenty.

The A. A. A. Program

EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Monday, February 27), 1939

STATEMENT ON THE PRESENT FARM ACT BY HANS LEUTZ, OF HEBRON, N. DAK.

Mr. FRAZIER. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a statement on the present Farm Act by Hans Leutz, of Hebron, N. Dak., a businessman and farmer of that State.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE A. A. A. PROGRAM—HOW MUCH AND STILL HOW LITTLE IT HAS DONE FOR AMERICA

The following table shows the yields on the harvested and seeded acreages of wheat in Mercer County, N. Dak., during the years 1929 to 1936, inclusive, and its value.

Year	Seeded acreage	Harvested acreage	Yield	Price to farmers	Total sale value of wheat less annual seed
				Cents	
1929	156,000	155,000	1,630,000	60	$885,000
1930	147,000	144,000	1,425,000	40	510,000
1931	138,000	62,000	180,000	50	15,000
1932	142,000	141,000	1,720,000	30	471,000
1933	146,000	140,000	603,000	75	340,000
1934	136,000	72,000	224,000	40	30,000
1935	144,000	127,000	935,000	30	235,000
1936	165,000	73,000	161,000	40	4,000
8 years	1,174,000	914,000	6,878,000		2,490,000

This table shows that the average wheat crop for the 8 years was worth about $310,000 to Mercer County farmers. The average Mercer County A. A. A. benefit payments from 1933 on were about $200,000 annually. The average wheat crop for the years in which A. A. A. payments were made, from 1933 to 1936, inclusive, was worth $150,000. This shows that the A. A. A. payments were worth to Mercer County, first to the farmers and next to the merchants,

$50,000 more annually than the whole wheat crop. In 1939 the A. A. A. payments will be considerably larger than ever before, or about $350,000 for 90 percent compliance. See how valuable the A. A. A. is, looking at it from an immediate needs viewpoint. Quite a hand-out.

Now, let us look at it from a more comprehensible point of view. Who pays for the A. A. A. hand-out? The answer is, we ourselves through our children, because this money comes from Federal bond issues which means our bond issues to pay; for we don't live long enough, so our children will have to foot the bill. Therefore we are now living off the earnings of our children.

Supposing now that Congress stops the A. A. A. today. What value would remain of the A. A. A.? A few dams which will wash out in a short time, a few acres of sweet clover, and the memory of a couple of millions headless piggies, of the biggest legal steal of processing taxes out of the farmers' and consumers' pockets, millions of pounds of good beef buried in dump grounds, millions of pounds of first-class cotton plowed under that the southern mule had too much sense to step on while filthy garments were gathered from attics for the needy, and not to forget the whole "gosh-darned foolishness," like Vice President GARNER expressed it, has still to be paid for; and remember, it will be paid for in the same manner as the soldiers' bonus will have to be paid for, namely, the soldiers getting $2,000,000,000, the bankers getting $3,000,000,000 in interest on the 20-year Federal bonds issued to pay the soldiers' bonus with, and the people have to pay for all the $5,000,000,000. At that rate, for each $200 the farmer gets as an A. A. A. payment the people will have to pay $500 in return, as with the soldiers' bonus. Do you still think you are getting something for nothing when you are getting an A. A. A. check? Draw your own conclusions. There will be nothing to show up for if the A. A. A. should stop now except the bill to pay.

Now, let us apply a sensible program, a cost-of-production program. In the discussion of the Senate bill 570, introduced by Senators FRAZIER, NYE, and others, it was the consensus of opinion of the administration and Congressmen that the cost of producing a bushel of wheat is about $2, figuring cost of production on the same basis that any other industry would figure the cost of production of their product.

Let us apply now our cost-of-production price of $2 a bushel to our Mercer County total production of 6,878,000 bushels for the 8 years and take off about 150,000 bushels for seed per year, or 1,200,000 bushels total seed requirements, which leaves 5,678,000 bushels for sale at $2, amounting to the grand total of $11,356,000. This is what we should have received, but what we did get was $2,490,000, a net loss to Mercer County farmers, and therefore also to Mercer County merchants, of $8,866,000. We got two and one-half million but should have had eleven and one-half million dollars. If we had received the missing $9,000,000, do you think we would still need relief; do you think we would still lose our farms? Nine million dollars loss in 8 years means one and one-eighth million dollars loss annually, which for about 1,200 Mercer County farmers means about $1,000 loss per farmer annually. With this $1,000 per farm per year we could pay our taxes up to date (no more headaches for legislators), modernize our homes, reequip our farms with new and modern machinery, modernize the roads to our farms, in other words, improve our standard of living immensely, and last, but not least, we would not have to keep our merchants and townspeople alive with relief checks.

In the discussion of the beforementioned Senate bill 570, the objection was raised that the price of a loaf of bread would be too high if wheat were $2 per bushel. This objection is justified if the speculation and profiteering in wheat from the minimum price of $2 on up is permitted to continue. This objection to the Senate bill 570 is not taken care of and must be remedied. The remedy is embodied in the Mercer County simplified soil-conservation, ever-normal granary, and crop-insurance plan. In this latter plan the soil-conservation association as a producers' cooperative sells their product, wheat, at cost-of-production price, no higher nor lower, direct to the consumer, the miller, which direct sale eliminates speculation and thereby ends the greatest curse that the American people have to suffer under.

This elimination of profiteering would enable consumers of bread to buy their loaves for about the same price as they have to pay now, even though the price of wheat be $2 per bushel. For verification look up the Agricultural Year Book of 1926, on page 818, for the average wheat price received by the producers during the years 1917 to 1920, inclusive, which was $2.04; then turn to page 824 to find the average retail price of a pound loaf of bread during the same 4 years, which was 10 cents per pound loaf or 15 cents for our usual pound and a half loaf when wheat was $2.04 a bushel. In 1938 wheat was 51 cents a bushel to the producer and a pound and a half loaf of bread cost the consumer 14 cents.

Now, take speculation out of the wheat market through the Mercer County simplified soil conservation ever normal granary and crop insurance plan by direct-to-consumer sale and we could have 13-cent loaves at $2 a bushel wheat.

During the above-mentioned 8 years the 1,200 Mercer County farmers received for the sale of their wheat crops a total of $2,490,000, which represents $250 per farmer per year. If the cost-of-production price of $2 per bushel had been paid for the same eight Mercer County wheat crops, the total amount received therefor would have been $11,356,000, which amounts to $1,250 per farm; and this could be accomplished without increasing the price to the consumer if the profiteering system would be abolished through the establishment of the producer cooperative to consumer cooperative trade commonwealth, as embodied in the Mercer County plan.

The Mercer County farmers receiving $1,250 instead of $250 each, annually, would have a fivefold purchasing power which would set the wheels of industry a humming and bring back prosperity.

T. V. A. Appropriation

EXTENSION OF REMARKS
OF
HON. CLARENCE W. TURNER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1939

RESOLUTION OF GENERAL ASSEMBLY OF THE STATE OF TENNESSEE

Mr. TURNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution passed by the General Assembly of the State of Tennessee:

Senate Joint Resolution 14

Whereas the people of Tennessee have on several occasions made expressions of being wholeheartedly in accord with the developments and the work being carried on by the Tennessee Valley Authority, these developments materially aiding in the program of national defense, cheap hydroelectric power to homes, farms, and businesses, and to matters relating to agriculture; and

Whereas, the National Congress has stricken approximately $17,000,000 in appropriations for the Tennessee Valley Authority from its appropriation bill for the next year; and

Whereas the development as planned and which is being so efficiently and successfully executed by the Tennessee Valley Authority has already meant more and will mean more to the people of Tennessee and the South generally than any project we have had to make this section with its favorable climatic conditions, unlimited natural resources, and cheap hydroelectric power the industrial mecca of our Nation: Therefore, be it

Resolved, That we, the members of the Senate and House of Representatives of the State of Tennessee, now in session at Nashville, commend our United States Senators, the Honorable KENNETH D. MCKELLAR and the Honorable TOM STEWART, in their efforts to restore an adequate appropriation for the Tennessee Valley Authority, that this program may be carried on to a successful conclusion; and be it further

Resolved, That we urge every Tennessee Member of Congress to join the two Senators from Tennessee in this fight; and be it further

Resolved, That a copy of this resolution be spread on record upon the journal in the senate and the house of representatives. The clerk in the senate is instructed to forward a copy of this resolution to each of our United States Senators and the Congressmen from Tennessee which will carry the seal of the State.

Communist Aliens

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1939

RADIO ADDRESS BY HON. J. PARNELL THOMAS, OF NEW JERSEY, FEBRUARY 19, 1939

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio station WHBI, Newark, N. J., February 19, 1939:

After serving as a member of the Dies committee, a special committee created by the Congress of the United States to investigate un-American activities, and after taking into consideration all of the testimony presented to the Dies committee, I unhesitatingly declare that subversive groups have become a real menace to the welfare of this Nation.

The testimony presented to our committee by outstanding national, civic, patriotic, veteran, labor, religious, and other organizations, and by many individuals, by our own investigators, all points to the increased activity, to the ruthlessness and growth of

many un-American movements in this Nation in the past few years. The radical press and the Communist front organizations have, of course, attempted to smear both the committee members and the committee witnesses and even the testimony presented under oath. At the same time, no one, not even America's No. 1 radical columnist, can deny that in the 4,000 pages of testimony taken down at the committee hearings there is not an enormous amount of factual information relating to the growth of communism, what it stands for, its Moscow control, its cowardly and sneaking leaders, its so-called front organizations, and the recent inroads it has made in our schools, churches, political parties, labor unions, and even in many of our Government agencies.

Yet one wonders why communism ever makes any inroads into anything, for if there ever was a doctrine that is harmful to free people and independent institutions, it is communism. It is not alone the antithesis of individual liberty, but it is the watchword for economic and financial distress. It is brutal, inhuman, and ungodly. It is definitely antireligious. From a government standpoint, it is a colossal failure.

Still there are individuals and groups of individuals living in this country today who, if given their way, would exchange our liberties and our democratic form of representative constitutional government for the comintern. Irrespective of the failure of communism abroad, they attempt by devious methods, mostly foul, to bring about a change for us; they would tear down that which it has taken 150 years to build, in order that they might cloak us under some form of Marxian, Leninian, or Stalinian philosophy.

To my way of thinking these individuals and groups of individuals bear the same relationship to our institutions as termites do to a frame house. They are un-American human termites. Moreover, frequently they are not even citizens, and in many cases they reside here not because of any legal status but because our Government is following a jellyfish attitude in its enforcement of existing immigration statutes.

Were we to thoroughly investigate the present status of immigration-law enforcement, my belief is that we would uncover untold numbers of immigration violations, most of which would undoubtedly show that the act of October 16, 1918, as amended by the act of June 5, 1920, in that aliens who believe in and teach the overthrow by force and violence of the Government of the United States; who are members of organizations, associations, societies, or groups that believe in, advise, advocate, and teach the overthrow by force and violence of the Government of the United States; who are members of organizations which publish and circulate written or printed matter advising the overthrow of the Government of the United States, are deportable, has been violated.

Yet in the face of a vast amount of evidence in the possession of the Labor Department clearly pointing to the anarchistic beliefs and teachings of alien Communists residing within our borders, the Department of Labor not only refuses to assume further deportation proceedings against unwelcome Communist aliens but it causes the appeal of the so-called Strecker case, an admittedly weak case, to the Supreme Court as an alibi for not proceeding further with the deportation of Harry Bridges and other Communist aliens who have been shown without a semblance of a doubt by both subordinate immigration officials and the courts to reside in the United States illegally.

And also in the face of universal public condemnation of such wishy-washy enforcement of the existing immigration laws, Frances Perkins, Secretary of Labor, and other civil officials in the Department of Labor choose to coddle these Communists by using the Strecker case as a means of delay. It is my opinion that the Strecker case was a "sell-out," for by appealing it, to use the legal vernacular, the Secretary of Labor sold out the United States to save Harry Bridges, a Communist alien.

In addition, Frances Perkins and other immigration and Labor Department officials have willfully violated section 156, title VIII of the United States Code by failing to enforce that part of the Code which states that "pending the final disposal of a case of any alien so taken into custody he may be released under a bond with security approved by the Secretary of Labor conditioned that such alien shall be produced when required for hearing or hearings in regard to the charge upon which he has been taken into custody and is deportable if he shall be found to be unlawfully within the United States." Unlike other Communist aliens, however, who have been released only on bond, Harry Bridges is allowed to go scot free on his own recognizance.

The Secretary of Labor has also declared defiance of the will of Congress by admitting aliens who are notorious advocates of the overthrow of all existing forms of Government outside of Soviet Russia. For example, Emma Goldman who previously had actually been deported from the United States by reason of her subversive activities. Among others were Harry Barbusse, Tom Mann, and Willi Munsenberg, some of the most notorious revolutionists the world has ever known.

Likewise, the Secretary of Labor, contrary to the immigration statutes of the United States, suspended action on warrants for deportation in thousands of cases. Yet the late Commissioner of Immigration, Col. Daniel McCormick once testified: "I was informed by the attorneys of the Department that we almost certainly have no discretionary power with reference to warrants of deportation." Yet, in the face of the statutes which are so clear, in the face of the mandate of Congress, and in the face of the apparent will of the people, the incumbent Secretary of Labor endeavors to replace our immigration laws with some sort of philosophical ideology.

Recently Frances Perkins, in a public statement made in defense of herself and two associates whom I have already charged before the House of Representatives as having conspired to defraud the Government of the United States by failing to enforce the immigration laws, gave an unmistakable inkling into her peculiar philosophy when she said, "I also wish to emphasize that I am not in accord with the principles of the Communist Party. I do not share the economic or political views of the Communists. I regard many of their tactics as an impediment to the efficient functioning of the Government as well as of society at large. I find in their insistence upon party authority and their emphasis on class struggle, their conception of a dictatorship of one class and their oft-repeated contempt for religion the negation of that individual liberty and that development of the human personality for which this country and every democracy must stand."

The significance of the foregoing quotation can only be grasped by an analysis of the words which she uses. She does not say that she is opposed to the Communist Party, but she says that "I am not in accord with the principles of the Communist Party." She does not say that she is opposed to their economic and political views, but she says, "I regard many of their tactics as an impediment to the efficient functioning of the Government as well as of society at large." And Miss Perkins finds their views on "party authority, class struggles, conception of a dictatorship of one class and their oft-repeated contempt for religion" not something that is obnoxious to her but as "the negation of that individual liberty and that development of the human personality for which this country and every democracy must stand."

In other words, Miss Perkins could not have expressed her opposition to communism in more kindly phraseology.

In view of this sympathetic attitude which the Secretary of Labor assumes toward Communist aliens is it any wonder that the Department of Labor has condoned delay after delay in the deportation of such well-known alien radicals as Harry Bridges, Strecker, and others? Is it any wonder that police officials from all over the United States have testified before the Dies committee as to derelictions on the part of the Department of Labor? At this point it may interest you to know that within the past week I have received from various police departments throughout the country case histories of many Communist aliens who were remanded by police officials, turned over to the proper Federal immigration authorities, but only to be later released for unknown reasons by the immigration authorities. Is it any wonder, also, that with such an attitude that over 200 pages of the hearings of the Dies committee should be devoted to immigration matters?

What can we Americans expect from our Department of Labor when the head of the Department likewise refers so generously to these Communist aliens as, and I again quote from Frances Perkins' recent defense statement, "Stranger within our gates."

But, aside from my own personal views relating to the failure of the Department of Labor to enforce immigration laws by deporting Communist aliens who believe in and advocate the overthrow of our Government, I am convinced that the people of this Nation, you people who are listening to me today, are also alarmed over the encouragement which the Department of Labor is now giving to undesirable Communist aliens. From the vast amount of mail coming to me at Washington, I am further convinced that you are not only unalterably opposed to such a shoddy and dilatory enforcement of our immigration laws, but that you would like to do your bit to correct such a deplorable situation, and my friends—this is what you can do—you can express in a letter to your own Congressman and to the Judiciary Committee of the House of Representatives now sitting at Washington, just the way you feel about it. Tell them, if you care to, that you want a complete investigation of the Labor Department and be sure and let them know also that you are unequivocally opposed to the encroachment of communism in our American institutions.

By so writing you will express to the Congress of the United States a mandate that it not only cleanse the Department of Labor but that it take every possible means to eliminate an unhealthy cancerous sore which has been for too long now eating into the body politic of American democracy.

Aviation Day in America

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

STATEMENT BY COL. J. E. MYERS, RETIRED ARMY OFFICER

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by

Col. J. E. Myers, a retired officer of the Army, favoring the celebration of National Aviation Day:

When Italian children 5 years of age and up are taught air-mindedness in their schools, and Russian youths are being trained in parachute jumping in mass formations, we can begin to realize how far back we are in the march of time in the matter of junior aeronautics.

To start a Nation-wide campaign for "youth education in aviation," the slogan of our association, a suitable date must be selected for the celebration of a national aviation day and the school children encouraged to attend and compete in model airplane contests and to take other active parts in the exercises of the day.

WOULD NOT BE LEGAL HOLIDAY

It may be maintained that we already have too many holidays, but Aviation Day, like Army Day, would not be a legal holiday and I quote an old admiral's retort, when asked to become a member of the Aviation Day Association: "Hum-hum, what, another day? Why not have a submarine day, a cavalry day, and a field-artillery day?" To which I replied, "Why, Admiral, that would be fine, but you see this is just a little bit different. In the beginning the good Lord created the land, the sea, and the air, and when man conquered the land and the sea we celebrated these occasions by an Army Day and a Navy Day, and now, since we have conquered the air I believe He wants us to have an Aviation Day."

The proper time has come and we are going to have an Aviation Day, at least this is the general consensus of opinion of practically every Member of both Houses of Congress as well as many distinguished persons in the United States, including Col. John H. Jouett, president of the Aeronautical Chamber of Commerce of America; Mr. Jesse Jones; Mayor La Guardia; the president of the Aluminum Co. of America; Lt. Gen. R. L. Bullard; and Mr. Bernarr Macfadden, both the latter being honorary directors of the Aviation Defense Association; and 162 other prominent executives of the Nation who enthusiastically endorse the celebration of an Aviation Day on August 19 of each year.

The Veterans of Foreign Wars and the American Legion of the District of Columbia, the American War Mothers, the Quartermaster Association, and the United States Flag Association all stand ready to support this measure.

To fix a date for such a portentous occasion certain requirements must be fulfilled if the celebrations on Aviation Day are to result in producing that state of air-mindedness among both the adults and youth of our Nation necessary in the establishment of the means for the future peace and safety of our country.

DATE IS APPROPRIATE

The requirements for setting such a date are, first, the date set must be at such a time when the weather conditions are most suitable for flying and for the comfort and safety of the participants as well as the spectators. Second, since a legal holiday would not pass in Congress, the date established must be during the period of school vacation. Third, the date set should not be near any other national commemorative legal or other holiday. Fourth, the date set should have the historical background of some nationally known figure or event that stands out preeminently in the minds of our people and the world in aeronautical history.

Dr. Orville Wright's birthday is on August 19 and this date was selected by the Aviation Defense Association on which to celebrate an annual Aviation Day in his honor and in the memory of his brother Wilbur Wright, "the fathers of flight" as well as all our air heroes, and no other date would meet all the requirements.

Among other dates that have been considered for Aviation Day are May 28 (celebrated in 1937 with poor national attendance), which is only 3 days before Decoration Day; April 16, Mr. Wilbur Wright's birthday, which is 10 days after the celebration of Army Day on April 6 of each year; and December 17, the date of the first flight, which is near the holidays and impossible on account of weather conditions.

All of the above dates occur during school session and would for this reason be objectionable.

It is only fitting and proper that these great men of science, Wilbur and Orville Wright, who have given to the world a weapon so terrible in its potentialities that nations hesitate to make war and which may even lead to future peace on earth, should be honored not only as the greatest Americans of our time but as men that stand out above all others, revered and loved by all people of the world today.

Truly every patriotic citizen should be deeply grateful to these two brothers who so bravely faced and solved the dream of the ages and which will result in the protection of our country from any foreign invaders.

It was a happy occasion, indeed, that Dr. Orville Wright, the first man to successfully fly a heavier-than-air machine, was born on August 19, as this date meets all the requirements set forth above which will allow national and international celebrations to be brought to successful and appropriate conclusions.

WESTOVER IS REMEMBERED

I might add that it is through Maj. Gen. Oscar Westover, that great hero who gave his life for his country, this national celebration will be made possible. It was General Westover's last expressed wishes to me that Aviation Day be observed on August 19 of each year, and I quote from his letter of June 20, 1938: "The date you suggest has two distinct advantages in that it honors the 'Fathers of Flight' and it occurs at a season of the year when the weather is generally favorable to flying and therefore to any ceremonies which might be held annually to commemorate the date."

Senate Joint Resolution 53 and House Joint Resolution 134, and as introduced by Senator CLAUDE PEPPER, Hon. J. H. PETERSON and Hon. JENNINGS RANDOLPH, respectively, in this congressional session, are all identical bills to create a national celebration of an Aviation Day on August 19 of each year, in which the President of the United States may call upon the Army and Navy "to assist civic bodies in appropriate celebration" of the day.

These resolutions will be presented to Congress in the very near future and, like all great measures, meet with some opposition from organizations which are either entirely unfamiliar with our national-defense requirements or they have some ulterior motives not apparent to the average patriotic citizen.

This measure of preparedness must and will pass Congress as soon as possible, and we call upon every man, woman, and child to give their full support to this legislation so vital to our peace and safety and to the welfare of mankind.

Write, write, write—and if you can't write, telegraph—your Representatives in Washington to bring this important matter before Congress now, so that we may have time to prepare for the World Fair events and the celebrations throughout the land commemorating our first permanent Aviation Day in honor of our "Fathers of Flight" on August 19, 1939.

J. E. MYERS,
Colonel, United States Army, Retired,
National Secretary, Aviation Defense
Association, Washington, D. C.

How to Help the Farmers, Consumers, Wage Earners, and the Country by Passing H. R. 1

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

Mr. PATMAN. Mr. Speaker, the President of the United States, the Honorable Franklin D. Roosevelt, visited the Grand Coulee Dam in the fall of 1937. In his speech on October 21, 1937, at Grand Coulee Dam, he stated:

PRESIDENT COMMENTS ON BAD EFFECT OF CONDITIONS THAT INTERSTATE CHAIN STORES WILL CAUSE

This concentration of business accounts in large part for the lost influence of big business, and its press, and its legal lackeys, and its business organizations, in legislative and election struggles. Forty years ago big business had as its ally in every town and settlement the local merchant, local manufacturer, local banker, and local utility man. Each was a leading citizen, on whom many depended for information and leadership as well as for credit and jobs. This type of man has largely gone. Why he has gone makes little difference.

In the place of this strong and leading individual is a managing clerk at the chain store who cannot make a credit sale, and a local superintendent for the factory. The local bank is closed and nobody who has more authority than a bill collector represents the utility in most communities. Big business has found it to its advantage, to rotate even those men so that no one of them is left in the community long enough to get his roots established or to really become a part of the life about him, to become a property owner, or to be regarded as a fellow citizen by those among whom he dwells as a representative of an absentee control.

Thus, big business has destroyed its own defense, it has devoured its own young. The small-business man who used to be our most ardent capitalist and the most uncompromising of conservatives has been crushed, or merged, or consolidated, or otherwise retired. This has brought about a subtle change not only in economic life, but in social and political life as well. There are values in local independence and responsibility which are being sacrificed to balance-sheet values.

The process seems not to be discernible to, or appreciated by the people who dominate the large industries in our great cities. It is plainly discernible to those who live in smaller cities and see the life of the community as a whole.

Many other excerpts from speeches of the President favorable to independent business may be found in a speech I delivered in the House, February 14, 1938.

VICE PRESIDENT GARNER LAUDS LOCAL OWNERSHIP

The Washington, D. C., Times-Herald, Sunday, February 5, 1939, contains a direct quotation from the Vice President

of the United States, the Honorable JOHN N. GARNER, as follows:

I have always believed that in any city, town, or village it is best for the community to have the owner of a newspaper live in the city where it is published. This is true of any organ of public opinion. It is always better than so-called foreign ownership.

Although this statement had reference to the ownership of a local daily paper by local people, it is to be observed that the principle is very much the same when applied to absentee control of any business that is injurious to local community welfare.

VIEWS OF SECRETARY HOPKINS

Mr. Harry Hopkins, new Secretary of Commerce, in a speech at Des Moines, Iowa, February 24, 1939, stated:

There can be no solution to our problem of unemployment in the cities until the farmer regains his proper economic position in relation to the rest of the Nation's population.

Mr. Hopkins said further:

Preservation of the American system of free enterprise—

He said emphatically—

no longer is the American dream, but is the American imperative.

In regard to small business enterprises, Mr. Hopkins outlined his policy as Secretary of Commerce in this speech, as follows:

Certain types of enterprise need sympathetic aid by the Government. For many years we thought of steel as being a most reliable barometer of business conditions. Today we have what is perhaps a better guide—the operations of the so-called small businessmen. In cities and towns and villages the hundreds of thousands of small enterprises constitute the very backbone of our national, industrial, and economic life.

Upon the combined thinking and planning and action of those men depends to a large degree the prosperity and welfare of America. It is upon their vision and ingenuity and confidence and their ability to merchandise and promote and sell that much of our manufacturing, mining, and transportation depends. Their operations affect the number of workers which any manufacturer can employ. Therefore, one of my principal interests as Secretary of Commerce will be to see that the resources of the Government are particularly directed toward aiding these small enterprises.

I do not believe that Mr. Hopkins can be successful in his very worthy undertaking to promote the interest of small enterprises unless Congress cooperates with him by passing a law to restrict the national corporate chains that are using profits made elsewhere to destroy the merchants in a local community.

TEXT OF BILL

H. R. 1, a bill providing for an excise tax on retail stores, introduced in the House of Representatives on January 3, 1939, and referred to the Committee on Ways and Means, is as follows:

(a) On and after the effective date of this act every person opening, establishing, operating, or maintaining under the same general management, supervision, ownership, or control 10 or more retail stores shall pay annually an excise tax for each fiscal year ending June 30, measured by the number of retail stores so opened, established, operated, or maintained during such fiscal year as follows, except as provided in subsection (b) hereof:

For each store not in excess of 25, $50 a store;
For each additional store not in excess of 25, $100 a store;
For each additional store not in excess of 50, $200 a store;
For each additional store not in excess of 75, $250 a store;
For each additional store not in excess of 100, $300 a store;
For each additional store not in excess of 200, $450 a store;
For each additional store not in excess of 300, $600 a store;
For each additional store not in excess of 400, $750 a store;
For each additional store not in excess of 500, $900 a store;
For each additional store in excess of 500, $1,000 a store.

(b) For the first fiscal year beginning on July 1 following the date of enactment of this act, the tax under this section shall be one-half of the amount determined in accordance with subsection (a) hereof; and for the second fiscal year, the tax shall be three-fourths of the amount determined in accordance with such subsection.

SEC. 2. If any person subject to the tax imposed by section 1 opens, establishes, operates, or maintains during the taxable year retail stores under the same general management, supervision, ownership, or control located in more than one State, the tax imposed by section 1 shall be multiplied by the number of States (including the District of Columbia) in which any of such stores are located except that for the first fiscal year beginning on July 1 following the date of enactment of this act the tax shall be one-fourth of 1 percent of the amount determined in accordance with the preceding provision hereof and that for the second fiscal year the tax shall be one-half of 1 percent of the amount determined in accordance with such provision. If this section or any provision or application thereof shall be held invalid the validity or application of section 1 shall not be affected thereby.

SEC. 3. (a) [Administrative only.]

SEC. 4. When used in this act—

(a) The term "person" shall include any individual, corporation, partnership, association, joint stock company, or business trust, however organized and whether or not incorporated, but does not include any such person if during the taxable year the gross business of the retail stores opened, established, operated, or maintained by it does not exceed $250,000, or in case of the taxable period between the effective date and July 1 following, does not exceed such part of $250,000 as such period bears to a year.

(b) The term "retail store" shall mean and include any store or mercantile establishment in which goods, wares, or merchandise of any kind or description are sold at retail; but said term shall not include any filling station engaged primarily in the sale or distribution of petroleum products and not engaged in the sale or distribution of automobile tires or tubes, any establishment or facility maintained by a common carrier as part of its transportation facilities primarily for furnishing meals or other commodities to its passengers and employees, or any branch office maintained by a newspaper for the distribution of its papers or for taking subscriptions or advertisements therefor, and shall not include individually owned stores, whose revenues in part or in whole are not made available to or inure to the immediate or ultimate benefit of any other individual store, store owner, or any other person, firm, or corporation operating a retail store as herein defined.

(c) The term "under the same general management, supervision, ownership, or control" shall include control or direction by one management or association of ultimate management, whether by legal control, direct or indirect, or by actual control, direct or indirect, through ownership or control of evidences of indebtedness, physical property, or other assets, through contract, lease, or agency arrangements, through interlocking directors or officers, or through any other means.

(d) [Administrative only.]

SEC. 5. If any provision of this act, or the application thereof to any person or circumstance, is held invalid, the remainder of the act, and the application of such provision to other persons or circumstances, shall not be affected thereby.

OBJECT AND PURPOSES OF H. R. 1

1. Question. What is the object of H. R. 1, the bill providing for a Federal tax on retail chain stores?

Answer. The object is to curb a few large interstate chains that are attempting to get control of retail distribution in this country.

2. Question. What does the bill provide in regard to taxes?

Answer. The first 9 stores in any chain are exempt. The amount of tax is graduated from $50 per store up to $1,000 per store where there are over 500 in a chain. The tax, after 2 years, will be multiplied by the number of stores in which a chain operates. This will make it prohibitive for a concern to operate in a very large area, but will permit one concern to operate a comparatively large number of stores profitably in one State, if not prevented by State legislation.

3. Question. Why propose a tax for the purpose of curbing interstate chains? Why not offer a bill to prohibit their expansion in more than one State?

Answer. Such a proposal was considered. Some of the best lawyers in this country said it would not be constitutional if enacted. Therefore, a bill to tax was agreed upon for the purpose of reaching the same objective. No one can doubt the constitutionality of a law thus using the taxing power of the Government.

4. Question. Is this an abuse of the taxing power of Congress?

Answer. No. The Republicans as well as the Democrats have in the past used the taxing power as a vehicle to reach a worthy objective.

5. Question. When does the tax become effective under the bill?

Answer. July 1, following date of passage. Section 1 of the bill provides that it shall apply to concerns owning or controlling 10 or more retail stores.

For the first year beginning on July 1, following the enactment, the tax under this section shall be one-half the amount determined and for the second year three-fourths of the amount.

Section 2 of the bill provides that the tax shall be multiplied by the number of States in which the stores are lo-

cated, except for the first year the tax shall only be one-fourth of 1 percent of the amount, and the second year shall be one-half of 1 percent of the amount.

Therefore, any concern having so many stores in so many States that they cannot be profitably operated under this law will have 2 years in which to dispose of them. At the same time a low tax is provided for the first 2 years, in order that any concern expecting to contest the law will be induced to do so immediately after its passage.

6. Question. How will the tax be collected?

Answer. By the Bureau of Internal Revenue, and usual penalties provided in the event of failure to pay.

EXEMPTIONS

7. Question. What are the exemptions under this proposed bill, H. R. 1, if any?

Answer. (a) It will not apply to any concern, regardless of the number of stores being operated, if the gross business does not exceed $250,000 a year.

(b) It does not include filling stations engaged primarily in the sale and distribution of petroleum products, if not engaged in the sale or distribution of automobile tires and tubes.

(c) It does not include any establishment maintained by a common carrier, such as restaurants and newsstands for the convenience of its customers.

(d) It will not include individually owned stores, whose revenues, in part or in whole, are not made available to or inure to the immediate benefit of any other individual store or concern operating a retail store. This will exempt voluntary and cooperative stores that are individually owned.

8. Question. Why were these particular exemptions allowed and others not allowed?

Answer. The laws of the different States that provide taxes against chain stores were carefully examined, and the exemptions contained in this bill are the usual exemptions contained in State laws.

9. Question. Will the bill be amended or passed as it is?

Answer. Every major proposal is seriously considered by a committee in the House and in the Senate as well as on the floors of both the House and Senate before it is finally passed and presented to the President of the United States for approval. Evidently there will be many amendments considered. As to whether or not they will be adopted will depend upon the will of a majority of the Members of Congress.

STATUS OF BILL

10. Question. What is the status of the bill now?

Answer. It has been referred to the Committee on Ways and Means of the House. Hearings will be requested as soon as this question can be presented to and discussed by a fair percentage of the people of the Nation. The hearings will doubtless furnish much additional information for discussion, and the success or failure of the bill will depend on public sentiment. If the people want it, they will likely get it enacted into law. It is evident that the people are more disturbed over this problem than ever before. If such intense interest continues and continues to grow, the bill will undoubtedly become a law in a reasonable time.

WHY WHOLESALERS NOT INCLUDED

11. Question. Why is the bill confined to retail stores and does not include wholesalers and manufacturers?

Answer. Local retail stores can and will be operated by local people. We know retailing is a business that local capital and local people within a comparatively small area will operate, if allowed to do so. The same is true of local banking. At this time, a bank cannot own a branch out of the State in which it operates. It cannot be said that local people can always conduct a larger business than retail distribution, such as wholesaling or manufacturing; therefore, we were desirous of confining the bill only to such lines of business as we know local people will conduct and can conduct. The committee of the Members of Congress, who are sponsoring this bill, decided not to include wholesalers and manufacturers in the bill presented to the House of Representatives, although it will apply to any retail stores owned by them. The bill will not apply to the wholesale houses owned by A. & P. or any other concern. Consideration was given to including not only wholesalers and manufacturers of goods and merchandise but multiple ownership of newspapers and radio stations and picture shows, but decision was made to confine it to a business we knew local people could and would operate if not prevented by absentee owners and, therefore, we restricted it to retail business. Many large wholesale concerns own retail outlets and this bill will apply to such units.

Newspapers, radio, and the news reel represent means of communication and should be considered as such in connection with any legislative proposal.

12. Question. What concerns or establishments are included in this bill?

Answer. Only those retail stores as defined in the bill to mean and include any store or mercantile establishment in which goods, wares, or merchandise of any kind and description are sold at retail. This is subject, of course, to the exemptions outlined in the bill.

DUMMY ORGANIZATIONS OUTLAWED

13. Question. Will a concern operating in many States be able to break up into State units and continue to operate from one office through a holding company or through dummy organizations?

Answer. No. This is provided against in the bill. If they should attempt to evade the law in this way and retain any control or management or direction whatsoever, I am sure they would be considered subject to the tax as though they had not broken up. The bill provides that if a concern has any control, direct or indirect, through contract, lease, or agency arrangement, through interlocking directors or officers, or through any other means, the concern will be considered as one and be subject to the tax.

HUGE PROFITS OF A. & P.

14. Question. It is claimed by the owners of the Atlantic & Pacific Tea Co. that this company has been earning a very small amount on its investment. Is this correct?

Answer. The figures disclosing this information are available for the period from 1929 to 1937, inclusive. It will be discovered that during some of the hardest years the people of this country have suffered this concern made its greatest profits, 1 year exceeding $30,000,000, which is in excess of 22 percent on the money invested by its stockholders, including capital and surplus.

The following table, which shows the earnings of the Atlantic & Pacific Tea Co. and invested capital for the years indicated, is self-explanatory:

	Invested capital	Net income
1929	$118,659,000	$26,220,000
1930	136,689,000	30,743,000
1931	150,573,000	29,703,000
1932	156,821,000	22,733,000
1933	160,867,000	20,478,000
1934	161,104,000	16,709,000
1935	161,219,000	16,593,000
1936	161,384,000	17,685,000
1937	157,494,000	9,119,000

These figures were obtained from one of the prominent publishing companies who publish stock reports.

It will be noticed that the profits of A. & P. were reduced 50 percent during the first effective year of the Robinson-Patman Act. A congressional committee of which I was chairman disclosed that this concern was receiving more than $8,000,000 a year in secret and confidential rebates from manufacturers and producers that it was not entitled to receive. The passage of the Robinson-Patman Act deprived it of many of its chiseling tactics, which enabled it to obtain more than $8,000,000 a year that it was not entitled to receive, and which enabled it unfairly to destroy many independent merchants. Having lost this enormous sum through the Robinson-Patman Act, it found its net profits were reduced by almost that exact amount the first full year following enactment.

15. Question. The interstate chains claim that if they are forced out of business almost a million employees will lose their jobs. Is this statement correct?

Answer. The number of employees mentioned includes all chains. Many of them will not be affected by this bill, and only about one-third of 1 percent of all the chains will be seriously affected and this one-third of 1 percent will be able to operate a comparatively large number of stores in one State, but cannot profitably operate in more than one State, if this bill becomes a law. Most of the employees will become store owners or employees of local owners. The chains were rather ruthless in putting independent merchants out of jobs and their employees as well and did not seem to be concerned about the unemployment problem at that time.

OPPORTUNITIES FOR YOUNG AT STAKE

16. Question. Why is it said that large retail chains destroy opportunities for young folks?

Answer. The W. P. A. reported January 1, 1939, that there were too many young persons on American farms to support themselves comfortably in agricultural pursuits; that between 1920 and 1930 2,000,000 young persons were forced to migrate from the farms to the city to find employment; that since 1930 the migration has continued and the number will reach in excess of 1,000,000 more before 1940.

Since young people cannot make a living on the farm and millions of them are going to the cities every few years, they will either have to find employment in the cities, or this country will have a tremendous relief problem. The sad part is the hopes and aspirations of these young people will be crushed when they find a few people in this great country controlling practically all privileges and opportunities, and that it will be impossible for them to start out in business for themselves.

ARE INDEPENDENTS INCREASING AND CHAINS DECREASING?

17. Question. It is claimed that the number of independent stores is increasing while the number of chain stores is decreasing. Is this true?

Answer. That contention is based upon census figures for 1933 and 1935. These figures include all retail stores, including liquor stores, which cannot be conducted by a chain in many of the States, including New York and the District of Columbia. The New York law, for instance, forbids any liquor concern from operating more than one liquor store. The same is true of the law that Congress passed for the District of Columbia. The Congress and many of the legislatures realized when prohibition was repealed that a few concerns should not obtain control of the distribution of liquor, and, therefore, they guarded against it by preventing any concern from operating more than one liquor store. If that contention is sound in the liquor business to prevent monopoly, why is it not also sound in any other retail business?

Further, the figures relied upon by those making this contention include all retail outlets, including those in which chain stores are not engaged, and they include areas in the United States where chain stores are not operating. The only fair analysis of this question will include the number of retail stores owned by chains in the areas where they operate and the number of independents engaged in this same business in these particular areas. The volume of business by each should also be taken into consideration.

In 13 selected cities, according to the last Government census, chains—food chains—had 19 percent of the retail outlets, but did 46 percent of all the retail food business. In the combination food store—groceries and meats—they did 51.5 percent of all the retail sales in these cities. These percentages ranged from 23.3 percent in Milwaukee to 68.9 percent in New York City—an almost 70-percent control of the combination store market by chains.

City	Percent of stores (number)	Percent of business total	Combination stores (percent)
Cleveland, Ohio	24.6	60.2	52.0
Detroit, Mich	25.0	58.7	45.3
Chicago, Ill	17.2	56.8	49.8
Boston, Mass	29.6	53.4	55.8
Pittsburgh, Pa	20.1	50.2	48.3
Los Angeles, Calif	14.8	49.4	62.8
Philadelphia, Pa	18.2	48.5	54.1
Buffalo, N. Y	16.0	47.8	56.5
New York City	20.5	41.2	68.9
Baltimore, Md	12.5	36.1	31.5
San Francisco, Calif	17.2	25.0	61.1
St. Louis, Mo	12.2	28.4	29.7
Milwaukee, Wis	9.9	23.9	23.3

It is well known and universally admitted that the trend in the past 5 years has been markedly toward the complete or combination market. The trend continued in 1936, 1937, and 1938, so that the domination of the chains in the combination-store field is much more important than similar control in the plain grocery store.

The chains piously point to the number of stores in the independent field but say nothing of the fact that these numbers include thousands upon thousands of tiny little outlets where people are trying to go in business rather than go on relief. For A. & P., or any other interstate chain, to claim these thousands of little stores constitute competition is merely to beg the question and to deliberately cloud the issue. With less than 25 percent of the outlets in Cleveland the chains do more than 60 percent of all retail food business. In Los Angeles, with less than 15 percent of the number of stores, they do very close to 50 percent of all business.

Corporate chains did approximately 40 percent of the entire business in the food and grocery stores throughout the country in 1935, according to the latest available figures. Taking into consideration that these concerns did not operate all over the country, but just in certain good markets, it is evident that they are doing practically all business in many of these markets. It is also worthy of note that six of these chain-store organizations did 70 percent of the 40 percent mentioned, which establishes definitely that these "big six," by establishing prices, can control the market as effectively as if they had a monopoly.

PROFITS OF SIX LARGEST GROCERY CHAINS

18. Question. How do the profits of the other large chains compare with the profits of A. & P.?

Answer. The Federal Trade Commission's Agricultural Income Inquiry, part 1, on page 891, published October 13, 1938, discloses the profits of A. & P., Kroger, First National Stores, Safeway, National Tea, and American Stores as follows:

Percent on investment in business

Year:	
1929	23.46
1930	20.00
1931	19.87
1932	17.09
1933	16.51
1934	13.58
1935	12.48
Annual average	17.46

The profits of A. & P. are given in answer to question 14.

19. Question. How many chain companies are there in the United States?

Answer. With respect to the number of chain companies, 1,500 has often been used as the number representing the largest chains with an average of 35 stores each. However, the Bureau of the Census report, issued June 1937, discloses that there are 6,079 chain companies or systems in the United States, with 139,810 stores. Four stores or more represent a chain. H. R. 1 levies no tax at all on less than 10 stores. The tax provided in this bill will affect seriously about one-third of 1 percent of all the chain-store companies in the United States.

PERCENT OF RETAIL BUSINESS DONE BY CHAINS

20. Question. What percent of the retail business is done by chain stores?

Answer. The total retail business in the United States is usually from 58 to 62 percent of the national income, and in 1935 was $33,160,000,000. In 1929 the chains were doing 20

percent of all retail business; whereas in 1935 they were doing 22.8 percent. This includes, however, lines of business in which chains are not engaged. For instance, dealers in motor vehicles represent approximately $4,000,000,000 of the retail business and there are less than 5 percent of such dealers in chains. Ninety and one-tenth percent of the business of variety stores was conducted by chains in 1929, and increased to 90.8 percent in 1935. Shoe chains increased from 38 percent of the total business in 1929 to 50 percent in 1935. Automotive accessories, tire, and batteries dealers' stores did not have enough to count in 1929, but in 1935 they were doing 50 percent of the business. However, filling-station chains were doing 33.8 percent of the business in 1929, but only 21.5 percent in 1935. Combination food stores—groceries and meats—were doing 32.2 percent of the business in 1929 and 39.1 percent in 1935. Enormous increases have also been made in other lines. When one considers that these chains are only operating in certain areas, it is obvious that they are dominating the market in most of these localities.

21. Question. Do chains drain capital from local towns?

Answer. The chain-store systems that will be seriously affected by H. R. 1 do drain capital from local towns, and these profits fly overnight to New York. The apologists for the chains try to dodge this serious allegation by pointing to local chains that are not seriously affected by the terms of this bill at all.

SHOULD LABOR OPPOSE H. R. 1?

22. Question. Why did the American Federation of Labor at its convention at Houston, Tex., October 1938, pass a resolution in opposition to this bill, if it is in favor of labor?

Answer. Undoubtedly the question was not fully and adequately discussed by informed people from the standpoint of the proponents of the legislation, or this resolution would not have been passed. The American Federation of Labor has spoken on this question before and passed resolutions in opposition to chain stores. I refer to the resolution passed at Denver, Colo., in 1937; Cincinnati, Ohio, in 1932; Vancouver, British Columbia, Canada, in 1931; and in Boston, Mass., in 1930.

I quote excerpts from the resolutions adopted.

1937 AMERICAN FEDERATION OF LABOR REPORT AGAINST CHAIN STORES

The American Federation of Labor at Denver, Colo., October 4 to 15, inclusive, 1937, asked for a Senate investigation of chains and unanimously endorsed the following statement in a resolution:

It is an intolerable situation when highly organized chain systems can hammer down prices all over the Nation and then force manufacturers to make shoes at these prices or go out of business. This condition leads to steady demands upon the workers for wage cuts, and, with living costs steadily rising, wage cuts are impossible. Wage earner and manufacturer alike are dictated to by highly organized selling groups who deliberately fix prices for the whole country. The Boot and Shoe Workers' Union appeals to the organized trade-union movement for support. The very existence of entire communities is at stake, and the shoe industry is rapidly becoming a mere appendage to a few small groups who control prices throughout the United States and who manipulate these prices for their own profit and with absolute disregard for human welfare or social justice.

1932 AMERICAN FEDERATION OF LABOR REPORT AGAINST CHAIN STORES

The American Federation of Labor, at its annual convention at Cincinnati, Ohio, November 21 to December 2, inclusive, 1932, unanimously endorsed a resolution, which contained the following:

Whereas the growth of these chain-store companies, both financially and in number of units operated, have shown remarkable growth at the expense of the people of the United States; and

Whereas it is our thought that the present economic depression is due in part to consolidations, amalgamations, and the creation of some mammoth organizations of chain-store companies now operating in this country; and

Whereas the laboring classes of the United States derive no benefit whatsoever from some mammoth combinations: Therefore, be it

1931 AMERICAN FEDERATION OF LABOR EXPRESSION

The American Federation of Labor at Vancouver, British Columbia, Canada, in convention assembled, October 5 to 15, inclusive, 1931, has the following colloquy in its proceedings regarding chain stores:

Delegate MARTEL, International Typographical Union. I don't desire to discuss the committee's report or to disagree with it, but I would like to ask a question. Several States have undertaken the enforcement of a sales tax on chain stores as a means of equalizing the opportunities between chain stores and individual stores. If we pass a resolution opposing the sales tax, will that commit the American Federation of Labor on that matter? I know that independent merchants are fighting chain grocery and chain drug stores, and they are asking legislatures to impose a tax on the volume of trade of the store. Will this commit us to being opposed to that kind of legislation?

President GREEN. The Chair is of the opinion that it would not, because there is a difference, as we see it, between a tax imposed on chain stores, upon the property owned by chain stores, and the tax imposed on the contents of those stores, which would, of course, be a tax on a pound of coffee, a pound of bacon, or a package of sugar.

Delegate GAINOR. May I ask if the American Federation of Labor has ever taken action in opposition to chain stores?

President GREEN. We have never taken any position on the subject so far as I can recall.

The distinction pointed out by President Green is very interesting. H. R. 1 provides for a tax on the stores, the kind of tax that was not frowned upon by President Green at that time.

AMERICAN FEDERATION OF LABOR IN 1930

The report of the American Federation of Labor proceedings at its annual convention held at Boston, Mass., October 6 to 17, inclusive, 1930, contains the following:

Protesting labor policy of chain stores

Resolution No. 5, by Delegate Arthur J. Beauregard, of the Providence Central Federated Union:

"Whereas the country is being overrun by the chain-store system, and their employees do not belong to any labor unions in most cases; and

"Whereas we of the building-trades department are confronted with a serious menace by these concerns where they are employing so-called maintenance men to do our work, and now they are negotiating with some manufacturer direct to buy their material and having same installed by their maintenance men, who work longer hours and receive considerably less wages than the men to whom this work rightfully belongs receive, who are affiliated with labor unions: Therefore be it

"*Resolved*, That this American Federation of Labor in convention assembled at Boston, Mass., October 6, 1930, shall go on record as opposed to these methods of certain chain stores; and be it further

"*Resolved*, That a committee of the executive council be instructed to wait on the officials of these firms and see if this evil can be corrected."

Your committee recommends that this resolution be adopted.

The report of the committee was unanimously adopted.

Further, the American Federation of Labor resolution adopted at Houston, Tex., in 1938, erroneously indicated that the object of H. R. 1 is to collect discriminatory and punitive taxes. It is true that a comparatively small amount of taxes will be paid under the proposal, but the greater objective is correcting a bad economic situation.

23. Question. Do all labor unions oppose H. R. 1?

Answer. No. A number of labor unions in various sections of the country have endorsed H. R. 1. They realize that their members cannot continue to receive good wages unless other classes and groups are privileged to enjoy a fair measure of prosperity and that especially it is desirable for the farmers to have adequate buying power, and that interstate chain stores destroy this buying power, since they control a sufficient amount of purchases to dominate the market. No one ever heard of interstate, absentee-owned chains permitting their employees to join a labor union until Congress commenced consideration of H. R. 1. Until that time such chain systems were not having their printing done in union printing plants. The introduction of this bill has also caused the representatives of absentee-owned chains to become more interested in making contributions to local charities, churches, and schools and the support of civic organizations, but even now the amount contributed is miserly compared to the volume of business, and, in many places, they are making no contributions at all.

FARM ORGANIZATIONS ON H. R. 1

24. Question. Is it true as charged that the American Farm Bureau Federation, at its annual convention in New Orleans last year passed a resolution against H. R. 1?

Answer. The proceedings of this convention disclose that the following resolution, No. 16, was passed:

We condemn discriminatory and punitive taxes of all types designed to favor or penalize a selected group. The enactment of such legislation results in further efforts by other groups to obtain special privileges.

Evidently the delegates to this convention were sold on the theory that this resolution correctly outlined the aims and purposes of H. R. 1—at that time the bill was H. R. 9464 in the Seventy-fifth Congress. Doubtless our side was not presented. Let us see if the resolution properly describes our proposal. First, the primary object of H. R. 1 is not to levy discriminatory or punitive taxes. It is using the taxing power as a vehicle to correct a bad economic system. Suppose it should favor independent business, that is no excuse for opposition to it if it is in the country's interest. If chains were put out of business entirely the million and a half independent merchants would not have a monopoly. Another million and a half people could immediately go into competition with them.

I hope no one contends that we should not appropriate Federal funds to help the farmers, because it is favoring a selected group and will encourage other groups to seek such a favor. We should give farmers plenty of help and increase their income until they are privileged really to enjoy the American standard of living. If Congress succeeds in its efforts in that direction will it give the 6,000,000 farmers a monopoly? No. They will be in the same position as independent businessmen, other people may go into competition with them. It is in the interest of the general welfare of the people of this Nation for the farmers to be favored and if the passing of a law to protect local business for local people as against absentee control and ownership of business is favoring independent business, then I say that such independent business should be favored.

The American Farm Bureau passed a resolution at the same convention against monopoly, as follows:

Resolution 15

MONOPOLY

The alarming growth of monopolistic practices and monopolistic controls in industry and labor place a heavy burden upon American agriculture and constitute one of the chief reasons for the inequalities between farm prices, industrial prices, and industrial wages.

We commend the Federal Trade Commission and the United States Department of Justice for instituting a more aggressive and effective enforcement of antitrust laws and urge a continued, vigorous attack upon illegal monopolies and unfair trade practices.

The interstate chains dominate more farm prices than any other group in America and have done more to destroy farm prices. One would think from the wording of that resolution that its object was severely to condemn the interstate chain systems.

I cannot agree that Resolution No. 16 was passed to praise the chains, as their defenders are contending, after the Farm Bureau passed Resolution No. 15 that hits them right on the nose.

CALIFORNIA STATE GRANGE AGAINST CHAINS

Chain stores, with their insidious propaganda, are telling the people just how much they spend for farm products—but they do not say how much more they should have paid the farmer so he could make a living. It is most encouraging that organized farm opinion now can speak for itself on the chain-store question. When facts were compiled definitely showing that the more the chain stores sold the less the farmer received, it was not a surprise that the 5,000 delegates of the California State Grange, in its annual State convention November 15, 1935, unanimously passed the following resolution:

Whereas mass buying as practiced by chain stores is a menace to the farmer and tends to produce a private monopoly in the distribution of food; and

Whereas private monopoly in the distribution of food is a threat to the welfare of all people; and

Whereas chain stores do not now pay their fair share of the tax load, and at the same time take the net profit from business out of local communities and send it back to Wall Street controlled financial centers in the East, destroying, at the same time, opportunities for our own boys and girls coming out of high schools and colleges to go into business for themselves: Now, therefore, be it

Resolved, That the California State Grange endorses and supports legislation to curb expansion and to regulate existing chain stores in California.

It was reported in the newspapers recently that the National Grange condemned chain farming. I construe that as an expression by this organization against absentee ownership of a business that should be owned locally.

SPREAD BETWEEN PRODUCER AND CONSUMER NOT LESS THROUGH CHAINS

25. Question. Has the spread between the producer and consumer decreased through the mass buying power of a few large interstate chain stores?

Answer. The period of the greatest chain-store growth has been since 1926, although they have been expanding since 1920. The period since 1930 represents a time of the greatest control and domination by these major chains.

I am inserting herewith a table prepared by the United States Department of Agriculture showing the price spreads between the farmer and consumer for the years from 1913 to 1937, inclusive, as follows:

TABLE 8.—*Value of 58 foods, 1913–37*

Estimated retail value and equivalent farm value of quantities purchased annually by a typical American workingman's family:

Year	Farm value [1]	Retail value [1]	Margin	Farm value as percentage of retail value
				Percent
1913	$134	$252	$118	53
1914	137	258	121	53
1915	134	258	124	52
1916	155	285	130	54
1917	223	370	147	60
1918	245	424	179	58
1919	267	470	203	57
1920	272	514	242	53
1921	179	404	225	44
1922	170	374	204	45
1923	173	384	211	45
1924	170	381	211	45
1925	198	410	212	48
1926	202	418	216	48
1927	190	406	216	47
1928	194	407	213	48
1929	195	415	220	47
1930	171	391	220	44
1931	121	322	201	38
1932	88	270	182	33
1933	92	264	172	35
1934	108	295	187	37
1935	138	331	193	42
1936	152	342	190	44
1937	160	353	193	45

[1] Retail price data are from the U. S. Bureau of Labor Statistics, farm price data are principally those estimated by the Bureau of Agricultural Economics.

Estimates of annual purchases of foods by a typical workingman's family were obtained from the 1918–19 Cost of Living Survey made by the U. S. Bureau of Labor Statistics. The 58 foods include meat, dairy and poultry products, bakery and cereal products, a number of fresh and canned fruits and vegetables, and several miscellaneous items.

It will be noticed that before chain-store domination, from 1913 to 1925 inclusive, the farmer received an average of 51⅓ cents of each retail dollar paid by the consumer; from 1926 to 1937 inclusive, the average was only 42⅓ cents that the farmer received on each consumer retail dollar. In 1932, the hardest year for all the people except seemingly the Atlantic & Pacific Tea Co., the farmer only received 33 cents on each retail dollar. Then the F. S. C. C. was organized, furnished Government money to buy surplus commodities and protect the farmer's price. Since that time the farmer has received more than 33 cents on each retail dollar.

This same report discloses that the farmer from 1913 to 1926 received from 52 cents to 72 cents of each retail dollar paid by the consumer for potatoes, except one year—in 1923 it was 48 cents.

Whereas since 1926 the farmer has received the following percentage of each retail dollar paid by the consumer for potatoes:

	Percent
1927	58
1928	52
1929	50
1930	58
1931	52
1932	41
1933	48
1934	48
1935	42

And in April and May 1938 the farmer received only 38 percent of each retail dollar paid for potatoes. The large chains are ruining the potato farmers. Every time a dollar

is taken away from the farmer it reduces his buying power that much, which destroys buying power equal to several times that $1. If the farmer receives a dollar he puts it into circulation. Velocity of money is helpful to the entire Nation.

HOW FARMERS AFFECTED

26. Question. How does chain buying power affect the farmer?

Answer. The chains' representatives know when perishable and other products of the farmer are moving to the market. They know exactly where each car is traveling every night. If they want to reduce the price on that market, all they have to do is to withdraw for the period of time necessary to effect their purpose. In this way they force prices down or force the farmer to take his products back home to await a more favorable market. The farmer cannot return his products because the freight charges would be more than his products would be worth.

As the interstate corporate chains have grown in number, size, and power the farmer's plight has become more and more acute. As the sales volume of these concerns approached their peak, farmers' prices sunk lower and lower until the yearly total of agriculture income became so low as to cause national alarm.

27. Question. What was done by the Government to protect the farmer against such an abuse of mass buying power?

Answer. The Federal Surplus Commodity Corporation was organized in 1933 under the Department of Agriculture. Large sums of money running into many millions of dollars each year appropriated by the Government have been used by this agency to go into the markets, where the chains were destroying the buying power of the farmer, and buy up some of the farmers' products at distressed prices and prevent a total collapse of the market in that area. It is a case of Government money being used in an effort to protect the producers against a conspiracy on the part of the big chains. It is well known that this agency is powerless in many instances properly to protect the producers against the tremendous power and influence of a few organized large buyers of national corporate chains.

LOW-INCOME GROUPS NOT HELPED BY CHAINS

28. Question. Is the statement made by representatives of chain-store groups true, that the chain stores help low-income groups?

Answer. If that is true, which I deny, H. R. 1 will not deprive low-income groups of such help, as the passage of this bill will only seriously affect one-third of 1 percent of the chain-store companies. It will not destroy the one-third of 1 percent but will have a tendency to restrict each company in this category to the boundaries of one State or a smaller area.

29. Question. Do low prices help the low-income groups?

Answer. What is known as the submerged one-third of our people, will be helped more by good prices and good wages than they will by low prices and low wages. Suppose we should arbitrarily reduce prices 50 percent and wages 50 percent. The argument would be made that the wage earner earning $2 per day under the new scale would be able to buy as much as he formerly bought when he received $4 per day, since prices had been reduced in proportion. This is a beautiful theory, but in practice it does not work out. The people of this Nation owe more than $200,000,000,000 in debts. Much of it is owed by the one-third of our people in the low-income class. If we reduced their wages and prices 50 percent, we in effect would double their indebtedness, in what they have to pay with. Instead of owing $100 they will owe $200, measured in their paying power, and instead of paying 6 percent interest they will pay 12 percent interest.

Further, there are certain fixed charges that cannot be reduced and which become cheap or lower only with good prices and good wages. I refer to electricity, gas, water, and telephone service; also to railroad freight and passenger rates and such fixed charges as interest, debts, and taxes.

The lower the wages and the lower the prices of farm products and other commodities that go to make up purchasing power, the higher in proportion becomes the debt and tax burden.

PRICES, AMOUNT OF GOODS SOLD, AND PRODUCTION

30. Question. Will the passage of H. R. 1 make it harder on the farmer and producer by keeping high prices, less goods sold, less production, and less tax collections for the Government?

Answer. In every chain-store argument one point is emphasized, and that is: "We keep prices down." If the farmers had $12,000,000,000 a year gross income, as they should have instead of six or seven billion dollars a year, one of the greatest markets in the world would be created for all goods and services produced in America. This additional purchasing power would represent "acres of diamonds" here in our own yard and would be better than the entire foreign trade of several of the other countries of the world. But with the interstate chains keeping the farmers' prices down, that reduces the buying power of the farmers who are the best customers of the people who live in the cities. The people who live in the cities have lower wages, because the farmers cannot buy; therefore low prices to farmers force low wages to factory workers. Low wages to the factory worker means he will buy less, because his debts, taxes, and other fixed charges have become proportionately higher by reason of his low wages.

So the effect of the passage of H. R. 1 will mean more purchasing power to the farmers in the form of higher prices but not unreasonably high prices. It means more goods sold because the aggregate wages will increase, which will make fixed charges easier for the wage earner to pay and will cause him to have remaining a much larger percentage of his earnings to buy goods, which will mean more goods sold. This will lead to more production and more tax collections for the Government.

The clever, adroit attorneys for the interstate corporate chains will try to convince the American consumer that low prices are in his interest. The truth is they are against his interest, as low prices force low wages and cause less goods to be sold and less production.

IF FARMERS SUFFER, NATION SUFFERS

The farmers of this Nation represent sufficient buying power to cause our Nation to be prosperous if they are prosperous. If they suffer—by reason of low prices—all classes and groups will suffer along with them.

We never have good times in this country when prices and wages are low. And the city consumer is beginning to realize that the interstate chain store is rendering a disservice by destroying prices of farm products, because farmers represent a large market for the products of industry upon which the city consumer depends for a livelihood. It is in the selfish interest of the consumer to adopt a policy of live and let live toward farmers, wage earners, and industry.

Any consumer who demands a price so low that the farmer or wage earner does not receive a fair price or a fair wage to give him purchasing power, is demanding a price that will destroy the purchasing power of two-thirds of our people and will eventually destroy our Nation. If low prices were the paramount consideration, repeal of the protective tariff would be the logical step in that direction.

February 21, 1939, I received a letter from a farmer, which stated:

> I am a farmer and a producer of fruits and vegetables and ship them to most all eastern markets. For a number of years these markets have been declining so rapidly at present it is useless to ship at all. I ask the commission men what is the trouble and the answer from them all is the same—"chain-store control."

The same thing applies to dairy and other farm products.

HOW CHAINS AFFECT FARMERS

In a recent report the Federal Trade Commission cites a number of glaring examples of the unfair gouging of farmers and growers throughout the land. This report deals with many commodities. I will mention a few. In each

example the consumer's dollar is broken down—fractionally—as follows:

Pacific Northwest apples: Of one consumer dollar spent in 1936, 14½ cents paid for packing and loading, 23⅓ cents for railroad shipment to Dallas, Chicago, New York, and other principal markets; the interstate chain stores hogged 31⅓ cents of the consumer dollar while the poor grower got a mere 21⅓ cents.

Texas onions: Again in 1936, of one consumer dollar, 11½ cents paid for packing and loading; 28 cents for rail—watch this closely—41½ cents went to the interstate chain stores, but the hard-working Texas onion grower received only 12¼ cents.

Now, take Texas cabbage: In 1936, and for the same markets of one consumer dollar, 10¼ cents paid for packing and loading; 36 cents went to railroads; the interstate chains grabbed 35½ cents; and the painstaking Texas cabbage grower got only 14½ cents.

Florida cabbage, for the same year, same markets: Of one consumer dollar, 14¾ cents for packing; 27½ cents for railroads; interstate chains greedily clutched 40¼ cents, but the Florida grower received a miserable 11¼ cents.

California tomatoes: Of one consumer dollar in the same markets, 11 cents for packing; 17½ cents for railroads; interstate chains received 44¼ cents; and the grower ended up with only 23 cents.

These are very convincing official figures by the Federal Trade Commission. Similar illustrations could be given for other commodities, including dairy products.

Prior to the advent of the interstate chains the average farmer had an open market in which to sell his products. But today his price is virtually dictated by the grasping chain-store interests.

OFFICIAL REPORT OF FEDERAL TRADE COMMISSION

Last year, 1937, the Federal Trade Commission reported to the Congress of the United States as follows. Listen to this. I quote:

> The Commission records with dismay its belief that the survival of independent farming by farmers who own their own farms and maintain an American standard of living is in jeopardy.

You cannot read this report without realizing that the Federal Trade Commission is saying, in just so many words, "Mr. Farmer, unless the interstate chain-store system is broken, you are absolutely ruined."

LOBBY GANGED UP

This lobby has ganged up on the farmers. It has ganged up on the wage earners. It has ganged up on the livestock and dairy producers, and it is wrecking them. In cities where they obtain control they gang up on the consumers.

FARM SURPLUS

The national corporate chains claim much credit for disposing of certain surplus commodities of the farmers. One critic advised me that he had just purchased from a national chain store three cans of peas for 12 cents and challenged me to deny that such purchase was in his interest and the interest of the country. He incidentally pointed out that the farmers were helped as well as himself; that the farmers had a surplus of peas that the chain store was helping them to dispose of. Let us see who was helped by this sale of surplus peas at 4 cents a can. The can company made a fair profit on the can. The railroad company made a fair profit on transporting the can to the producer and cannery, and also on the transportation after the can was filled. The telephone company made a fair profit on the calls necessary to complete the sale to the distributor, but the farmer who produced the peas worked for less than 5 cents an hour and threw in absolutely free the soil on his farm required to produce them. The wage earner working in the cannery did not receive a living wage. The chain store either received a profit or else placed his competitor a little bit nearer to bankruptcy. The railroad company profited, the can trust profited, the telephone company profited, but the farmer and wage earner suffered.

POTATOES IN MAINE AND MICHIGAN

One Member of Congress from Michigan protested to the Federal Surplus Commodity Corporation because this Government organization was purchasing potatoes in Maine, but not purchasing potatoes in Michigan. An investigation disclosed that the chain stores had framed up on the farmers in Maine and Government money had to be used to fix a fair price in that market, which was unnecessary in the Michigan market at the time. Government money has been used by this corporation to prevent the chains from destroying entirely the farmers' market for potatoes on the Atlantic seaboard, onions in Massachusetts, grapefruit and grapefruit juice from Florida and Texas, and poultry products all over the Nation.

It was announced in the newspapers recently that the Government was ready to purchase eggs. The announcement as given to the press is as follows:

> The Federal Surplus Commodities Corporation announced that it was prepared to purchase eggs to stabilize and strengthen the market. Purchases will be made, it said, at any country purchasing point, terminal market, and mercantile exchange if greater than normal surpluses accumulate and prices decline below present levels or fail to respond to normal seasonal advances.
>
> Eggs so acquired will be distributed to needy persons through State relief agencies.

It is a bad thing for the country, and especially the farmers, for a few buyers to control any market. If national chain stores get control of this country, both farmers and consumers will suffer. Private monopoly is indefensible and should not be tolerated.

31. Question. Why are loans to small business not being made by the banks or R. F. C.?

Answer. The security is insufficient, as a national corporate chain can go into any locality in competition with an independent at any time and destroy him.

HOW TO CREATE DEMANDS FOR SAFE LOANS AGGREGATING BILLIONS OF DOLLARS

Suppose all national corporate chains were frozen as they are today; that is, that they would not be permitted to establish any more new stores or stores in other locations. The result would be that banks, which are bursting with money and credit could afford to make loans to the tens of thousands of efficient, clever business men and women, who would gladly go into business under such conditions. As it is now, the bank will not make a loan to anyone who wants to engage in a business in which national corporate chains are engaged, for the logical reason that as soon as the business is built up, the national corporate chain will move in nearby and through unfair practices that they habitually resort to and through the use of profits made elsewhere, the independent business owned by him will be destroyed.

There are hundreds of thousands of men and women who would be anxious to go into business if they only knew that their business would not be unfairly destroyed by national corporate chains after it was built up.

32. Question. What is the most important problem confronting our country?

Answer. According to the National Association of Manufacturers, it is the creation of opportunity for private enterprise and to make jobs for men and women now carried on relief.

33. Question. How may these problems be dealt with?

Answer. First, by prevention of monopoly and the curbing of the large concerns that are taking away from local people privileges and opportunities, which has resulted in the destruction of opportunity for private enterprise and has caused the placing of men and women on relief, many of whom would otherwise find employment.

34. Question. Are consumers saved $750,000,000 annually trading with chains?

Answer. That is not possible, when in 38 out of 45 lines of business independents have a lower overhead, according to United States Bureau of the Census. Further, interstate chains charge customers higher prices when they dominate distribution in any locality. In addition, court records dis-

close that the interstate chains have a system of charging up to each manager of a store all the goods delivered to him at retail prices. It is well known that broken package goods cannot be weighed out accurately and there is great loss in certain types of commodities. The manager is, therefore, encouraged to cheat his customers in some way in order to keep from appearing short when the supervisor comes around. This shortage has been proven in the United States courts to be as much as 25 cents and 30 cents on the dollar in the case of certain commodities.

35. Question. Will newspapers lose $200,000,000 advertising revenue each year?

Answer. No, as independent merchants will advertise more than the chains. However, the chains are trying to make the newspaper owners believe that it is in their selfish interest to stand by the chains in all publicity.

36. Question. Would the Government lose the taxes now paid by interstate chain owners each year?

Answer. The amount that would be received from independent merchants taking their places would, doubtless, greatly exceed the amount now paid by interstate chain-store owners. I have not determined accurately, and I doubt that it will be possible to do so, but, judging from the hundreds of complaints—criminal and civil—against the largest chain in America each year, I doubt that the taxes paid by the owners of this concern are sufficient to cover the actual cost of policing by the Federal, State, and City governments. It costs lots of money to try lawsuits and properly to inspect and supervise all the activities of a giant concern if the public interest is properly protected.

37. Question. How do interstate chains unfairly destroy independent merchants?

Answer. One case was cited by the Honorable Charles H. March, of the Federal Trade Commission, in a public address last year. He said that a large chain opened up a store opposite a successful retail merchant in a Minnesota town. No matter what price the small man placed on his goods, the chain store went a little lower, although the chain was handling the same goods made by the same manufacturer as the independent was handling.

The independent was dependent upon his earnings at that particular location to survive. The large chain had thousands of other retail stores in other sections of the country to depend on to keep it going until the independent merchant could be put out of business. Then prices would go up and the public would pay the bill. We do not need economic dictatorship in this country, and the fight against a few men owning a few retail chain-store systems is a fight against economic dictatorship.

38. Question. If the interstate chain is a bad system, why do not the people stop trading with them?

Answer. Many polls have been taken on this subject. Some people answered that they expected to continue to trade with interstate chains as long as it was so convenient for them to do so, but they would favor a law that would make it necessary for them to patronize home business instead, in order that they may be compelled to patronize institutions that are of the greatest benefit to the communities in which they live.

A large percentage of people do refuse to trade with such interstate systems, but many honestly believe that they get better bargains than they would get from independent merchants and do not consider the social objections.

Others have traded by the month with chains and then with independents and discovered at the end of the month the bill to the independent was no larger than the bill to the chain for a month. One merchant I know has gained back many customers by telling one, who has been frank enough to admit that he is going to try the chains, to please keep an account for a month or two months and compare the bills with the bills from his store for a similar period. Almost invariably, the customer returned.

LOCAL PEOPLE LOYAL TO LOCAL BUSINESS

The W. P. A. has just finished a study of social relationships in an established rural-urban community, South Holland, Ill. It is only a few miles from Chicago and is surrounded by many other good towns. The report has this to say about the trade area:

Of the 467 families reporting, 87 percent bought their groceries, 56 percent their farm machinery, and 35 percent their furniture in South Holland. Such loyalty to the local merchants is significant, for it is relatively simple for a villager to be at any one of a dozen markets in less than half an hour. In 1937 (when the survey was made), there were no chain stores in South Holland; in fact, none has stayed open any length of time. One chain store tried to gain a foothold before 1932, but was unsuccessful in spite of its greater variety of goods and more attractive prices.

39. Question. Why is it so difficult for the people to get correct information about any proposal?

Answer. People who are selfishly interested are inclined to exaggerate and if they are on the wrong side are usually successful in confusing the people by misrepresentations, untruths, and half truths to the extent that the people are not convinced as to which side is right.

Newspapers have several times as much news furnished to them each day as they can possibly print. It is up to some person at each newspaper office to decide which is printed and which is thrown in the waste basket. If two interesting news items come in in the same day, one in favor of independent merchants and one in favor of interstate chain stores, that person will probably be prompted by a number of factors in determining which of the two items should go in. If the chains in that town are spending large sums of money with him and are bringing pressure to bear on him to print everything on their side, and the independent merchants are not organized and not bringing any pressure, it is easy to determine which side of the argument will be printed.

Some newspaper owners, however, realize that if they permit the independent business in a town to be destroyed that the newspaper will be destroyed with it. The interstate chains quit advertising when they get control of a market. They put out their own publications instead.

40. Question. Some newspaper correspondents are carrying the statement that H. R. 1 does not have a chance of passing Congress. Is the statement true?

Answer. That is the stock phrase always used by the opposition to a bill—"It does not have a chance." It is very effective sometimes in preventing people from joining in a fight that would meet with success were their efforts joined with others who knew differently. The selfish interests said the same thing about the Robinson-Patman Act and thought they had silenced the sentiment in favor of the bill in that way. Its enactment came like a thunderbolt out of a clear sky. People who are interested in economic changes, that are opposed by those who have considerable control over the press and by those who use much paid time over the air, should be on guard against such propaganda and not be influenced by it.

This is the third national campaign that I have assisted in conducting. The two former ones were successful—one involving millions of men and billions of dollars, and the other, the Robinson-Patman Act, which affected millions of people and denied to the greedy few the advantages equal to hundreds of millions of dollars a year which they were not justly entitled to receive.

This is not a "share the wealth" proposal, but it is a bill providing for sharing the privileges and opportunities.

41. Question. Have the interstate chain owners recently changed their policies in regard to local affairs?

Answer. Yes; since the national chain-store tax bill has been introduced, much of their printing is being done in union print shops, but not local shops, employees in many cases are joining labor unions and all managers and clerks are instructed to appear—at least, look—interested in local affairs and join civic organizations, such as chambers of

commerce, civic clubs, and religious and fraternal organizations. They are also instructed to make contributions to local charity in an effort to answer a very deserving criticism. Reports I receive indicate that in some localities, the interstate chains are contributing for local purposes, but it is well known that the greatest contributions are made in Sates where they have their hardest fights before legislative bodies.

Millions were spent for all kinds of purposes during the chain-store fight preceding the election, in 1936, in California where the chains won by a very small majority. Mr. Milton M. Gair, a prominent businessman of Redlands, Calif., says that the chains spent $4 for every vote they received at the election. Whereas the proponents of the tax proposal only spent a small sum amounting to only 6 cents a vote.

The question of a State chain-store tax was submitted to the people of Colorado at the general election on November 8, 1938. An enormous sum of money was spent by the chains, approximately $1,215,000, and a comparatively small sum, approximately $100,000, by the proponents. The chains lost by an overwhelming majority. In fact, they only carried 5 counties by a very small majority out of 63 counties in the State.

HOW YOU CAN HELP PASS H. R. 1

42. Question. How can I, as a local citizen, help in the compaign to secure the enactment of H. R. 1?

Answer. I would suggest that you endeavor to convince your Representative in Congress and your two United States Senators that the enactment of this bill is in the public interest. I do not recommend coercion, intimidation, or threats as a method to be used; in fact, neither should be resorted to. I do recommend the use of logic and reason. Since you have the right side, you do not have to use unfair methods and underhanded tactics. Selfish interest will prompt some people to be on our side and some on the opposite side.

It is my opinion that there is less selfishness on our side for the reason that if we are successful in curbing or restricting the chains it will not only help the independent merchants now in business, but it will help all other independent business as well and will not foreclose to anyone the opportunity of going into business. Whereas, if the chains win, only a comparatively few people will be helped, the other lines of independent business will be destroyed, and the door of opportunity will be closed and safely locked to those who desire to engage in business.

Should one refuse to work for a cause in the public interest because he will be indirectly benefited? No. If the chains are restricted, the independents are only indirectly benefited along with the country. If the chains win, a few people—and we know now who they are—will be directly benefited to the extent of tens of millions of dollars a year. Some people are fighting for these greedy privileges, spending millions to destroy the business of good fathers and mothers who are trying properly to rear and educate the coming citizens of our country, their children, when some of those fighting and destroying, do not have children to pass these valuable privileges on to. They would be left to corporations instead.

Mr. Harry Hopkins said in his Des Moines speech a few days ago:

> Our farm homes receive less than 10 percent of the national income, and on that they must bring up about 30 percent of the Nation's children.

43. Question. Should we maintain a lobby in Washington?

Answer. Not at all necessary, since there are already existing organizations that are keeping the people informed as to what is going on in Congress. The most effective work can be done from home by your cooperating with neighbors and friends in an effort to convince your Representatives and Senators in Congress that the cause is just and right and that the bill should be passed. Anything printed in the CONGRESSIONAL RECORD may be quoted and reprinted without special permission. This is not a political campaign; it is a crusade. We must gospelize our cause which we know is just and right. A few letters from honest-to-God folks back home, who have vision, and who can vividly picture the evil consequences of absentee ownership to a Member of Congress, have more weight and influence than thousands of inspired telegrams. More than 150 Members of the House have stated to constituents that they expect to vote for this bill.

A FEW MEN CONTROLLING A FEW BANKS CONTROL THE CORPORATE WEALTH OF THE NATION

Mr. John A. Hartford, one of the principal owners of the A. & P. Co., which operates in about 40 of the 48 States, is also a director in the Guaranty Trust Co. of New York. The resources of this one bank—Guaranty Trust Co.—exceeds the resources of all the 1,455 banks in Texas, Arkansas, and Oklahoma, the population of these 3 States being approximately 11,000,000 people. There are interlocking directorates between the Guaranty Trust Co. of New York, the Chase National of New York, the Bankers Trust Co. of New York, the Chemical Bank & Trust Co. of New York, the J. P. Morgan & Co. of New York, and the New York Trust Co. The total resources of these six banks, according to the Comptroller's report for December 31, 1936, and it has not changed greatly since that time, aggregate $7,409,904,000. The resources of these six banks, which are closely related through interlocking directorates, one of the directors being Mr. John A. Hartford, are a billion dollars in excess of the resources of all the 3,710 banks in the 13 Southern States.

There are 24 banks in the United States, 13 of them being in New York City, that have resources equal to approximately one-third of the total resources of all the banks—16,000—in the United States. The 7 heretofore named are in this group of 24. There is close interlocking directorates between these 24 banks and the 175 nonfinancial corporations that own 58 percent of the corporate wealth of the Nation. Considerable time and thought was given to a study of this question. This study was placed in the CONGRESSIONAL RECORD June 15, 1937, and is contained in bound volumes for the first session of the Seventy-fifth Congress, pages 5777 to 5785, inclusive.

Banks under our present system can create through their own bookkeeping systems and loan to their customers $10 for every $1 that they have as a reserve. Using this tremendous power and influence, these few banks can create sufficient money practically to control this country, and that is what they have been doing and what they are now doing.

The question is: What chance will the people, young and old, of the future have in this great country of ours if we continue to permit a few people to control so much of our country's wealth and foreclose to our people so many privileges and opportunities that they should rightfully enjoy?

MR. JUSTICE BRANDEIS, ONE OF THE FIRST TO POINT OUT EVILS OF ABSENTEE OWNERSHIP

Mr. Justice Brandeis, of the United States Supreme Court, in his dissenting opinion in the case of *Louis K. Liggett Co.* v. *Lee* (288 U. S. 517, 568, et seq. (1933)), stated:

> "Among 200 nonbanking corporations directly controlling about one-fourth of the national wealth of the United States, each with assets in excess of $90,000,000, are 5 of the plaintiffs. These 5 have in the aggregate $820,000,000 of assets; and they operate, in the several States, an aggregate of 19,718 stores. A single one of these giants (the Great Atlantic & Pacific Tea Co.) operates nearly 16,000. Against these plaintiffs, and other owners of multiple stores, the individual retailers of Florida are engaged in a struggle to preserve their independence—perhaps a struggle for their very existence. The citizens of the State, considering themselves vitally interested in this seemingly unequal struggle, have undertaken to aid the individual retailers by subjecting the owners of multiple stores to the handicap of higher license fees. They may have done so merely in order to preserve competition. But their purpose may have been a broader and deeper one. They may have believed that the chain store, by furthering the concentration of wealth and of power and by promoting absentee ownership, is thwarting American ideals; that it is making impossible equality of opportunity; that it is converting independent tradesmen into clerks; and that it is sapping the resources, the vigor, and the hope of the smaller cities and towns.
>
> "There is a widespread belief that the existing unemployment is the result, in large part, of the gross inequality in the distribution of wealth and income which giant corporations have fostered; that by the control which the few have exerted through giant corporations, individual initiative and effort are being paralyzed, creative power impaired, and human happiness lessened; that the true prosperity of our past came not from big business, but through the courage, the energy, and the resourcefulness of small

men; that only by releasing from corporate control the faculties of the unknown many, only by reopening to them the opportunities for leadership, can confidence in our future be restored and the existing misery be overcome; and that only through participation by the many in the responsibilities and determinations of business, can Americans secure the moral and intellectual development which is essential to the maintenance of liberty. If the citizens of Florida share that belief, I know of nothing in the Federal Constitution which precludes the State from endeavoring to give it effect and prevent domination in intrastate commerce by subjecting corporate chains to discriminatory license fees. To that extent, the citizens of each State are still masters of their destiny."

Notice Mr. Justice Brandeis' reference to absentee ownership thwarting American ideals; making impossible equality of opportunity; converting independent businessmen into clerks; sapping the resources and hope of smaller cities and towns; causing unemployment, gross inequality in distribution of wealth and income and other harmful results, all of which shows that curbing interstate chains is a social as well as an economic problem.

WHETHER JOHN DOE REMAINS IN BUSINESS NOT THE QUESTION

It is a matter of no concern to the country, generally, whether John Doe, the local groceryman, remains in business, and no law should be passed that will reward him if inefficient. However, if Groceryman John Doe is a capable, hard-working merchant, and is being put out of business solely by reason of a system that is spreading all over the Nation and destroying community life, including the homes, churches, and schools, the wrecking of his business is a matter of the greatest concern to all the people who desire a fair distribution of privileges and opportunities.

OBJECT TO RESTRICT NATIONAL CHAINS

It is contended that when our bill, H. R. 1, becomes fully effective after the second year the taxes will be so high on the national corporate chains, which own several thousand retail stores, that they will be unable to continue in business. Frankly, the object of this bill is to cause a law to be enacted that will restrict retail distribution to a small area and to a comparatively small number of units. It will not put the national chains out of business; it will cause them to reduce the number of stores they own and give other people, especially local citizens, a chance.

Local privileges and opportunities are so valuable that it is difficult to estimate a price, measured in money, that would be sufficient to give in exchange for them. Community life in America is so valuable and so vital to the continued happiness and prosperity of our people and the general welfare of our Nation that a price in the form of taxes cannot be fixed too high.

Opportunities for the young, as well as for our community life, are too valuable to be bought with the money of national corporate chains.

NET PROFITS TAKEN AWAY FROM LOCAL COMMUNITY

We are "dead set" against the interstate chains that milk the community dry by taking money in the form of net profits away from local towns and local banks and by crushing out the life of independent business. Such chains are neither economical, efficient, nor in the public interest.

Every boy cannot own a railroad, a telephone company, or an electric-light plant. But if every young boy in this Nation is deprived of the opportunity of some day acquiring a retail store in his home town, the aspirations of many fine young men will be crushed.

The Robinson-Patman Act, which greatly benefits the independent merchant and the public, does not prohibit the chains from using profits from many stores in towns where they already enjoy a monopoly to enable them to sell goods at a loss in another town until the independent merchants in that town are put out of business. That is why the Federal chain-store tax bill is necessary.

INDICTMENTS AGAINST INTERSTATE CHAINS

Here are a number of direct indictments against the interstate chain system:

They are the products of a few monopolistic money masters of Manhattan.

Cost of food is higher in chain-controlled towns and communities.

They do not contribute to local relief, local schools, churches, or charities, except a miserly sum—entirely out of proportion to their business—in an effort to buy goodwill.

They break down local rent schedules by destroying the independent merchants.

They compel our boys and girls to work for absentee owners for long hours at starvation wages.

They crush out labor as monopoly invariably does.

They are draining capital from local towns.

They destroy the independence and self-reliance that built this Nation.

They do not create. They take away what others have created.

They never guarantee a doctor bill for an unfortunate employee.

They take away local privileges and opportunities that formerly enabled local citizens to assume local relief assistance and responsibility.

They never send an unnamed Christmas basket to a poor family.

They never fail to beat down the price of farm products.

They are the first to arrive after a town is built and the first to leave when a town is overtaken by drought, cyclone, epidemic, or other unforeseen disaster.

They charge different prices in different cities in the same State, and even in the same city, according to competition from the independent merchant across the street who is marked as the next victim.

They owe their growth to chiseling, cheating, racketeering methods, wrecking others to build themselves.

They never operate in a distressed community.

They never render temporary assistance in the form of credit to any citizen.

They never pay their just and fair share of taxes in proportion to their volume of business.

They have never raised the standard of living in any community. Absentee control of business is a detriment to the future welfare of all classes and there is no class or group that escapes its detrimental effect upon our economic life.

Net profits from farms, mines, or business are the only means of building towns, cities, and States. These net profits—under the chain system—fly overnight to New York.

Every dollar that is taken from your State or mine in net profits is a loss of many times that $1 in buying power to the local residents.

Net profits remaining in the community and deposited in the local bank circulate many times a year among local citizens.

FINANCE MORE WIVES OF FOREIGN COUNTS

Chain-store net profits go to distant owners to buy automobiles there, not in our community; to build schools and churches there, not in our community; or to finance more wives of foreign counts, who will spend such profits not in America but in foreign lands.

More than 15 officials of one large national corporate chain each receive more than $100,000 a year. Would it not be better for these privileges and opportunities to be widely distributed and have a larger number receive the aggregate amount of salaries paid to these 15?

NO VISION, THE PEOPLE PERISH

Would you believe that one New York bank has more than 4,000 directorships in the largest manufacturing, industrial, and other concerns in every section of the Nation? Would you believe that another large New York bank has more than 2,000 such directorships? What chance have you in the face of such power and influence? These men may intend to be good, but power naturally begets greed. They seek greater power, influence, and wealth. Where there is greed there is no vision, and the Bible says that where there is no vision the people perish.

PEOPLE SHOULD WAKE UP

Our country's welfare is distressingly at stake. Opportunity for the young and security for the aged hang in the balance.

Do you want private monopoly to continue to operate to the benefit and advantage of a few New York bankers? Do you want a community life built and sustained by local independent merchants or one bled white and cold-bloodedly exploited by absentee owners? Let us save America by preventing monopoly, by keeping the broad road of opportunity open, and by passing a law that will regulate selfishness and restrain greed.

Ambassador Hirosi Saito

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

EDITORIALS FROM THE NEW YORK TIMES AND THE WASHINGTON POST OF FEBRUARY 28, 1939, CONCERNING AMBASSADOR SAITO

Mr. MARTIN J. KENNEDY. Mr. Speaker, this afternoon, here in the Nation's Capital in the building of the Japanese Embassy will be held the last services in honor of Ambassador Hirosi Saito, until recently the Japanese Ambassador to the United States.

I am sure that fitting tributes will be paid to his memory by many of the world's leading citizens and statesmen, but in addition to these tributes, I deem it appropriate to insert the following editorials eulogizing the life and work of Ambassador Hirosi Saito:

[From the New York Times of February 28, 1939]

HIROSI SAITO

The youngest Ambassador ever to represent Japan in the United States is dead at the age of 52. It is said that he could not stand the strain of the fast-moving, high-pressure diplomacy which he himself used so skillfully. But perhaps more than any other Japanese of his generation he was responsible for averting a grave crisis for his country, when, apparently on his own initiative, he publicly committed his Government in advance to complete apologies for the *Panay* bombing. It took Japan some time to understand at its proper value this swift stroke of prescience. Meanwhile Saito shrugged and remarked characteristically that he was in "the dog house."

He knew how to play on the American idiom and he could interpret Japan for us in our own terms. He knew what we meant, too, and his acute ear caught overtones in the confusing roar of this country which his superiors often found it hard to credit. But he was the Emperor's man as much as they and as firmly committed to what Japan conceives to be her destiny. Had not ill health compelled his retirement he would almost certainly have been a member of the present Japanese Cabinet.

In Washington, as in New York, where he served as consul general, he will be missed for his engaging personal qualities and his gift for friendship.

[From the Washington Post of February 28, 1939]

AMBASSADOR SAITO

The death in Washington of Hirosi Saito, former Japanese Ambassador to the United States, robs Japan of one of her ablest diplomats and the American Nation and people of a sincere and understanding friend.

Mr. Saito knew the United States as do relatively few foreigners. During his long years of residence here he developed a deep admiration for American ways, habits of thought, and institutions. And the undisguised affection he entertained for Americans was wholly reciprocated. There have been few foreign envoys more genuinely popular here than Ambassador Saito, none who had more real friends.

It was particularly tragic, therefore, that the last years of his ambassadorship were clouded by increasing friction between Japan and the United States, a development that may well have hastened his untimely death. With American opinion intensely critical of Japan's course in China, Ambassador Saito demonstrated that his tact was as keen as his intelligence. His conduct during those latter days of his ambassadorship was exemplary and won him further admiration from those already charmed by his frank and open habits of speech, his keen sense of humor, and his camaraderie. He will be widely missed in Washington and throughout the entire United States.

Ambassador Saito was equipped for his task by inheritance and training. Born in 1887, his diplomatic activities took him to many parts of the world.

It was Macaulay who said that if one stopped under a doorway for a moment with Edmund Burke to escape a shower, he would be impressed with the certainty that he had met a kindly man. That was true of Ambassador Saito.

Washington mourns his passing and extends to his country and his family its deepest sympathy.

Restricting Exportation of "Peeler" Logs

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

LETTER FROM T. A. STEVENSON, SECRETARY OF TACOMA CHAMBER OF COMMERCE, URGING PASSAGE OF H. R. 3579

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a copy of self-explanatory letter sent by the secretary-manager of the Tacoma (Wash.) Chamber of Commerce, to Hon. Cordell Hull, Secretary of State, in which is set forth strong arguments urging the passage of bill introduced by me, to wit, H. R. 3579, providing an interdictment upon the export of high-grade Douglas fir logs.

I am appreciative of the courtesy of my colleagues in permitting me to have this letter printed in the RECORD. The letter sets forth in graphic and persuasive language the strongest arguments justifying the prompt consideration and early passage of the measure. Though the letter is laconic and terse, it has condensed in admirable fashion the facts and underlying reasons justifying the passage of my bill. The letter follows:

FEBRUARY 23, 1939.

Hon. CORDELL HULL,
Secretary of State,
Washington, D. C.

MY DEAR MR. SECRETARY: Our district is the center of important wood-conversion plants, drawing on our virgin timber resources for their raw material. For many years past our industries have developed an important export market for finished wood products. This export market has been of great economic importance, since it acts as a balance wheel on the domestic industry, thereby enabling our plants to maintain a steady schedule of operation and to retain their labor force.

During the last few years this export trade has undergone an important change in that the exportation of finished products, such as high-grade lumber, plywood, doors, and similar items, have been superseded by the exportation of high-grade Douglas fir logs. Five to six years ago the Northwest exported 68,000,000 feet of plywood of Douglas fir and less than 10,000,000 feet of Douglas fir logs, whereas the last couple of years our export of plywood has dropped to less than 20,000,000 feet. At the same time, our log exports have risen to more than 130,000,000 feet. Were it not for the war in the Orient, the present log export trade would have been much larger, since Japan is the largest buyer of these logs.

Similar conditions confront lumber and other manufactured wood items. We know that the Department of State is making a strong effort to secure equitable custom duties in foreign countries applying to our products, but as long as the United States permits the unrestricted exportation of high-grade softwood logs these efforts are in vain. We are paying the highest wages of any similar industry in the world and must compete with Japanese wages of about one twenty-fifth of our current wages. We are shipping our logs to British Columbia, having a wage scale of 25 to 30 percent lower than ours, and their products enter Empire markets under more favorable duty treatment than is accorded our products. It is therefore impossible for our industries to compete.

Coupled with this it may be mentioned that through a trade treaty with Finland the American import duties on birch plywood have been reduced from 50 to 25 percent ad valorem and the

imports of birch plywood have already been felt by our industry. Canadian lumber of low and medium grades is entering our market under a reduced duty as a result of the Canadian trade agreement, and as a result the entire Northwest forest-products industries are in a critical condition.

The initiative has been taken by the Northwest industries with strong support from labor and the general public to prohibit the exportation of high-grade Douglas fir logs and a bill is now before Congress. The Chamber of Commerce of Tacoma has unanimously passed the enclosed resolution and we are asking that the Department of State give favorable consideration to this bill which, if it passes, will give our industry a measure of protection which cannot be secured through any trade agreements under present conditions. We know that the United States is the only country in the world which is willing and able to export this type of softwood logs, and it seems reasonable and equitable to us that our own Government should take the necessary steps to reserve this valuable natural resource for the benefit of its own people.

May we point to the fact that certain foreign countries, such as France, possessing valuable hardwood-timber resources in their colonies, have specifically prohibited the exportation of logs to any other country than the mother country. In years past Northwest sawmills imported Japanese hardwood logs, but the Japanese Government stopped this trade and insisted on changing to the exportation of finished hardwood products.

The United States Forest Service is fully conversant with the important conservation angle involved. The continued exportation of high-grade Douglas fir logs will completely undermine future reforestation efforts and will seriously affect the Northwest economic structure.

May we therefore ask you to give your support to this bill?

Yours very truly,

T. A. STEVENSON, *Manager*,
TACOMA CHAMBER OF COMMERCE,
Tacoma, Wash.

Coal Laboratory—Government Has Done Little in Way of Assisting Anthracite Area—One Way In Which Private Business Can Be Established and Built Up With a Little Government Encouragement and Cooperation—Would Benefit Employment

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1939

EDITORIAL FROM THE POTTSVILLE (PA.) EVENING REPUBLICAN OF FEBRUARY 20, 1939

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pottsville (Pa.) Evening Republican:

[From the Pottsville Evening Republican of February 20, 1939]

With anthracite so much in the public eye just now, favorable consideration may be given to the bill of Congressman FENTON which would establish in the anthracite region a Government laboratory for the purpose of prosecuting experiments with coal to ascertain if by chemical processes something may make this product as much in demand for some other need besides that of heating.

The expenditure of a million dollars a year, as the bill provides, would establish in the region an industry of no mean proportions, which in itself would be of material benefit in the matter of employment. The Du Ponts have done a wonderful work in their experimental laboratories and are constantly turning out new products from old materials which have become of general necessity. It is altogether possible that from coal can come something which will not only create a new demand for coal but which may result in the establishment of large employing industries to turn out some new product that may be evolved, not by the Government but by commercial companies.

The Government has done little in the way of assisting this part of the country. There was a time when it bought our fuel, but even this is not done now. The manufacture of products for the Army or Navy might well be conducted in this section and at this time the airplane offers a possibility in this direction, where factories might be established for making plane parts. There are many ways in which private business can be established and built up with a little Government encouragement and cooperation.

Our Nation First

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1939

Mr. SPRINGER. Mr. Speaker, many things have been said within the last few months respecting war in the future, and it has been openly predicted that our Nation will become involved therein. Such unguarded statements have been made by many of our people who speak without authority, and, I regret to say, many of such statements have been made by those in high authority in the national administration who attempt to speak the sentiment of our people. The rank and file of our people do not generally discuss this very delicate and revolting subject, and to the very best interest of our Nation they refrain from discussing the things which look toward war, and I doubt if the people of any other nation, except those actually engaged in war, indulge in such revolting thought or conversation at this time. Reliable information comes from abroad that the people of many European countries not only refrain from discussing the subject of war but they emphatically state "there will be no war in which the United States will be involved." Those countries do not want any involvement with us, and the people, therefore, refrain from discussing the subject.

It is lamentable, indeed, that various officers and Department heads of the national administration continue to speak of war. We should speak of peace, not of war. The people of our Nation do not want war, they want peace; they want an adequate national defense, which is a prepared defense sufficient to protect our shores, our institutions, our people, and our homes. With all their vigor they oppose an excessively inflated defense program which will create a huge spending spree and, in the end, an added burden upon our people by the imposition of more taxes. Our people do not want to become a warring nation, with great and excessive armament and numberless soldiers, sailors, and marines, all studying and talking war and its various phases, but they seek to enhance the arts and trades of civil life, the development of trade and commerce, and the institutions of peace; they do not want maimed and disabled veterans in cur communities, but they want men who are strong and capable and who can produce and aid in the building of our Nation.

We have had a rich experience in the payment of claims, pensions, and compensation to our disabled veterans and their dependents. And with this I am in full accord, because, if any nation sends its men to war and disability results, then the obligation to pay, and to fully pay, exists. However, we do not want impaired citizens; we want men. When we analyze the great cost of the World War in both money and in life, we are constrained to conclude that such a cost is entirely too great a sacrifice for any people to consider lightly and without calm reflection. War is a serious subject; it is too serious to discuss when we are enjoying peace and with no war clouds upon the horizon.

Let us reflect for the moment to the days of the late war and the years that have folowed it. We had and supported an Army of 4,791,172 in that war. Many of my comrades in this House, who are glad to have served their country, helped to make up that great army of men. We lost in action and from other causes 173,274 of our citizens; 205,690 of our soldiers were wounded; we have paid from the Federal Treasury since the close of the war to June 30, 1938, the vast sum of $3,595,965,530.99 in compensation to veterans and to dependents; that staggering sum does not include the payment of the adjusted-service certificates, which adds an additional $3,732,464,320.75 to the vast sum already shown above; that

is not all, because an additional $244,191,900 was paid out by our Government in discharge certificates, which brings the total amount to the staggering and incomprehensible figure of $7,572,621,751.75.

However, the greatest loss sustained by us as a people was in the loss of life and in the disabilities suffered by our comrades.

Let us remember the peak of disability has not yet been ascertained, and it will be many years hence before the great loss sustained can be fully realized.

Those who talk of war today should consider that the World War cost this Nation $1,000,000 and more each hour from April 1917 to April 1919. The reports available show that our expenditure of money for the World War was in an amount equal to a sum which is sufficient to have carried on the Revolutionary War continuously for more than 1,000 years at the respective rates of expenditure entailed by those two wars. With the great cost of war, why do our national leaders talk of war?

Let us analyze our economic situation for a moment. Our present national debt approximates the stupendous sum of $40,000,000,000, and our struggling taxpayers, which embrace all our people of every walk of life, are appalled at the imposition of the great burden upon them. In the face of the unprecedented spending of the people's money, by the present national administration, we have approximately 13,000,000 of our people who are unemployed. Business and industry in our country is at low ebb and our farmers, of every class, have been controlled and regimented until theirs is an eternal struggle to pay their taxes and their overhead expenses.

I suggest that we should talk economy and recovery in this country, and not the idle gossip of war and idle things which destroy; that we discuss the means and proceed to carry into effect the plan to stimulate business and industry and thereby aid in the reemployment of the unemployed in our Nation; that we speak of the things which will aid in the building of the confidence of our people in their Government, and not of the things which tend to destroy that confidence; that we have more of statesmanship here, and less of politics; that the will and the determination of our people should be the first consideration in these legislative halls, and the spectacular and uneconomic policies, which are wholly unsound, should be entirely eliminated and forgotten.

Let us advocate a complete cessation of "war conversation" in our country, and let us save the United States of America, first.

Secret Armies

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1939

LETTER OF HON. LEE E. GEYER, OF CALIFORNIA, TO WALTER WINCHELL

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a letter written by myself to Walter Winchell. It is to be hoped that all Congressmen will read the book Secret Armies, as he suggests in a letter to all.

The letter is as follows:

FEBRUARY 22, 1939.

Mr. WALTER WINCHELL,
New York Mirror, New York City.

MY DEAR MR. WINCHELL: I have just finished reading Secret Armies and I say "orchids to Walter Winchell for his public service in making this astounding book available to every Member of Congress."

If you will refer to the CONGRESSIONAL RECORD of February 27, page 1948, you will see that the book is also provoking discussion in the House. Representative HAMILTON FISH sought to dismiss its revelations of Nazi activities on the ground that John Spivak writes for the Communist Daily Worker. As I said in reply to Mr. FISH, I am sure that your sponsorship of the book does not in any way imply your sympathy with or advocacy of the doctrines of communism.

I echoed your opinion when I said that every Congressman has a duty to read this book and judge it on its merits. If the charges there set forth are not true we should know it. If they are true, in whole or in part, then certainly we should act promptly to put an end to the clear and present dangers which they expose.

In continuing the splendid work you are doing in your column and in your broadcasts for the preservation of democracy, I hope you will continue to draw attention to the basis for further investigation which the material in Secret Armies offers. The Dies committee, with the new funds at its disposal, should certainly look into the overt acts of foreign spies and the military preparations of foreign groups plotting the overthrow of our Government, before making further excursions into the wonderland of fantasy it has explored in the past. Not the opinions of American citizens, but the activities of foreign agents, are the proper subject of congressional investigation.

Again many thanks to you for sending me the book, and more power to your tongue and pen.

Very sincerely yours,

LEE E. GEYER, M. C.

Guam

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1939

LETTER FROM J. G. B. COBERLY, OF PARKERSBURG, W. VA., IN REFERENCE TO GUAM HARBOR DREDGING

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an interesting letter from J. G. B. Coberly, of Parkersburg, W. Va., in which he piquantly makes observations concerning a recent development in the House of Representatives. His remarks about Japan, and foreign policy in general, are provocative and worthy of study. The letter follows:

1046 EMERSON AVENUE,
Parkersburg, W. Va., February 23, 1939.

Hon. JOHN M. COFFEE,
House Office Building, Washington, D. C.

MY DEAR FRIEND: I am heartbroken and in tears to know that our Congress is so infested with traitors that they would sell our national honor just to avenge themselves on President Roosevelt. I never thought to live to see the day when the American people would be so humiliated as they are tonight. I know you did not vote to subject us to this ignominy.

Is it not enough that we should sell Japan the implements with which to destroy the women and children of a friendly nation without asking their permission to use our possessions as we please? If it is not, let us appoint some old man in his dotage, like * * *, as England did Chamberlain, and let him fly to Tokyo and ask the holy Emperor what he will take in land and money to refrain from persecuting us. If he says he wants China, but is unable to conquer and subdue her patriots, let us send an expeditionary force to assist the Japanese in their murder of women and babies, with the hope that he may leave us alone for another 10 years.

I do not know whom to appeal to in the Senate who will do it, but surely you can find one man who will take up this battle where you left off and fight it till he drops dead rather than force this disgrace on the American people. Ask them to put the Guam item back into the bill and keep it there, even at the expense of the whole program. We would be foolish to go ahead and build up a military force if we have to ask nations who are patently our enemies as to where we may use these forces on our own possessions. If I were in the Senate, I would stand there and fight until I dropped dead on my feet, if no one else would help me, rather than suffer this thing.

Only 2 nights ago I took down my old McGuffey's Sixth Reader and read again the ringing words of Patrick Henry: "Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God."

I don't know whether we need Guam or not. It may not be worth a tinker's damn; but if I were President, I would fortify that island if it took every warship, every plane, and every military power we could muster.

On many a morning I stood at attention at Fort Myer and saw the flag unfurled to the sweet breezes of the Virginia hills. Many an evening I helped furl it and carry back and lay it safely away

for the night. But I never dreamed I would be ashamed to look upon it. I little thought the day would come in the short space of 20 years when a heathen nation could tell us when and where we could fly it.

Isn't there something that can be done? You are on the ground where the fight is going on. Surely a bunch of traitors like those in the House cannot dictate legislation.

Most sincerely yours,

J. G. B. COBERLY.

Public Works Appropriation

EXTENSION OF REMARKS

OF

HON. JOE STARNES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

Mr. STARNES of Alabama. Mr. Speaker, on June 21 last year the President signed a bill which included in its provisions an appropriation of $965,000,000 for the Federal Emergency Administration of Public Works, of which $200,000,000 was made available for Federal projects and $750,000,000 for grants for projects of States, school districts, municipalities, and other local public agencies throughout the country. The act, known as the Public Works Administration Appropriation Act of 1938, permitted the receipt of applications for loans and grants through September 30, and provided a deadline date of January 1 for getting all projects under construction.

At the time the act became effective last June, the Public Works Administration had a reservoir of some 2,000 approved projects in its files, and a trained technical and administrative staff of employees who had been with the administration for nearly 5 years and had supervised the construction of more than 30,000 projects, from small school buildings costing a few hundreds of dollars to immense construction projects such as the sanitary sewer project of Chicago, the Triborough Bridge in New York, the Florida overseas highway, and others of similar magnitude.

It was less than 4 weeks after the Public Works Administration Appropriation Act of 1938 became law that the first project of the new program was placed under construction, and by January 1, 6,163 non-Federal projects and 1,884 Federal projects were under construction. Never in world history has such a record of speed in public works been achieved, and its achievement here would have been impossible but for the splendid organization that has been developed in the past 5½ years for this specific purpose, and but for the fact that a large number of proposed public works had been planned and studied and prepared for in advance.

In addition to the almost superhuman task of placing such a large number of projects under construction, with a total estimated cost of more than $1,500,000,000, the Public Works Administration received nearly 12,800 new applications for Federal assistance in the way of loans and grants, showing the intense interest of communities throughout the country in the program, and their desire to cooperate therein.

I have introduced a bill, which will be known as House Joint Resolution 4576, to provide for a new program of non-Federal public works and making available for loans and grants for such projects an appropriation of $500,000,000. This appropriation will, on the basis of past experience, result in the construction of projects costing over a billion dollars. The bill further provides for the continuance of the Public Works Administration as a permanent agency of the Government, with a small staff of trained and experienced experts and others, which can be quickly expanded when the need arises for an intensive program of public works.

Following is a synopsis of the bill by sections:

Section 1: $500,000,000 is appropriated, for expenditure by the Administrator, Public Works Administration, with the approval of the President:

(a) For loans and grants to States, Territories, possessions, political subdivisions, and other public agencies;

(b) For loans and grants to public agencies and nonprofit corporations for projects for the construction of hospitals, sewage treatment and disposal plants, and for elimination of stream pollution; and

(c) For grants to public agencies for the preparation of plans and specifications for projects.

Allotments may be made only for projects that can be commenced by April 30, 1940, and substantially completed by December 31, 1941.

Section 2: On and after July 1, 1939, the Federal Emergency Administration of Public Works is to be known as the Public Works Administration.

Section 3: All limitations on the life of the Public Works Administration are repealed, and the Administration is authorized to continue to perform its present functions.

Section 4: The Administration is given the following specific powers, but only within the limits of available appropriations):

(a) To construct or finance Federal projects, although no part of the appropriation made by this bill is made available for this purpose.

(b) To make loans or grants to public agencies or nonprofit corporations for projects for the construction of hospitals, sewage treatment or disposal plants, or for the elimination of stream pollution.

(c) To make loans or grants to public agencies for the construction of other projects of such public agencies, the grant in any case being limited to 45 percent of the cost of the project.

(d) To acquire property by exercise of the power of eminent domain, and to construct and lease to public agencies projects eligible for allotment under subsection (b) or subsection (c); provided that the nonrecoverable portion of the cost of such project may not exceed 45 percent of such cost.

(e) To make grants to public agencies for the preparation of plans and specifications for projects pursuant to standards prescribed by the Administrator; such grants being limited to 3 percent of the estimated cost of such projects, and to an aggregate of $10,000,000 in any fiscal year.

(f) To receive and consider applications.

(g) To purchase refunding bonds as an incident to financing a non-Federal project.

(h) To exchange obligations purchased by the administration for other obligations of public agencies.

(i) To sell obligations purchased by the Administration, and to use the proceeds in making further loans.

(j) To provide funds for temporary operation of projects constructed and leased by it, and for temporary operation of projects which it has financed when necessary for the protection of securities which it has acquired.

Section 5: Provision is made for a regular staff to be appointed (with certain exceptions) subject to the Classification Act of 1923, as amended, the maximum annual compensation of such staff to be $2,000,000. The appointment of additional employees is authorized when necessary to carry out public-works programs for which appropriations are made by Congress. Provision is made for administrative expenses, in addition to the amount appropriated by the Public Works Administration Appropriation Act of 1938 and the Independent Offices Appropriation Act of 1940, in an amount sufficient to carry out the program of public works authorized by the bill.

Section 6: Conflicting provisions of existing acts are repealed, and the commencement and completion dates established by the bill are made applicable to any further allotments from funds previously appropriated.

Section 7: The act is to be cited as the "Public Works Administration Act of 1939."

The bill is, with but a few changes, substantially the same as previous P. W. A bills. The changes are worthy of mention, and no one can gainsay their desirability.

The bill broadens the scope of eligible applicants by permitting loans and grants to be made to nonprofit corporations for projects for the construction of hospitals, sewage treatment or disposal plants, and for elimination of pollution in streams. Based upon the experience of the P. W. A.,

there are a large number of communities in the country where hospitals, though essentially public and performing all the functions of a publicly owned hospital, are owned and operated by nonprofit, endowed institutions. To deny such institutions the aid that is granted to public bodies for such projects is to deny such aid to the communities where they are situated since, in many cases, the communities cannot support two hospitals.

The bill provides for the making of grants for the preparation of plans and specifications, in accordance with standards approved by the Administrator, of proposed projects. The maximum grant for such purpose cannot exceed 3 percent of the estimated cost of the proposed project and not more than an aggregate of $10,000,000 may be paid out for such purpose in any fiscal year. Furthermore, any such grants will be included in determining the maximum amount of grant on the projects under the 45-percent limitation. Permitting grants for the preparation of plans and specifications will insure that projects for which grant allotments are made will be properly designed—none can question the fact that the activities of the P. W. A. have substantially raised standards in the construction of public works—and that no delay will be encountered after the allotment is made as a result of necessary changes in such plans and specifications.

The bill sets a dead line of April 30, 1940, for the commencement of construction. I believe it essential that the work under the new program be carried on in such manner that the completion of projects under the present and this new program will result in a tapering off of the employment provided thereby rather than in an abrupt drop. Furthermore it appears that the peak of employment on the present program will be reached during the late spring and early summer of this year. To require that the projects in the new program be commenced during this peak of employment would to some extent dislocate the facilities for construction and might result in a disastrous drop in employment upon completion of the present program. Finally the fixing of the April 30, 1940, date for getting projects under way will permit more reasoned selection of projects, both by the communities affected and by the Public Works Administration, as well as more careful preparation of plans for the projects actually financed.

The most important change, and to my mind the most desirable, is the repeal of existing limitations on the life of the Public Works Administration and the setting up of a nucleus organization, strictly limited as to size and expense.

The experience of the Public Works Administration, under the Public Works Administration Appropriation Act of 1938, has demonstrated conclusively the value of such an organization and the value of a reservoir of public-works projects, in case an emergency arises. Given such an organization and a reservoir of approved projects, a program of public works can be put into full swing without loss of time or effort.

In 1938 the Public Works Administration, working within the shortest period of time ever imposed by the Congress on a construction agency for a major program, placed the largest non-Federal program it had ever undertaken completely into construction within 6 months. Its 1938 record showed that—

First. Eight thousand and forty-seven P. W. A. projects, Federal and non-Federal, calling for the expenditure of more than a billion and a half dollars, were put under contract in 143 working days.

Second. P. W. A. released for construction and supplied to heavy industries an average of more than $11,000,000 worth of work daily. During the 4 months following passage of the act projects were approved at the rate of 2,000 per month, thus placing on the market more than $300,000,000 worth of work every 30 days.

Third. In the 78 working days allowed for filing applications, cities and States submitted requests for 12,814 projects, the total cost of which exceeded $4,000,000,000.

Fourth. All records for volume of P. W. A. construction within a comparable period were broken. The following table shows how the 1938 non-Federal program moved as compared with previous P. W. A. programs when procedure was being perfected:

Non-Federal projects

	First 6 months of—		
	1933	1935	1938
(a) Number of projects for which allotments were made	1,374	2,965	6,246
(b) Federal money contributed and loaned	$387,013,085	$343,903,855	$693,225,275
(c) Total cost of construction	$625,789,714	$615,123,168	$1,438,580,784
(d) Number of projects put under contract	396	53	5,987

Fifth. Projects being erected under the 1938 P. W. A. program include the following types:

Types of non-Federal projects	Number of projects	Total allotments	Total estimated cost
Streets and highways	598	$108,409,689	$238,705,516
Sewers, waterworks, power, and other facilities	1,436	142,167,044	289,762,218
Educational buildings	2,808	220,907,508	469,195,114
Other buildings	945	119,102,260	242,833,273
Flood control, water power, and reclamation	29	11,929,305	14,185,683
Water navigation aids	21	5,946,829	11,937,404
Engineering structures (bridges, tunnels, etc.)	197	67,918,288	145,401,138
Miscellaneous	212	16,844,362	26,560,438

Our economic framework is so complex that the contribution of any single agency to national recovery through the carrying out of a national program cannot be accurately estimated. Nevertheless, there is sufficient evidence to warrant the claim that the public-works program of 1938 has made a substantial contribution to national economic recovery.

As a result of Bureau of Labor Statistics studies, the P. W. A. was able, by the time the current P. W. A. program was undertaken early last summer, to forecast the effect that the program would have in terms of industrial production and in employment. It was able to predict the benefits that would flow to the heavy industries affected, including that of steel. These predictions have been fulfilled.

For example, the Federal Reserve Board index of industrial production advanced from 77 in June, when the P. W. A. Act was passed, to 97 in October and 100 in November. Simultaneously with the making of P. W. A. allotments, the steel index rose from 28 percent of capacity to 62.5, as follows:

Week ending—	Approximate value of Public Works Administration construction authorized	Percent of ingot capacity (reported by Iron Age)
June 28	$619,345,000	28
July 19	833,346,000	36
Aug. 23	1,247,599,000	43
Sept. 20	1,426,637,000	47.5
Oct. 18	1,605,010,000	51
Nov. 15	1,626,874,000	62.5

Because the machinery was in working order at the time Congress passed the 1938 act P. W. A. was able to set and maintain an unprecedented pace in getting the program under way. A substantial reservoir of accumulated applications that had been examined and approved was ready for the sluice gates to be opened.

The bill provides for a small permanent organization to be appointed with usual exceptions, subject to the civil-service laws. Provision is made for the certification by the Administrator to the Civil Service Commission of present employees who have rendered satisfactory service for a period of not less than 6 months prior to the enactment of the bill, and who are to be assigned to the regular staff of the Administration, and for their acquiring civil-service status after noncompetitive examination. In order to carry out specific programs additional employees may be appointed without regard

to the civil-service laws, but their compensation is payable only from appropriations made to carry out such programs, or otherwise specifically authorized to be used for the purpose.

It is estimated that the nucleus organization will be less than one-tenth the size of the present organization, and the bill specifically limits the aggregate annual compensation of the regular staff to $2,000,000. This is less than one-tenth of the authorization for administrative expenses for the current fiscal year and is less than 7 percent of the maximum of $29,500,000 expended during the calendar year of 1935. I have not the slightest doubt that this $2,000,000 or less annually will be recovered many times over in case of a future program by savings in administrative expenses alone, without considering the benefits to be derived from the ability of such an organization to get a program under way with a minimum of effort and expense and without a moment's delay.

In conclusion, I may state that the record of the P. W. A. is such as to inspire every confidence that whatever appropriations are made—and it must be borne in mind that no program of public works can be carried out except as Congress may approve—will be spent for the purposes for which such appropriations are made, and without extravagance or waste; that any limitations imposed by the Congress upon expenditure of such funds will be complied with to the letter; that the P. W. A. will never come back to Congress with the plea that it has overobligated itself or has spent money without authorization; and that, for all money so spent by the P. W. A., the country will have received full value in lasting public works.

Transportation Rates

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

MEMORIAL OF THE SENATE OF THE STATE OF MICHIGAN

Mr. SHAFER of Michigan. Mr. Speaker, under permission granted me to extend my remarks, I include a memorial from the State Senate of the State of Michigan, being Senate Concurrent Resolution No. 12, as follows:

Concurrent resolution memorializing Congress to defeat certain measures that would discriminate against Michigan industry and agriculture in the matter of transportation rates

Whereas there are now pending in Congress several measures; namely, H. R. 188, S. 126, S. 137, and S. 158, and before the Interstate Commerce Commission an action designated as Docket 27744, all of which are detrimental to Michigan labor, industry, and agriculture, because they impose discriminatory transportation rates against Michigan and in favor of certain Southern States competing with the products of Michigan; and

Whereas adoption of these revised rate schedules, in the estimation of competent authorities, would force some Michigan industrial enterprises to face the alternative of closing or moving their plants to States sponsoring these rate revisions, thus making more acute Michigan's economic difficulties; and

Whereas other States threatened with the same destructive discrimination, notably Illinois and Indiana, are putting forth every effort to defeat this attempt to subject them to unfair competition: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That we do hereby urge the United States Senators and Members of the United States House of Representatives from Michigan to exert their full force in defeating the measures referred to; and be it further

Resolved, That the interests of the State of Michigan be adequately represented in hearings before the Interstate Commerce Commission or before any other agency of the Government, on the proposals referred to, such representation to be at the discretion of the Governor of Michigan.

The Farm Problem

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, OCTOBER 18, 1938

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from the address by Hon. ROBERT A. TAFT on the farm problem, as delivered over a chain of radio stations in Ohio, October 18, 1938:

One-fourth of all the people of the United States live on the farm. Unless they are prosperous, general prosperity is impossible, and every city dweller, every workingman, every businessman is interested in seeing a policy adopted which will produce a real and permanent prosperity on the farm.

On the other hand, it is useless to hope for good farm prices while the entire country is in the midst of a depression. The farmer's prime interest therefore is the same as that of every other American. He cannot hope for general prosperity under a planned economy administered by hundreds of thousands of governmental bureaucrats. He cannot hope for any real prosperity through a Government spending program which proposes to add $4,000,000,000 to the national debt in the year ending July 1, 1939. A deficit of $17,000,000,000 in 5 years has brought the country, and the farmer, back to the same point he was in 1933.

Planned economy as applied to the farm has been a notable failure during the past 5 years, but the Ohio farmer has only been indirectly in touch with it. Today he feels for the first time the heavy hand of Government dictation. The new dealers are finally carrying out through rural Ohio the theory they have long held that they can run any man's farm, or any man's business, better than he can run it himself. Well-informed farm organizations and legislators warned the Nation of the arbitrary power given the Secretary of Agriculture by the new farm act, but the administration insisted on its passage. The farm bill gives the Secretary of Agriculture almost unlimited power to restrict production and tell the farmer what he may produce and what he may market.

WHY I AM OPPOSED TO LIMITATION OF FARM PRODUCTION

I am opposed to compulsory limitation of production, and I am further opposed to semicompulsory limitation of production through the making of benefit payments only to those who comply with prescribed quotas. In my opinion, any policy which is based on compulsory limitation of production is bound to fail in the long run in maintaining prices, is bound to increase unemployment, and limits the essential freedom of the farmer to develop his own farm in the best and most suitable manner. Furthermore, it has brought about the loss of the foreign market, a loss likely to become permanent. When those who have been consuming our products are compelled to go to other sources on account of the limitation of American farm production and become accustomed to depend upon these other sources, it will be difficult to regain their trade.

The present effort to limit corn acreage in Ohio is ill-advised and unnecessary. Corn is a crop of which very little is marketed. Every farmer is better off with a good reserve of corn; and if his reserve proves excessive, he can limit his own production. The carefully planned rotation of crops customary in Ohio is completely upset by Government dictation. Furthermore, the attempt to prescribe quotas seems to have been done in a most haphazard way, without regard to the needs of the particular farmer, and without any attempt to be fair between farms which seem to be in every way alike. If corn-acreage limitation is intended to limit hog production, it is an indirect and ineffective method of reaching that result.

America looks to its farm population for new blood, new ideas, and the preservation of sound democratic principles. Nothing is more important than to make the life on the family type farm as attractive as that of the average city dweller. There must be no discrimination in favor of the city.

SECURE THE AMERICAN MARKET FOR THE AMERICAN FARMER

The basis of any American farm policy under present world conditions must be to secure the American market for the American farmer. From 1934 to 1937, under the present farm and reciprocal-treaty policy, exports of agricultural products have increased from $900,000,000 to $1,000,000,000, or 12 percent. At the same time imports of agricultural products have increased from $1,088,000,000 to $2,042,000,000, or 88 percent. The excess of imports over exports has increased from $186,000,000 to $1,023,000,000. Corn, wheat, and cotton goods have been freely imported, with the result that the American farmer is deprived of his best customer. This

has resulted from the limitation of production and from ineffective tariff barriers. It would not occur if the tariff on agricultural products were sufficient to protect the American producer against similar products produced cheaply in other countries whose currency has been devalued more than that of the United States. There should definitely be a tariff on agricultural products, and no reciprocal-trade treaty should permit this tariff to be reduced below the difference in the cost of production in this country and abroad. With such a tariff and the removal of production control the imports would be checked.

STIMULATE THE DOMESTIC AND FOREIGN MARKET FOR OUR FARMERS

The Government should deliberately stimulate a market for agricultural products, should assist in finding new uses for agricultural products, and should, of course, promote the sale of American agricultural products abroad as much as possible.

Cooperative marketing should be encouraged through more intelligent and sustained support, so that the farmer may not be at a disadvantage in bargaining for the disposition of his products. The various farm-credit agencies should be coordinated and simplified to eliminate the red tape incident today in nearly all farm borrowing.

In the process of a progressive policy of conservation, much land may be taken out of immediate production by the planting of trees which in time will enable the United States to produce more of its own paper and pulp. Certainly when the Government creates additional agricultural land by irrigation projects, it should correspondingly reforest the poorer type land now in production.

For many years the farmer has had a comparatively lower income than other groups in the country. He has to pay a higher price for some of the things he buys because of the tariff, whereas those farmers producing crops with an exportable surplus, like wheat and cotton, must sell at the world price. This condition justifies a reasonable subsidy in the form of benefits for soil conservation, and for the planting of crops which bring about soil improvement.

All of these things may be done without Government dictation or the creation of a vast corps of bureaucratic inspectors overrunning the farms of Ohio like a plague of grasshoppers.

Restoring Agriculture to Prosperity

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

RADIO ADDRESS BY HON. ROBERT L. OWEN ON THE QUESTION OF RESTORING AGRICULTURE TO PROSPERITY

Mr. CARTWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the speech of ex-Senator Robert L. Owen, of Oklahoma, made on the National Grange Hour over the N. B. C. network, under date of February 18, 1939. Senator Owen is one of the greatest authorities of the world on money matters. This speech is interesting and instructive. I advise everyone to read it.

The speech is as follows:

My friends and fellow citizens, it is a great privilege to appear as the guest of the National Grange to discuss this question of restoring agriculture to prosperity. It is the same problem as restoring the small-business man to prosperity. It is the same problem as restoring the professional men and those engaged in the vocations, those that labor in the factories, to prosperity.

Millions of people in the United States know perfectly well what has been the cause of our sorrows during the last 20 years. Let me call your attention again to what took place in 1920. Then agriculture was in the most prosperous condition and it was prosperous because there had been an expansion of credit and currency in the United States. There had been an expansion of the money supply in the United States through the billions of bonds sold, which created money. And under those conditions not only was agriculture prosperous but the labor of the country was being well fed and well housed.

In 1921, under an unwise contraction of credit and currency, there ensued a depression which cost the farmers of this country $20,500,000,000 in the value of their farms; and it caused the value of farm commodities to fall more than half within 1 year; and it caused the dollar index to rise from 60 to 107 from May 1920 to June 1921.

We had another experience of the contraction of credit and currency in 1929-32 from which we have not yet recovered, and which bankrupted not only millions of farmers but, these two depressions, both caused by the contraction of credit and currency, bankrupted 16,000 banks. Don't blame the poor banks for what took place. They were the victims as well as you. The cause of this has been due to a lack of understanding on the part of our great industrial and financial leaders. And no man ought to point to them in reproach for what has taken place for the reason that they have suffered, and suffered greatly, from the same identical cause.

And this cause is now well known. It has been well known to your farm leaders. Nobody knows better what has caused this distress for the farmers and businessmen of this country than do the leaders of the farm groups in America and the farm organizations in America.

Please listen: I will ask the announcer—in the briefest possible form—to read what they have said in their public meetings:

The legislative program of the National Grange for 1939 proposes that:

"Congress should give a mandate to the Board of Governors of the Federal Reserve System to manage the currency in such a way as to restore the average price level obtaining between 1921 and 1929, and then stabilize the purchasing power of the dollar at that point."

Mr. Louis J. Taber, speaking before the annual session of the National Grange, 1938, at Portland, Oreg., said:

"There will be no sound farm program or enduring rural prosperity until we secure an honest dollar."

The American Farm Bureau Federation passed a resolution in 1938, saying in part:

"The American Farm Bureau Federation has repeatedly urged Congress to exercise its constitutional obligation to regulate the value of money."

Mr. Edward A. O'Neal, before the twentieth annual convention, 1938, of the American Farm Bureau Federation, in New Orleans, said:

"I am convinced further that we must have a managed currency."

The National Cooperative Council, after 2 years' study of this matter, passed a resolution which in part said:

"The desire and objective of the National Cooperative Council is that our monetary system be so revised and currency and credit so managed as to establish and maintain the dollar with a constant purchasing power."

The President of the United States himself has said and spoken of the importance of restoring the predepression price level and giving the country a dollar whose debt-paying purchasing power should be the same from one generation to another.

The question is, Why has not relief been given through the necessary steps in Congress to compel the correction of this condition and establish this stable dollar? I think the answer is that there has not been in the United States a sufficiently well-informed public opinion as to how to apply the remedy and exactly what was needed in the law.

For that reason, I wish to suggest to you and urge upon you the organization of money study clubs, as they have in Canada, thousands of them. I want to ask you to inform yourselves. You can get the information you desire now. The information is available in public documents. There was a public document printed by the Senate of the United States within the last 2 weeks (S. Doc. 23), which is a book which I took the pains to prepare explaining what ought to be done and exactly how it should be done. This book is available for those of you who ask your Senators or Congressman to send it to you; here you will find all the facts necessary. Here you will find an explanation so brief and so clear that a high-school boy can understand it.

I am urging you to take this step in order that the country may be informed, and so that you, as citizens, may understand what you are talking about as to the need and manner of the reform required so that you may write with intelligence to your Senators and to your Members of Congress and cause them to be more deeply interested in this matter.

There are a number of bills now before Congress which are adequate for this purpose. One (S. 31) introduced by Senator LOGAN of Kentucky. One (H. R. 195) introduced by Mr. PATMAN, of Texas. And others doubtless will be presented.

But it is necessary to have an informed public opinion and I am appealing to you to do your part to restore prosperity through an informed public opinion and through the action of Congress that shall give us relief.

Great Britain has adopted the system of managed money with great benefit and their production has increased 50 percent in the last 5 years. Germany has increased her production under Hitler 146 percent in the last 6 years.

The Constitutional Money League of America has been organized in Washington, D. C. This league proposes to appeal to the country for the organization of money study clubs. There will be upon the advisory council leading men. Through this organization you will be able to obtain information. But from the Congress, itself, you will find many speeches being made—which will appear in the CONGRESSIONAL RECORD—by leaders in the House and Senate explaining this matter.

But it will require the citizens of the United States to be awake to understand the importance of this matter in order that Congress shall take definite action at this session of the Congress. I am appealing to you to write letters to your Senators and your Congressman when you shall have studied this matter urging them to take the proper action.

I want to thank you for this opportunity, and above all, I want to thank the radio, the greatest gift which God has ever given to mankind for the promotion of the truth; for it is written—

"Ye shall know the truth, and the truth shall make you free."

National Defense

EXTENSION OF REMARKS
OF
HON. DOW W. HARTER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1939

ADDRESS BY COL. STEPHEN A. PARK ON FEBRUARY 17, 1939

Mr. HARTER of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Col. Stephen A. Park, Infantry Reserve, national president of the Reserve Officers' Association of the United States, at the annual national council banquet in Washington on February 17, 1939:

Mr. Secretary (Hon. Harry H. Woodring, Secretary of War), members of the Congress, and officers of the Regular Establishment, we of the Reserve Officers' Association of the United States are happy to welcome you as our distinguished and honored guests at this banquet held in connection with the fifth annual midwinter meeting of our national council.

Tonight marks the midway point in the period between Lincoln's and Washington's birthdays, the period which our organization has for several years sponsored as National Defense Week, the period during which we, with the splendid collaboration of the Regular Army, the National Guard, veterans' and patriotic organizations and other groups, have endeavored to impress upon the citizenry of the entire country the status and basic needs of our national defense.

It must be evident to all of us that this year's observance of National Defense Week and our meeting here tonight are particularly significant and challenging because every peace-loving citizen is now asking the vital question, "Will America become involved in the war which threatens to embroil all of Europe as well as parts of Asia and Africa?"

Like all other civilians, the members of the Officers' Reserve Corps and the Reserve Officers' Association, fervently hope and pray that our future history will answer that question in the negative. We are real pacifists because some of us have personally experienced the drudgery, the suffering and the indescribable horrors or war, and we want no more of it for ourselves or for our children. Both we of the war-veteran group and the younger men who have joined the Reserves since the World War hope that we will be allowed to pursue our civilian businesses and professions without interruption, because we have everything to lose and nothing to gain for ourselves personally should we ever be called to the colors for war service.

And because we are real pacifists we want our Government to pursue the surest and probably the only course for keeping our country safe and at peace, and that is by making all the elements of our defenses so strong that we will be able to discourage or repel, if necessary, any possible aggression.

During the last few years substantial progress has been made in that direction. Our Regular Army has been increased to 12,760 officers and 165,000 enlisted men, but it still needs 2,000 more officers and 15,000 more men to fulfill its responsible missions, including the training of the civilian components and making proper provisions for the Air Corps and other vital branches of the service. The total of approximately 195,000 officers and men needed now as the minimum strength for this component would represent only 1.3 per 1,000 population in the United States and its Territorial possessions. When it is considered that our cities employ 2 to 3 policemen per 1,000 population merely to maintain law and order in their communities and that our Regular and Reserve forces now stand eighteenth among the armies of the world, although the United States stands first in wealth and fourth in population, certainly an objective of 195,000 officers and men for the Regular Army is modest in the extreme.

Our National Guard, supervised and trained by Regular Army officers, has developed into a highly efficient force and, although still less than half the strength provided for under the National Defense Act, will admirably supplement the Regular Army as the first line of land defense in any national emergency.

While it is of utmost importance that we increase the strength and efficiency of these two components which would constitute our initial protective force, we must recognize the fact that no army is any stronger than its reserves and that under our system of national defense we place reliance for the Nation's ultimate security upon a citizen army which must have trained and qualified leaders.

Those leaders must come from the Officers' Reserve Corps. They must be ready to command platoons, companies, battalions, and regiments, and perform staff functions in the various echelons of an army, raised on mobilization, in the same manner as officers of the other two components.

Against an estimated minimum requirement of 120,000 such officers to meet the demands of the first phase of a national emergency, the Officers' Reserve Corps now has on the active list about 100,000, 85 percent of whom have had no wartime experience either as officers or as enlisted men.

In view of the tremendous responsibility which would devolve upon this corps in having to furnish four-fifths of the officer personnel for a national army, and recalling our experience in the World War, our association maintains that the opportunity for active-duty training should be given to such officers annually and not on the present basis of once in 2½ years for officers of the arms and once in 6 years for officers of the services.

As a result of this policy, based upon considerations of economy rather than on military efficiency, it has been necessary for Reserve officers to supplement their infrequent practical training in camp by pursuing Army extension courses and attending schools and conferences on an inactive and nonpay status.

That our present laws and appropriations are inadequate for maintaining the interest and activity of members of the corps and building up a strong, reliable component of the Army, is evidenced by the fact that nearly half of our R. O. T. C. and C. M. T. C. graduates commissioned in the Officers' Reserve Corps since 1920 have either resigned or allowed their commissions to lapse.

In connection with this problem of training I am reminded of a story that is told about Col. Selah H. Thompkins, the widely known Cavalry officer, who died a few days ago in San Antonio, Tex., at the age of 76. Years ago, when on duty in the Philippines, Col. "Tommy" Thompkins, or "Pinkwhiskers," as he was affectionately called, was given 400 Cavalry recruits and told to mold them into a fighting unit. After a few weeks his superior officer wrote, asking how things were going. Colonel Thompkins replied, "I have 400 men who have never seen a horse, 400 horses who have never seen a man, and 12 officers who have never seen a man or a horse. Now what can I do?"

That was long before the Officers' Reserve Corps was even thought of, but the need for practical training is just as evident now as it was in Colonel Thompkins' day.

You gentlemen of the Congress have the constitutional duty and responsibility, particularly grave at present, of providing for the national defense, while you of the Regular Establishment have as one of your principal missions the administration and training of the Organized Reserves in accordance with congressional provisions. As for the Reserve Officers' Association, the mouthpiece of the Reserves, we, too, recognize our duties and responsibilities, first, to the country; and, second, to the members of our component.

Thus as we meet here this evening with a common objective and upon a basis of mutual understanding and respect, let me assure you that we are confident you will treat our requests for the Organized Reserves in the spirit that we present them, namely, of endeavoring to transform this component from a mere paper organization into one of flesh and steel—one that will be adequately trained and equipped and prepared to fulfill its vitally important mission whenever the necessity arises.

We rest our case in your capable hands.

T. V. A. Appropriation

EXTENSION OF REMARKS
OF
HON. JOE STARNES
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1939

Mr. STARNES of Alabama. Mr. Speaker, this House will soon be called upon to act on the conference report of the independent offices appropriation bill for 1940. One of the questions then before the House will be the approval of the appropriation of funds for the Tennessee Valley Authority to continue its program of construction which, when completed, will create a 9-foot navigable channel from the mouth of the Tennessee River to Knoxville. The Tennessee Valley Authority has been directed by act of Congress to do that.

The Tennessee River is an integral part of the inland-waterway system now being developed in this country. When completed this system will provide the most extensive improved waterway in the world, reaching from New Orleans and the Gulf on the south to Minneapolis and the Great Lakes on the north, and from Pittsburgh and the Appalachian Mountains on the east to the Western States of Iowa, Nebraska, and South Dakota. It will contain approximately 5,700 miles of continuous 9-foot channel, plus an additional 3,000 miles of auxiliary channel with navigation depths ranging from 4 to 9 feet. The system is now about 85 percent complete.

The development of such an inland system of waterways is not a new governmental policy. Since the time of George Washington the value of waterway improvements has been expounded by leading statesmen of all political beliefs, and congressional interest in inland-waterway improvement has extended almost uninterruptedly from the beginning of the nineteenth century to the present time.

One of the principal objectives of Congress in the improvement and integration of the inland rivers for navigation purposes, as shown by the records of debates and committee hearings on this subject, has been to create, as nearly as possible, a balance in economic conditions and opportunities as between the interior of the country and the coastal and Great Lakes margins. The latter areas, composing what has been appropriately termed the "deep-water rim," enjoy the benefits of cheap navigation by natural water routes. The great commercial and industrial developments that have taken place in these marginal sections indicate that navigation has been useful and promotive of beneficial results. Congress has added to the effectiveness of these natural waterways by appropriations for harbor improvements and by the construction of the Panama Canal. The hope of the great interior regions for similar advantages lies in the improvement and integration of the inland streams for efficient and economical navigation.

The early navigation improvements on the inland streams of this country were made in piecemeal fashion and did not result in the creation of a network of uniform channels. Gradually sentiment developed for carrying out a more definite program with reference to these improvements. Hon. Herbert Hoover, while Secretary of Commerce, articulated this sentiment before Congress and thereby helped to crystallize the thinking of the country on inland-waterway development. In 1926 he appeared before the House Rivers and Harbors Committee of the Sixty-ninth Congress and earnestly urged the completion of an improved and integrated waterway system for the interior of the United States. He based his position upon the following grounds:

First. To reestablish a balanced economic relationship between agriculture in the United States and foreign agricultural competitors by giving the farmer of our great interior agrarian regions a cheaper form of transportation to the seaboard.

Second. To improve the economic relationship between industry in the interior of the United States and industry located along the deep-water margins of the country.

Third. To promote a better distribution of the population of the United States.

The present inland-waterways development of which the Tennessee River is a part will advance toward those objectives. The inland-waterway system adapts itself to the transportation needs of the country by reason of the fact that it is naturally set up in a way that coincides with the predominant directional flow of the Nation's traffic, which is north and south and east and west. Such diverse points as Chicago, Pittsburgh, Minneapolis, Kansas City, Birmingham, Cincinnati, Chattanooga, and St. Louis are directly connected by the system. Transportation charges to old markets may be lowered by shipping over it, and completely new markets can be opened for shipments to or from the above cities and many others. It is possible, for instance, to move, without transshipment of cargo, a bargeload of steel pipe from Pittsburgh, Pa., all the way to Corpus Christi, Tex., a distance of 2,258 miles. Or it is equally possible to ship a bargeload of kraft paper from Panama City, Fla., to Minneapolis, Minn., a distance of 2,155 miles, without a transfer of lading.

The improved Tennessee River, because it will be an integral part of this national network of waterways, will provide, at relatively low rates, water transportation to shippers in a large part of the country, both in the Southeast and elsewhere. By integration with other forms of transportation shippers in nearly all sections of the country should directly or indirectly receive benefits from the improved river.

The relation of the inland-waterway system to the currents of traffic in the United States is a matter of importance in any effort to estimate the volume of commerce which may be developed on the Tennessee River. There is a large volume of traffic flowing into, out of, and across the Tennessee Valley annually. A substantial part of this traffic moves in a direction that coincides with the improved river channels.

Some regions, of course, produce surpluses of commodities, while others have deficits of the same commodities, which causes an interchange of goods. The Tennessee Valley is a deficit area in some respects and a surplus producer in others. It therefore has a constant movement of traffic into and out of, as well as across, the region. Generally speaking, it is a surplus producer of forest products, coal, coke, limestone, marble, phosphate rock, tobacco, cotton, cottonseed and cottonseed products, hay, zinc ore, and certain types of manufactured products. It is a deficit area in respect of grain, grain products, iron and steel, petroleum products, sugar, salt, sulphur, agricultural implements, and most of the long list of manufactured articles in common use. The surpluses move out-bound and the articles of consumption, of which there is a scarcity, move in-bound.

The present navigation improvement of the Tennessee River was authorized after a thorough and extensive investigation of the river's traffic possibilities. This survey was made by the United States Army engineers under the immediate direction of the district engineer at Chattanooga. The results of the survey were published as a part of the general report on the Tennessee River designated as House Document 328, Seventy-first Congress, second session.

The district engineer, after conducting this extensive study of the commercial possibilities of the river, made a specific estimate of the tonnage that could have moved on the river in 1926 if it had been canalized and put into operation at the beginning of that year. The total estimate of tonnage on the Tennessee River proper, exclusive of tributaries, as of 1926, as made by the district engineer, is 9,558,749 tons, at a saving of $12,231,744. The average saving is $1.31 per ton.

In transmitting his report to the Chief Engineer, through the division engineer, on January 27, 1930, the district engineer stated that while his report had shown the total amount of tonnage that could move on the river at a material saving, it might not be reasonable to expect more than 60 percent of this tonnage actually to take advantage of the possible saving. This calculation indicated a total of 5,700,000 tons that would have moved on the river had the channel been completed in 1926. The annual saving in transportation charges would have been $7,300,000.

The Tennessee Valley Authority has completed a limited commercial survey of the Tennessee River in order to bring up to date the one made by the Army engineers. This investigation was conducted in 1937 and covered possible tonnage as of that year. The results of the study indicated a potential movement by the river as of the year 1937 of 5,686,732 tons of new traffic, at a total saving of $7,735,395.08. Adding to this estimate the average tonnage moving on the Tennessee River for the 4 years from 1933 to 1936, inclusive, makes a grand total of 7,311,892 tons, at a saving of $9,444,958.92.

In making its survey the Tennessee Valley Authority considered certain fundamental factors which have a bearing upon the traffic performance of the Tennessee. They indicate not only present prospects for river tonnage but definite possibilities for future growth of traffic on the Tennessee River. One of these factors is the strategy of the location of the inland-waterway system, of which the Tennessee River is to be a part, with reference to primary traffic-producing resources of the country.

It should be noted that this inland-waterway system reaches from the Appalachian Mountains on the east, where great mineral resources occur, through the Mississippi Valley to the grain-producing areas of the West, and from the industrial district on and adjacent to the Great Lakes to the Gulf coastal region, where other basic minerals are present. In addition to these natural resources, it is important to note that, according to the 1930 census, 22,300,000

people live within 25 miles of the banks of the interconnected inland stream, thus creating a large reservoir of traffic potentialities for all-water transportation.

The chief value of water-transportation service lies in its cheapness. A growing commerce requires not only an adequate transportation service; it requires also that the cost of the service to the public be cheap enough to encourage the orderly development of all resources that can contribute to the national well-being. High speeds are needed in the transportation of some classes of traffic, but speed itself, in the final analysis, is measured in terms of cost. Speed is demanded and paid for only when it will lead to lower over-all expense in the conduct of business. It is hardly open to dispute that waterways are the cheapest of all forms of transportation.

The largest new movement on the Tennessee River has been in gasoline. One of the large oil refining companies, beginning operations in April 1938 has moved approximately 70,000 tons of gasoline from Wood River, Ill., to distributing points at Perryville, Tenn., and Sheffield, Decatur, and Guntersville, Ala. This operation is continuing at an increasing rate. Another important movement has been the transportation of pig iron from Birmingham, Ala., to Joppa, Ill., and to Pittsburgh, Pa., by rail and water movement. The movement began in October. About 8,000 tons were transported during the last quarter of 1938.

Not only has the stimulation of long-distance or through traffic been noticeable but also the creation of new local traffic. The development of large slackwater pools is making it possible to assemble at strategic points, by means of local transportation, industrial raw materials that heretofore have remained untouched. There are enormous quantities of such materials—metallic and nonmetallic minerals, forest products, agricultural products, and so forth—along and near the banks of the reservoirs. They cannot be used without very cheap means of transportation. The improvement of the Tennessee River is making that sort of transportation possible. A practical demonstration of this fact is to be found in the present movement of brick clay at the rate of about 800 tons per week from Whitesburg Landing to a brick plant in Decatur, Ala., on the Wheeler Pool, a distance of 30 miles.

The estimates of savings which the Army engineers and the Tennessee Valley Authority have made on the Tennessee River are based entirely upon tangible benefits from navigation. Other advantages of an intangible nature will accrue to the national economy from the improvement of inland waterways. In reaching foreign markets, for instance, in competition with world competitors, and in attempting to supply the great consumer markets that are constantly growing along the margins of the United States, the interior of the country, by reason of long inland hauls, is at a disadvantage. If this handicap can be removed, or even partly overcome, by extending the best type of navigable waterways to this interior region, then a material benefit will redound to this inland empire and to the country as a whole which cannot now be calculated in terms of money.

So far as navigation is concerned Gilbertsville Dam is the key dam in the T. V. A. system to develop the Tennessee River. It is the one located nearest the mouth of the river and its completion is essential for the estimated traffic to move from the Mississippi and Ohio to the Tennessee.

Gilbertsville is also of major importance to aid in the control of floods. The 25 feet of available storage space above the navigation level in the Gilbertsville pool will provide 4,600,000 acre-feet of flood storage a short distance from the lower Mississippi Valley, which presents the greatest flood-control problem of the Nation.

Because it is designed with large storage capacity for flood control, opponents of the T. V. A. have contended on this floor and elsewhere that the interests of navigation could not be served at the same time. Those opponents profess to prefer the low navigation dams of the type used on the Ohio River. It should be remembered that in all the legal proceedings in which the Authority's projects have been subjected to the most severe attack that expert witnesses could supply no expert has failed to point out that if low navigation dams were substituted for Gilbertsville Dam all flood control would be lost. Low navigation dams of the Ohio River type have no flood-control value whatever.

For essential flood control Gilbertsville must be a high dam, so the opponents, who must admit there are many tangible advantages for navigation present in the high dam proposed, such as fewer locks, and so forth, have directed special attacks on the point that the large pool behind Gilbertsville Dam will be so wide as to invite severe wind and wave action which at various times may interfere with navigation.

Experienced hydraulic engineers, such as Col. Lewis Watkins, who conducted the great 5-year study of the Tennessee River made by the Corps of Engineers of the United States Army, assert that the wider channels provided by the high dams, far from being a disadvantage, are a positive advantage in coping with wind action, because they reduce possibility of being blown aground, which would be a hazard along the narrower more crooked channels created by the low dams.

Expert boat operators on inland waterways, such as Mr. James S. Brodie, chief operating engineer for the Federal Barge Lines, take the view that commercial navigators can operate without interference from waves on these high-dam pools, just as they have operated successfully for a number of years over comparable wide stretches of water on our inland waterway system. They point out that only on rare occasions will storms be of such intensity as to endanger seriously the operation of boats, and that on these rare occasions it will be a simple matter for the navigator to tie up his fleet until the storm passes.

In this connection it might be noted that the width of the proposed Gilbertsville reservoir has been greatly exaggerated. The width generally is less than 2 miles when the pool is at its navigation level. Widths of substantially greater dimensions occur only for short stretches at the confluence points of several large tributaries, and these greater widths will be reached only on rare occasions when the pool is at a high flood level. The reservoir is comparable in every way to the lower half of the Wheeler pool, which has been navigated with consistent success for over a year by towboats and barges of the old Ohio River type used in carrying construction material for the Tennessee Valley Authority.

A Resolution to Commemorate the One Hundred and Ninety-second Anniversary of the Birth Date of Brig. Gen. Casimir Pulaski

EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

Mr. TENEROWICZ. Mr. Speaker, in these troubled days, when the general unrest that is so widespread throughout the world is causing so much concern to the democracies, I think it most appropriate that we pause and pay tribute to a distinguished Polish patriot and soldier, Brig. Gen. Casimir Pulaski, of whom it was said:

> His superior endowments, his zeal, his military skill and intrepidity, his generosity, his manly virtues, and his sublime devotion to the cause of liberty, both in his own country and in the land of his adoption, constitute him a beau-ideal of the patriot, the philanthropist, and the soldier. His access to the temple of fame was obtained through the temple of virtue—consequently his reputation is imperishable. He will be remembered as the countryman of Kosciusko, the companion of Lafayette and the friend of Washington, and will be honored for all time as a brave but unfortunate defender of liberty, as a martyr in the cause of American independence.

Monuments have been erected to the memory of this great hero, but it does seem that at this particular period, when we are apt to question the motives of men who have come to America from foreign shores to find freedom, liberty, and security, that we pause and ponder on the assistance

that was sent to us from the Old World during the early dark days in our country's fight for independence; and instead of further monuments being erected to the memory of this Polish hero, that we take time off to rededicate our lives to the purposes for which he so nobly gave his life. And further, instead of most of us being hasty in judging the motives of the foreign-born man or woman who has come to make his or her home with us that we pause and consider how the so-called foreigner has enriched our lives in these United States and how they have fought to make this "the land of the free and the home of the brave" with a zeal that a people who have never known persecution such as they have experienced could never understand. Let us only judge people by their actions rather than by their background.

In paying homage to the memory of Brig. Gen. Casimir Pulaski it might be well to recount some of the incidents in his life that made him stand out above his fellow men. He was born on March 4 in 1747, of noble parentage in Podolia, Poland, with rank and fortune. His father, an able jurist, who stood high in public esteem, was a man of integrity and ability. His associations were with the first families, particularly with the House of Chartoryski. His early years were spent in careful study, in the acquisition of a thorough military education, and in the cultivation of those elevated principles which so signally distinguished him in after life.

Count Pulaski surveyed with anxious eyes the political and social conditions of his native country, Poland, a country of ancient renown which consisted of a population one-fifth larger than France and containing 20,000,000 people. It had been ravaged, plundered, divided, subdued, and its political existence annihilated by the treachery and cupidity of its three formidable neighbors, Russia, Austria, and Prussia. Poland was oppressed by this conspiracy on the part of the strong to crush the weak and devour their substance. To Russia belongs the odious preeminence of taking the lead in this career of crime.

These outrages kindled resentment in the heart of every Pole. Count Pulaski observed the seeds of discord sown where unity of purpose and generous affiliation should have existed. He knew his people loved freedom and hated oppression as much as he himself. He believed that only a rallying point was wanted in order to evoke the national spirit of the Poles and unite them in an earnest vindication of their claims to personal and political liberty. As an outgrowth of this feeling, at the age of 20 years, he joined his father and three brothers in drafting and signing a secret compact whereby they solemnly pledged their time, fortunes, energies, and lives to the glorious mission of accomplishing the redemption of Poland. They also inspired and enlisted other Polish nobles to join them. This became the noted Confederation of Barr, the model of all others that later sprang up in Poland in the fight for freedom. At the formation of this confederation Count Pulaski is recorded as having spoken these words:

At length, brave countrymen, the perfidious allies of Poland have become her declared enemies. For 60 years a concealed war, more dangerous than bloody hostilities, has enfeebled and desolated our unfortunate country. An execrable people, who can neither be disarmed by justice, modified by submission, touched by favors, nor surfeited by pillage, has resolved to impose upon us the yoke of slavery. Virtues the most sacred have passed for crimes in the eyes of our oppressors; and virtuous citizens, our fathers and our exemplars, now drag out a wretched existence in the dungeons of that barbarous nation. If ever men had a duty to perform it is that which has compelled us to take up arms. Our Republic is invaded, religion outraged, the justice which was promised to us has been converted into a snare, the rights of nations have been trodden underfoot, our senators are in chains. Nations the most servile, who should be the objects of such insults and outrages even from a legitimate sovereign, would not be so tame as to submit. The whole universe would applaud their rebellion; and the oppressions of which we complain would justify a revolt under the most despotic government. Brave confederates! Poland does not want courageous citizens prepared to sacrifice their lives for her deliverance. It is not blind despair which impels us onward, but a firm resolution, a well-founded hope, a noble sentiment, the love of country and freedom, of humanity, and justice.

So Pulaski, repudiating the honors and emoluments which would certainly have been his had he courted Russian influence, and it was offered to him, or sympathized with the schemes of the dominant party, sacrificing all interests of a personal and selfish character, laying aside every claim to promotion by virtue of acknowledged rank and family position, devoted his patrimony to the furtherance of the cause of his native land, Poland.

The Empress of Russia, angered at the revolt of the nobles of Poland, declared them the enemies of her empire and rebels against their own country. She threatened devastation and ruin to all parts of the country which should lend support to the confederates—nor was it a vain menace. Seven regiments of regular troops and 5,000 Cossacks marched through some of the provinces, marking their course with fire, sword and blood, ravage and slaughter, burning villages and detached houses, putting to the sword wandering families and fugitives whom they encountered in the way flying to escape an indiscriminate carnage.

History records that though Pulaski was a young man he was not without experience. He had been in the service of Duke Charles of Courland, and was in the Castle of Mittau when that city was besieged by 15,000 Russians. For 6 months he had witnessed the evolution and discipline of that army, but his own talents and bravery were his chief resources. On the present occasion the post he defended with 1,200 confederates, was attacked during 7 days, at first by an equal number, then by 2,000 men, and at last by 6,000. He constantly sustained himself and gained frequent advantage.

With the Russians it seemed like a war of extermination. For 4 years Count Casimir Pulaski, together with his three brothers and a cousin, fought for Poland. Their resentments were sharpened by the atrocious acts of barbarism and cruelty inflicted upon their people, a people who claimed nothing but the quiet enjoyment of their homes, their ancient freedom, their inborn rights. Many a brave patriot seized the sword to avenge his country's wrongs, to rescue it from the iron tyranny of a detested foreign invader. Many poured out their blood like water in so righteous a cause, and left examples of a glorious martyrdom to their sons, and to men in all ages who are thus goaded to despair by the barbed rod of an inhuman and bloodthirsty despotism.

But, says a historian—

The name which soon eclipsed all others and which became one of the surest hopes of the nation was that of young Casimir Pulaski, always full of resources in misfortune and of activity in success. His name was a terror to the Russians and they seldom attacked him in equal numbers.

History records further:

Pulaski's soldiers were devoted to him. His vigilance never left an opportunity for surprise, and this man so intrepid and terrible in combat, against whom there was no reproach but that of being too fond of danger, was at all other times amiable, gentle, conciliating, and always above personal resentment. After holding interviews with those, by whose designs he might have been justly incensed, he would lead them to engage in mutual operations, and afterwards seize every occasion to afford them his assistance.

One historian continues his praises of Pulaski, saying:

Never was there a warrior who possessed greater dexterity in every kind of service. Endowed by a peculiar gift of nature, strengthened by exercise, he was always the first in battle to charge in person with an intrepidity which inspired his followers to imitate his example. Young men were drawn to him, and he, perceiving the inactivity into which the Poles of more advanced age had fallen by long habit, yielded his confidence to the young who were formed by his lessons and became emulous of his address and courage. There was no one among his soldiers who had not signalized himself by some remarkable exploit. Their extreme quickness and accuracy of observation, guiding them to judge of distance, and by crossing plains and entering woods to cut off small Russian detachments, enabled them constantly to take many prisoners.

Pulaski by a natural ascendency was the chief among equals. All were ardent and bold, all sought danger, all strove to render mutual support. In this last particular Pulaski had the advantage. He had scarcely an officer whom he had not rescued from the hands of the enemy, or from some danger, and who might not say that he owed his life and liberty to his commander. The other marshals when they were uncertain what to do, consulted their subordinate officers and thus were frequently exposed to address themselves to traitors. But, in the army of Pulaski, the chief alone took his resolutions; no one knew his secret; the

confidence which all reposed in him inclined them to entire obedience, and checked an indiscreet curiosity. Intrepid in combat, he was gentle, obliging, and sociable. Never distrustful where he had once placed his confidence.

In the year 1771, after the nobles had fought a losing battle for 4 years, it became evident to them their struggle was hopeless. Pulaski's father and brother had been captured and taken to Russia in chains, where his father died in prison and his brother died later in servitude. His cousin had fallen in battle and his brother Francis had also been killed. In Lithuania he had fought five severe battles and within 6 weeks had traversed with his cavalry a distance of nearly 500 leagues. The confederates had determined that King Poniatowski was an enemy of his own country (Poland) and had betrayed them. Pulaski's companions decided to capture the King. Pulaski agreed to this course of action provided no harm was done to the King. Pulaski and his companions were denounced for their daring and received the condemnation of both Frederick the Great and the Empress of Austria. In the absence of Pulaski he was declared an outlaw and sentenced to death and his property confiscated.

Now an outlaw by a judicial decision, without trial and evidence yet enforced by the dominant authority, he realized his cause was lost. His was no voluntary expatriation, no abandonment of cause and country. Further resistance was madness. It is said that "Most gladly would he have sealed the independence of Poland with his blood, or mingled his bones with those of his slain father, brothers, and compatriots, could such a martyrdom have proved of any avail." The hope still cheered his heart that amid the changes of empires a favorable opportunity would present itself for again lifting the standard of liberty upon the hilltops of Poland. This hope, unrealized, he carried with him to his grave.

Count Pulaski left his native land and reached Turkey after numerous adventures and perils. His next 4 years were passed in sadness, poverty, and comparative silence. He pleaded Poland's cause with Turkey and was pledged assistance, but the assistance promised was never forthcoming. Failing to enlist the sympathy of Turkey he abandoned that country for France.

He arrived in Paris in 1775 and there encountered Dr. Benjamin Franklin, who was in France enlisting financial aid for the American Colonies in their fight for freedom. Pulaski here perceived a new field for vindicating with his sword the same principles, the same rights, and same immutable laws in whose behalf he had wielded it with such singleness of purpose in his own country. He resolved immediately to tender his military services to America, the infant Republic.

One historian records:

There is something peculiarly attractive and impressive in the impulse which in that trying hour brought to our assistance heroes unallied to us by association or blood—soldiers who came not to secure individual preferment or promote private interests—daring men upon whose services we could of right urge no claims, save such as are recognized by the brave and generous of every land when the cause of freedom demands assistance and the principles of justice protection.

Equipped with letters from Benjamin Franklin and letters from Silas Deane, the American representative in Paris, together with credentials from leading Frenchmen of the day, he set sail for America. He arrived in Boston in July of 1777. He was eager to undertake active service at once and went south toward Philadelphia, where General Washington's headquarters were located. General Lafayette acted as interpreter between Count Pulaski and General Washington. Dr. Franklin's letter to Washington stated:

Count Pulaski, of Poland, an officer famous throughout Europe for his bravery and conduct in defense of the liberties of his own country against the three invading powers of Russia, Austria, and Prussia, will have the honor of delivering this (letter) into your hands. The court here have encouraged and promoted his voyage from an opinion that he may be highly useful in our service.

In another letter to General Washingtn regarding Count Pulaski, Dr. Franklin states "Count Pulaski is esteemed one of the greatest officers in Europe." With such a recommendation he could not fail to receive a real welcome from the Commander in Chief of the American forces and Congress. Pulaski first joined the Army as a volunteer, in this respect imitating the example of the French officer Lafayette.

General Washington recommended Count Pulaski to Congress in the following words:

This gentleman has been, like us, engaged in defending the liberty and independence of his country, and has sacrificed his fortune to his zeal for those objects. He derives from hence a title to our respect that ought to operate in his favor as far as the good of the service will permit. Though the horse will suffer less from the want of a general officer than the foot, a man of real capacity, experience, and knowledge in that service might be extremely useful.

Until Count Pulaski's arrival in America the Cavalry was under no higher officer than colonel and it was for a high-ranking cavalry commission Pulaski was recommended.

Before his commission reached him Count Pulaski as well as General Lafayette struck their first blow in defense of American liberty—the Battle of Brandywine. General Washington was pleased with the result and it was said of him:

Pulaski fully sustains by his conduct and courage the reputation for which the world had given him credit.

Four days after this event he was appointed by Congress to the command of the Cavalry, with the rank of brigadier-general.

By reviewing our early American history we recall the fateful battles in which Pulaski distinguished himself, principally those of Brandywine, Valley Forge, Egg Harbor, Charlestown, Germantown, and finally in the Battle of Savannah at which Pulaski lost his life.

At the direction of General Washington, Brigadier General Pulaski was given command of a body of 68 light horse and 200 foot-equipped light infantry—this was called Pulaski's Legion. Later, similar independent legions were formed and this proved important in subsequent operations of the war. Pulaski's Legion was enlarged to three companies of horse and three of infantry. It was Pulaski's wish to put the Cavalry on an equal footing with that existent in any of the European countries. To that end he caused to be prepared a book of drill regulations and rules for officers and privates. That book is still the basis of cavalry drills in the United States Army.

I should like, however, to refer to the closing chapter of his life, a life which had been seemingly charmed up to this time. He was destined at this battle to offer up his supreme sacrifice for the country of his adoption. The record of his death is brief. An attack upon Savannah, Ga., had been determined upon because of British assaults. Two columns of infantry were engaged against the British by order of General Lincoln, one under D'Estaing and the other under Brigadier General Pulaski. During the battle D'Estaing was grievously wounded and Pulaski hoped that his presence would give the men courage and he rushed on the scene of disorder and bloodshed. In his attempt to penetrate to the murderous spot he received a swivel shot in the upper part of his right thigh, and the officer who had accompanied him was, while on his way back, wounded by a musket ball. Pulaski and his wounded officer were conveyed on board the United States brig, *Wasp*, to go round to Charleston. They remained some days in the Savannah River and during that time the most skillful surgeons in the French fleet attended Count Pulaski. It was found impossible to establish suppuration and gangrene was the consequence. Just as the *Wasp* got out of the river Pulaski breathed his last, and his comrades were compelled, though reluctantly, to consign to a watery grave, all that was now left upon earth of their beloved and honored commander. His death occurred October 11, 1779.

This narrative of the heroic death and burial of the gallant Pole was prepared by a Revolutionary officer who shared in the dangers of the assault and was an eyewitness of the memorable events which then transpired:

The *Wasp* entered the harbor at Charleston with her flag half hoisted. The mournful signal was repeated by all the shipping

in the port and all the forts and batteries responded to it in the manner usual on occasions of deep and universal sorrow. The Governor and Council of South Carolina and the municipal authorities of Charleston jointly adopted resolutions to pay to the memory of General Pulaski the most respectful and the most splendid funeral honors. A day was set apart for the celebration of the obsequies, and the Quartermaster General of the United States at Charleston directed to make and to defray all the preparations necessary for that melancholy solemnity. The procession was grand, magnificent, suited to the occasion. The pall was carried by three American and three French officers of the highest grade, followed by the beautiful horse which Pulaski rode when he received his mortal wound, with all the accoutrements, armor and dress which he then wore. So immensely large was the mournful procession that it was found necessary to make a circuit around the whole city to the church, where an eloquent and impressive discourse was delivered by the Chaplain of the Army.

History tells us further:

He sleeps where the ebbing tide of our own Savannah meets and comingles with the waters of the broad Atlantic. Fit resting place for a man of such expansive soul! He sleeps where the praises in honor of his great deeds sung by the waves of the Savannah as they kiss the shore consecrated by his memories are caught up by the billows of ocean and joyfully repeated in wider circles in more heroic strains. He sleeps where the ambient air—fragrant with the perfumes of a land whose freedom he died to achieve—tells to Atlantic breezes the story of his fame, that they too in glad acclaim may answer back to the farthest coast of the greatness of his name. By a strange coincidence the beloved of Mars rests in the embrace of Neptune. A bright record of ennobling acts is the true index of a well-spent existence—then indeed did Pulaski—although yielding up his brave spirit in the noontide of his age—accomplish his earthly mission nobly and in honor.

When the Polish King heard of Pulaski's death, he exclaimed: "Pulaski has died as he lived—a hero, but an enemy of kings."

The repetition at this time of the historical facts of the life of Count Pulaski should cause us to pause and take stock of the blessings that Americans take so much for granted as part of their God-given heritage and right. The great patriots that came from the Old World to our shores sacrificed their lives in order that we might enjoy the freedom they were never to know. With their passing they placed into our hands a burning torch and bade us carry on the principles for which they so nobly gave all they had.

Our responsibility is a great one—that of insuring to our children and our children's children a country blessed with free institutions—a land where all persons regardless of race, color, or creed are guaranteed the right to the pursuit of life, liberty, and happiness; where freedom of speech and of the press is an understood privilege and where all may worship as their minds and hearts dictate. These great gifts and privileges can only be perpetuated if each and every one of us, young and old, guard these blessings as we would our lives and be vigilant so that subversive propaganda and forces from foreign shores are not permitted to influence our lives.

So today, in commemorating the anniversary of the birth of our hero, Brig. Gen. Casimir Pulaski, a man with a heart that so loved freedom that he gave his life for another country, the United States, in order that our people might have freedom—a freedom that his native land was never to know or enjoy—I am sure that I speak for approximately 5,000,000 Poles who live in these United States when I say that on this anniversary we rededicate our lives to the cause of liberty for which Count Pulaski died. His name will forever be written on the pages of American history because of his participation in so many major battles which were turning points in our fight for American independence. Because of his dauntless spirit and sterling character and because his name will continue to inspire Poles whenever heard may we repeat the story of his life often and each time we hear it resolve to do our part so that we may be worthy of kinship with this great soul and to carry high the torch he has placed in our hands so that America may never cease to be "the land of the free and the home of the brave."

Keynote Address Before the Young Democratic Clubs of Missouri Convention

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

ADDRESS BY DAVID A. McMULLAN AT JOPLIN, MO., FEBRUARY 24, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by David A. McMullan, associate city counselor of the city of St. Louis, before the Young Democratic Clubs of Missouri convention at Joplin, Mo., February 24, 1939:

Fellow Young Democrats, at this, our seventh annual convention, I thought it would be well for us to counsel with one another about the position of our party at this time compared to the time of the formation of our Young Democratic Club.

It is not necessary to review the economic, moral, and political chaos that existed in our country in 1932. Young people demanded relief from those conditions—demanded security—demanded united action—demanded leadership! We saw in the principles and leadership of the Democratic Party an answer to what we were seeking.

About 7 years ago a group of young people, believing in the principles of the Democratic Party, met and formed the Young Democratic Clubs of Missouri. In every State of the Union young people were spontaneously and enthusiastically organizing because this Nation lacked leadership and those in power were overcome by the terrible problem which confronted them. An uninspired and mediocre Republican Party had fallen into confusion and weakness. We organized, I quote from our preamble "to stimulate in the young people of Missouri an active interest in governmental affairs, to increase the efficiency of popular government, to foster and perpetuate the ideals and principles of the Democratic Party, and to provide for our people through its administration the highest degree of justice and social welfare."

We were encouraged, aided, and accepted by the leaders of the Democratic Party. Our organization was sustained by the party organization. We became a party organization. We were given an active and important part in campaigns and we gave a good account of ourselves. Young people from all over the State swelled our ranks. The higher percent of young people who supported us and who support our party now is a matter of common knowledge.

We played a large and important part in the Democratic victory of 1932 and in the successive Democratic victories since. What has happened since the formation of our organization? Under the leadership of our President, Franklin D. Roosevelt, and with the aid of a militant united Democratic Congress, the financial house was put in order—great social reforms were enacted, the Government was changed from one whose chief concern was for the few to one whose sole concern was for the many.

While in the short space of 6 years our party has solved, or is well on the way to solving, some of our Nation's problems, many serious ones still confront us. We must especially bend our efforts toward the problem of unemployment and to the preservation of our principles of government. To do this we must stand united and continue to develop leadership. We must function as a responsible and reasonably coherent unit. We must not permit a break-down in the Democratic majority with an attendant result of inaction and confusion. A solution of the problems of the moment does not permit a stalemate between the various branches of government and their component parts. This applies to State and local governments as well as to our National Government.

As the party in power, our primary duty is to govern. Our primary obligation is the welfare of the people. To meet these obligations, we must draw from that which is most fundamental in the tradition of our country to see clearly and act resolutely.

Our founders first decided upon the destination of our Government, and, when this had been determined, they chose appropriate methods for reaching that destination. The language that charts the course of American Government is found in the Declaration of Independence, "We hold these truths to be self-evident, that all men are created equal."

As regards our Government, the interest of all, whether high or low, are equal. The working classes are, by nature, members of the State equally with the rich and are very largely in the majority. Therefore, the public administration must provide for the welfare of the working classes. Action along this line will not

be harmful to any interest but, on the contrary, it will be to the advantage of all. A great step has been taken by our party in this direction by the wage and hour bill. It is a recognition of the principle that it is the duty of the State to secure the working people from the cruelty of men of greed who use human beings as mere instruments for money making, and to protect the working people from being made the victims of force and injustice. I quote again from the Declaration of Independence, "That they are endowed by their Creator with certain inalienable rights."

It is the right of workingmen to organize and form trade-unions. There is an increase and spread of association amongst farmers and others to demand their legitimate rights. This right to organize is also in the employers. The State can often act as arbitrator and we feel that the National Labor Relations Act is a step in the right direction. Each must be protected against any excessive demands of the other. This is a function of State in securing the inalienable rights of man. Let employers and employees join in their plans and efforts to overcome difficulties and let them be aided in this wholesome endeavor by wise measures of the public authority.

Every man has by Nature the right to possess property as his own, and while the State has by no means the right to abolish it, it should control its use and bring it into harmony with the interests of the public good so that it ministers to the needs of all. Every effort must be made that at least in the future a just share only of the fruits of production be permitted to accumulate in the hands of the wealthy, and that an ample sufficiency be applied to the workingman. It is a reproach to our methods and principles when the heads of our great corporations can obtain hundreds of thousands of dollars in salaries or bonuses when not a cent is paid to the investor and meager wages are paid to the employee and thousands of workers laid off.

There is an individual side to private property. It is, after all, the only safeguard of human and individual liberty. The aim of social legislation should be to make private property more widely held, not restrict it or destroy it altogether. Private property must not be administered solely at the pleasure of him who happens to own it, not for selfish and exclusive private interests. Society can be destroyed by too much individualism or by too much socialism. It can be saved only by a combination of the two.

We must be liberal but not radical. The agencies created to carry out social reforms must be placed in the hands of those in sympathy with their purpose. Enactments in the past 6 years have created agencies to administer great social reforms. These were Democratic measures. They embody Democratic ideas. Caution should be taken that they are not placed in the hands of radicals or reactionary individualists who are not in sympathy with their real purpose, radicals or reactionary individualists who will by sabotage destroy their effectiveness and popularity and use them for their own ends.

With all of the confusion, despotism, atheism, fear, and terror that beset the governments of the earth, we hear the question, "Is there danger that democracy in the United States may succumb to either fascism, nazi-ism, or communism? Some may laugh it off, but sensible men have experienced many shocks in recent years. Lenin and Hitler could not have foretold their triumph, although both demanded it, and their dreams came true.

When we organized 7 years ago, we believed and have added large numbers to our ranks who believe that our country is best served by the application of the great political principles upon which our party was founded and which were adopted by our country's founders as the guiding principles of a government to protect the rights and liberties of the people.

We have all heard men in all walks of life plead for the preservation of our American form of government without a single reference to the substance without which that form would be an empty shell. The form of our government is about all we teach. As a result, the idea how American government works is fairly well known to the average American pupil, but we should teach and preach why it was called upon to work in the first place.

Americans should have a reverence for the Declaration of Independence. It is as important as the Constitution, for the reason that the Constitution did not create American government and state its purpose. The Declaration of Independence embodies the whole story of American political philosophy. It is the one clear-cut repudiation of communism, the ringing refutation of nazi-ism, fascism, and every other form of the arbitrary, all-powerful, God-denying totalitarian state.

The Constitution sets up a system or form of government to carry out the object and purpose of government. Under it every wrong in the social and economical fields can be righted.

Keeping in mind the principles of our party and using the instruments of government, our party must stand united to approach the problems confronting our Nation. If Democrats were banded together as are the enemies of democracy, we could easily check the onslaught of foreign powers.

Every Democrat should join with all other Democrats in keeping the enemy out of the entire field of the State and preserve for his country the American ideals which were written into its basic law by the Constitutional Fathers. In order to do this we must give our attention to youth. We must not look upon politics as a racket and upon young people trying to voice an opinion as one trying to "muscle in." There is and must continue to be a place in our party for a youth organization. Our leaders must continue to recognize that these youths of today are to be the politicians of the future and will take over the government of this country. The majorities who will have to defend democracy are being cradled now, and if our party leaders are far sighted they will make sure that those future majorities are grateful to our party for united action, leadership, and constructive reform.

In 1932 the Republican Party was in the exclusive control of a few who shaped its policies for their own selfish interests. In my city, St. Louis, the Republican Party organization was a closed corporation. Young people who attempted to actively participate in its political affairs were looked upon with suspicion, and if they disagreed in any one particular with Republican leaders they were given the cold shoulder. As a result many young people associated themselves with the Democratic Party where they were welcomed, encouraged, and aided in their work. Many of these young people have performed outstanding service to the community and hence have reflected credit and honor to our party.

In my ward we organized a Young Democratic Club in February 1932 and attracted many young persons to our party by providing intelligent political instruction and entertainment. We were encouraged and received assistance from the ward organization. And what was the result? These young people became interested in politics, became interested in our party, joined the ward organization, and began working for our party with all the pep and enthusiasm of practical youth. As chairman of the ward organization I often look over the list of its officers, precinct captains, and workers and see the splendid young men and women brought to our ranks through that Young Democratic Club. Our party, our community, our organization has been enriched by their work; our ward leaders have gained by their efforts. The policy of supporting the Young Democratic Clubs must be pursued by our party organizations—National, State, and local.

Every young person will follow some leader. Hence, our party leaders must be very careful that they not follow leaders who would sovietize or nazi-ize our Government! If our party leaders wish to remain in power, if they wish to see the principles of our party promulgated and handed down, it is necessary that they continue to recognize, instruct, and encourage youth.

Young people are interested in governmental affairs. Young people are interested in the policies of government. Young people have a larger stake in the welfare of our country than any other group because their future is at stake and the policies which are shaped now will affect them, and the long-term obligations now being incurred must be met by them. Therefore, youth must be consulted, heard, instructed, and encouraged.

We are the official youth organization of the Democratic Party. We, the Young Democratic Club of Missouri, do not demand patronage. We were organized "to foster and perpetuate the ideals and principles of the Democratic Party and to provide for our people through its administration the highest degree of justice and social welfare." We call upon the leaders of our party for renewed recognition, assistance, and encouragement. We offer our organization and services to our party to deliver the message of Democracy to youth and to train and educate youth in the science of democratic government. Our party leaders have not failed us in the past; they must not fail us in the future.

It is the work of our party to see that the present state of man be not worse than the former, and this can be done by the united effort of our party leaders in applying the principles of our party to present-day problems. It is the work of our party to see that the future be better than the present, and here is a youth organization that is the answer!

We pray that our officers who are appointed to guard our political welfare may be enabled, with God's help, to discharge the duties of their respective stations with honesty and ability, so that they may carry out the purpose of our Government, encourage and teach youth in the ways of true democracy, so that the social welfare be secured and future generations be spared the advance of the mortal enemies of democracy.

Mr. Congressman, It Is Up to You

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1939

EDITORIAL FROM THE IDAHO COUNTY FREE PRESS

Mr. WHITE of Idaho. Mr. Speaker, it has been my contention all along that the two main problems confronting the people of this country and which the Congress must solve by the enactment of constructive legislation as the

means of restoring national prosperity are, first, to devise and put into operation an adequate monetary system free of a continuing interest charge, and second, the enactment and enforcement of the necessary laws to curb monopolies and eliminate unfair competition and unfair trade practices which will operate to give free play to the law of supply and demand and reestablish the parity between the prices of the basic industries—farming, mining, lumbering—and the price of the products of the manufacturing industry which must be attained before there can be any permanent prosperity in this country.

In reviewing the record of the Congress in passing remedial legislation and the many expedients that have been applied in enacting laws to assist business and industry, it is apparent that we have failed to solve the main issue. This situation is outlined in a recent editorial appearing in the Idaho County Free Press as follows:

[From the Idaho County Free Press]

MR. CONGRESSMAN, IT IS UP TO YOU

The theory of pump priming is the same as that when the old valves in the pump begin to wear out, one can keep it going for a time by pouring water down the pump, and by working the handle rapidly the water will be raised and will flow freely as long as the up and down motion keeps up.

The bad part is, that the darned old pump needs a new priming every time you want a new supply of water. It seems to a natural born dumb moron, like myself, that the old pump needs new valves.

We have primed the pump now for 6 years. Once, in 1937 it looked as if it might succeed, but alas, it was only that the old worn-out leather valves had swelled, and gave a fine flow for a time. Then the thing refused to work again, and like the man spoken of in the Bible the last condition was worse than the first. You 535 wise men in Congress you have dilly-dallied long enough. You have got to roll up your sleeves, spit on your hands, and come down to earth, and solve this problem of 10,000,000 to 12,000,000 out of work, or prepare for the worst storm that ever hit this grand old U. S. A., and there are millions upon millions of we common folks that don't mean maybe.

No doubt it is going to hurt. All major operations hurt. And there is no sleep-producing drug that will help. You and I and everyone must just "grin and bear it."

Borrowing will soon end, or end in disaster. Pump priming has gone the limit. Mr. Congressman: Mr. WHITE, Mr. BORAH, Mr. CLARK, Mr. DWORSHAK, from Idaho, just what are you going to do?

You cannot plead that it is not your "baby"; it is, and getting wetter and hungrier every minute.

We are all in the same boat. The twin storms of war and inflation are just off the weather bow.

You had better forget petty politics—you Democrats, you Republicans, and you what nots—and gather 'round the table, and do something before it is everlastingly too late. And again I don't mean maybe.

POP.

Georgia Press Institute

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 1 (legislative day of Monday, February 27), 1939

ADDRESS BY HON. BENNETT CHAMP CLARK, OF MISSOURI, FEBRUARY 22, 1939

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by the senior Senator from Missouri [Mr. CLARK] to the Georgia Press Institute, at the University of Georgia, on the 22d of February.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is both an honor and a pleasure for me to have the opportunity of being here this evening to participate in such an occasion. It would be a memorable privilege as a graduate of my own State university to address on any occasion an audience at the first chartered of all our State universities in the great Empire State of the South. It is an especial pleasure for me to be in the State so ably represented by my colleagues and friends—your senior Senator, whose spotless character and towering learning and ability would have insured him a place in the front rank of the statesmanship of any age of this Republic, WALTER F. GEORGE; and your brilliant, dynamic, and useful junior Senator "DICK" RUSSELL. That it should be on the birthday of the greatest of all southerners, as well as the greatest of all Americans, is added honor. That it should coincide with the beginning of the meeting of the Georgia Press Institute makes it only a more significant occasion. Let me say that while Georgia may have the oldest charter of all State universities, Missouri has the oldest department of journalism in the Nation.

I have frequently boasted that in a certain sense the school of journalism of the University of Missouri and I are twins—at least to the extent that we entered upon our careers and activities in that great institution on the same day—it as a department and I as a freshman. Parenthetically, I may add that I will cast my vote in the current raging debate as to the integrity of the American press on the first day of the school year in 1941, when my oldest boy, the namesake of my father, will by his own wish enter the Missouri School of Journalism with intent to make the pursuit of that high profession his life career. I could not better express my high estimate of the American system of public schools, topped by our great State universities, as well as my opinion of the high aims and great usefulness of the profession of journalism than by the statement of that fact.

I feel at home in addressing a southern audience at a great southern institution on the anniversary of the birth of that great southern patriot whose memory will always be hallowed as the greatest of our countrymen. Any American from any portion of our far-spread Republic should feel at home in the South, when he considers the tremendous contribution of the South to the achievement and preservation of our liberties and of the institutions passed on by the fathers which have been the blessing of our country. As a native of the great border State of Missouri, where South meets North and East meets West, I gratefully acknowledge the debt of my own State and of the Nation to the South for its great contributions to our American civilization.

I cannot agree with the views expressed by some—no matter how highly they may be placed—that the South is the "Peck's Bad Boy" of the Nation, or that its people are, or have ever been, unwilling to participate and cooperate to the fullest extent in any proper measure for the national welfare.

When I was a boy, growing up in a little Missouri town, I knew by heart, as nearly every boy did who engaged in the declamation contests of those days, the magnificent address of that great Georgia editor and publicist, Henry W. Grady, entitled "The New South." The opening remarks, quoting the immortal words of the great Ben Hill, still ring in my ears: "There was a South of slavery and secession—that South is dead. There is a South of union and freedom—that South, thank God, is living, breathing, growing every hour."

Those words of the great Ben Hill, as amplified with the noble elcquence of Grady, were true. The South has proved its devotion to the Union in war and peace. It preserved its integrity and the integrity of the American form of government under the guns of a hostile soldiery in perhaps the darkest chapter of our national history. In the face of a consistent policy of discrimination against it in economic matters—tariffs, freight rates, even in the present-time relief contributions—it has developed and progressed. As the section containing by far the largest percentage of native-born Americans, it is and has always been a bulwark in support of the Constitution and our liberties.

Today each branch of our National Congress met to pay tribute to the memory of the Father of his Country by solemnly listening to the immortal words of his Farewell Address. This is well.

The greatness of Washington has only increased with the passage of time since his death. He was loved and revered and trusted by the American people during his lifetime as no other American has ever been, and doubtless none ever will be, although during his Presidency even he was not spared the barbs of factional hate which wounded him deeply and which were as foul as they were unjustified. But alive or dead he has held, and will always hold, an incomparable position in the hearts of Americans. No king or dictator has ever held the position in the esteem and veneration of the whole world which his great talents and towering character left as a heritage to his fellow countrymen.

As the great English poet Lord Byron so eloquently expressed it:

"Where may the wearied eye repose,
When gazing on the great;
Where neither guilty glory glows,
Nor despicable state?
Yes—one—the first—the last—the best—
The Cincinnatus of the West,
Whom envy dared not hate,
Bequeath'd the name of Washington,
To make men blush there was but one!"

Of all of his contemporaries, probably only the great philosopher and patriot, wise old Ben Franklin, truly appreciated what a towering figure Washington would be in the history of the whole world. For he wrote from Paris in 1780:

"Here you would know and enjoy what posterity will say of Washington. For a thousand leagues have nearly the same effect with a thousand years."

Washington's public service was great as the leading citizen and soldier of Virginia long before the Revolution. It was incomparable as the dauntless Commander in Chief of our ragged and starving

Continentals during the struggle for freedom. His services as the first President during the trying formative years of the Republic cannot be overestimated. But, to my mind, perhaps our greatest debt of gratitude to the great Virginian is for his absolutely invaluable services as President of the convention which framed our Constitution.

If Washington had never lived, some other gallant soldier would have commanded the patriot forces in the inevitable struggle for independence. Once the Constitution was adopted some other statesman could doubtless have made an excellent President of the Republic. But, except for the towering prestige and great influence of General Washington that majestic instrument, that bulwark of our liberties, the Constitution of the United States, could never have been formulated, and, if formulated, could never have been adopted. Indeed, it seems clear that but for the certainty that Washington would be the first President under the Constitution it could not have been ratified in any event.

That Constitution is the mighty fortress of our liberties and of our institutions of government. Today and tomorrow and as long as our Government endures, we owe a duty to constantly assert and reassert and maintain and make effective our devotion to those eternal principles of constitutional liberty upon which this Government was founded and upon which it has endured.

That "eternal vigilance is the price of liberty" is so axiomatically true that it has become trite and has unhappily been for whole periods of our history ignored rather than observed. But a right once compromised is likely to be invaded and a right once successfully invaded is in danger of being permanently lost. The people must be constantly alert to see that the rights guaranteed to every individual under the Constitution must be defended at the very threshold of invasion, not particularly for the benefit of that individual alone but for the vital protection of the whole people.

For, if the constitutional rights of one individual may be violated in one particular, the right of another individual may be violated in another particular and both rights may soon be lost to the whole people. If the rights of a political minority can be subverted, the rights of a religious minority may be destroyed. If the guarantee of freedom of the press could be wiped out, the guarantee of freedom of speech and freedom of religion and of freedom from unlawful arrest soon follow into oblivion. Our protection for all our rights and all the blessings which we enjoy lies in that immortal document, the Constitution of the United States.

The Bill of Rights is the citadel of the rights and liberties which we enjoy under the Constitution. Although not a part of the original draft of the great instrument but agreed upon during the process of ratification, it is today the very heart of the Constitution itself. It frequently seems to me that we in the United States are so accustomed to the fact that the Bill of Rights is in the Constitution that we are likely to pay too little attention to the pregnant lessons to be learned from the long and bitter struggles on the part of our forefathers by which those liberties were attained, and likewise altogether too little attention to the repeated attempts which have been made from time to time throughout our history to subvert them.

I am glad that in discussing some of the fundamental liberties in our Bill of Rights I am privileged to address members of the Georgia Press Institute. This body represents one of the greatest and most influential sections of that great profession whose freedom in the reporting of facts and in the expression of decent opinion is guaranteed by the first article of our Bill of Rights and which by reason of that guarantee has imposed upon it a moral if not a legal duty to exercise its great power fearlessly, efficiently, and fairly.

As our forefathers visioned a free press as one of the bulwarks of our liberties, so it follows that to properly perform its functions it must likewise be an honest press, a vigilant press, a courageous press, and an impartial press in its presentation of facts.

Insofar as the press has failed in the past or may fail in the future in fulfilling these obligations, it is to be criticized and stringently condemned. But the experience of the world and contemporary history in other lands teach us that no fault which has ever even been charged against the press—neither prejudice nor inefficiency, neither cowardice nor greed for money, neither vindictiveness nor blatancy, not ignorance, not even corruption—can possibly be so dangerous to the liberties and well-being of any land as the suppression of the freedom of the press. Nothing can be more dangerous to the liberties of any people than to have the press controlled by government, forced to be subservient to officials, appointed perhaps by dictators, as to what facts they may not be permitted to bring to the knowledge of the people, what fables or distortions of fact they must foist upon the public, what opinions they may express, to what vile propaganda they must give utterance, and what proper expressions of opinion and warning on questions of public import they must suppress.

In every land where dictatorship has reared its ugly head the suppression of the freedom of the press has invariably been one of the most deadly weapons in the destruction of the liberties of the people. The right of free speech has never long survived the right of free expression by the press, and personal liberty or personal rights as to property or life have not long existed after the subjugation of either of the twin rights of freedom of speech and of the press.

It should never be forgotten that while our constitutional guaranty of freedom of the press incidentally inures to the benefit of the press, that is not its primary purpose. The framers of our Bill of Rights were not concerned with granting a special privilege to one class of citizens. They were asserting and guaranteeing to the whole people a right to an adequate medium of expression and information absolutely uncontrolled. It is in the light of this public interest that the constitutional provision was framed and it was in the light of that primary purpose that the Supreme Court of the United States has in several cases recently construed it.

In view of some of the recent decisions of that high tribunal involving some of the most precious of the rights guaranteed by the Constitution and in view of the various proposals for altering the Constitution either by amendment or by change in judicial construction brought about by radical and violent changes in the membership of the Court with regard to particular issues and litigation, it seems not amiss to discuss some of the more fundamental rights which have been protected by the Constitution as construed by our courts.

It is an interesting fact in connection with the history of our institutions, but one frequently overlooked, that the theory of the right of freedom of the press is far older than the right of freedom of speech except as the two were joined together. It was the demand that the public might be informed and might be served by an uncontrolled and unlicensed press to supply not only facts but theories which was the forerunner and genesis of the contention that even the humblest citizen should be permitted to express his free and untrammeled opinion.

Nearly 300 years ago, upon the eve of the Protestant revolution in England, John Milton, in his noble Areopagitica—a Plea for the Liberty of Unlicensed Printers, sounded the battle cry against what had been one of the chief weapons of absolutism, the denial of freedom of expression, which at that time meant the suppression and punishment of political pamphleteers, among whom Milton himself was the greatest. His majestic words in describing the England of free expression which his sightless eyes visioned still rings in our ears: "Methinks I see in my mind's eye a noble and puissant nation rousing herself like a strong man after sleep and shaking her invincible locks; methinks I see her as an eagle mewing her mighty youth and kindling her undazzled eyes at the full midday beam; purging and unsealing her long-abused sight at the fountain of heavenly radiance; while the whole noise of timorous and flocking birds, with those also that love the twilight, flutter about amazed at what she means, and in their envious gabble would prognosticate a year of sects and schisms." And then with an eloquence seldom equaled in our tongue Milton exhorted the "Lords and commons of England" to "consider what nation it is whereof ye are and whereof ye are the governors; a nation not slow and dull, but of a quick, ingenious, and piercing spirit; acute to invent, subtle and sinewy to discourse, not beneath the reach of any point that human capacity can soar to." And then he reached the splendid climax: "Give me the liberty to know, to utter, and to argue freely according to conscience above all liberties."

These are the old words of an old man who lived and died long before the "horse and buggy" days of our Nation; but upon the wisdom, the courage, and the sacrifice of such as he many of our most vital rights and liberties were founded.

So potent were the arguments of Milton and his followers in the long, bitter struggle which followed for generations that when the time came to frame the American Bill of Rights, the first 10 amendments to the Constitution, without the assurance of which the Constitution itself could not have been adopted, the guaranty of the freedom of the press was included in the very first amendment.

James Madison introduced into the first Congress of the United States the first 10 amendments to the Constitution which we now know and cherish as the Bill of Rights. Only eight of the original States had bills of rights in their constitutions before adoption of the Federal Constitution. Some of his provisions Madison took from these constitutions. Some he borrowed from other sources. Some were absolute innovations. It is significant that the bill of rights of each of the States then possessing one contained at least four safeguards of popular liberty, the fruit of long experience—freedom of the press, freedom of religion, trial by jury, and a guaranty against being deprived of life, liberty, or property without due process of law.

It is significant that the separate guaranty of the right of freedom of speech, which we now prize so dearly, was not mentioned in the bill of rights of any State prior to the adoption of the Federal Bill of Rights. Before the adoption of the Federal Bill of Rights, the provision as to freedom of individual speech amounted only to an immunity against being called to account in any other place, that is to say, in a court, for words spoken on the floor of the legislature.

We think of the rights guaranteed in the Bill of Rights together, whatever may have been their origin, because they were adopted at the same time. And this is proper because so long as they stand, they stand together as parts of the Constitution, and anything which impairs the force and authority of the Constitution as a whole necessarily impairs the effect and the effectiveness of each of the provisions of the Bill of Rights.

I might stand here for hours, if your patience were sufficient for you to endure, and tell you wherein from my reading of the history of the Nation and from a lifetime during much of which I have been close to public affairs of times and instances wherein I think sections of the American press have failed to live up to the obligations morally imposed upon it by its constitutional sanctions. If my opinions as a layman on the subject of newspaper ethics were of any value to you, I could readily explain why, as a layman, I

believe that certain newspapers have failed to live up to the obligations implicit in the guaranty of freedom of expression by exhibitions of venomous partisanship, of activity in propaganda of dubious character, of seeking after profit by sensationalism by the exploitation of the most depraved of human actions. On the other hand, I could more easily recount a splendid sequence from the foundation of the Republic down to the present in which the press of the Nation as a whole has well and faithfully performed its function of keeping the public advised of developments from which the people could draw their own conclusions, of many instances of outstanding public service by the newspapers of the country, of a general attitude of vigilance and independence which have contributed much to the safety and progress of the Nation.

So we all know that the right of freedom of individual speech has been abused during the history of this country by extremists in both radicalism and conservatism, who have sought to tear down the very institutions which permitted them their license to express their opinions, no matter how erroneous they might be. Nevertheless, the right to free speech has in the long run been one of the most valuable of the rights guaranteed in the Constitution and has stood as the strongest bulwark against the possibility of tyranny.

Freedom of religion has been abused in our history, but it has been a priceless gift to our Nation. The right of trial by jury has resulted in freeing many guilty people, but it has been the protector of millions of citizens against possible tyrannical aggressions of government against the rights of the people, such as we see taking place before our eyes in other countries at the present moment.

Other provisions of the Bill of Rights and other provisions of the Constitution have been the subjects of abuse as well as of benefit. Any of them are subject to change at the will of the people in the manner provided by the Constitution. But certainly the question of the desirability of a change in any constitutional provision is not such as to justify the undermining of the authority of the whole Constitution by the destruction of the independence of the judicial branch of the Government thereby completely wiping out the whole theory of the separation of powers between the branches of the Government upon which the Constitution rests.

Let me say that I am not one of those who believe that the Constitution should be sacrosanct, as immutable as the laws of the Medes and Persians, although I have always believed and still believe, as Gladstone said, that it is the greatest document ever struck off by any group of men at any one time. The framers of the Constitution themselves wisely set up explicitly the means whereby the Constitution might be changed in any particular by the will of the people. This method is cumbersome and difficult to be sure—purposely made so by the framers of the instrument—but capable as we have recently seen of being employed with amazing rapidity and completeness once the people have made up their minds. It has also been demonstrated that it is sufficiently flexible to enable the people to try an experiment in government and if proven unsatisfactory, to speedily repair their error. The repeal of the eighteenth amendment was accomplished in less than 10 months after the submission of the twenty-first amendment. With only one exception, none of the latest eight amendments to the Constitution required more than 2 years for ratification and some of them much less.

Indeed, the Constitution itself was wisely amended, at least by general agreement, by the insertion of the Bill of Rights before it was even adopted or else it had not been adopted.

It seems to me that the test of whether changes should be made in the Constitution should be determined not by reverence for its antiquity but only by the question of whether changes would be in the interest of increasing the happiness and well-being of the people. Thomas Jefferson said: "The only orthodox object of the institution of government is to secure the greatest degree of happiness possible to the general mass of those associated under it." But in the determination of the question of proposed changes the greatest consideration should be given to the question of whether or not the prospect of success of the proposed change is sufficient to justify us in abandoning a system of government under which we have enjoyed a century and a half of amazing progress and of general although by no means universal prosperity

But as the man whose memory is still revered as "first in the hearts of his countrymen" wisely said in taking his long farewell of the Nation he had served so faithfully, "if changes are to be made they should be made by the will of the people according to the orderly processes provided for amendment." In his Farewell Address, George Washington said:

"The necessity of reciprocal checks in the exercise of political power, by dividing and distributing it into different depositories, and constituting each the guardian of the public weal against invasions of the others, has been evinced by experiments ancient and modern, some of them in our own country and under our own eyes. To preserve them must be as necessary as to institute them. If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil, any partial or transient benefit which the use can at any time yield."

Never was the wisdom of that great man better exemplified than in his insistence upon the preservation of the unique system of reciprocal checks and balances whereby each is made the guardian of the Constitution and of the public welfare against invasion by the others.

I wish that every school child in America could be made to commit to memory the majestic words of that great address. I wish that every American citizen could be required to read it again each year on this day. The wisdom of his advice to his countrymen has only been more completely demonstrated by the passage of the years. The necessity for the preservation of the Bill of Rights in its full constitutional vigor, to preserve intact our system of checks and balances between the branches of the Federal Government, and to maintain the balance between the powers granted by the Constitution to the Federal Government and the rights reserved to the States, is as vital today as on the day that George Washington retired from the Presidency.

I would not on any account wish to be understood as holding that progressive development of our laws in the interest of the welfare of the whole people will not be necessary from time to time, even if they involve changes in the Constitution. The fathers of the republic held this in contemplation. Thomas Jefferson wrote: "We have happened to live in an age which has witnessed more changes in government than any that has yet taken place." That great statesman, the prophet and champion of liberalism in this country, realized and proclaimed that the science of government is a progressive science and that developments must be made in the interest of the welfare of the whole people lest we perish.

But to advocate change for the sake of change, to tear down the foundations upon which our Government was founded, is neither liberalism nor democracy.

One does not have to be a crackpot to be a liberal nor are those either reactionaries or Tories who are unwilling to lightly forego the blessings of that Constitution upon which our Government was founded and under which we have enjoyed so much of progress and of prosperity. Radicalism and totalitarianism alike are the natural and inevitable enemies and antitheses of liberal, democratic government.

Changes in the interest of progressive social legislation must be made within the framework of our constitutional structure. It is not enough that the aims of a President or a Congress or a Governor or a legislature be excellent and their purposes high and patriotic. Even these things do not justify us in breaking down our constitutional processes.

Be it not forgotten that a precedent set by a good President or a good Governor of high ideals for good public purposes may be taken advantage of in some future time by a bad President or a mistaken President or one with ulterior motives. If the Court can now be increased to nearly double its present membership with respect to a particular situation, some future reactionary President with a subservient Congress could again pack it for the subjugation of our rights.

But the question is asked, "Do you not trust the Congress?" (which, of course includes all future Congresses as well as the present). Do you not trust the President (which includes all Presidents)?

I answer in the words of the immortal Jefferson, the author of our Bill of Rights:

"It would be a dangerous delusion if our confidence in the men of our choice should silence our fears for the safety of our rights. Confidence is everywhere the parent of despotism. Free government is founded on jealousy, not on confidence. It is jealousy and not confidence which prescribes limited constitutions to bind down those whom we are obliged to trust with power. Our Constitution has accordingly fixed the limits to which, and no further, our confidence will go. In questions of power, then, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution."

We know both from the history of the world and from observation in our own country that extraordinary powers granted to or assumed by a good legislature or a good Executive for beneficent purposes and beneficently used by him may be seized by a bad legislature or a bad Executive and made an engine of tyranny.

We have frequently heard it said that it was the custom of the ancient Roman Republic in times of danger to appoint a dictator with absolute power as a measure of safety for the Republic. I doubt not that there were times when this system worked well, but one fateful day there came a bad dictator who did not turn back his extraordinary powers, and the Roman Republic was no more.

But we need not go back to ancient history for illustrations of the fact that tyranny may be the outgrowth of the breaking down of constitutional safeguards even for good purposes. We have seen in very recent years striking instances of this sort.

The machinery by which Hitler achieved his despotic mastery of Germany was not devised by him. He had neither the means nor the popularity to impose his undisputed will upon the German people. The system of government by decree, in contravention of the German constitution, was devised to meet a temporary economic crisis by an honorable, upright, patriotic German citizen, Hitler's predecessor, Chancellor Breuning. But when Hitler by devious means came into the chancelorship, he proceeded to avail himself of all of the breaches made in the system of constitutional law by Breuning to establish himself as dictator. It was at the time that the German people acquiesced in the benevolent extra-constitutional methods of Breuning that they unwittingly bowed their necks to the chains of Hitler.

In our own country in the recent past in an American State we have witnessed the functioning of what might fairly be classed as a test laboratory for dictatorship. We have seen in an American commonwealth constitutional changes sponsored by a Governor of good intentions and not misused by him seized by a man of

towering ambition and used by him to destroy every vestige of a republican form of government and establish a dictatorship as complete as that of Mussolini or Hitler—only to be ended by assassination.

It is not necessary today to discuss the question of whether or not the dictatorship of Huey Long was a benevolent despotism. Many thousands of citizens of Louisiana believed and still believe that it was dictatorship in the interest of the people. Many thousands of others believed and still believe that it was a dreadful tyranny. The fact which is outstanding is that a constitutional change enacted by his predecessor, Governor Parker, in effect authorizing the legislature to resolve itself into a constitutional convention and adopt constitutional changes without submission to the people was the means by which Long achieved his dictatorship. Nor is it to be disputed that his empire did not become complete until he had brought the judicial as well as the legislative and executive branches of the State under his control.

Once having achieved this control of the courts, Long proceeded to break down every vestige of local self-government in opposition to him. Martial law was declared on the slightest provocation. Registrations and elections were held under the menacing weapons of the military arm of the State. Ballot boxes were forcibly taken from the possession of the court by the soldiery. Taxation was absolutely controlled at the whim of the dictator. Local governments, including that of New Orleans, with nearly a third of the population of the State, were either voted out of office or ravished of all authority and left helpless.

Having taken steps to bring the medical and legal professions under his absolute control, Long then proceeded to jam through legislation to effectually destroy the freedom of the press guaranteed by the Constitutions of the United States and of the State of Louisiana. This incursion against the Constitution and our liberties was thwarted by the unanimous decision of "nine old men" sitting as the Supreme Court of the United States.

In that memorable case I had the honor of being counsel for those who sought the freedom of the press. I rejoiced in the sweeping unanimous decision which vindicated that right. But it is only fair to say that I rejoiced no less at the equally logical and equally correct opinion of the same Court in setting limitations to the claim of newspaper freedom. These decisions, taken together, emphasize the proposition which I stated a little while ago—that the constitutional guaranty is for the benefit of the public and not the publishers of newspapers as a class. Where the public interest is involved, the constitutional guaranty stands with drawn sword across the path of governmental aggression. Where attempt is made to use this provision as a shield against the operation of general laws as to labor conditions, tax levies, or any other, the Supreme Court has wisely declared that the guaranty has no application.

Our independent judiciary has always been the protection of the liberties of the individual and of the minorities. Without the protection of the Constitution and the courts many of our most precious liberties would have been lost.

I recall that in my own State, indeed, in my native county, a priest, notable throughout that country for kindness and good works, was once put in jail for the crime of administering extreme unction to a dying parishioner without having taken a political test oath required by a despotic legislature in the dark days of reconstruction following the Civil War. He was freed by the "old men" then on the Supreme Court of the United States on the ground that it was a violation of the Bill of Rights and the reign of terror in Missouri was thereby ended.

James Madison, the father of the Constitution, once wrote: "The people who are the authors of this blessing must also be its guardians. Their eyes must ever be ready to mark, their voice to pronounce and their arms to repel or repair, aggressions on the authority of their Constitution."

The American people have ever been devoted to their Constitution. They know full well that wise men conceived it, that strong men have administered it, that brave men have fought for it, that heroes have died for it. It is my hope and my fervent prayer that it will be long, long indeed before the people consent to break down the bridge upon which we have crossed the chasm by changing the fundamental spirit in which the Constitution was conceived and the principles upon which it was founded.

So can we best pay tribute to the memory of the great Washington and his associates in achieving our liberties and setting up this Republic.

The Situation in Spain

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 1 (legislative day of Monday, February 27), 1939

LETTER FROM RICHARD W. HOGUE, OF WASHINGTON, D. C.

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter written to me by Richard W. Hogue, director of the Independent Legislative Bureau, of Washington, D. C., relating to the situation in Spain.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDEPENDENT LEGISLATIVE BUREAU,
Washington, D. C.

DEAR SENATOR: As you know, through the years in which it has been my privilege to know you I have never sought a personal favor at your hands. Nor can I recall having done so at the hands of any one of the Members of the Senate with whom I have been more or less closely associated.

My sole reason for saying this is to make it clear that the request I now have to make is not in my own behalf but solely for the purpose of clarifying an issue of vital interest to the public and of great importance as a matter of historic record. I wish merely to express the hope that it will be entirely agreeable to you to place certain important facts in the CONGRESSIONAL RECORD.

In its issue of Sunday, February 26, the New York Times pictured the tragic fate of hungry, panic-stricken men, women, and children in "one of the greatest mass migrations in modern history." "In a single day," reports the Times, "more than 100,000 fugitives streamed across the French border," driven by fear of a pursuing army comprised chiefly of invading Nazi, Fascist, and Moorish forces.

This scene is the culmination of a long and tragic story of relentless aggression by foreign powers against a heroic people loyal to their government. During this long period that government was friendly to and recognized by our own Government. Its scholarly ambassador still remains as its duly recognized official representative in Washington. Yet the incredible truth is that our Government, while outwardly friendly to the Republic of Spain, has been in effect an ally of foreign invaders directed by the outstanding dictator enemies of democracy of the world today.

The administration, the State Department, and many Members of Congress have been subjected to a deluge of propaganda against the Republic of Spain. It is now too late to save that republic. It will soon be too late to prevent the record of Congress from being closed without even a brief reference to certain indisputable facts. Some of these facts are: (1) The American people have expressed themselves in no uncertain terms through the Gallup poll, published on December 30 last. That poll showed the following division of opinion: For the Loyalist Government, 76 percent; for the Franco insurrectionists, 24 percent. (2) The relation between our Government and that of loyalist Spain has been one of unbroken mutual recognition and friendliness. (3) Neither the President nor any member of his official Cabinet has expressed any condemnation or criticism of the loyalist Spanish Government. Quite the contrary is true. (4) The embargo against the friendly Government of Spain was imposed for a definite purpose—namely, as part of a general nonintervention policy designed to prevent the struggle in Spain from extending beyond a civil war. (5) This nonintervention policy was violated, and the object of the embargo was frustrated by Germany and Italy, whose large-scale aggression brought about the overthrow of the loyalist Government of Spain. (6) Scholars, clergymen, editors, lawyers, public officials, and others have openly condemned those who fostered this aggression and applauded its outcome and those who misrepresented and denounced the distinguished Spanish Ambassador to this country.

As a matter of simple justice and clear truth, these indisputable facts should form a part of the record of Congress before that record is closed. So far there has been no recognition of them either on the floor of the Senate or in the pages of the CONGRESSIONAL RECORD. That there should be such recognition is the conviction of some of your colleagues, as well as of a vast number of distinguished citizens and a large body of public opinion. I have reason to believe that this conviction is held by a majority of your colleagues in the Senate.

Frankly, dear Senator, I believe that you would be honoring yourself, as well as rendering a public service, by placing these facts in the CONGRESSIONAL RECORD at this time.

With best wishes.

Very sincerely yours,

RICHARD W. HOGUE.

Government Cotton for the Needy—Home Gardens for Farmers

EXTENSION OF REMARKS
OF
HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1939

Mr. LUTHER A. JOHNSON. Mr. Speaker, various suggestions have been made as to the disposition of the 11,000,000 bales of cotton which the Government is holding as a

result of loans made to farmers. I desire to call the attention of the Members of the House to H. R. 4399, a bill recently introduced by me to use 1,600,000 bales of this Government cotton for distribution to needy persons, of articles manufactured from such cotton. My bill is a companion bill to one introduced by Senator TOM CONNALLY in the Senate.

The substantive portion of the bill is as follows:

That the Commodity Credit Corporation is hereby authorized and directed to acquire title to 1,600,000 bales of cotton from the 1934 crop or subsequent crops remaining as security for loans made or arranged for by the Corporation, and after discharging all obligations with respect to such cotton to transfer title to such cotton to the Works Progress Administration.

SEC. 2. The cotton transferred to the Works Progress Administration pursuant to this act shall be used for the manufacture by such Administration of mattresses and other articles which shall be distributed to families on relief and to other needy persons, without cost to them, through the Federal Surplus Commodities Corporation or such other agency as the Works Progress Administrator may designate.

SEC. 3. The Works Progress Administrator is authorized to make such rules and regulations as may be necessary to carry out the purposes of this act.

SEC. 4. The Works Progress Administration is also authorized to deliver, under such rules and regulations as it may prescribe, a portion of such cotton to be used by home demonstration clubs, or other similar women's clubs, for the purpose of making mattresses and other similar articles of home use, for free distribution to those families not on relief, but whose income is so low that they have been unable to buy, and who are in need of mattresses and similar articles, and the Works Progress Administration may, in such cases, require the furnishing of ticking and labor by such persons in converting the cotton into mattresses and similar articles where needed.

Those who are familiar with conditions existing among many of the poor families realize the need and necessity of this assistance. In the rural areas of the South, where cotton is the principal crop, in many of the homes of the poor, families are in dire need of mattresses, sheets, and other household articles made of cotton.

Since the introduction of this bill I had a letter from a social worker in my district, whose work carries her into the homes of the poor, and who is thoroughly familiar with conditions, and I quote from her letter as follows:

The condition of homes and supplies is a vital one. The very meager incomes of families which have had low wages; decreasing farm incomes; the uncertainty of getting work, and those many contributing causes which affect their existence have brought about conditions which are hard to picture.

Even the regularity of W. P. A. wages is not equal to paying rent, buying school shoes and supplies, food, medicine, and incidentals, to say nothing of household supplies. They have not had the money to get items such as mattresses, sheets, pillowcases, and towels. The kitchens are also bare of needed items. These conditions have entered homes not accustomed to life without essentials. No local money or that from other sources has been available to assist families in securing these necessities; and the possibility of getting household supplies is one that offers some encouragement, as it is one of the most immediate needs around us.

In our small local way we have begged supplies and hold them as loans, where they are sent into homes in cases of illness, but when the emergency is over it is necessary to take them out in order to be ready for the next call. There are times when every item is out.

My feelings on the subject are so deep that I could not refrain from an expression and entertain hope that such a measure for the use of cotton would become possible.

Section 4 of the bill is for the purpose of providing aid to those families who are on the border line of low income, but not on relief, but who need mattresses and sheets, and so forth. There are many families of five whose total annual income does not exceed $500, and many far less than that amount.

It is thought that distribution under section 4 for those not on relief might be made by home-demonstration clubs or other women's clubs who have women trained to make mattresses, and they could be supplied as many bales of cotton as they would furnish tick for. Tick costs from about $1 to $2 per mattress. It is estimated that 1 bale of cotton will make about 10 mattresses.

Another social worker in my district, interested in aiding the poor, has made this suggestion:

All States have organization machinery to get these mattresses made—home-demonstration agents are trained to teach women to make mattresses—in practically every county in Texas there are from 5 to 10 rural women trained well enough to teach others. The councils of home-demonstration clubs are equipped with committees who are known as expansion committees, whose duty it is to extend information learned through home-demonstration clubs to all other people that they can reach. These committees are capable of passing on those entitled to receive the cotton, just as the county committeemen are capable of passing on those farmers and farms eligible for benefit payments. This is leadership that has been developed over a long period of years, and is available. They would give service on the same basis that A. A. A. committeemen do or probably volunteer service—if this is more of an emergency—or for a small per diem if it is promised to be prolonged. That is a detail that can be worked out later.

It is believed that the home-demonstration service of each State would readily cooperate just as they did in a somewhat similar way in the Federal meat-canning project.

Last year I talked to a doctor in my district who practices in the country, and many of whose patients are of the poorer class, and he told me that it was pathetic in many of the homes where he visited professionally, and that many times where there was illness, the homes were without mattresses, sheets, pillowcases, and towels, and in many homes they were using old flour sacks for these purposes.

It does seem a travesty on justice that in the South where cotton is grown in such large quantities, that in the homes of those who produce cotton, these necessities are not available.

The need for this legislation is recognized by all who are familiar with conditions in the South, and under leave obtained to do so, I submit herewith a resolution passed at College Station, Tex., in my district, last October, upon this subject, as follows:

Whereas the citizens of Texas have been aroused to the situation confronting not only this State but all of the Southern States, which is hindering the development of the people and retarding progress in agriculture and industry; and

Whereas since the recent visit of Secretary of Agriculture Henry A. Wallace to Texas, and at which time he called attention and asked for united aid in handling 7,000,000 bales of cotton now held in the United States, and which was a surplus over and above the amount used before the 1938 crop went on the market and which equals or enlarges the production of the past year: Therefore be it

Resolved by the Board of Directors of the General Federation of Women's Clubs in session at College Station, Tex., October 13, 1938: That we lend every effort to the Department of Agriculture, Washington, D. C., to assist in this immediate piece of work and ask that the surplus not be thrown on the market, but that it be manufactured into household articles, such as mattresses, comforts, bed linens, towels, work clothing, and other articles for the use of those now dependent upon Government agencies for their existence, either by work at very small wages or dependent upon direct grants.

Further, we commend Secretary Wallace for his plan for the appointment of a committee to work out plans for the use of this surplus cotton.

MRS. JUD COLLIER,
MRS. MINNIE FISHER CUNNINGHAM,
MRS. J. L. BROCK,
Committee.

This bill will serve a twofold purpose: First, by disposing of a portion of the surplus cotton which the Government holds; and, second, to afford substantial and needed relief to the worthy poor. And I trust that the Committee on Agriculture, to which this bill was referred, will act favorably thereon and I hope that the membership of this House will aid in passing this bill, which I believe to be meritorious and just.

HOME GARDENS FOR FARMERS

Closely related in point of need to this relief bill is the necessity that the agricultural conservation program may provide for home gardens among the farmers. As I understand, under existing law the Agricultural Adjustment Administration may make provision therefor by regulation, and no legislation is needed for this purpose.

Provisions for a home garden for providing food for the farm family should be included in the agricultural conservation program of the Agricultural Adjustment Administration. In support of this contention I submit the following facts:

1. In 1934 the A. A. A. released a table showing that 53,000,000 more acres would have been put in food and feed if all the people had a liberal diet. The Bureau of Home Economics, in 1936, stated

that if the diets of city people were raised to a first-class level it would take one-sixth more eggs, one-third more milk, one-fifth more fruits, and one-fifth more vegetables.

2. According to the 1935 census there are 624,146 farms in the southern region without gardens.

3. According to nutrition standards, 715 pounds of vegetables per person per year are needed for good nutrition.

4. According to the standard, 7,700,000,000 pounds of vegetables are needed per year by the farm population of the southern region for nutrition that will protect and promote health. At the rate of 5 cents per pound, home gardens of the South need to produce vegetables to the amount of $385,000,000. This amount of money would release the pressure on other cash crops.

5. This family table is a market that pays retail prices and offers no competition.

6. There is 17 percent more illness in families having an income of $1,000 and less per year, and considering this fact, the low income of the South and the relation of the home garden to good health, it is vitally important that every measure be taken that will encourage the production of home gardens.

7. The problem of food production is of equal concern to all the Nation if we are to have a people physically and mentally fit.

Illustrative of this need for home gardens on farms, the following statistics are presented:

Southern region

State	Number of farms	Number of farms reporting gardens	Number of farms without gardens
Arkansas	253,013	206,134	46,879
Oklahoma	213,335	126,954	86,381
Texas	501,017	285,700	215,317
Louisiana	170,216	132,662	37,554
Georgia	250,544	199,112	51,432
Alabama	273,455	224,212	49,243
Florida	72,857	36,732	36,125
South Carolina	165,504	133,076	32,428
Mississippi	311,683	242,896	68,787
Total	2,211,624	1,587,478	624,146

I request the cooperation of all members from agricultural districts in urging the Agricultural Adjustment Administration of the Department of Agriculture to make proper regulations to encourage the planting of home gardens by the farmers who cooperate with the Government's program.

T. V. A. and the Gilbertsville Dam

EXTENSION OF REMARKS
OF
HON. CHARLES H. LEAVY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1939

Mr. LEAVY. Mr. Speaker, a little over a year ago a three-judge Federal court, in a comprehensive decision, established the constitutionality of the T. V. A. Released from litigation the T. V. A. proceeded at once to acquire a market for the surplus power which can be generated at these great water-control projects.

There are now four dams in operation with a power capacity of 420,000 kilowatts. Late this year the dam at Guntersville, Ala., will be ready to generate power, and next year Chickamauga Dam near Chattanooga will be completed. These will be followed by Hiwassee, where construction is well along, and later by Gilbertsville, Watts bar, then Coulter Shoals, making a total of 10 dams which will provide a navigable channel from the mouth of the river at Paducah for 650 miles to the city of Knoxville and in addition will provide substantial flood-control benefits in the Tennessee Valley and in the lower Mississippi Valley.

This 10-dam system, according to tentative plans, will have an installed power capacity of about 1,400,000 kilowatts and will be capable of producing over 4,000,000,000 kilowatt-hours of primary energy annually as well as at least an equal amount of secondary power.

The present revenues of the Authority coming from over 70 municipal and cooperative customers and several large industries and public utilities approximate $6,500,000 a year. With the completion of the 10-dam system it is estimated that the annual revenues will exceed $20,250,000, leaving a margin of over $16,000,000 after deducting the operating expenses assignable to power.

Most of this power is being sold for the direct benefit of the public at rates which cover all costs, but which at the same time permit reductions of from 25 percent to 50 percent as compared with the rates formally charged in the same area by the private utility companies.

With a market already developed, the additional dams to be completed over a period of years will provide a capacity which is essential to supply the power requirements of the area. As pointed out in the testimony before the Appropriations Committee, there is no longer any problem of disposing of the power, but rather the problem of providing capacity to meet the growth, and the demand for power must be faced. The construction of Watts bar is essential to open the Tennessee River for navigation and to provide power to meet the requirements of the market.

The entire power capacity of the 10-dam system is only 485,000 continuous kilowatts, which represents about 800,000 kilowatts under the usual conditions of use. The best estimates available on the part of both utilities and public authorities indicate that this capacity will be far from sufficient to supply alone the increasing demands for power. In fact, at least an equal amount will have to be installed by private public utilities or public agencies, in addition to the T. V. A. capacity, if the expected power requirements are to be provided for.

It has been charged that Gilbertsville Dam will provide a tremendous pool of power that will jeopardize utility companies in a widespread area, including St. Louis, Louisville, Ky., and much of Illinois, Indiana, and Ohio. This is far from the fact. The power available at Gilbertsville is a minor consideration, and everyone knows that Gilbertsville Dam would never be constructed if power were a primary consideration. That dam is essential to navigation and flood control. As for power, the ultimate capacity may reach 150,000 kilowatts, with less than 100,000 kilowatts of primary power. This is not sufficient power for the city of Louisville, Ky., alone, to say nothing of the widespread areas which have been mentioned. Furthermore, the power capacity at Gilbertsville Dam will be subject to serious reduction at times of flood, making it necessary to provide capacity at other dams to carry the Gilbertsville load during flood periods.

There can be no question that the market has been obtained for the T. V. A. power; that the rates being charged will cover all cost; that the power operations have caused no unreasonable losses to legitimate investors; and that, above all, power operations from this 10-dam system will save the public on the order of $40,000,000 a year in reduced power rates in the Tennessee Valley area alone. This is without including the millions of dollars of rate reductions effected throughout the country as the indirect results of the T. V. A. power program.

Wars Are Not Won by Armies

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1939

Mr. CELLER. Mr. Speaker, since superior resources are the determining factor in a war, as is generally admitted by competent students, the leading democracies, that is, the United States, Great Britain, and France should emerge victorious in a conflict with the principal nondemocratic powers, that is, Germany, Italy, and Japan, as and when such conflict comes.

Wars are admittedly no longer won by vast armies. The so-called "have nations," that is, those who have ready access to, or are in control of natural resources, are more likely to succeed than nations classified as the "have nots." Since there is so much talk about war between these two groups, which may also be termed democracies and nondemocracies (or dictatorships), an examination of their natural resources should be of interest. (Statistics are based on Foreign Commerce Yearbook and the Federal Reserve Bulletin. See accompanying table.)

Cotton, wool, oil, copper, and wheat, the sinews of war, are virtually all in the hands of the democratic nations. The nondemocratic forces produce very little wheat and copper and virtually no oil, wool, or cotton. Of agricultural products, rye, potatoes, sugar beets, and rice are practically the only ones which they possess in fair volume, but hardly enough for a protracted war. They produce little oats and barley—less than 11 percent of the world's total output—practically no corn—slightly more than 2½ percent—no rubber whatsoever, and little tobacco—only about 8¼ percent. There is one item—raw silk—which the nondemocracies virtually control, production amounting to almost 90 percent of the world's total output. However, war cannot be waged successfully with silk. The nondemocracies produce coal and steel ingots in fair amounts, about 18¾ percent and 21½ percent, respectively. They also control about 13½ percent of the world's total output of lead and zinc.

The number of active cotton spindles in the nondemocratic countries amounts to only slightly above 18 percent of the world's total compared with more than 60 percent for the democratic nations. The amount of developed water power in the nondemocratic countries amounts to slightly less than 26¼ percent of the world's total, compared with 53½ percent for the democracies, while the respective figures for potential water power are about 4½ percent and 39 percent.

Whereas the democratic nations control almost half of the total number of merchant vessels, the nondemocratic countries control only one-fifth of the world's total. The number of automobiles owned by the democracies is well over 83 percent compared with less than 5 percent for the nondemocratic countries.

While the democracies produce close to 62 percent of the world's total output of gold, which is still the universally accepted standard of value and indispensable as a medium in the event of serious complication, the nondemocratic countries produce less than 2 percent of the total. With regard to silver, the nondemocratic countries produce only 6½ percent of the world's total, compared with about 34½ percent for the democratic nations. Whereas the currency in the democratic countries is backed by a gold reserve of close to 79 percent, the gold reserve in nondemocratic countries is only slightly in excess of 2 percent, suggesting strongly the precarious position of the respective currencies of the nondemocratic countries.

No reference was made to some of the minor countries which could be included within either category. Statistics are confined only to the major countries in each group and should suffice to enable one intelligently to appraise the relative position held today by the two major groups of nations, comprising, on the one hand, the democracies, and, on the other, the aggressors.

Enemies of democracy have pointed out that democracy has failed and that other forms of government should be tried to bring salvation to a stricken world. Curiously enough, history teaches the very opposite: In times of crisis democracy has triumphed and autocracy was unable to withstand trials and tribulations. The Great War affords a most illuminating example. Following the cataclysm all autocracies collapsed, including those of the Romanoffs, the Hohenzollerns, the Hapsburgs, and the sultanate. The democracies of the world survived, and if history will repeat itself, as it invariably is in the habit of doing, democracies will once again triumph.

Natural resources of democratic and nondemocratic forces

	World total	Democracies[1]		Nondemocracies[2]	
		Total	In percent of world total	Total	In percent of world total

[2] Comprise Germany, Italy (and possessions), and Japan (and possessions).

Col. Ernest Graves, Retired

EXTENSION OF REMARKS
OF
HON. JOSEPH J. MANSFIELD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1939

Mr. MANSFIELD. Mr. Speaker, I have introduced a bill to adjust the retired pay of Col. Ernest Graves, Corps of Engineers, and I wish to invite the attention of his many friends in the Congress to the merits of properly recognizing his distinguished services in connection with both the military and civil activities of the War Department.

Colonel Graves was born in North Carolina. After graduating from the University of North Carolina, where he was a star football and baseball player, he went to the United States Military Academy, where he was prominent both as an athlete and as a scholar. He has since served in the Army through all the commissioned grades, including colonel.

In the spring of 1916 Colonel Graves, then a captain, Corps of Engineers, marched into Mexico with the punitive expedition. On this strenuous expedition, where energy, determination, and ability were in demand, Captain Graves attracted the attention of General Pershing, and in the spring of 1917, after coming out of Mexico, he sailed for France on the *Baltic*, which carried General Pershing and a limited number of selected officers who were the nucleus upon which the American Expeditionary Force was built. During the World War Colonel Graves served in a number of different localities in the theater of operations, and the conspicuously meritorious character of his services with the American Expeditionary Forces is indicated by the following citation, upon which he was awarded, before his return to the United States, the Distinguished Service Medal:

> He was charged with the construction of the Gievres storage depot, and later was appointed engineer officer of the intermediate section, Services of Supply, where he was placed in charge of all construction projects west of Bourges. As engineer officer of base section No. 2 and of the advance section, S. O. S., he performed the duties with which he was intrusted in a conspicuously meritorious manner. In the many responsible capacities in which he was employed, the performance of his duty was characterized by sound judgment and untiring zeal.

After his return to the United States Colonel Graves wrote a book entitled "Construction in War," which was then and still is the most thorough if not the only publication containing essential expert information on this subject.

The retirement of Colonel Graves in March 1921 may or may not have been caused directly by his strenuous, nerve-racking activities continuing through the Mexican and World War campaigns. However, a physical disability of deafness in the line of duty caused this retirement.

Colonel Graves was recalled to active duty in April 1927 and has served continuously since on active duty in the Office of the Chief of Engineers. In 1928 he was selected, appointed, and confirmed by the Senate as a member of the Mississippi River Commission and he is still a member of that commission. He has served on the Board of Engineers for Rivers and Harbors and he was Chairman of the Interoceanic Canal Board when that Board submitted its final report. He has been retained on active service by four different Chiefs of Engineers. The especial work of Colonel Graves is on the Mississippi River, but his exceptional talents are needed and used frequently on various other matters, including flood control and river and harbor projects everywhere in the United States, interoceanic canals, and some military subjects.

Colonel Graves is not only a Tar Heel from North Carolina but also a servant of all the United States, including every State in the Union. This is especially true with respect to any and every locality where there are flood control or river and harbor problems. During the long service of Colonel Graves in the Office of the Chief of Engineers he has made it his business to assist in every way possible any and all of us who have had waterway and flood-control problems. Although my bill provides only for an equitable adjustment of the retired pay of Colonel Graves, I believe that his services to us should be rewarded by giving to him the rank and pay of a major general, United States Army.

Congress in Review

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1939

Mr. BENDER. Mr. Speaker, the Seventy-sixth Congress has been in session for only a brief 8 weeks; but in this short space of time it has become clear that a new feeling is sweeping the Nation. The deliberations of Congress have blown a breath of fresh, clear air into the atmosphere of America. A new spirit of courage and vigor has pushed its way into the conduct of the Nation's business. Partisan lines in Congress have been repeatedly broken as Democrats and Republicans have discovered that they are really running the "show." When the President told Congress in his opening message that he was going to give us the "privilege" of doing the job we were elected to do, he sounded as if he did not believe we could do it. His attitude was one of sublime contempt. He threw down a challenge and Congress has accepted it. Representatives and Senators in Washington have determined to make good. We are making good in a big way. We are proving every day that we can conduct the Nation's business as a democracy—efficiently, wisely, and independently. There was a time when Will Rogers prayed every morning for Congress to adjourn. I am sure that he would be praying for us to keep in session today.

Look at the new line-up in Congress. Democrats and Republicans are agreeing on major issues; and in almost every case of agreement, we have encountered White House opposition. The Republican Party, in spite of all the talk in the newspapers of the Nation, does not have a majority in either House of Congress.

So much publicity has been given to the sensational turnover at the elections last November that a good many people sound as if the Republican Party were running things with a majority in Congress. We are definitely only a minority party. But, unlike our Democratic opposition, we are a cooperating, united group. When the questions before Congress present an issue which vitally concerns the Nation, the Republican Party threshes out its opinions and comes before the people with a positive point of view. We have completely changed the part we played in the last Congress. There the Republicans were gadflies, stinging the thick hide of the Democratic jackass. Even today, we occasionally tweak the donkey's tail, but we no longer stop at this amusing form of national entertainment. We have moved a long way, and today we are claiming an important and sometimes decisive voice in the affairs of government. The 170 Republicans of the House of Representatives are exerting a tremendous force in the determination of policies. We are no longer treated like small children, either in committee or in debate. This new respect which the Republican Party enjoys in Washington is no tribute to us. It is a tribute to the voters of America who gave the Republican Party a magnificent vote of confidence last November.

This new feeling has penetrated the Democratic side of the House just as strongly as it has marked our Republicans.

Democrats can read election returns quite as well as anyone else. They have analyzed the results of last November, and they know that the people of this country are moving rapidly away from the extravagance and centralized government which the New Deal has imposed upon our Nation. Everywhere in this country, from the smallest backwoods village to our biggest cities, the demand for economy, for less governmental interference in business, has made itself a real factor in our political life. Congressional Democrats know that their day is over and that their only hope for any future lies in adopting the program of the Republican Party. This is the only way we can understand the work of the Seventy-sixth Congress.

Legislation offered by the White House in the years from 1933 to 1938 was looked upon as sacred. It was simply given to Congress to go through the form of rubber stamping it. Sometimes, in fact, they almost forgot to give it to Congress at all. Once, for example, there were only three copies of a bill printed for 435 Representatives to study before it came up for a vote. On another occasion, the Attorney General's office had to admit to the United States Supreme Court that official copies of N. R. A. codes were as scarce as hen teeth; and it took 3 weeks of hard scratching before the "brain trust" found the copy of the Poultry Dealers' Code that killed the Blue Eagle. This sort of thing is ancient history now. No laws are going to be slipped through the Seventy-sixth Congress like greased lightning. They are all getting mature and detailed discussion. Debate is not being shut off like the family radio.

What are the results of this new spirit in the United States Congress? We have already seen the House and Senate smashing all party lines to cut down the President's excessively large W. P. A. proposal. That measure was checked by a line-up of Democrats and Republicans which could never have been assembled 2 years ago. The insistence of Republicans and Democrats alike is making the National Budget for 1940 a very carefully considered business. Every detail is being looked at as if Sherlock Holmes were using his famous microscope. Even the form in which the Budget was introduced is being challenged, because we are determined that we shall not subscribe to the New Deal theory of a permanently unbalanced Budget. Already, Members of the House of Representatives are taking off their gloves and rolling up their sleeves to get ready for the White House's next big job. Away back in 1917 Congress fixed the top limit of the national debt at $45,000,000,000. We are so close to this figure now that the New Deal is preparing a bill to raise the ante. As far as they are concerned, the sky is the limit. They have never heard the old proverb that "Everything that goes up must come down."

Mr. Eccles, who heads the Federal Reserve System, and a young man named David Coyle have worked out a new theory of economics, which tells us that so long as you borrow from yourself, everything is hunky-dory. You will never have to pay up. This is the most amazing idea of Government finance ever invented. It is original, but it just will not work; and every Democrat on the majority side of Congress knows that it will not work. We are convinced that the Republicans are going to be joined on this issue by at least a hundred Democrats when the bill to raise our legal-debt limit reaches the floor.

These are not the only major issues on which Republicans and Democrats are joining forces. When the Dies committee was attacked by the obedient henchmen of the White House; when a campaign of ridicule and sarcasm was directed against its work, Democrats and Republicans joined again to pass a measure giving $100,000 to the committee to continue its investigation of un-American activities. But the climax of our national drama up to date, was the reaction of our United States Senate to the appointment of Judge Roberts to the Federal bench and the selection of Thomas Amlie for a place on the Interstate Commerce Commission. New dealers have tried to accuse the Senate of petty spite. They have told us that it was simply playing politics. But one of the New Deal's most loyal supporters, United States Senator ELBERT THOMAS of Utah, rose from a sickbed to justify the position taken by 72 Senators in rejecting Judge Roberts for the Virginia Federal bench. Mr. THOMAS presented a lesson to the President in constitutional law, when he told the Nation that the President's authority to designate Federal judges was not an absolute power. When Mr. THOMAS told the President that no member of the White House had ever succeeded in destroying the influence and prestige of the Senate, he was warning the Nation that such an attempt was the surest way to destroy democracy.

But our executive department has not accepted Senator THOMAS' verdict. The nomination of Tom Amlie, of Wisconsin, to the Interstate Commerce Commission brought an immediate resolution from the Wisconsin State Legislature denouncing the appointment. Folks who knew him best have told the people of our country that Mr. Amlie is a follower of the red flag; that he has appeared before Communist gatherings; that he is opposed to the capitalist form of society. Whatever color Mr. Amlie may be, he is certainly not red, white, and blue. Senators of every party leaning are getting ready to give Mr. Amlie a thorough going-over when his name is brought before them for final confirmation.

And to top our congressional revolt off, this last week Congress has again spoken courageously and independently on a problem of the first importance to America. Our President has been retracing the steps of Woodrow Wilson for over a year. In 1938, at Chicago, he delivered an address urging the quarantine of "aggressor" nations. Ever since then he has been making militant "jingo" speeches. Congress has refused to follow this lead. In speech after speech on the floor of Congress, Representatives have risen to denounce every proposal which might involve us in foreign wars. We are determined, even if the President and his advisers are not, to keep American blood from being spilled on any foreign soil. We have seen the bitter failure of the policy of intervention before. Our internationalists have already forgotten that we entered the World War to make the world safe for democracy. How miserably we failed is written in every newspaper published in America. Congressmen of both parties are agreed that we shall authorize nothing which may in any way provoke hostilities. We are ready and willing and anxious to defend our own soil; but we refuse to send the sons of American mothers abroad to fight the nations of the world to no real purpose.

On this basis, Congress has refused in the last few days to appropriate $5,000,000 for the development of the island of Guam. Most of us had forgotten where this tiny island is located; but to refresh our memory, it will help us to know that Guam is 6,250 miles from San Francisco by way of Honolulu. As the crow flies, this little dot in the Pacific is almost 2,000 miles from Manila. It is much closer to Japan than it is to any possession of the United States. In fact, it is directly in the midst of a whole string of 98 islands over which Japan exercises a mandate. What earthly reason connected with the protection of our own shores could be advanced by the advocates of fortifications on Guam? We know full well that if any European or Asiatic power were to undertake any kind of construction on an island which was closer to our shores than to their own, we should holler "Monroe Doctrine" until the skies shook. The mere fact that the executive wing of our Government was strongly in favor of harbor work on Guam, furnished new proof that the White House is still thinking in terms of aggressor punishments. Congress insisted on discussing this issue. We were not bulldozed by the Government's forensics. If our national frontier is to be extended to Guam, we must make the decision with our eyes open. It must not be sneaked in through any back-door appropriation. Congress has effectively destroyed this first threat in the Pacific. We shall be on guard to check any others.

One other event of possibly great significance for our citizens occurred in the Upper Chamber of Congress early this week. The junior Senator from Ohio, ROBERT A. TAFT, rose to participate in the debate on the Tennessee Valley Authority. Throughout the country, newspapers were on the alert to catch his remarks. The genuine statesmanship which Mr. TAFT's words revealed did much to add to his political stature.

The Senate may be sold on the opposition point of view, but there is no doubt that the Republican position is gaining an attentive hearing throughout the country. People are stopping to ask themselves the consequences of T. V. A.'s program. They are questioning the wisdom of destroying private utilities and drying up important sources of tax revenues.

The Seventy-sixth Congress has just begun its work. We have only begun to fight. There will be weighty issues before us in the days ahead. Our Nation is clearly reaching a moment of decision. It will be yours to decide whether we shall go on piling debt upon debt, until our top-heavy burdens stifle all individual initiative, completely check the flow of private funds, and turn us into a huge governmentally supported bureaucracy.

Congress is taking the lead these days in every front in the battle to restore the American way of living. We fully recognize the need for supporting every man and woman who is rightfully on W. P. A., P. W. A., C. C. C., N. Y. A., or local relief agencies. Yet we are convinced that a solution of our major problems will not be a system in which everybody is on one or another form of public relief.

I call upon the people of every State in our Union to support the work of the Seventy-sixth Congress. We are fighting your battle to rebuild the American tradition upon a sound basis; to give our people what they have so long wanted—hope in the future of our Nation.

The Importance of the Gilbertsville Dam for Flood Control

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1939

I. NECESSITY OF TRIBUTARY RESERVOIRS FOR MISSISSIPPI FLOOD CONTROL

Mr. SPARKMAN. Mr. Speaker, there is no longer any difference of opinion as to the necessity of constructing reservoirs on the tributaries of the Mississippi River to provide adequate control of floods. The report of the Army engineers of April 6, 1937, set forth in Committee Document No. 1, Seventy-fifth Congress, first session, states:

20. The control works on the Mississippi are designed to pass a flood of 2,250,000 cubic feet per second from Cairo to the confluence of the White and Arkansas Rivers, the flood capacity being increased below these rivers. The recent flood out of the Ohio was a little less than 2,000,000 cubic feet per second. This discharge, combined with that of the Mississippi above Cairo, produced a discharge below Cairo of about 2,100,000 cubic feet per second. The reservoirs authorized and herein recommended in the Ohio Basin would have reduced the flow below Cairo by about 200,000 cubic feet per second. Meteorological studies suggest that a large discharge from the middle Mississippi is not to be anticipated under the atmospheric conditions which give rise to winter floods like the recent one out of the Ohio, but that a discharge of about 400,000 cubic feet per second might occur at such times. On the other hand, such a flood out of the Ohio is not to be anticipated during the spring, when large floods may come down the Mississippi. A review of all data indicates, however, that due prudence should provide for a flood which, without reservoir control, would reach 2,600,000 cubic feet per second in the Mississippi between Cairo and the Arkansas. A winter flood out of the Ohio but 10 percent larger than the recent one, on top of a Mississippi River flow of 400,000 cubic feet per second, would reach this discharge; as would the maximum record flood out of the middle Mississippi, amounting to 1,000,000 cubic feet per second, should it happen to coincide with a spring flood of 1,600,000 cubic feet per second out of the Ohio.

21. The present levees on the Mississippi are about as high as it is desirable to construct them. An increase in the height accentuates the danger of a crevasse and its consequences, besides presenting a serious hazard of subsidence in the soft ground which they must occasionally cross. Additional safety should be sought rather in the continuation of the program for improving the flood-discharge capacity of the river channel and in reducing peak discharge by the construction of reservoirs (p. 6).

There is no truth whatever in the statement that has been made that the Tennessee River makes no material contribution to the flood damage on the Mississippi. This statement was based upon a report of the president of the Mississippi River Commission, set forth in House Document 328, to the effect that the projects described in that report for the Tennessee River system would not contribute materially to the reduction of Mississippi floods. This was simply a restatement of the views expressed by the Reservoir Board of the Mississippi River Commission of 1927 which recommended against the construction of reservoirs for Mississippi flood control on any of the tributaries of the Mississippi—on the Tennessee or any other tributary. As already noted above, the experience in the 1937 flood has led the Army engineers to reverse that position. Even before the disastrous flood of 1937 the Mississippi River Commission, on the basis of an exhaustive study of tributary reservoirs for Mississippi flood control, had already modified the earlier position of 1927 and had recommended "that the Federal Government adopt a policy encouraging and participating in the construction of feasible tributary systems which will fit into an ultimate general system for the control of lower Mississippi River floods" (Comprehensive Report on Reservoirs of Mississippi River Basin, House Doc. 259, p. 33).

There is no longer any disagreement among any of the experts, including the Army engineers, as to the desirability and necessity for tributary reservoirs for the control of Mississippi floods.

It is also everywhere acknowledged that the best sites for flood-control reservoirs for the protection of the Mississippi are located on lower tributaries of the Ohio River, including the Tennessee River. Today no responsible authority would agree with the statement that the Tennessee River makes no "material contribution to the flood damage on the Mississippi." Mr. George Clemens, senior engineer of the Mississippi River Commission, testified in the Fourteen Power Co. case:

The principal contributor to the lower Mississippi floods is, of course, the Ohio. The past floods have ranged from about 52 to 90 percent of the contribution of the flow at Cairo. Of the total flow in the Mississippi River below Cairo, the Ohio has contributed from 52 to 90 percent over that range in these various floods. (References are to the record in the Supreme Court in the case of the *Tennessee Electric Power Co. et al.* v. *Tennessee Valley Authority et al.*)

The Tennessee River, as the principal tributary of the Ohio, of course, makes a substantial contribution to the Mississippi floods. Mr. O. N. Floyd, an engineer of wide experience and a consultant of both the Army engineers and the Tennessee Valley Authority, testified that—

The Tennessee is one of the main contributors to all our [Mississippi] floods, and there has never been one of the higher floods or bigger floods in Cairo without a substantial contribution from the Tennessee River—

and it is also everywhere agreed that the cheapest and most effective sites for Mississippi flood control on the Ohio River are on the lower tributaries of the Tennessee River.

The Army engineers' "308" report on the Ohio River system, set forth in House Document 306, Seventy-fourth Congress, first session, states:

It was found that relatively little benefit on the Mississippi could be obtained from reservoirs in the Ohio Basin on tributaries above the Green River. While it is beyond the scope of this report to draw conclusions in this connection, it is believed that further consideration of reservoirs in the Ohio Basin to provide flood control on the lower Mississippi should be confined to the lower Ohio River tributaries, namely, Tennessee, Cumberland, Wabash, and Green Rivers (p. 127).

Mr. Clemens, of the Mississippi River Commission, who was in responsible charge of the preparation of the Commission's Comprehensive Report on Reservoirs in Mississippi River Basin (H. Doc. 259, 74th Cong., 1st sess.), testified as follows in the Tennessee Electric Power Co. litigation:

Question. In your opinion, what reservoir sites on the Ohio River system are most effective for Mississippi River flood control?

Answer. The lower tributaries of the Ohio would be the best. Those reservoirs within prediction distance, including, of course, the Tennessee; other tributaries are also valuable, the Cumberland, Green, Wabash.

The Gilbertsville Dam is the most important of the projects of the Authority for Mississippi flood control, not only because it is the largest but because it is the closest to the point of danger.

The Gilbertsville Dam site is less than a day's water flow from Cairo, and can therefore be operated with exceptional accuracy in reducing peak flood stages. It also increases the effectiveness of upstream dams by regulating and correcting for any possible errors there may be in the operation of the more distant dams. With this exceptionally large storage capacity located immediately adjacent to the point of greatest danger it would be feasible to cut off all or part of the entire flow of the Tennessee River at a critical time.

The proposed Gilbertsville project is not only the most effective project that could be developed in the upper Mississippi River system, but it is also the cheapest. It is cheaper either in terms of the amount of money per acre-foot of storage or in terms of the cost per foot of reduction of flood stage. The potentialities of this project have been exhaustively studied by the T. V. A. engineers, and their conclusions have been carefully checked by eminent, independent consulting engineers, including Mr. O. N. Floyd, of Dallas, Tex., who is consultant of the Army engineers on the flood-control project at Sardis, Miss., and on numerous other projects; Mr. L. L. Hidinger, an experienced consultant on numerous flood-control projects; and Mr. E. W. Lane, for a number of years connected with the Bureau of Reclamation, and now professor of hydraulic engineering at Iowa State University. The conclusions of these engineers can be summarized briefly as follows:

The Gilbertsville Dam project will make possible the reduction of 2 feet or more in all major floods on the Ohio River system at Cairo, which reduction will persist substantially to the mouth of the Arkansas River at Helena, Ark.

The cost of the Gilbertsville project per acre-foot of storage or per foot of reduction in flood stage at Cairo, Ill., is less than one-half the cost of any other reservoir or system of reservoirs which could be located on the tributaries of the Mississippi River above Cairo.

The reports of the T. V. A. consultants, Messrs. Floyd, Hidinger, and Lane, were made independently, and the comparisons of costs made by them were based upon studies of the reports of the Army engineers set forth in Committee Document No. 1, Seventy-fifth Congress, first session (1937); House Document No. 306, Seventy-fourth Congress, first session; House Document No. 259, Seventy-fourth Congress, first session. These reports contained exhaustive studies of all the available sites on the tributaries of the Mississippi River above as well as below Cairo, together with careful preliminary estimates of cost and estimated effectiveness for Mississippi flood control. The conclusions of these three consultants are as follows:

Mr. Lane states:

The Gilbertsville Reservoir * * * forms a necessary part of the most economical system of reservoirs for the Mississippi River flood control (p. 26).

Mr. Floyd states:

The Gilbertsville project appears to be one of the most outstanding large-scale flood-control units in the entire Mississippi Valley. * * * It will cost less to build and require less time to complete than any other known reservoir or combination of reservoirs of equal capacity or effectiveness. * * * Flood-control benefits alone should justify its entire cost even though the amounts allocated to navigation and initial power provisions should not appear to be economically justifiable at this time. There appears to be no reasonable doubt but what any well-considered comprehensive plan for controlling the larger floods from the Ohio and upper Mississippi must include Gilbertsville about as proposed as one of the key units; and its immediate construction should be regarded as a harmonious and effective step for the larger plan (p. 34).

Mr. Hidinger states:

An analysis of the proposed Gilbertsville project leads to the conclusion that it will provide more positive flood control at less cost and that it can be built and put into operation in shorter time than any reservoir or group of reservoirs that will give equal protection. From every viewpoint it appears to be the most meritorious agency for the control of excessive floods in the lower Ohio and Mississippi that is available (p. 21).

A striking demonstration of the economy of the Gilbertsville project is furnished by a comparison of other costs as estimated by the Army engineers in House Document No. 259, cited above. That report shows that the estimated cost per acre-foot of reservoir projects on the Ohio River above the Cumberland and Tennessee Rivers is $28 (p. 40). The Gilbertsville project provides 4,800,000 acre-feet of flood storage and its total cost, including the powerhouse but without generators, is $95,000,000, about $20 an acre-foot, even if the total cost is charged to flood control.

II. VALLEY STORAGE MYTH

It has been contended that the flood storage at Gilbertsville is of no value for flood control because it merely displaces valley storage which exists in the state of nature and automatically serves to reduce Mississippi flood heights. The answer is that this so-called valley storage is merely the flood itself, is wholly uncontrolled, and may even increase the flood hazard. Mr. Clemens made this point very clear in his testimony in the T. E. P. case, in which he said:

In my opinion, the construction of the high-navigation and flood-control dams on the Tennessee River is of substantially greater aid to the Mississippi flood situation than the so-called valley storage seems to have been here a confused issue. I think it might be that this term "valley storage" is a mysterious term used to give a very simple thing an unduly complicated definition. Valley storage is the space occupied progressively by the crest of a flood wave in its passage down the valley. The valley storage is the valley, and the flood peak in passing down the valley occupies progressively different positions in the valley and the accumulated effect of those positions is the valley storage. It is just the flood.

Examination by the court:

It is the space occupied by the flood as it goes down the stream in its natural course throughout the valley. It is variable with each flood. That is, if we have a flood height of 10 feet, it occupies certain space as it passes progressively through the valley. If we have one of 20 feet above low water throughout the valley, it will occupy a much greater space. If we have one of 30 feet, it will be still greater. So it is of variable quantity, depending on the flood. When the (fol. 1030) river is at its natural stage the land flooded by the river is valley storage. Then when the river is higher it is still valley storage, more valley storage. In time of flood the waters spread out throughout the valley and are to some extent retarded by that spreading out. It is not controlled, but it is retarded or delayed in its passage through the valley. There is no valley storage unless there is a flood. The valley storage is entirely uncontrolled, and the water goes out of the storage. There is no valley storage unless the river is out of its bank. A simple illustration of the effect of valley storage might help. In the 1937 flood the Tennessee River crested ahead of the Ohio River at Cairo. As the flow of the Tennessee passed through the valley storage it was retarded and the flood peak held back, which brought that peak back closer to the peak at Cairo. However, it was still eventually before the peak at Cairo and was falling at the time Cairo was rising to its crest. As it fell it was drawing water out of the valley storage of the river and was actually placing valley storage on top of the flood crest at Cairo, so that the valley storage in the Tennessee, uncontrolled this year, increased the flood crest at Cairo (pp. 1652–1653).

The fallacy of the valley-storage argument may be summarized as follows: Since the Mississippi floods are composed of the contributions from all of the tributaries, including the more distant ones, it is only reasonable to expect the floods on the Tennessee to peak in advance of the floods at Cairo; and as the flood crest passes on the Tennessee the water coming out of valley storage will arrive at Cairo just when the flood peak is building up at that point. This is exactly what happened in 1937. It is not true, as has been stated, that the floodwater of the Tennessee will have passed to the Gulf before the Mississippi flood is reached. Since valley storage is wholly uncontrolled, there is no way of telling when the Tennessee floodwaters will come out of valley storage and arrive at Cairo. It may arrive just when the flood peak at Cairo is reached, as happened in the 1937 flood.

Facts are confirmed by the findings of fact by the trial court in the recent Tennessee Electric Power case:

61. The Ohio River and its tributaries, including the Tennessee River, are the largest contributors to all Mississippi floods, contributing from 52 percent to 90 percent of the floods between Cairo, Ill., and Helena, Ark. The Tennessee River has always made a substantial contribution to all Mississippi floods.

62. The existing flood-protection works on the lower Mississippi River, consisting of levees supplemented by floodways and cut-offs, are inadequate to pass a flood such as is now estimated to be reasonably probable in the future without disastrous overtopping of the existing levees. Even in lesser floods the existing projects

provide adequate protection for only 60 percent of the alluvial valley, and then only with the use of the floodways, the use of which it is desirable to eliminate whenever possible. The levees on the lower Mississippi have reached the practical limits of height. Any additional protection against lower Mississippi floods must be found in part in the provision of reservoirs on the tributaries of the Mississippi to reduce their contribution to Mississippi floods. For the most effective flood-control use reservoirs should be located close to Cairo, which is at the junction of the Ohio and the Mississippi Rivers.

63. The Tennessee River, being the largest tributary of the Ohio and closer to Cairo and the lower Mississippi than any other major tributary of the Ohio system, is one of the best rivers for reservoirs for flood control on the lower Mississippi. For the most effective reduction of the contribution of the Tennessee River system to Mississippi floods it is necessary to provide high dams with controlled storage (such as the projects of the Authority) on the main stream and storage dams on the tributaries, including the Clinch and Hiwassee Rivers.

66. The controlled-storage projects of the Authority are the only types of engineering works on the Tennessee River system which will afford effective flood control in both the Tennessee and Mississippi River Basins. Automatic, uncontrolled detention reservoirs are of uncertain value for local Tennessee flood control and would be of no value for the control of floods on the lower Mississippi. The so-called natural valley storage in the Tennessee River Basin is the space occupied by the flood itself, and the retarding effect of such uncontrolled valley storage may increase the danger of Mississippi floods. The low dams set forth in House Document No. 328 would be of no value in the control of destructive floods either in the Tennessee or Mississippi River Basins, as was recognized in House Document No. 328.

These findings relate explicitly to the Gilbertsville Dam as well as the other projects of the Authority, contrary to the statement made in the daily CONGRESSIONAL RECORD of February 27. In fact, the trial court, in its opinion, made this explicit reference to the Gilbertsville project:

It is reasonably estimated that Gilbertsville, when completed, will supply over 4,000,000 acre-feet of flood storage, and it is the most important of the series for flood control on the Ohio and Mississippi Rivers.

Social Security Reserve

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 1 (legislative day of Monday, February 27), 1939

ARTICLE BY JOHN T. FLYNN IN HARPER'S MAGAZINE OF FEBRUARY 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an article, appearing in Harper's Magazine for February, by John T. Flynn, on the subject the Social Security Reserve Swindle.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SOCIAL SECURITY RESERVE SWINDLE

(By John T. Flynn)

In January 1942, a long, angry howl of disappointment will be heard rumbling throughout the length and breadth of the land. In that month, the first pensions under the Federal contributory old-age insurance system will be paid to the first batch of beneficiaries reaching the retirement age. This is the old-age insurance plan which is supposed to end the tribulations of the aged with dignity and decency.

Their neighbors and fellow townsmen who get benefits of the public-charity description from the States may be getting as much as $30 a month. But under this system of purchased insurance, a man earning a hundred dollars a month will, in 1942, be obliged to give up his job and pauperize himself in order to draw the $17 a month old-age insurance he has bought from the Government. The charity pensioners who get almost twice as much will give him a horse laugh as he sinks back into the dignity and decency of retirement on $17 a month.

The reader will probably be surprised to learn how small these first pensions will be. But he will doubtless surmise at once that this is because the Government is not collecting enough money in premiums to pay more. The guess will be wrong. The reason is a little shocking. The Government is collecting and will continue to collect in pay-roll taxes for a generation enough money to pay benefits many times this sum. But it will not pay adequate pensions—and this is the point I aim at—because all the time it will be spending the old-age insurance premium taxes for other things—paying the ordinary expenses of the Government.

If the reader is a little surprised at this, let me add three very serious statements.

First, the Government will in the years up to 1980 collect in taxes for old-age pensions about $111,000,000,000.

Second, of this one hundred and eleven billion some 43 percent, or forty-seven billion, will never be spent for old-age pensions at all but for every sort of Government expense, including, perhaps, building battleships.

And third, the Government will never return this $47,000,000,000 to the Social Security Board.

Behind these facts is one of the weirdest and most fantastic episodes in public finance. Unfortunately, all this is cloaked under a collection of seemingly just and prudent arrangements—arrangements which are mere fictions, however, and must be examined narrowly to be seen in their true relations.

II

It is very necessary that we have clearly in mind that under our Social Security Act two sorts of benefits are provided for the aged. The Government set out to establish an old-age retirement system which would provide a decent annuity for workers and for which the workers would pay. It was to be organized as an insurance system but operated by the Government. The members of this system were to be taxed on their wages monthly and, when 65 years of age, would be entitled to the benefits provided in the act.

But obviously people already past the retirement age could not get such insurance any more than a man who is dead can get life insurance. Therefore to provide some protection for those already arrived at retirement age an entirely separate system was established.

Thus there are two plans. One is called the old-age assistance plan for people already past 65. The other is called the old-age benefit plan for those not yet arrived at retirement age.

The first is entrusted to the States to organize, manage, and support, save that the Federal Government will make grants directly to the States to aid in supporting the plan.

The second is organized and operated by the National Government through the Social Security Board. It is of this latter plan that we propose to speak here. But we shall concern ourselves with only one feature of this plan, the incredible scheme, as chimerical as Dr. Townsend's wildest inventions or California's famous ham-and-eggs device for $30 every Thursday—the scheme to create a vast reserve fund of $47,000,000,000.

As the Government was setting up an insurance plan, what more plausible than to do it as a private company would do it—to create a great reserve fund to insure the financial soundness of the plan? In other words, the Government decided to charge the members at a rate large enough to pay all benefits for many years and also to accumulate in the course of time a reserve fund, called the old-age account, of $47,000,000,000.

The theory is plausible. The Government will "save" for the fund a large sum each year and invest it in Government bonds, the soundest securities in the world. Back of the great plan, therefore, will always be this huge reserve with its constantly accumulating interest.

But there is another reason for the reserve, also touched with the fatal vice of plausibility. This insurance plan is going to cost a great deal of money. It is to be paid for by a tax on the workers and their employers, and these taxes will be sufficient to pay the bills for many years. But there will come a time when the number retiring will be so large that the old-age taxes will be insufficient to pay the benefits. Then the Government will have to supplement the old-age taxes with other taxes. But by that time the reserve fund will have risen to many billions of dollars. It will be invested in Government bonds. The interest on this investment will be sufficient to meet the deficits and thus save the Government from imposing further taxation.

To put this concretely, here is the way it will work. Every employee who is a member of the insurance plan will be taxed 1 percent of his wages and his employer will be taxed 1 percent. The employer must deduct 1 percent from the pay envelope and add 1 percent to it and send it to the Treasury. It will be 1 percent during 1937, 1938, and 1939. After that it will increase one-half of 1 percent every 3 years until it reaches 3 percent for employee and 3 percent for employer, or a total of 6 percent. This tax will be paid on the salaries of 26,000,000 persons and hence will yield enormous sums. The taxes paid will rise with the years. To give some idea of this, the following table gives the sums which will be collected and the benefits which will be paid in the years selected.

Year	Receipts	Benefits
1937	$278,800,000	[1] $1,000,000
1942	873,000,000	52,800,000
1950	1,877,200,000	505,500,000
1960	2,041,200,000	1,379,000,000
1970	2,205,100,000	2,303,500,000
1980	2,295,300,000	3,511,300,000

[1] The benefit payments begin in 1942. Before that only small refunds will be made to beneficiaries who die before benefits are payable.

A glance at this table will show that the receipts will be sufficient to pay the benefits until 1970 when they will fall one hundred million short. In 1980 they will be $1,200,000,000 too small. But by 1980 this reserve accumulation will have grown to $47,000,000,000 and the interest on that will be $1,406,000,000 a year or enough to cover the deficit.

On the face of things, if you are one of those people given to the bad habit of tossing off decisions on grave problems without reflection, you will say nothing could be juster and sounder than this. That's the way it looked to the President. That's the way it still looks to him. But let us take a second look and see what we can see.

III

Now in order to follow this you must see how the reserve is now working in actual practice. The plan began in 1936 with the 1-percent tax for boss and workers. Up to October 31, 1938, the collections amounted to $910,165,940.84.

Now what has become of this money? It has gone into the Treasury. As no pensions are payable until 1942, no pensions have been paid—only some refunds on account of death and the expenses of administration. The balance—some $817,000,000—has been transferred to the reserve, called the old-age account. That is just an account in the Treasury. From there it has been transferred to the general funds of the Treasury. That is, the Treasury "borrowed" it and transferred to the account its own bonds. Having borrowed the money, the Treasury is at liberty to use it as it chooses. It has spent the money on the general expenses of the Government. Thus, as matters stand, the money is gone—spent; the old-age account or reserve has $817,000,000 of Government I O U's and the Government owes the account $817,000,000.

The explanation of this, of course, is that when needed the Government will pay this money back to the old-age account. Meantime it will pay interest at 3 percent each year. Each year the amount in the reserve will be greater. And each year the Government will pay 3-percent interest on that reserve. All the money will be loaned to the Government. Hence all of it will bear interest at the rate of 3 percent. The Government will collect taxes to pay the interest. But it will promptly borrow the interest just as it borrows the principal. And so by 1980 the Government will have collected in old-age taxes and in interest $111,000,000,000. By that time it will have paid out in benefits $64,000,000,000. There will be $47,000,000,000 remaining in the reserve. Of course there will be no money there—but just $47,000,000,000 of Government paper. But why should anyone worry about this? What could be better than United States Government I O U's? Let us see.

To understand this we have to be clear about the true character of savings. We are in the habit of speaking of "savings" rather loosely. One may save $1,000. But one's savings do not continue to be $1,000. There is only one way to save a thing and that is to save it. You save 1,000 bushels of wheat by putting it into your bin or into a warehouse. You save $1,000 by putting it into a tin box or a bank vault. If you use your $1,000 to buy a New York City bond or a Santa Fe Railroad bond, your savings are no longer $1,000. They are now in the form of a claim on the city of New York or the Santa Fe Railroad. You no longer have dollars but claims—perfectly good claims, to be sure. But the distinction is important, as you will see. The investment is a claim to interest each year at a fixed rate and to the payment of $1,000 when the bond falls due. If I lend $1,000 in money to the United States Government on a bond, my money is gone, but I have something just as good, perhaps better because it draws yearly interest at 3 percent, which the money can never do. But I no longer have the $1,000. Speaking casually I may say my savings are $1,000, but what I have is a claim for $1,000 and interest against the United States Government.

The distinction may seem a fine one, but you will see at once the seriousness of it if you will consider that the value of the claim must depend on the person on whom the claim is established.

Consider for a moment the following performance and please do not think it irrelevant. Each week you save $10. You put it in a tin box marked "Reserve." In a year you have $520. You wish to put it to work. You lend it to a friend who is in business, who is solvent, and who agrees to pay you 6 percent. He gives you a note which goes into the box. Each year you save $520 plus the interest your debtor pays you. In 10 years you have in the reserve box the promissory notes of your friend covering his borrowings of your savings and the interest, all amounting to nearly $8,000. You may say you have saved $8,000. But what you will have will be claims for $8,000 in loans and interest against your debtor.

Now suppose you handle your savings in the following manner. You put $10 a week in the tin box marked "reserve." In a year it amounts to $520. From time to time you need money. Instead of borrowing from a bank or a friend you decide to borrow it from your reserve. You take out a hundred dollars and put in your I O U as a man may do in his petty cash drawer. You continue faithfully saving the $10 a week for 10 years. You continue at intervals to borrow what you have saved. You put in I O U's and bind yourself to return the money with interest at 6 percent to the box. You are very faithful with your I O U's and your bookkeeping. At the end of 10 years you have in the tin box your own promissory notes to the amount of nearly $8,000. You may say you have saved $8,000. But what you have is $8,000 in claims—upon yourself. If they were claims upon your friend they would be paid to you out of your friend's earnings. But being claims on yourself they must be paid back out of your earnings. It is not necessary to press this seemingly simple transaction any further. For it is very obvious that you have no savings; that you have nothing. The "reserve" you have created is a pure fiction. The dollars in your little tin box are phantom dollars.

It is through this seemingly foolish performance that we can now see the fallacy of comparing a government old-age annuity system with a private insurance company, and a government reserve with a private insurance company reserve. Let us apply this test.

The International Insurance Co. puts aside $10,000,000 a year in its reserve. That ten million it invests each year in the bonds of various utilities, railroads, and government bodies. In 10 years it has over $100,000,000 of claims against various corporations and public bodies. It has an annual income of perhaps $4,000,000 in interest.

An insurance company has two sources of revenue—from its policyholders and from its investments. It has claims for premiums on its policyholders which must be paid out of their pockets. It has claims for interest upon the corporations which must come out of their earnings. An investment is a means of adding to your own earnings part of the earnings of another person. It is not a device for merely earmarking part of your own earnings. Therefore each year the International has the revenues collected from its policyholders plus what it collects from the earnings of various corporations against which it has claims. If at any time it should run into difficulties, if policyholders' revenues should decline in hard times, the International could meet its obligations by drawing upon its reserves, by using the interest, or by converting the reserves into cash. It could, in short, go to sources of revenue outside its own assets or the resources of its policyholders.

Now suppose the International put its surplus into a tin box marked "Reserve." Then suppose it needed money from time to time and borrowed from its reserve, putting bonds into the tin box. At the end of 10 years it would have in its tin box a hundred million of its own bonds bearing interest. Would this be a reserve? Would the International really have savings of a hundred million? Would it not have in reality merely a tin box full of claims upon itself, which would mean claims upon its policyholders? In other words, instead of having claims upon the earnings of others it would merely have claims upon its own earnings. And is it not as plain as a pikestaff that it does not have to have a tin box full of I O U's to have claims upon its own earnings? It has those claims anyhow.

Of course, it is not possible to imagine an insurance company engaging in a farce comedy of this sort. If it did it would be promptly pounced upon by the authorities. Its officers would probably be indicted. Yet this is precisely what the Government is now doing through the Social Security Board and the Treasury.

The Social Security Board is merely a large Government-operated insurance company. But it is also merely a department of the Federal Government. So is the Treasury Department. The acts of both are merely the acts of the Government. When, therefore, the Government puts aside a billion dollars in a year in a box marked "Reserve" and then borrows that billion, substituting its promises to pay in the form of bonds, and then pays interest each year on these billions and borrows it, giving bonds in its place, what it will have at the end of 43 years will be a box full of bonds—claims, not upon some outside assets, but upon itself; which, of course, are no claims at all. It has no means of getting the funds or the interest upon the funds save by going to the very people from whom it took these funds in the first place—the policyholders, the workers thus insured, 26,000,000 of them, who constitute the chief part of the population which must bear the taxes. If the Government invested these billions in the bonds of some other government or some private corporations so that it could realize on the investment out of the earnings of some other entity than itself, then it might claim to have a reserve. But of course no one would suggest doing this.

In short, there is no reserve. There will be no reserve. The whole thing is a solemn and cruel farce.

IV

One reason assigned for this most singular device is the need for relieving future generations of the burden of supporting all of the heavy load when pensions reach their full dimensions. The idea that we can relieve future generations by taxing this one and spending now the taxes collected and then repaying the loan in the future by taxing future generations is too fantastic for serious discussion.

But it leads to an important fact which we must face. A public old-age insurance plan can be financed on a pay-as-you-go basis and in no other way. We cannot escape it.

The object of an old-age insurance plan is to provide the aged with the necessities of life. These necessities will have to be produced at the time they are distributed. In other words, we shall not save those necessities against the day of need. In any given year those under 65 must produce enough for themselves and also enough for those who are retired and who produce nothing. However, as our method of distributing goods is by means of money, workers under 65 must create in any given period enough money income for themselves and, in addition, the sum needed for the aged.

To put the matter differently, whatever is paid out to the annuitants in any given period will have to be collected out of the workers in that period by means of taxes.

We cannot doubt this if we will look at the way it works out in practice. In the year 1960 the actuaries estimate that the Government will have to pay out $1,379,900,000 in benefits and spend $102,000,000 on administration of the plan—a total of $1,481,900,000.

But in that year it will collect $2,041,200,000 from the insured and their employers as premiums. No one will doubt that all this money will be collected in the period in which it is paid out. In other words, 1960 will pay for the 1960 benefits.

But in 1970 it will be different. The benefits will amount to $2,303,500,000 and the expenses $110,300,000—a total of $2,413,800,000. But in that year the collections of premiums will be only $2,205,100,000. And so the Treasury will be $208,000,000 short. And so this $208,000,000 must be raised some other way. Now, by 1970 the reserve will have grown to over forty-one billions. The interest on it will amount to over $1,200,000,000. It is this interest which will supply that extra $208,000,000. And because of this our naive President imagines that the people living in 1970 will be relieved of the burden.

But where does he suppose that $1,200,000,000 in interest is to come from? Certainly not out of the people of today. The Government must collect it in taxes out of the people of 1970 and go through the empty comedy of paying it in interest to the reserve which will pay it out to the beneficiaries in annuities.

Since the plan can be operated on a pay-as-you-go system and can, in fact, be operated in no other way, very low rates could be adopted which would enable the Government in each year to meet all its obligations to the retired and during the next 43 years to collect $47,000,000,000 less than it will for social old-age insurance.

This can be proved. In the present act the old-age tax on employer and employee starts at 2 percent and increases by 1 percent every 3 years.

From 1937 to 1970 the total amount needed to pay all benefits and costs in those years will be $34,237,100,000. I give a short table based on two tax plans.

One is the tax plan of the President, now embodied in the act. The other is a tax plan which I propose and which is arrived at to produce enough revenue to pay costs and benefits and nothing else. It is a pay-as-you-go plan. Both taxes are levied on employers and employees equally. The first column shows the employer-employee tax rate fixed in the act. The second column shows a proposed tax rate very much lower.

Year	Tax rate in act	Proposed rate
	Percent	*Percent*
1937	2	¼
1940	3	½
1943	4	¾
1946	5	1¼
1949	6	2
1951	6	3
1961	6	5
1970	6	6

This table reveals that up to 1940, the proposed tax would be only one-eighth as big as the tax now in force. Ten years from now the proposed tax would be only one-third as big as the tax in the act. Not until 1970 would the tax be the same under both plans.

And yet the proposed tax would suffice to pay the costs and all the benefits due in all the years from 1937 to 1970.

But it is important to remember that the tax in the act is not the only tax which will be required if the present system continues in force. In the years between 1937 and 1970, by the President's plan all of the excess taxes will be used to build up a reserve. This reserve will grow in figures (although the fund will be dissipated) by leaps and bounds. By 1942 it will be over $3,600,000,000. By 1950 it will be over fourteen billion. By 1960 it will be nearly thirty billion. By 1970 it will be forty-one billion. And all that time the Government will be called on to pay interest on the reserve. To pay this interest it will have to impose additional taxes. By 1942 it will have to raise taxes for interest of $84,000,000; by 1950 almost half a billion; by 1960 nearly a billion; by 1970 much over one billion. In other words, while, between 1937 and 1970, the employer-employee taxes will be enormously more than will be needed to pay the costs and benefits, additional general taxes will have to be raised to pay the interest on the mythical "reserve." So that to get the amount of taxes which will have to be imposed between 1937 and 1970 under the President's plan, you have to add to the employer-employee taxes the general taxes to pay interest on the reserve. I give the taxes which must be raised by both plans, by my suggested plan and by the President's plan. By my plan only employer-employee taxes must be collected. By the President's plan two taxes must be collected, employer-employee taxes and general taxes to pay interest.

Sum needed to pay costs and benefits, 1937 to 1970	$34,237,100,000
Sum to be collected by proposed low employer-employee tax from 1937 to 1970	35,000,000,000
Sum to be collected under President's plan, 1937 to 1970:	
Employer-employee tax	56,000,000,000
General tax for interest	19,000,000,000
	75,000,000,000

By 1970, under the President's plan, the Government will have levied taxes of seventy-five billions to meet a $34,000,000,000 obligation and will have used the balance for all sorts of purposes utterly unconnected with social security. The money will be gone.

Now see what happens from 1970 on. By 1970, as we have seen, the amount needed in the year for benefits and costs will be $2,413,800,000. The old-age employer-employee tax by both plans will by that time be the same—6 percent. It will yield $2,205,100,000 that year. So the old-age tax by that year will be insufficient to pay the costs and benefits. By that time additional sums will have to be found under both plans. And in each year up to 1980 the amount needed for costs and benefits will increase. By 1980 the need for benefits will be $3,511,000,000 for that year. By that time the yield through the old-age tax by both plans will be the same. By both plans the deficit will be about $1,400,000,000 a year. And so in each year some means will have to be found to collect money to meet this deficit.

What that means may well be left to that generation to determine, since it will know its own problems best. But one thing is certain. Whatever it may be, it will be some form of tax. In other words, in each year from 1970 to 1980 two taxes will have to be imposed by each plan—the old-age employer-employee tax of 6 percent on pay rolls and some additional tax. The table below shows the amounts that will be needed and amounts to be raised by both the employer-employee tax and the additional tax in different years.

[In millions of dollars]

Year	Amount needed	Proposed plan		President's plan	
		Old-age tax	General tax	Old-age tax	General tax
1970	2,413.8	2,205.1	208	2,205.1	1,210.9
1975	2,988.5	2,287.1	700	2,287.1	1,341.8
1980	3,626.1	2,295.3	1,400	2,295.3	1,406.6

In both cases it will be seen that a general tax will be levied in order to meet the deficit. In the proposed plan this tax will be levied in an amount sufficient to meet the deficit. It will be levied for that purpose. It will be paid to the Social Security Board as a subsidy for the old-age pensions. It will be called a subsidy. Everybody will know precisely what it is. In the President's plan embodied in the act the tax will be levied. But it will be called a tax to pay interest on the phantom reserve. When it has been paid in the form of interest part of it will then be devoted to old-age insurance payments precisely as in the proposed plan. In both cases it will be a tax. In both cases it will be levied for the same ostensible purpose. The difference will be that it will be called by a different name.

But there is another difference. In the proposed plan the tax will be proportioned to the deficit to be met, to the actual purpose for which it is intended. In the President's plan the tax will be gaged in size and rate not by the purpose for which the money is supposed to be intended, but in order to meet 3-percent interest on this imaginary reserve. Hence until 1980 it will continue to be enormously greater than it need be. In plain figures, by my plan, this supplemental tax will have to equal $7,905,000,000 in those 10 years from 1970 to 1980. That is what it should be under the other plan if the tax were levied to make up the deficit. But as it will be levied to pay interest on the reserve, it will be $13,348,000,000. And, of course, as usual, the excess of five billion will be taken over by the Government for general expenses.

To sum it all up, by the proposed plan the supplemental deficit taxes will not have to begin until around 1970. Under the President's plan they will begin at once—have already begun. By the proposed plan only about $8,000,000,000 in supplemental taxes will have to be collected from now until 1980. By the President's plan these supplemental taxes will amount to $32,000,000,000. By the proposed plan the old-age employer-employee taxes will be very much lower and will yield fifty-seven billion in 43 years. By the President's plan the old-age employer-employee taxes will be heavy and will yield seventy-eight billion in the same length of time.

V

I have said that by 1980 the Government will have collected forty-seven billions which it will never use for old-age pensions and, furthermore, will never repay to the old-age account. The Government, of course, has no intention of ever repaying this money or any part of it. The whole theory of the reserve is inconsistent with the idea of repayment, even if repayment were possible.

The idea at the bottom of it is that the $47,000,000,000 reserve will be invested in United States bonds at 3-percent interest. And it is this interest which will make up the deficits of the insurance plan after 1970. Therefore this assumes a continuance of the bonds as a Government debt and as a basis for this interest. To repay the bonds would be to end the basis for the interest. Besides, to repay the bonds would be a preposterous performance. Whether the bonds are outstanding or not, whether the reserve plan is continued or not, future generations beginning in 1970 are going to have to raise by taxes from two hundred to one thousand four hundred million dollars a year to cover the deficit of the old-age tax. The only course for these future generations is to do that. But if in addition they should decide to raise once again by taxation the forty-seven billion in order to go through the motions of repaying the money, not only would the burden be intolerable, but it would be indescribable folly. For if they did raise the forty-seven

billion, what would they do with it? Put it back in cash in the reserve tin box? And then reinvest it some other way? Or distribute it among the aged? And, having distributed it among them, the Government would still have to go on raising by taxes the equivalent of the interest each year.

What the future really has to do is to collect each year enough to discharge its annuity obligations in that year. The quicker it forgets about the reserve the better.

VI

This reserve ghost is an offense against the younger workers who are burdened with an excessive levy; against the older workers who will retire in the early years of the plan; against the economic society.

The employee and his boss must pay a 2-percent tax when one-fourth of that would be more than sufficient for some years; in 1950 they must pay 6 percent when 2 percent would pay for what they are getting.

The present plan forces payment of shockingly low-retirement benefits to those who will pass the 65-year milestone in the next 20 years. In 1942 the man who has averaged a hundred dollars a month in earnings will be forced to give up his job to draw $17.50 a month, while his indigent neighbor who has paid nothing may be drawing nearly twice as much. To him who retires in 1947 the benefit will be $22.50 a month; to the annuitant who retires in 1952 the benefit will be $27.50 a month, while for the man who quits work in 1957 the pension will be $32.50 a month.

Obviously the Government cannot pay adequate pensions if it insists on "borrowing" most of the old-age taxes and spending them to support the Government. The whole thing is a disguised tax levied upon the lowest-income groups under the pretense of old-age pension premiums. No government would dare attempt to support itself out of a pay-roll tax if it honestly proclaimed its purpose. The workers have remained silent because they have been deceived.

Chief victims are the very youngest workers. For 6 percent—the permanent tax aimed at—a private company will guarantee to a young man taking old-age insurance at 20 a retirement annuity, at 65, of $58.94 a month. The Government plan will give him only $53.75, with this difference—that under the private plan the annuity will be his of right when he reaches 65, while under the Government plan he may have to sacrifice his job to get the annuity.

The Government plan diffuses its evil effects throughout the economic society. It is a grave mistake to associate taxes with pay rolls. This almost requires employers who wish to cut their taxes to cut their pay rolls for this purpose. Nothing will so swiftly accelerate the shift from hand workers to machines as this exorbitant tax, for the employer's only escape from high social security taxes will be by replacing the taxable worker by the machine which claims no pension.

And who can doubt that the extraction of over a billion dollars a year in taxes from the pay envelopes of the lowest income groups, not for social insurance but for Government expenditures (as will be the case in 4 years) will have a most depressive effect upon the already limited purchasing power of the wage-earning groups? Mr. Marriner Eccles, Chairman of the Federal Reserve Board, and a Presidential adviser, has expressed the belief that the withdrawal of half a billion in the last year hastened and deepened the recessive movement of this year.

VII

How came this monstrosity into the Social Security Act? It is a depressing story.

In the winter of 1934–35 a group of technical agents of the Cabinet Committee on Economic Security were bringing their labors to an end. The idea of a reserve had arisen somewhere, but every actuarial and financial expert consulted opposed it vehemently. Messrs. O. C. Richter and W. R. Williamson were the actuarial consultants of this group (Mr. Williamson is now actuary of the Social Security Board). They opposed it as "quite beyond the realm of practical possibilities" and "an unsound departure from the principles that should govern social insurance." They are our authority for the statement that "Representatives of the Treasury and Federal Reserve System who acted as financial advisers to the committee were of the opinion that an old-age pension plan which did not require a reserve would be preferable."

Four eminent actuarial consultants of the Cabinet committee were called. They were Mr. M. A. Linton, president of the Provident Mutual Life Insurance Co.; Prof. A. L. Mowbray, of the University of California; Prof. Henry L. Reitz, of the University of Iowa; and Prof. James W. Glover, of the University of Michigan. Mr. Linton writes me: "The actuarial consultants were unanimously opposed to a large reserve and expressed themselves clearly on the point." Says Dr. Reitz: "It is my recollection that the committee was unanimously against holding reserves on this basis. * * * The members of our committee argued as strongly as they could against this feature of the plan in certain committee meetings of the larger group, including representatives of the Treasury."

Finally the Cabinet committee adopted the advice of these consultants, and in their report to the President expressly declared that "the plan we advocate amounts to having each generation pay for the support of the people then living who are old." It warned against large reserves and announced that "to keep the reserves within manageable limits we suggest that the combined rate of employers and employees be 1 percent for the first 5 years (against 2 percent for the first 3 years adopted in the act), 2 percent for the second 5 years, 3 percent the third 5 years, 4 percent the fourth 5 years, and 5 percent thereafter." And upon this report, signed by four members of the Cabinet and Harry Hopkins, the Wagner-Lewis bill was framed.

But at this point a strange thing happened. The President, seeing the report of the committee, expressed apprehension at the fact that in 30 or 40 years general taxes would be required to supplement the old-age pay-roll taxes. He gave the matter a swift, glancing blow of his mind and decided that future generations ought not be burdened. About this time, and perhaps hearing of this, an official of the Treasury Department called upon the President and spun him a whimsical yarn of fairy finance. He pictured how a great reserve might be created; how with this, which would belong to the poor, all the national bonds would be bought; how the interest being paid the rich would now be paid to the poor; how the grave problem of tax-exempt bonds would thus be solved, since the debt would be practically extinguished as a possession of the rich; how the old-age system would thus become self-supporting and future generations would be emancipated from the drudgery of providing for their aged; and how, most delightful to contemplate, these immense old-age tax collections and the mounting reserves would become an almost inexhaustible reservoir of funds to meet Government deficits. Here was a miraculous contrivance of heavenly finance. It was a wondrous vision which could survive only upon one condition—a condition easily complied with—that it be not looked at too closely.

About this time the House committee was holding hearings on the bill as introduced by Messrs. WAGNER and LEWIS. The heat was on and the administration managers were jamming it through the committees at the full speed then so easily managed. Except for administration spokesmen, witnesses were allowed only 5 minutes each. Only a few days remained, when one morning Secretary Morgenthau, who had signed the report against large reserves, walked into the committee chamber with a message. The Treasury, he declared, wanted the huge reserve—the $47,000,000,000 device—put into the bill and the rates raised to make that possible. And so with little or no thought about the matter, under the pressure of the Presidential "must," this grotesque fraud was railroaded through the committee. It got little notice. Later the bill was jammed through Congress. Some Members warned against it. The American Association for Social Security, which for years had fought the battle for social security, issued a solemn protest. But Mr. VINSON told the House the President wanted it. And it became a law. It remains in the law despite the fact that it has, so far as I have been able to find, the support of no first- or second-class economist, actuary, or finance expert, either here or abroad, and despite the fact that old-age insurance systems have existed for many years, even decades, abroad without anything more than small convenience reserves.

VIII

Many criticisms of the Social Security Act have been made. It is probably just to say that to set this system aright it may be necessary to start all over again. But of the other defects in the plan we need not speak. So far as the reserve is concerned, the wise course would seem to be fairly obvious.

The idea of a reserve should be taken out of the act altogether. The pay-as-you-go plan should be employed completely and for the very good reason that any other plan is impossible.

The rates should be promptly reduced. The table used on an earlier page of this discussion was offered not as an ideal schedule of rates but merely to illustrate the discrepancy between the present exorbitant rates and rates that would be sufficient to pay the benefits authorized in the present act. The rates should be somewhat higher because the benefits should be higher at least in the early years of the plan. Instead of a 2-percent total tax on employers and employees increasing by 1 percent every 3 years and rising to 6 percent by 1949, the original rates of 1 percent rising by 1 percent every 5 years, attaining to 5 percent by 1957 and 6 percent by 1962 would be sufficient to produce the needed payments up to 1970 and a reserve of perhaps $10,000,000,000 besides. But if the benefits were increased in the earlier years, the reserve would be kept to a low and manageable level.

Of course, some reserve is inescapable—a billion or two or even three or four. But the question would be well worth considering whether investment of such reserves ought not to be limited to the open bond market to prevent a political government from exploiting the reserve as part of the public fiscal policies.

Congress and labor, as well as the employers, will do well to face this problem squarely and honestly in this session. There is going to be no end of pension tinkering. Behind every crackpot scheme of politicians competing for the votes of the aged will be the problem of money—where to get the money. This reserve fund offers a tempting reservoir of money upon which they will cast hungry eyes. Already the housing advocates have made a bid for it. Mr. Roosevelt thinks it looks good for his present spending purposes. The Townsendites will presently lay claim to it. The best thing to do with this monstrous child is to slay it at once and thus frustrate the kidnapers.

The Pribilof Islands

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 1 (legislative day of Monday, February 27), 1939

ARTICLE BY MISS JUNE LIPKE

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD a most interesting article from the pen of Miss June Lipke, of the University of Washington, at Seattle, entitled "Here on the Pribilofs." This article should prove particularly interesting at this time, when many eyes are turned toward Alaska as a result of the national defense bill which we now have under consideration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HERE ON THE PRIBILOFS

(By June Lipke)

My departure for the Pribilofs was as if I had left for another world. From Seattle I had gone, young—16 years old—expectant, filled with the glory of Alaska and the great adventure before me. I was to join my father who is Government agent and caretaker on these distant islands.

Before leaving Seattle I eagerly searched for additional information concerning my future home. I found only scant details.

"Pribilof Islands consists of five islands, two of which are inhabited; St. Paul, the largest, and St. George. Maintained and operated by the United States Government. Approximately 240 miles north of the Aleutian Islands in the Bering Sea, Alaska. Important because of fur seal."

After a trip through the wintry beauty of the Inside Passage, out over the Gulf of Alaska and along the Aleutians, then into Bering Sea on the Bureau of Fisheries boat *Penguin*, I had caught my first glimpse of the islands. My first impressions were far from favorable. Tundra—scowling skies—whining winds—a treeless, even bushless monotony of hills blotched with frozen snow.

But now I am gradually learning to love this country. Its very barrenness, etched sharply against the sullen skies, seems to attract. There are rampant winds that easily give way to rage. In the winter, ice often soothes the pounding waves into drugged silence.

I love the lonely mating call of foxes. The reindeer herds, with sentinel bucks skirting the herd on those rare, clear nights when the moon rises from the sea to cast its orange-gold blushes on the Arctic drifts, have a charm of their own. But most of all, the fur seal herds; their comings and goings and their peculiar habits interest me.

Naturally readjustments were hard at first. There is no one here of my own age or with my interests. There are no movies, no places to go dancing, nor a corner drug store where one can get an occasional soda.

What could one of my age do in a place of this sort? For one thing, being particularly fond of athletics, the answer was quite obvious. I had to look to the outdoors for my recreation. And I did just that. I went hiking. And in winter I skied and went ice skating. But most often, when they came to make their summer home here, I observed the seals.

To my surprise, I soon found the town of St. Paul to be a modern, immaculate little village. It is in no way comparable to the villages I had seen along the Aleutians. Here at St. Paul electric lights, running water, a large, well-equipped school, and a native recreation hall are a few of the conveniences. The natives, who are wards of the Government, are furnished food, clothing, shelter, and a percentage of the proceeds from the fur sale in exchange for their services in sealing, foxing, and village maintenance.

Everything is in first-class order. Everything is under Government supervision. There are 25 miles of scoria (a lava formation) road for the 16 trucks. There are no docks at either St. Paul or St. George Island, however, because of the strong seas and lack of a good harbor. Supplies must be lightered in or brought in by the native skin boats called bidarrahs, creating a considerable problem when supplies must be landed because weather conditions are so undependable.

Someone once said that there are only two seasons on the Pribilofs—summer and winter. How true it is. After our winter season the brittle cold seems to soften almost overnight. The hitherto screaming winds begin to croon, green vegetation begins to show itself, shyly at first through the brown hills. Then the mist comes rolling in from the sea.

With a change in the weather there comes a change in the attitude of the native and white population as well. At first this change is hard to detect, then the change gradually becomes stronger and stronger. An expectancy seems to charge the air. Eyes are turned toward the sea. Strolls are taken toward the water rather than on trodden inland paths.

It is May! Time for the return of the seals!

What if they do not come back? That could certainly not be possible! However, the question lurks in the back of each mind, but each person is ashamed to voice such a thought.

Then comes the first Sunday in May, when, so legend is, seals have always been found on the rookeries. Many of the islanders lose no time in proving that it is so again this year. Year after year they come ceaselessly as the waves.

What is it that lures the seals back each spring? Why do they pilgrimage through the thousands of watery miles from California and south to mate and bring forth their young on these distant, misty islands? How do they chart their course? Mother nature guards the secret jealously—no one knows.

I haunted the rookeries, eager to learn the habits of these marine animals. The beaches of worn, smooth rocks began to spot with belligerent, fat bulls, fighting, roaring, sneaking to obtain a place where they could await their harems.

Invisible boundaries seem to divide the rookeries. Once located, a bull will rarely move more than 3 or 4 feet, then only to retrieve a coquettish cow or lunge at a less strong male who may tirelessly attempt to break through the front ranks to find his own domain.

The breeding bulls graduate from the bachelor stage when 6 years old. Then they struggle to win a cow, be it to beg, borrow, or steal. The struggle won, success is almost assured. Harems of 40 or more cows are not uncommon to the strongest males.

With the bull seals, it is a question of the survival of the fittest. Battle-scarred and bellicose, the beachmasters lord it over their cows, who fight among themselves, as well, for his attention.

It is amusing to watch a cow pamper a conceited bull and try to rub his nose with her own—a feat greatly resembling a kiss.

But alas, the cows are often only rudely "flippered" for their attempts at caressing.

Yet, the cows, dainty in proportion to the bulls, are a fickle lot. They eye the nearby strutting bulls longingly and, when given an opportunity, make a dash to the more desired sire. A fight is inevitable. The bull, when realizing that his mistress is deserting, endeavors to snatch her back. If he can catch her before she crosses one of the "invisible boundaries" he takes her with the nape of her neck clutched between his teeth, and manhandles her cruelly with his flipper. But if she has succeeded in escaping too far, the males concerned engage in a fight that often ends in death for one.

A favorite pastime of mine is to sit near one of the rookeries and watch cows perform their parental duties after the pups are born. The pups are all born of the previous year's mating. They have only one a year. He is a jet and fuzzy little fellow who dozes or waits patiently for his mother when she is out to sea, often 3 or 4 days at a time, to find feed.

Upon the return of a hunt for food, a cow will stand on a rock and call and call until she sees or hears her own pup. How they can recognize them from among the thousands that all look the same to me, I never expect to understand, but they do.

If something happens to a female while at sea and she does not return, her pup is doomed to die of starvation. No cow will feed any pup but her own. This is one of the sins of pelagic sealing and the reason that when the seals were taken at sea the herd declined in numbers so rapidly.

It is a sight to watch the cows teach their pups to swim. For they must be taught!

When a mother thinks her child is old enough, she hustles him to the water's edge and, with her nose, pushes him into a shallow pool afforded by the rocks.

At first the little pup will frantically clamor to his mother, but after much insistence and an occasional slap with a flipper, the youngster learns to swim in spite of himself. If he becomes endangered, the cow rushes to his aid and drags him to safety with the back of his neck between her teeth, just as a cat carries its young. By the end of the season, the new-born pups are able to make the long pilgrimage south.

It is interesting to watch the seals awkwardly flapping over the rocks with amazing speed for a water animal, or diving gracefully through the surf. It is startling to observe how easily their actions and emotions can be likened to those of humankind.

It is the pelt of the 3-year-old male that is used in milady's sealskin coat. The "killables" and the other bachelors keep aloof from the family seals. They group together or "haul" up to an uncontested spot on the rookery, called the hauling ground. There they lounge, or fight, or sleep; dreaming, perhaps, of the time when they may take on the responsibilities of a family. This arrangement has proved very convenient for the sealers. The bachelors can thus be easily surrounded without disturbing the harems.

I shall not forget the thrill I felt when I saw my first drive and kill. It occurred one morning when the pale rays of sunrise were filtering through the mist.

As the native sealers neared the rookery of sleeping seals, all was hushed. Even the breeze seemed to wait with abated breath. Then bedlam broke! With a cry, the natives broke into a run. In single file they sped down around the hauling ground, cutting off the bachelors' retreat to the water. With but a clapping of sticks and a shout, the whole group of seals, numbering about four or five thousand, was as easily led as sheep.

Confused and sleepy-eyed, the seals stumbled up to the parade ground which leads to the killing field. It all happened so quickly and so smoothy that I was amazed.

The drive to the killing field was slow, since it is a considerable distance from the rookery. It is purposely at a distance to avoid disturbing the family seals. The seals are stopped frequently during the drive, to rest and cool, for inland travel is difficult and foreign to them.

The killing, which I was at first a bit hesitant about viewing, was as surprising as the round-up had been. It was all done with the efficiency and thoroughness of machinery and mass production. The animals, upon reaching the killing field, were grouped together. They were then dispersed in small pods to the clubbers.

With experienced eyes and deft blows, the natives selected the 3-year-olds from the group. They allowed the fortunate "rejects" to scramble away to the protection of the sea. With one blow, the killables were either stunned or killed, then quickly laid in rows of 10 and pierced through the heart with a knife.

The flipper men next moved up, cutting expertly around each flipper and nose, and slitting the belly. A third crew followed with iron rods that were driven through the skulls of the dead seals to hold them firm while the pelts, held between tongs, were stripped from the animals with one tug, leaving white carcasses, row on row, and the skins to one side in other rows.

In 1 hour, 40 natives had killed and stripped 600 seals. It is all just as simple and humane as that.

Little is wasted of the seal. After the pelts have been removed, the blubbery carcasses are hauled away to the by-products plant here on the island. There they are made into seal oil and meal. This oil is sold for commercial uses and the meal is used as fox food and food for fish in hatcheries in the States.

The seal fisheries are administered by the United States under a treaty with Great Britain, Japan, and Russia, signed in 1911. Uncle Sam carefully guards the valuable island children, seeing that they get protection during the summer season from the Coast Guard patrol, and permitting no one to land on the Pribilofs who is not connected with the Government or who has been authorized to do so by the Department of Commerce.

Instead of the usual 3-mile limit, the Pribilof Islands are protected by a 12-mile limit.

I have never regretted my stay, now nearing 2 years, for I have witnessed, first hand, the drama of seal life, enacted nowhere else in the world, experienced the pang of winter isolation with the compensating joys of healthy outdoor recreations, and heard wild music in the restless sighing of wind and wave.

Repayment of Loans to Foreign Governments

EXTENSION OF REMARKS

OF

HON. JOHN C. SCHAFER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1939

RESOLUTION ADOPTED AT CITIZENS' MASS MEETING IN PHILADELPHIA, PA., FEBRUARY 19, 1939

Mr. SCHAFER of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions approved at citizens' mass meeting held at Philadelphia, Pa., on February 19, 1939, under the auspices of the Clan-Na-Gael and Irish Republican War Veterans of the United States:

We, citizens of the United States, in mass meeting assembled in Philadelphia, "the cradle of American liberty," demand in the name of our idle and improvershed fellow citizens who are victims of a depression which can be truthfully attributed to the vast loans made to England and France and other European powers to save them from annihilation in the late World War.

In the name of these and all other citizens we demand that these billions of American money be collected from England, France, and all countries which at that time were given such vast sums.

We point out that England and France have brazenly refused to repay these loans, while they are at the same time offering vast loans to European powers in order to form new combines for future wars, in which they are cunningly attempting to again use the manhood and the money of these United States to bring them victory in wars they will themselves provoke.

In the name of our warriors who sleep in death on the battlefields of Europe; in the name of our blinded and maimed veterans whose lives have been blighted in the performance of the sacrifice they have made for these ungrateful European powers; in the name of our thousands of citizens whose homes have been sold under the sheriff's hammer for the payment of taxes they are unable to meet while these ungrateful powers hold approximately one hundred billions of our money, and while our pension rolls mount and will be a burden not only to the present but to coming generations of Americans.

Britain, according to press reports, has ordered the construction of 33 new battleships.

We ask, is it not our billions that is to pay for these while millions of our citizens go hungry?

We hold that to say that these loans cannot be collected is a confession of incompetency or a pandering to foreign powers at the expense of the citizens of these United States.

We hold that the interests of our own citizens are first and demand that these loans be collected.

Reorganization of Executive Departments

EXTENSION OF REMARKS

OF

HON. FREDERICK VAN NUYS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 1 (legislative day of Monday, February 27), 1939

ARTICLE BY HON. HARRY F. BYRD, OF VIRGINIA, APPEARING IN THE OCTOBER ISSUE OF THE COUNTRY GENTLEMAN MAGAZINE

Mr. VAN NUYS. Mr. President, in the October issue of the Country Gentleman there appears a very enlightening and exhaustive article on the subject of Government reorganization by the distinguished junior Senator from Virginia [Mr. BYRD]. I ask unanimous consent that the article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Country Gentleman of October 1938]

GOVERNMENT REORGANIZATION

(By HARRY FLOOD BYRD, United States Senator from Virginia)

The new Congress, which convenes in January, will be confronted with the question of reorganizing the Federal Government. The President has indicated that he will submit another proposal to this effect. No other issue of greater importance is likely to engage the attention of Congress and the American people.

The Seventy-fifth Congress sentenced the last reorganization bill to death, because it wanted reorganization of the Federal executive agencies for economy and efficiency to live.

It wanted reorganization to live a full and fruitful life for the benefit of those who pay the costs of government and those who have to deal with the Government in the daily work of making a living for their families and themselves. It wanted reorganization of the bureaucracy at Washington to live a life strictly within the bounds of accepted governmental principles and tried American fundamentals.

I, and others, believe that such a reorganization could and should be accomplished without disturbing these principles and fundamentals. We believe that this could and should be done in a manner both directly and indirectly beneficial to all, economically and socially. We believe that this could and should be done without disrupting the orderly and proper progress of governmental functions to meet changing conditions and new public necessities.

These are the views of one who believes that the greatest service that can be rendered good reform is to couch it in simplicity, economy, and efficiency; that solvency is prerequisite to true liberalism, and that a government steeped in extravagance, waste, inefficiency, debt, and unbridled bureaucracy offers poor guidance for the Nation's underprivileged.

In originating the congressional action in 1936 for governmental reorganization I looked toward the kind of Federal Government reorganization contemplated by the Democratic platform of 1932, which called for the elimination of waste and extravagance in government in a manner to reduce costs by 25 percent. These were my views, responsive to convictions born of long study and nurtured by actual experience; and in 1937 and 1938 I was forced to fight

the kind of reorganization contemplated in the defeated move by the executive branch of the Government for reorganization.

Despite all that has been said or will be said to the contrary, similar views bulwarked the fight by most of those, if not all, who successfully fought what generally was referred to as the President's reorganization program.

Experts' statistics are not necessary for proof when it is said that hundreds of millions of dollars can be saved annually by the elimination of waste and extravagance in government, and inefficiency, through the consolidation of duplicating agencies, coordinating overlapping activity and effort and abolition of useless bureaus—in short, reorganization for economy and efficiency. The objective of such reorganization would be to save direct costs of government, and to save time and patience of citizens who are finding it increasingly necessary to deal with governmental agencies.

A surprisingly revealing homespun investigation is available to almost everyone interested. Just thumb through a telephone directory and note the governmental agencies to be found there. Reflect a moment upon their activities, their personnel, and the possible economies which become apparent.

Imagine the amount of office space required, the rent that is paid for it, or the upkeep of the buildings, if the Government owns them. How much of it could be saved if the obviously overlapping agencies were consolidated?

For instance, what would be wrong with a consolidation of the Federal Housing Administration and the Home Owners' Loan Corporation? Are they not in the same general field of house and home mortgages? Is it not true that parallel trails of offices, office forces, files, equipment, investigators, and other personnel lead out of great separate Washington offices to separate headquarters, perhaps on opposite street corners, for almost every State in the Union, and on down the line into their branches in hundreds of communities all over the United States?

What is true of these two agencies applies likewise to many more which could be named. Consolidation of such agencies would not necessarily mean curtailment of their functions, if they are useful, or disrupting their service.

Think of the apparent waste and extravagance you yourself have observed in Government activity and procedure. Look at your last tax bill. Remember the Federal taxes you pay hidden under the price of everything you buy—your food, your clothes, your fuel, your automobile and its fuel, your luxuries. For instance, if you smoke a package of cigarettes a day you pay $21.90 a year to Uncle Sam's tax collectors. It has been estimated, in all seriousness, that there are 120 Federal, State, and local taxes hidden in the price of a funeral and 53 in the price of a loaf of bread.

The fact is that we are paying for a gigantic, gangling government of some 150 major agencies and an uncounted number of subdivisions. We are paying for a government that has not had a thorough overhauling since it was established. It has been growing continually, but since the turn of the century the record shows marked increases in costs and complexity. Piled upon a previous accumulation of disjointed agencies we now have half again as many agencies as we had before the depression when, to meet emergencies, we created by statute and Executive orders, agency after agency virtually without regard for coordination in the Federal Government pattern.

Some of these agencies fill very definite needs. Others overlap. Some have outlived their usefulness or have been superseded. There are glaring cases of duplicated effort. Where the Government was complex before, it frequently is found to be confusing now. To point out 50 Federal agency legal divisions in Washington alone is enough to describe the Federal jungle.

There have been at least 29 agencies concerned with lending Government funds, according to reports taken from Government records.

There have been at least three agencies concerned with insuring deposits and loans.

There have been at least 34 agencies concerned with the acquisition of land.

There have been at least 16 agencies concerned with wild-life preservation.

There have been at least 10 agencies concerned with Government construction.

There have been at least nine agencies concerned with credit and finance.

There have been at least a dozen agencies concerned with home and community planning.

There have been at least 10 agencies concerned with materials of construction.

There are more than two score personnel officers for the Government listed in Washington offices alone.

There are more than 100 information and publications offices in Federal agencies at Washington.

There are more than 100 Federal agency libraries in Washington, besides the Library of Congress.

The Federal Government operates an average of one motor vehicle for every 1,200 people in the United States and they travel enough miles every year to traverse nearly every highway in the world.

Without counting those who are on relief, or those receiving pensions, or those in the Army, the Navy and the Marines, or those in the legislative and judicial branch of the Government, there are more people on the Federal civil executive pay roll than there are people—men, women and children—living in the State of Maine, or New Hampshire, or Vermont, or Rhode Island, or North Dakota, or South Dakota, or Delaware, or Montana, or Idaho, or Wyoming, or New Mexico, or Arizona, or Utah, or Nevada.

The great majority of these people do not work in Washington, and there are more than a hundred thousand of them in the Nation's Capital. This number alone is twice as many as 5 years ago.

There are enough Federal offices and Federal employees in the city of Richmond, the capital of Virginia, to fill three and a half skyscrapers according to the Government's own figures. And these, of course, are outnumbered by the various branch offices and their personnel which are to be found in every city, town, and county in the State.

The office space required by Uncle Sam for his offices outside of the District of Columbia is the equivalent to two skyscrapers of Empire State Building dimensions, or more, for every State in the Union.

These statements come from official records. They may present some idea of the vastness of the Federal Government, and at the same time indicate what a field there is for reorganization of the executive agencies of the Federal Government for economy, efficiency, and simplification.

Where is the man who has not heaped anathema upon the "red tape" of Government? But inconvenience of complicated overlapping governmental procedure and the resulting cost to the everyday citizen over and above the taxes he pays is only a part of the story.

There is extravagance.

There is in the Valley of Virginia, to cite only one example, a resettlement project. The per unit cost of that project is nearly $9,000. A reputable contractor who has lived in that section all his life submitted estimates to the effect that he would build every house in the project for $900 each. The land and all the rest that goes with the unit should cost not in excess of $1,000 additional. The rest of that $9,000 is sheer wastefulness in Government expenditure and overhead.

THE PATH OF WASTE

That kind of extravagance is not difficult to find in any part of this country. You don't have to burn the barn down because the roof leaks. No matter what you think about that kind of Government activity, it is admitted that such a program does not necessarily have to be eliminated to reduce the costs. Everybody, the tenants, the taxpayers, and those in the Government, would be better off if the waste were eliminated.

So we find a kind of bureaucracy which has grown up like Topsy. We find extravagance which has come along with it, hand in hand. Almost everybody can reach out and touch this great factor in the well-nigh overwhelming Federal debt under which the Nation is searching to find the light of prosperity. The more agencies there are the more overhead there is, and the more agencies there are the less coordinated they are likely to be, and the less coordinated they are the greater is the likelihood that extravagance and waste prevail. The proof is in the audits of Government accounts by the Government's auditors.

It is astounding to see the progressive increases in the regular expenses of the Federal Government after eliminating all items in the emergency Budget.

The following table of regular Budget expenditures comes from official Government audits, totally exclusive of all recovery and relief expenditures:

1934: $2,700,000,000.
1935: $3,200,000,000.
1936: $3,300,000,000.
1937: $4,400,000,000.
1938: $5,400,000,000.

The revenue has not nearly kept pace with the expenditures of the Federal Government. As a result, the Nation is now facing the greatest peacetime debt of all time, about $284 per person, and the Federal tax bill is approaching an all-time record. The outgo of the Federal Government has exceeded the income for 8 consecutive years and we are in the ninth. It is certain that the 1930's will go down in history as the Nation's first deficit decade. The longest continuous deficit record before was for 2 years, and that was when we were engaged in the World War.

These deficits are piling up at such a rate that the interest alone on the growing debt amounts to about $10 a year from every man, woman, and child in America. Even if the National Government were to start soon living within its income, and at the same time start paying a half billion dollars a year on retirement of the vast debt, it would take more than 40 years to reduce the debt to where it was 5 years ago.

How many farmers realize that the Government's debt today is equal to the total value of all the agricultural capital in the entire United States?

How many realize that the Budget for the current year is far more than equal to the cash income from all farm marketings plus all the Government payments to farmers during the past year?

In other words, if the farmers of the Nation were called upon to liquidate the Federal debt, practically all of their capital would be wiped out overnight.

If the farmers of this Nation were called upon to defray the costs of the Federal Budget this year the tax collector would squeeze from them every cent of their income last year; not only that coming from their marketings, but all the dollars paid them by the Government as well.

Viewing these conditions as they are, and they are not a pretty picture, there seem to be only two ways through which they ordinarily might be expected to be met.

One is raising taxes still more.

The other is by reducing expenses.

My choice is the more economical operation of government.

Black examples of inefficiency, loose government, extravagance, and growing costs like these silhouetted against the 1932 Democratic platform, and gratifying experience with the reorganization of the State government in Virginia prompted me to introduce a resolution in the United States Senate in January 1936 for the creation of the Senate committee to investigate executive agencies of the Government with a view to reorganization for economy and efficiency.

Later a Presidential statement said the Chief Executive, too, was interested in reorganization, was appointing his own committee outside of Congress, and requesting the Speaker of the House of Representatives to appoint a third committee on that side of Capitol Hill.

There was a huge job to be done and enough work to go around. While the committees overlapped, it was hoped by the Senate committee that the work could be parceled out in a manner to expedite constructive conclusions and action.

The President's committee, with apparent great haste, made its report to the President in the late autumn of 1936, before the congressional committee's less dramatic but thorough and plugging preliminary survey of agencies and their functions was half finished.

The President's committee's report, sometimes called the Brownlow report, sounded well by the first cursory reading. But even at that juncture some glimpsed its all-inclusiveness shimmering through the fine phrases. It embraced what it described as a solution to the administrative management problems of the Executive. While sharpening the tools of administrative management, however, it dug great nicks in the fundamentals which separate the legislative and the executive branches of the Government and preserve their independence of each other. It was admitted to provide no economy in government.

The report was sent to the Congress by the President under a special message in January 1937. The message endorsed the recommendations of the report fully, without reservation or qualification. At the same time the President requested new committees in both Houses of the Congress when it met in January 1937, to consider the report and legislation necessary to put it into effect.

The first-blush praise began to fade at the first formal consideration of the proposals.

Subsequently representatives of the President's committee appeared before the joint committee to give their ideas of how their proposals should look in law. The committee took one look at their draft of a bulky bill, and sent them back to try again. The second draft was a document of more than 12,000 words, and the committee went to work on it * * * in closed sessions.

THE COMMITTEE SURPRISED

People of the Nation had come to place upon the words governmental reorganization a connotation which meant economy, efficiency, and frugality in government. Governmental reorganization had come to mean that the Government was endeavoring to get a dollar's worth of service for every dollar it spent. It had come to mean the slashing of red tape, and the minimum of inconvenience, and reduction of taxes and Government-imposed costs in addition to those in the regular tax bill.

Here the congressional committee found no guarantee for efficiency, and virtually no mention of economy.

What it found were proposals to increase the salaries of officials already in the higher pay brackets; proposals to create three new superestablishments in the permanent structure of the Government, proposals to give to the Executive complete control and dominance over quasi-judicial and quasi-legislative agencies which fix freight rates, license radio stations, establish fair-trade practices, regulate the stock market, judge labor disputes, and so forth. The committee couldn't believe its eyes for a long time when it came to consider some of these proposals throwing vital and independent functions into the complete control of the executive branch.

A BOMB-LIKE EXPLOSION

There was also a proposal to destroy the bipartisan aspects of the civil-service administration, by abolishing the three-member Commission, with its mandatory minority representation, and substituting a one-man administrator who could under no circumstances represent but one party faith. There was another proposal to abolish Senate confirmation of a vast number of important officials vital to the work of the Government not only in Washington but in the field performing work which took them to the front doors and into the homes of the Nation's population.

There was also the proposal to abolish the independence of the audit of executive accounts now made by an agent of the Congress, which appropriates all money, levies all taxes, and is supposed to say specifically what the money is to be spent for. Under this proposal there would be an auditor who would audit the accounts submitted to him by the Treasury Department, which is the biggest spending agency of the Government. He would audit the accounts which he was given to audit with no authority to obtain information he was not given. If he found anything wrong he could do nothing about it.

There was still another proposal that the President, after his own examination and by his own order should do all of the agency reorganization to be accomplished under the terms of the bill. The delegation of power coupled with this proposal was not limited to the agencies in the executive branch but was extended to the Library of Congress, the Government Printing Office, the legislative drafting counsel of the Congress, the District of Columbia, and other strictly congressional agencies. The only way Congress could recapture its constitutional authority and changed orders under terms of this proposal was to pass a law, which would be subject to the President's veto. It was not likely that he would sign a bill nullifying his own act. Therefore to counteract any of the President's reorganization orders would necessarily mean passing a law over his veto, which would require a two-thirds vote. The American fundamental of majority rule would thus be destroyed.

These were among the proposals as they were developed in the President's committee draft. These were the things the congressional committee members saw when they were deciding to postpone for a while, at least, any sessions that would be open to the public.

These were the proposals they were considering in executive session when the proposal to reorganize the Supreme Court exploded like a bomb over the Capital.

THE VITAL ISSUE

Throughout the executive session discussion, the major part of all consideration was devoted to the proposal to revamp the General Accounting Office, and thereby destroy the independence of the audit. When concessions were being made through the bill, and concessions were made, there was always a fight when anyone proposed compromising, changing, amending, or eliminating this proposal. The record shows that the bulk of evidence taken in nearly 3 months of executive sessions dealt with that proposal, and its proponents stuck to it to the last.

So when the fight on the court bill began raging, the subject of executive agency reorganization dropped from the limelight, but not until after the House of Representatives group had grown tired of the joint sessions and withdrawn to its own side of the hill to go about the business in its own way, and not until after the late Senator Joseph T. Robinson, of Arkansas, chairman of the new Senate committee, had drawn his version of a bill and introduced it It became known as Senate bill 2700. That bill made some concessions. The chairman took cognizance of vigorous criticism of salary raises and knocked them out of the bill and made other changes. That was the third draft of the President's reorganization bill.

OPEN HEARINGS DEMANDED

Meanwhile the House committee was working and in the spring and summer of 1937, while the Senate was tied up with the court bill, that committee introduced four bills of its own. These bills, altogether did practically the same things that the Senate proposal provided in one big omnibus bill.

The Senate had held 3 months of hearings on its version of the President's committee proposals and until August 1937 the public had not been given a chance to listen or testify concerning any of the bills, Senate or House.

The clamor became so great for a chance to be heard, the Senate committee called open hearings on Senator Robinson's bill. It was in these hearings that spokesmen from within the administration testified under examination that Presidents from now on, Republican, Democratic, or otherwise, could dominate those agencies which controlled freight rates, radio stations, fair-trade practices, the stock market, labor relations disputes, and so forth. So at the conclusion of 10 days of open hearings still another Senate bill was drafted, the fourth. This one made other changes and patched over the proposal giving the Executive control over quasi-legislative and quasi-judicial agencies.

This bill first took the number of Senate bill 2969. It was quickly withdrawn, and the fifth Senate bill drafted, known as Senate bill 2970. While more of the defects of the earlier bills were eliminated, there were still provisions for reorganization of the civil service, the auditing system, and agency reorganization and others which were highly objectionable to those who favored reorganization for economy and efficiency. There was still no guaranty for these results. There was still no assurance of economy. Members of the President's committee even admitted during the hearings that the costs of government probably would increase as the result of their proposals.

BLANKET AUTHORITY ASKED

And so the bill was put on the calendar of the Senate at the tail end of the congressional session which ended in August 1937. It was listed on the "must" program for the special session of Congress which was called in November, but no action was taken. The third session of the Seventy-fifth Congress was convened in January 1938 and the debate on the reorganization bill opened the next month.

The argument of the proponents of the bill was characterized by many of the same fancy phrases which sounded so well in the President's committee report. But most of the objections to the President's committee draft were still applicable to the bill, as it came to the Senate.

There was still no provision for economy, and there was still no guaranty for efficiency. In short, the bill was a declaration that the Government should be reorganized; that the Congress would delegate to the President blanket authority to do it as he pleased; that the minority would be deprived of representation in the Civil Service administration; and independence of the audit would be destroyed.

Those who believed that economy and efficiency should be the cardinal purpose of any reorganization of the Federal Government fought the bill in that belief. Proponents of the bill never produced proof that there would be either. Those who fought the bill did so in the belief that minority representation in the Civil Service administration, and the independence of the General Accounting Office and the audit reached to fundamentals that should not be destroyed and were vital factors in both economy and efficiency.

SAVINGS NOT AN OBJECT

Those who opposed the bill asked the proponents simply to insert a declaration in the bill that one of its purposes was to save 10 percent of the cost of government, not 25 as the platform of 1932 had called for. But the proponents beat down the proposal, and in doing so admitted that the costs of government would be increased by the operation of the bill.

Those who opposed the bill asked that the President be required, when he shifted agencies, simply to inform Congress whether economy was contemplated in the change. But the proponents of the bill likewise beat that down.

And so the debate continued. Finally it advanced to the question of what agencies the President would reorganize. And proponents of the bill began getting what they called "assurance" from "high authority," whom they declined to name, that pet agencies would not be touched. The upshot of that procedure was that if there had ever been any chance for economy in the bill all remote possibility for saving was "assured" out of the measure before it passed the Senate.

For 29 days the debate was waged in the Senate. Many of those who approved the bill at its first blush started to question it when public hearings were first denied and then opened for only 10 days out of 2 years of consideration, and were rebelling against the measure by the time of the final vote in the Senate.

VICTORY FOR DEMOCRACY

That rebellion was fired by widely criticized parliamentary tactics used by Senate managers of the bill which, had they been successful, would have deprived the House of Representatives of an opportunity to examine the provisions of the huge Senate omnibus bill. That subtle move failed, and the Senate bill went to the House, and there during 10 more days of study and debate the rebellion burst with a fury seldom, if ever, experienced before by an administration or the Congress. It broke in a manner and in a measure that repudiated all who were saying that democracy won't work; that democracy is too slow. It broke in a manner and in a measure that did good to the souls of those who believed that the processes of democratic government are still the best and are ample to meet any situation.

As the result the bill was killed.

It was a victory for those who want reorganization of the Government's agencies, but want reorganization for economy and efficiency, want reorganization that will be of benefit to the citizens of the Nation, not merely for the convenience of those running it; want reorganization that expedites the work to be done by the Government and increases its value. It was a victory for those who wanted this reorganization bill conferring great power killed in order that reorganization for economy and efficiency might live.

Reorganization can be made to reduce costs in a measure that will benefit taxpayers financially; reorganization can be made to result in a government that can expand and contract to meet emergencies; reorganization can be made to result in increased governmental efficiency and simplicity so much desired by all citizens.

VIRGINIA OFFERS A PROOF

This has been proved, certainly, in the State government of Virginia, which, as the result of its reorganization, came through the depression with balancing budgets, with debt curtailment, and with reduction of taxes, particularly taxes as they affected the agricultural population. With all of this Virginia met every relief need. Because of this condition, Virginia suffered less by comparison than other States. The State had a government ready and able to meet the circumstances. Likewise the Virginia government was ready to meet to the greatest advantage the first advances of any return of prosperity.

The same is true in other States. The same can be true with the Federal Government if proper reorganization is had. Of course, the job is larger, the difficulties more formidable, but by the same token the results should be relatively greater.

The people of the Nation know this. This is why those who had always advocated reorganization should turn against the proposals that were made. The people of the Nation, prior to the most recent proposal to reorganize the Federal Government, looked upon reorganization as a move in their favor, a move to reduce the cost of government, a move for economy, for efficiency, and for simplicity.

That is what it should be, and is what the original Senate committee is still striving for. That committee is still at work. Its objective is reorganization for economy, efficiency, and simplification.

Fourteenth Women's Patriotic Conference on National Defense

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, March 1 (legislative day of Monday, February 27), 1939

RESOLUTIONS ADOPTED BY THE FOURTEENTH WOMEN'S PATRIOTIC CONFERENCE ON NATIONAL DEFENSE

Mr. JOHNSON of Colorado. Mr. President, while the Senate is debating the important question of national defense, I feel that the resolutions adopted by the Women's Patriotic Conference on National Defense, recently held in Washington, should be made a part of the RECORD. I therefore ask that they be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Resolution 1

RESOLUTION ON DIRECTING TRAFFIC ON RESOLUTIONS

Whereas resolutions lose much of their effect unless directed to the appropriate parties or committees: Therefore be it

Resolved, That all resolutions passed by the Women's Patriotic Conference on National Defense be forwarded to the chairman of committees and to the authors of the proposed legislation.

Resolution 2

DIES COMMITTEE

Whereas there has been under investigation by a special committee of the House of Representatives the activities of alien and un-American groups within our borders seeking to undermine our present form of government by force and violence; and

Whereas this investigation has resulted in making public the insidious, subtle, and destructive methods of individuals and groups affiliated with communism, fascism, and nazi-ism, all of which are filled with hate for our free institutions and present form of government; and

Whereas this investigation is showing the extreme necessity for remedial legislation and measures which will combat these alien and un-American activities; and

Whereas, the special congressional commmittee and its work has been criticized by many of these selfsame alien and un-American individuals and groups: Now, therefore, be it

Resolved, By the Fourteenth Women's Patriotic Conference on National Defense that we express our belief in the findings of this special committee and state that they have proved of invaluable assistance to all true Americans and should enable Congress to draft and enact remedial legislation; that we urge the Congress to continue the work of the special congressional committee under the direction of MARTIN DIES, chairman, without fear or favor, to the end that all un-American activities within our borders may be brought to light; and that we urge the Congress to provide for such continuance of the committee's work by furnishing it with sufficient funds to complete the splendid work thus far done; and be it further

Resolved, That a copy of this resolution as a petition be sent to Representative MARTIN DIES, of Texas, with the request that it be inserted in the CONGRESSIONAL RECORD.

Resolution 3

ALIENS

Whereas there are several millions of aliens in this country who have not yet been assimilated and who have not yet become American citizens imbued with the ideals of Americanism and with determination to preserve our representative form of government, and

Whereas under existing immigration laws several hundreds of thousands of additional aliens are permitted to come into this country each year both under quota provisions and under nonquota provisions, in spite of the fact that there are still several million unemployed American citizens with whom these incoming aliens must naturally compete for employment: Therefore be it

Resolved, That the Fourteenth Women's Patriotic Conference on National Defense urge the Congress of the United States to enact legislation which shall very drastically reduce the immigration quotas 90 percent into this country of persons from other countries; and be it further

Resolved, That laws respecting the deportation of aliens be enforced; and be it further

Resolved, That a copy of this resolution be sent to the Secretary of Labor.

Resolution 4

PATRIOTISM

Whereas it is common knowledge that there are those in schools and colleges that are trying to undermine the faith of the youth in the American system of government; and

Whereas only those with patriotism or love of country are willing to serve that country in time of need: Therefore be it

Resolved, That the members of this Fourteenth Women's Patriotic Conference on National Defense take heed of the teachers in the public schools and colleges, and of the textbooks, magazines, and all supplementary reading required, and protest to the school boards when any is found to be unpatriotic or likely to influence the youth against proper defense of this country.

Resolution 5

NEUTRALITY

Whereas the present generation is living in a world wherein strife, changing boundaries and conditions, and national hatreds are causing widespread contention throughout the entire world; and

Whereas the great majority of American citizens, particularly the mothers, wives, and sisters are desirous that this Nation adhere to its traditional policy of remaining at peace with all other nations of the world; and

Whereas newspapers, radio, and all other forms of communication within this country are carrying reports which resemble war propaganda: Now, therefore, be it

Resolved by this Fourteenth Women's Patriotic Conference on National Defense in meeting assembled in Washington, D. C., on January 24 to 26, inclusive, 1939, That we urge the United States Government to maintain a strict policy of neutrality regarding foreign affairs, and we further urge that the United States be kept free from any alliance which might draw this Nation into war; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, the Secretary of State, the Vice President, the Speaker of the House of Representatives, and the chairmen of the Senate and House Committees on Foreign Affairs.

Resolution 6

LUDLOW AMENDMENT

Whereas there was proposed in the Seventy-fifth Congress legislation to amend the Federal Constitution under which amendment our present method relative to a declaration of war, as provided in the Constitution of the United States, would be changed; such proposal having been known as the Ludlow amendment; and

Whereas many excellent individuals and groups were misled into the belief such an amendment would be a means of preventing war; and

Whereas it has been stated that such an amendment to the Federal Constitution would prove unwieldy and might endanger the welfare of our Nation in these days of undeclared wars; and

Whereas proponents of such an amendment have stated a similar proposal will be introduced and pressed for passage in the Seventy-sixth Congress: Now, therefore, be it

Resolved by the Women's Patriotic Conference on National Defense in meeting assembled at Washington, D. C., on January 24–26, 1939, That we oppose any change in the present method relative to the declaration of wars, as provided in the Federal Constitution.

Resolution 7

ARMY

Whereas the purpose of the Women's Patriotic Conference on National Defense is to secure an adequate national defense for the United States; and

Whereas present world conditions demand that this defense be secured at the earliest possible moment; and

Whereas the War Department and the President of the United States have submitted to the Seventy-sixth Congress a building program commensurate with our country's position, wealth, and people: Now, therefore, be it

Resolved by the Fourteenth Women's Patriotic Conference on National Defense, That we go on record as approving and demanding the passage of said legislation, and further urge that appropriations for the same be made. The building program increasing the strength of the Army is as follows:

An increase in personnel from 12,760 officers to 15,000 commissioned officers.

An increase in enlisted men to 180,000 to meet the needs of armament already legislated.

An increase of 15,000 additional men for a new air corps and air defense regiments.

A Regular Army Reserve of 150,000 men.

A National Guard of 210,000 men with appropriate officers.

Reserve officer personnel of 120,000 men with 9,000 graduate Reserve officers provided for annually, and with 14 days' annual training for a minimum of 30,000 combat Reserve officers.

R. O. T. C. units in every qualified school and college.

Citizens' military training camps for annual 30-day training of 50,000 youths.

Resolution 8

NAVY

Whereas the Women's Patriotic Conference on National Defense has rapidly recognized the need for a strong Navy for our country; and

Whereas this Navy has been described as one second to no other in the world; and

Whereas there are pending in the Congress recommendations of the President of the United States and of the Navy Department which would give us such a Navy; and

Whereas appropriations have been asked to the cost of building same: Therefore, be it

Resolved, That the Women's Patriotic Conference on National Defense urge the continuation of a naval program to obtain as rapidly as possible the construction and maintenance of a Navy second to none, with sufficient officers and men to fully man the ships and stations; and be it further

Resolved, That this conference urge the passage of the recommendations of the President of the United States and of the Navy Department, and further urge that appropriations for same be made.

Resolution 9

AVIATION

Whereas aviation as a necessary arm of the military and naval branches of our national defense is much below the strength deemed essential by other countries; and

Whereas it is vitally necessary to be kept up to date in equipment and of sufficient numerical strength to insure the protection of our country and its people; and

Whereas there is in the Congress at the present time proposed legislation bringing the aviation of our country up to a point of serviceability: Now, therefore, be it

Resolved, That the Women's Patriotic Conference on National Defense urge the passage of those requests made by the War and Navy Department to increase the number of planes and give added modern equipment to this important branch of our defense, and be it further urged that appropriations for the same be made.

Resolution 10

MERCHANT MARINE

Whereas our prominent statesmen have pointed out that our present merchant marine is inadequate and fast becoming obsolete; and

Whereas the United States Maritime Commission, assisted through passage of H. R. 10315, is working diligently to rebuild our merchant marine sufficient for the needs and standing of this Nation; and

Whereas it has been pointed out by our ranking United States naval officials that a merchant marine acts as an auxiliary to the Navy in times of war; and

Whereas the building of ships in the United States is valuable in the economic effect of reducing unemployment through supplying work to steel mills, engine manufacturers, lumber and paint industries, rug weavers, linoleum and floor coverings, pottery makers, glassware, silverware, electrical and plumbing industries, etc.; and

Whereas the needs for the passengers and freights carried on American ships requires and gives employment to an army of workers; and

Whereas the operation of American ships may be likened to floating hotels in that it causes orders for foods and supplies amounting to millions of dollars to American ship purveyors; and

Whereas increased passenger travel and freight shippers on American ships produced increased revenue to American industry, a lessened cost to the Government through granting subsidies, and a consequent reduction in taxation to the American people: So be it hereby

Resolved, That we, the Women's Patriotic Conference on National Defense, do hereby adopt this resolution to promote an enlarged American merchant marine to supplement our defense in time of war, to stimulate American trade, and to aid unemployment; and be it further

Resolved, That a copy of this resolution be submitted to the United States Maritime Commission; and be it further

Resolved, That we adopt the slogan "Travel and Ship American" and such other means of publicity necessary to arouse our fellow citizens and gain their support for a greater American merchant marine.

Resolution 11

UNIVERSAL SERVICE

Whereas the international situation is threatening to the peace of the United States; and

Whereas to make war the responsibility of every citizen will be assurance of peace: Therefore be it

Resolved, That the Fourteenth Women's Patriotic Conference on National Defense hereby urge the Congress of the United States at the present session to enact into law the principle of universal service which would abolish profiteering and equalize the burden of war; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, the Secretary of War, the Secretary of the Navy, and to the chairmen of the Military Affairs Committees of the House and Senate.

Resolution 12

AMERICANISM

Whereas the Women's Patriotic Conference on National Defense is cognizant of the increasing damage being done by subversive elements in the United States: Therefore be it

Resolved by the Women's Patriotic Conference on National Defense, That legislation be enacted by the Congress of the United States as follows:

To make it a crime to advocate or promote the overthrow of the United States Government by force or violence, to be punishable not only by fine or imprisonment but by forfeiture of eligibility for any compensation, pension, wages, or other benefits from the United States Government and by immediate deportation of all aliens who are found guilty thereof.

To provide for the withholding of public appropriations from any school, college, or university which openly advocates the adoption of any foreign "ism."

To require an oath of allegiance by all Government employees, National, State, and local.

To extend governmental employment only to American citizens, excluding those holding cards of membership in the Communist Party.

To provide public relief for only citizens of the United States.

Resolution 13

COURTESY

Whereas the President of the United States, Franklin Delano Roosevelt, sent to this conference a message of good wishes and confidence; and

Whereas the President of the United States has always advocated an adequate national defense; and

Whereas there are pending before the Seventy-sixth Congress his recommendations for building up our defenses: Therefore be it

Resolved, That the Women's Patriotic Conference on National Defense go on record as expressing its appreciation to the President of the United States for his stand on the protection of our country; and be it further

Resolved, That a copy of this resolution be sent to the President.

Resolved, That the Fourteenth Women's Patriotic Conference on National Defense express to the chairman of this conference, Mrs. James Morris, its heartfelt appreciation for the splendid program given, for the courtesies extended to participating organizations, and for her unfailing good judgment; and be it further

Resolved, That we express our admiration of the manner in which she presided over this conference.

Resolved, By the Fourteenth Women's Patriotic Conference on National Defense that it express its appreciation to the National Bradcasting Co., and to the Mutual Network for their generous donation of radio time during this conference; and be it further

Resolved, That the conference express its appreciation for the manner in which the news of this conference has been presented; and be it further

Resolved, That this conference again thank the United States Navy Band and the United States Marine Band Orchestra for their contribution to our program; be it further

Resolved, That the Fourteenth Women's Patriotic Conference on National Defense express its sincerest gratitude to all who have contributed to the success of this conference:

Conference officers and presidents of participating organizations; Col. William R. Arnold, Chief of Chaplains, United States Army; Mrs. Reuben Ross Holloway, national society, Daughters of the Founders and Patriots of America; Mrs. George E. Whitlock, national president, national auxiliary, United Spanish War Veterans, Inc., and first vice chairman of the conference; Mr. Stephen Chadwick, national commander, the American Legion; the Honorable Harry H. Woodring, Secretary of War; Mrs. Malvina Freeman, secretary of the conference and national president, national ladies' auxiliary, Jewish War Veterans of the United States; Rabbi Norman Gerstenfeld, the Washington Hebrew Congregation; Mrs. Theodore Risley Ramage, president general, national society, Daughters of the Union, 1861–65, Inc.; Mrs. Rhoda Denny Moss, chairman of the rules committee and national president, national society, Daughters of the Revolution; Miss Charlotte C. Aycrigg, chairman of the credentials committee, national society, Daughters of the Revolution; Maj. Gen. H. H. Arnold, Chief of the Air Corps, War Department; Rear Admiral William G. DuBose, Chief Constructor of the United States Navy; the Honorable James W. Mott, United States Congressman from Oregon; the Honorable Scott W. Lucas, United States Senator from Illinois; Miss Jeanne Barker, student, University of Kentucky; Lt. D. N. Logan, United States Navy, Bureau of Aeronautics, Navy Department; Maj. Gen. J. C. Breckenridge, United States Marine Corps; Mr. Augustine Brabson Littleton, student, University of Tennessee; Capt. Robert D. Workman, Chaplains' Corps, United States Navy, head of the Chaplains' Division; the Honorable Henry Cabot Lodge, Jr., United States Senator from Massachusetts; the Reverend Edmund A. Walsh, Georgetown University; Mrs. Anne Raeyling, national president, Daughters of Union Veterans of the Civil War, 1861–65; Mr. Robert C. Zimmer, student, Purdue University; Col. Stephen A. Park, national president, Reserve Officers' Association of the United States; the Honorable Edwin C. Johnson, United States Senator from Colorado; Rear Admiral Emory S. Land, Chairman, United States Maritime Commission; the Honorable Claude A. Swanson, Secretary of the Navy; and to the Mayflower Hotel.

Resolution Against War

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1939

CONCURRENT RESOLUTION ADOPTED BY THE HOUSE OF REPRESENTATIVES AND SENATE OF THE STATE OF MICHIGAN

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include a concurrent resolution adopted by the Michigan State Senate and House of Representatives. The resolution follows:

House Concurrent Resolution 5

Concurrent resolution memorializing the Congress of the United States to provide for a reasonable, adequate home defense, and also measures for the prevention of war

Whereas we are warned by the facts that the Old World has been and is at war, declared and undeclared, and that there is a real menace, it is believed, to the peace of our Nation; and

Whereas the greatest peacetime program for war is now being prepared and the imminence of war is being discussed in assemblies and in newspapers throughout the Nation; and

Whereas our citizenry with foreign interests should be warned that we are unalterably opposed to any action, diplomacy, or mandate that will involve our Nation in war with any other nations; and

Whereas we approve uniting with friendly nations in diplomatic and economic cooperation: Now, therefore, be it

Resolved by the house of representatives (the senate concurring). That we, the members of the Sixtieth Legislature of the State of Michigan, memorialize the Congress of the United States that we are in favor of preparation for a reasonable, adequate home defense of the United States by air and sea and land, but that we are unalterably opposed to any action, diplomacy, or mandate that will involve our Nation in war with any other nations, on our own behalf or in defense of other nations; and be it further

Resolved, That any declaration of war, either direct or implied, we believe must be by the present United States constitutional sovereign power of Congress, and should not be delegated; and be it further.

Resolved, That we believe war is abhorrent, a destroyer and not a builder of nations, and that the people of our democracy can best serve, not only the interests of its own people, but the peoples of other nations, with a real demonstration of democracy of peace and prosperity in our own country, as the best guarantor of world peace and welfare; and be it further

Resolved, That this resolution be spread on the journals of the house and senate and suitable copies be sent to the President of the Senate, the Speaker of the House of Representatives, and to Michigan Members in the Senate and House of the Congress of the United States.

First 6 Years of the Roosevelt Administration

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 2 (legislative day of Monday, February 27), 1939

RADIO ADDRESS BY JAY FRANKLIN, MARCH 1, 1939

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address de-

livered last evening by Jay Franklin over the National Broadcasting Co. network on the subject of Mr. Roosevelt's first 6 years as President.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Roosevelt's first 6 years as President is the subject I propose to discuss tonight. I say his first 6 years, as it is becoming more and more apparent to realistic observers that Mr. Roosevelt must be reelected in 1940 if we are to escape national disaster. Only last Sunday night a number of fellow newspapermen and myself discussed this over the radio and we more or less reached the conclusion that in 1940 it must be Roosevelt or else. And I don't think that America will take "or else."

On March 4, Mr. Roosevelt will have been President for 6 years. They have been 6 momentous years; dramatic, tense, and vital years, as a great Nation has tried to break away from its "horse and buggy" ways and streamline itself for the twentieth century. I could speak tonight of this period, as a philosopher, and say, loftily, that a thousand years from now few if any people will ever have heard of Roosevelt or the New Deal. Or I could imitate the propagandists and concentrate on only those parts of the Roosevelt program that I wished to emphasize. You know, "The time is too short to do more than mention the sit-down strikes or the Potato Control Act or the Supreme Court packing bill or collectivism." That's the way a partisan propagandist operates. But I prefer to try to see the New Deal as part of the main current of American history. It is easy to do so since March 4 is not only the sixth anniversary of Mr. Roosevelt's Presidency but is also the one hundred and fiftieth anniversary of our Congress. We are today the oldest government in the world, since every other great nation has passed through violent or peaceful revolutions. Up to now we have not changed our political forms. Can we escape forever the necessity for political evolution?

Let's take 1900—"the turn of the century," as Mark Sullivan so aptly calls it—as our starting point. Since then there have been revolutionary changes in the governments of Russia, Japan, Italy, Germany, Spain, and Austria-Hungary. England went through a great political change just before the World War, when she abolished the arbitrary power of her House of Lords. I can remember when Lloyd George in England was spoken of by the British Tories with hatred and contempt, because he has sponsored a program of social security—unemployment insurance, health insurance, collective bargaining—and of political democracy which threatened the vested interests with the laying on of income and inheritance taxes. And I can remember how England later turned gratefully to Lloyd George as the one statesman who could win the war.

Now great nations do not undertake great changes in their political arrangements just for fun. Even revolutions, Mr. Sullivan, do not come because a small group of subversive conspirators spread alien "isms" or imitate the Tories in preaching class warfare. These great changes come when political and economic institutions prove unable to take care of the social needs of the people. What people need is not economic prosperity, for great civilizations have flourished with terribly low standards of living and we were all happier a hundred years ago when we were much poorer. What people need is social security, an individual and a group stability which will enable men to bring up and support their families. It takes a number of consecutive years to raise a family of small children, and during that period a man needs the assurance that, so long as he is willing and able to work, he can find steady employment with which to feed his dependents. People will take big risks in the hope of getting economic abundance, but history shows that people will go through hell and high water to get social security.

The events of the twentieth century have robbed an increasingly and dangerously large proportion of Americans of this security on which our national survival depends. Rugged individualism is not the answer since rugged individualisms brought the problem upon us. It is idle to talk of self-reliance or thrift when the most efficient farmers are ruined by their own efficiency in raising abundant crops, when single industries throw tens of thousands of workmen on the breadlines with one scratch of the pen, when floods and dust storms sweep away the labor of a generation, when hurricanes smash Florida or New England, and when the tractor and the combine brush the farm people off their land and herd them into cities already overburdened with unemployed, able-bodied workers. Some form of central control, social control, collective control is needed if we are to steer between the coast of chaos and the reefs of revolution. And Government—National Government—strong, Central Government—is the only agency which has first call on the lives and property, the brains and energies, of all of our people. So Washington must do the job.

I shall not recite all of the events leading up to the tragedy of Mr. Hoover's administration. The real tragedy was that the American people—myself included—expected strong and enlightened leadership from Mr. Hoover and that he preferred to act as though he were President McKinley, a "horse and buggy" President in a streamlined age. Theodore Roosevelt and Woodrow Wilson had struggled to make our National Government respond to the needs of the twentieth century. Mark Sullivan was a liberal then and helped to storm the Senate in the name of popular sovereignty, in the vain attempt to capture that citadel or arbitrary power. The World War built up a fake prosperity for our industries and our farmers. The peace brought disaster for our farmers, the foreign loans of the 1920's tided along our industries end, finally, with the Smoot-Hawley tariff the bottom dropped out of our foreign loans, our foreign trade, our domestic industries, our banks. I need not remind you that the Republican Party utterly failed to meet the crisis with any constructive policy of action or foresight.

Most of you can remember the final collapse of do-nothingism in the winter of 1932–33, the 14,000,000 unemployed, the eviction riots, the desperate farmers, the milk strikes, the penny auctions, the millionaires who stocked their hideouts with canned goods, and the masses of poor people who could not afford hideouts and who turned to Mr. Roosevelt and his promised New Deal as their last chance. He accepted the responsibility and he did his best to meet the crisis and to master it under democracy. He got little help then or later from those who leap up now and attack his measures for meeting the emergency and for reforming the conditions which had produced that emergency. But history will record that, if we escape national shipwreck, it will be due almost solely to President Roosevelt's courage, realism, and faith in the American people. For which service he has received a torrent of opposition, running all the way from honest criticism to barroom abuse.

In 1933 we faced a condition and not a theory. Farm prices were disastrously low, wages were on the sweatshop level, unemployment was sky high, the banks were ruined, the so-called best minds were panic-stricken and saying, "We need a dictator," business was in the red, and everyone was insecure. The New Deal had to put first things first, had to act quickly, even hastily, had to restore morale and hope. The A. A. A. was adopted. It did the job for the farmers until the Supreme Court murdered it. The N. R. A. raised wages, shortened hours, and protected business against unfair competition. It did the job until the Supreme Court murdered it. Gold was devalued, the banks were reorganized, the stock market was disinfected. Labor was given protection in the right of collective bargaining and in the matter of hours and wages. The real wealth of America was taxed and the public utilities were made to live up to their name. The unemployed were given relief. We started the C. C. C. We protected home owners against eviction, farmers against foreclosure. We started to develop and maintain our natural resources. We passed the Social Security Act. We began to provide for better national health. We tried to give our people better housing.

Oh, yes; I know. Not all of it worked. There were mistakes. Some New Deal officials were incompetent. The Supreme Court and the Comptroller General threw monkey wrenches into the machinery. There were petty graft, patronage, and some political skullduggery. Some money may have been wasted, some was spent unwisely. The rich still went secure while the poor were still insecure. The New Deal was far from perfect. I admit it. But there were no New Deal Teapot Domes, no New Deal Dick Whitneys or Donald Costers, no New Deal Herbert Hoovers. And there were—and are—thousands and thousands of decent, self-respecting, hard-working men and women who put themselves at the service of this great national effort to save American self-government. They have nothing to fear when their children will ask, "Daddy, what did you do in the great depression?" and they have nothing to apologize for. They can look at their mumbling critics and say with that English King who stood at Agincourt (Henry V, pt. II; act 4, scene 3):

> "And gentlemen in England now abed
> Shall think themselves accurst they were not there
> And hold their manhoods cheap whiles any speaks
> That fought with us upon St. Crispin's Day."

I think I would rather be able to say that I had honestly tried to help our people live through this crisis than have the best-developed case of coupon-clipper's thumb in lower Manhattan. I should not like to feel that I had stood by sneering as my fellow countrymen fought the battle for social security or that I had passed by on the other side.

And now? Now things are bad again. Again we have millions of the unemployed, and the courts have ruled that we can't have another N. R. A. to save them, while the conservative politicians are trying to prove that we can't afford to feed them. Again we have low farm prices, and the courts and Mr. Sullivan have ruled against the A. A. A. method of saving the farmers, while the conservative politicians are counting on farm discontent to help block reform. Again we have a violent labor controversy, and the Supreme Court has just legislated against the National Labor Relations Act by ruling that an employer can avoid obeying a national law if he can goad his employees to break a local law. We have the machinery for social security and have learned how to use it, and now there is a conservative coalition in the Congress determined to prevent Mr. Roosevelt from using that machinery. Senator TAFT, of Ohio, who is regarded as the probable Republican candidate for 1940 if Herbert Hoover is sidetracked, has even said that social security is not an American ideal. It had better be, since without social security the people perish. At one time the conservatives said that they liked the New Deal objectives but disagreed with the New Deal methods. Now they are beginning to say that they don't even like th New Deal objectives.

It's all part of the trend which produced the New Deal and is carrying us forward. I understand the opposition. I have the greatest personal sympathy with those who find events moving too fast for their rheumatic mentalities, for those who are fighting, without much conviction or sincerity, their rear-guard action against the future. Without their opposition we could not know our real destination, for where they retreat we must follow, and where they agree with us we know that it is a blind alley. In Mr. Roosevelt's first 6 years he has launched the American people on their way. In his next 6 years, thanks to the nature of his opposition, we shall probably get to where we are going.

Column by Senator Taft

EXTENSION OF REMARKS
OF
HON. HENRY F. ASHURST
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, March 2 (legislative day of Monday, February 27), 1939

ARTICLE BY HON. ROBERT A. TAFT, OF OHIO, IN WASHINGTON POST OF MARCH 2, 1939

Mr. ASHURST. Mr. President, the junior Senator from Ohio [Mr. TAFT] was successful as a lawyer. He is showing evidence of success as a Senator. I am of the opinion that if he had directed his talents toward writing he would have been successful as a man of letters. I ask unanimous consent to have printed in the RECORD a column written by the junior Senator from Ohio [Mr. TAFT], appearing in this morning's issue of the Washington Post. The article is a faithful description of Washington at this time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OVER THE COFFEE
(By Harlan Miller)

[Though virtually every Senator is reputed to have Presidential or Vice-Presidential aspirations, there are only four or five regarded by others as Republican prospects for the White House in 1940. Senator TAFT, of Ohio, a President's son, is one of the four. In his guest column today, Mr. TAFT discusses the air of unreality he finds in the Capital.—HARLAN MILLER.]

A SENATOR PINCHES HIMSELF

(By ROBERT A. TAFT, Senator from Ohio)

Before coming to Washington I didn't realize that a Senator might aspire to be a columnist. But that is not the only respect in which the whole job still seems slightly unreal and very different from what I am sure is the average man's view of a Senator's work.

It doesn't seem real to me to have people saying, "Yes, Senator"; "No, Senator"; "Senator, this—"; and "Senator, that—." It doesn't seem real to go to the Senate and hear people making speeches that don't resemble speeches at all. My idea of a speech is a talk directed at somebody, intended to interest and perhaps convince him.

—

Most speeches in the Senate up to date are addressed to thin air, or possibly to constituents back home. Certainly the gentlemen addressed don't regard them as real, because very few remain in the Senate Chamber, and even fewer listen to what is said.

—

A Senator's mail doesn't seem to be real mail. There was a time when I took an interest in opening letters, and a considerably greater interest in opening telegrams, but after I received 25,000 letters and telegrams in 2 days there isn't much life or interest left in correspondence.

—

I suppose the telegrams and letters I receive are sent by real people, but they seem a long way from Washington. They have to be handled in a routine way, because it is impossible ever to read every letter which arrives and still do the work a Senator is elected to do.

—

During the campaign in Ohio I traveled all over the State. I knew I was meeting real people, with definite opinions and views of public policy. Down here in Washington it is hard for anybody to feel confident whether the opinions he hears expressed are purely synthetic or actually held by any considerable number of the people back home.

—

Pressure groups are organized for the special purpose of trying to create the idea that a public opinion exists on this subject or that subject, when probably nine-tenths of the people of the State never heard of the subject and don't care what happens.

—

I even find the New Deal a little unreal. I spoke and talked against planned economy and Government-regulated economy so beautifully outlined by New Deal writers. But as a matter of fact, every little independent department seems to operate in a watertight compartment, interested in its own special and narrow task.

—

Instead of one great machine, there seem to be about as many private departmental machines as there are automobiles in the city of Washington, each one operating under its own power, without any brakes. Machinery is whirring in every direction, but without any balance wheel.

The situation isn't made any more real through the attempts of columnists to reveal what the situation is.

Every one of them has different opinions, and gives a different picture of what is going on.

There must be a real Government operating in Washington. There must be real statesmen passing on real and momentous questions.

—

But after spending 8 weeks legislating, without passing any legislation, a new Member feels vaguely uncertain whether the doings in Washington have any active relation to the people of the United States.

The Agricultural Situation

EXTENSION OF REMARKS
OF
HON. HARRY S. TRUMAN
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, March 2 (legislative day of Monday, February 27), 1939

STATEMENT BY HON. HARRY S. TRUMAN, OF MISSOURI

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by myself on the agricultural situation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The farm problem in the Middle West and the South is becoming more difficult. I am very much interested and anxious to find a solution. There is no desire on my part to be critical or to question the motives of Secretary Wallace and his various farm remedies. The farm bill as passed by the last Congress apparently is not working successfully. Whether that is due to the legislation itself or to its administration I do not know, but the fact remains that the income to the farmer has not been materially increased. The farmer is not getting his fair share of the national income, and unless he can get his fair share there is no settlement of the problem.

The administration has made an honest effort, but the results do not show a great deal of improvement for the farmer. Cotton and wheat are still the same problems they have been for the past 10 or 12 years. I have been giving the proposed cost of production legislation some thought, and if I can be convinced that it is practical and workable, I shall vote to give it a trial. I am of the opinion that conditions would be no worse for the farmer no matter what legislation we may pass.

The Philippine Problem

EXTENSION OF REMARKS
OF
HON. ROBERT M. LA FOLLETTE, JR.
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, March 2 (legislative day of Monday, February 27), 1939

ARTICLE BY MAJ. GEN. WILLIAM CANNON RIVERS, UNITED STATES ARMY, RETIRED

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Maj. Gen. William Cannon Rivers, United States Army, retired, published in the New York Times Book Review of February 26, 1939, entitled "Bold Realities Concerning the Philippine Problem."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times Book Review of February 26, 1939]

BOLD REALITIES CONCERNING THE PHILIPPINE PROBLEM—MAJOR ANDERSON'S STRICTURES UPON OUR TENURE THERE ARE ALWAYS VIGOROUSLY EXPRESSED

The Philippine Problem. By William H. Anderson. 338 pp. New York: G. P. Putnam's Sons. $3.

(By William Cannon Rivers, Major General, U. S. Army, retired)

"Recapitulating, it may be said that our possession of the Philippines is an economic loss to us; it tends to reduce our standard

of living; it menaces some of our industries; it subjects our economic structure to disintegrating influences; it hurts our self-respect by assuming a patronizing attitude; it paralyzes our common sense by continuing a thankless task; it projects us into an area 7,000 miles away from our shores, thus weakening our national defense; it leads us into a greater number of international obligations which involve our interests; it renders our position in international relations a fruitful theme for universal speculation; and, lastly, it pushes our country away from the moorings of tradition."

The above assertions appear in this interesting volume written by a successful American businessman who has spent 40 years as a merchant in the Philippines.

Major Anderson has written a valuable and timely book. He has realized the hope, expressed in the first page of the volume, of bringing out what constitute, in his opinion, some of the bold realities of the Philippines problem. He desires, also, he says, to "emphasize the impractical, idealistic efforts of the United States over a period of 40 years." Other pungent comments are: "Will it not take longer for the native to recover his sense of balance than it would have taken if the United States had never enforced such an idealistic, western form of government as a guide for the future hopes of the oriental Filipino?" And, "Has such philanthropy not been wasted?"

The author resigned from the Army on his graduation at West Point in 1892. He was an engineer in railway work for several years. He volunteered for service on the outbreak of our War with Spain. Appointed a major of volunteers, he was at the capture of Manila as a member of the staff of Gen. Francis V. Greene. Major Anderson went into business at Manila upon being mustered out of the Army.

This book contains a good account of Dewey's victory, of the capture of Manila, and of the subsequent clash between General Aguinaldo's revolutionary Filipino forces and the American Army. The work of the Taft Commission in establishing civil government in the islands, and the general history of affairs in the Philippines up to the present time, are described. However, the comments and views of the author as a businessman are features which render this book unusual. Most of the books about the Philippines have been written by persons who themselves have been in the government service in the islands, or by students of affairs who went to Manila to secure information.

The subject of the American businessman in the islands is treated at considerable length. The author feels that the American Governors frequently rebuffed business interests; that the odds were against the American businessman—that the doctrine should have been "An equal chance for all" instead of "The Philippines for the Filipinos." Detailed information is set forth concerning the alleged unfairness of provisions in our revenue acts of 1925 and 1926—provisions which tax the incomes of American business in the islands.

The author gives interesting summaries about the main policies and the personalities of the dozen prominent Americans who served as the Governor General and as our High Commissioners at Manila. The President of the Commonwealth, the Honorable Manuel L. Quezon, comes in for criticism. This criticism refers to President Quezon's postponement on one occasion of the elections for assemblymen and for provincial and town officials, although the law prescribed the time for holding these elections. Also, to the varying and conflicting views expressed by Mr. Quezon in a number of his public statements on important matters. The executive comes in for criticism also for maintaining a standing army of some 10,000 Filipino soldiers at a cost of about one-third the average total annual revenue of his government—at a cost for the army of $8,000,000. This, when the United States is responsible for the defense of the islands and when, in the opinion of the author, "not a single step has been taken by the Philippine Government toward a realistic readjustment of the island's economic structure." Another criticism of the President of the Commonwealth is "the supreme arrogance with which he brazenly and impudently demanded that the United States give the Philippines immediate independence, but at the same time protection, will long be remembered by the American people."

The limited space available renders it impracticable to outline the thorough explanation given by the author as to the principal Filipino products which enter the markets in the United States duty free. These include sugar, coconut oil and other coconut products, hemp, cordage, and tobacco. The author explains that the amounts of these different products admitted free of duty over the highest tariff walls in the world have steadily increased. Major Anderson is convinced that this generosity toward industry in the Philippines has brought about an artificial situation disadvantageous to industry in the United States—that "Congress has given to the Philippines the power to pit oriental contract labor against American labor."

The Japanese situation in the Philippines is discussed in a calm and thorough manner. Major Anderson feels that her proximity to the islands will enable Japan to continue her Philippine trade after the islands become independent in 1946. Tribute is paid to the skill and energy of the Japanese workers. The author states that the Japanese excel all others in agricultural matters and that they are competent in getting the best results with Filipino laborers—even with the untutored wild peoples who come down from the mountains.

Major Anderson believes that the McNutt proposal comes too late. The American Commissioner at Manilla has proposed that we annex the Philippines permanently—under a dominion form of government at Manila. "This dominion," remarks Major Anderson, "would be only the beginning of a 'build-up' for new and greater requests to be made on the American Government." The author feels that Commissioner McNutt "failed to consider the gigantic expense to the taxpayers of the United States" should we decide to remain in the Philippines.

Similarly, Major Anderson appears to have little faith in the most recent plan. This is the recommendation of the mixed committee of Americans and Filipinos to the effect that the republic be inaugurated in 1946, according to existing law, and that substantially the present trade privileges be extended the Filipinos until 1960. Our tariff laws would be applied gradually to Philippine goods coming to the United States, the full or normal tariff rate being collected from such goods after about 16 more years. One of the author's comments on this is: "It is the height of absurdity to suppose that the Philippines can occupy at the same time a place within and a place without the American tariff area; that is to say, the Philippines are to be within when selling to America and without when buying." The author also quotes a recent statement of Dr. Schurman, head of the first Commission to Manila: "The Filipinos will be no better prepared for independence in 25 years than they are now."

An index would have improved this book.

Same Side of Table

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Monday, February 27), 1939

EDITORIAL FROM THE LEXINGTON (KY.) HERALD OF FEBRUARY 28, 1939

Mr. LOGAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Lexington (Ky.) Herald of February 28 entitled "Same Side of Table."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Lexington (Ky.) Herald of February 28, 1939]

SAME SIDE OF TABLE

The address delivered in his home State of Iowa by Secretary of Commerce Harry L. Hopkins, the first since his appointment to the Cabinet, is the most statesmanlike address that has been presented to the American people since President Franklin D. Roosevelt's first campaign for President in 1932 and his electrifying recovery messages in 1933.

When Mr. Hopkins calls on the farmer, the laborer, and the businessman to sit down on "the same side of the table" he strikes a keynote that long has been awaited.

Of course it is ridiculous in this free country to talk about one group advancing at the expense of others. The agricultural bluegrass, almost strictly rural and depending upon the production of foodstuffs and smokes, knows that when factories are shut down in Detroit or Dayton, for whatever reason, the prices paid for lambs and tobacco suffer indirectly therefrom.

For 2 or 3 years capital in the United States has been on what the Herald frequently has called "a sit-down strike."

Men who have the money to start the wheels of industry spinning, to grease the skids with greenbacks for a Nation-wide recovery, are simply tanning themselves on the beaches in Florida and letting the country go to hang. They ask why should they worry. They do not wish to run the risk of losing what they have when there is a chance for industrial unrest or for whatever profits they make to be taken from them in the form of exorbitant taxes.

Mr. Hopkins is one of the original brain trusters, and as W. P. A. director he certainly has been one of the big spenders, having handled a $6,000,000,000 program for work and direct relief. He has done it competently and effectively.

He can speak with some authority when he says:

"I have never yet seen a W. P. A. worker who had not rather be employed in private business, and I have never yet seen a businessman who would not prefer giving jobs to caring for the unemployed through taxes."

Of course this is true.

The W. P. A. program was essential, but it was an emergency measure and not a permanent method of American life.

Says Mr. Hopkins:

"Any taxes that freeze the flow of credit and capital into industry are bad."

That is true again. What is necessary is to place men and women back to work in private industry, and it is a great thing for the country that Harry Hopkins, the biggest spender in history and the creator of W. P. A. jobs, recognizes this fact.

As to taxes, the Herald reiterates its belief that the size of them is not so much of a barrier to recovery as the method of levying and collecting them. The trouble is that the businessman has the idea that he is the victim of a punitive campaign on the part of the Government, that taxes and regulations are aimed at him. Instead of this he should buy government, just as he buys power and light and water; he should pay his part gladly and willingly, to build and preserve the greatest country in the world.

By sitting down on the same side of the table, farmer, laborer, businessman, and Uncle Sam can solve all the problems of the day.

The Influence of the Wright Brothers on History

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Monday, February 27), 1939

EDITORIAL FROM WASHINGTON TIMES-HERALD OF FEBRUARY 13, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the RECORD an editorial entitled "The Influence of the Wright Brothers on History," printed in the Times-Herald of Washington, D. C., on February 13, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of February 13, 1939]

THE INFLUENCE OF THE WRIGHT BROTHERS ON HISTORY

Admiral Alfred T. Mahan (1840–1914) named his masterpiece, published in the nineties, "The Influence of Sea Power Upon History."

It seems to us that there is now in the making, to be written some day, a book of equal significance, to be entitled "The Influence of Air Power Upon History." We don't know who will write it, and we don't know what it will say; but most of all we hope it won't be written for a long time.

All of which is getting around to the observation that the real trouble with the British Empire today, we believe, started with the Wright brothers.

It was on December 17, 1903, at Kitty Hawk, N. C., that Orville Wright, piloting his and his brother Wilbur's power-driven kite, made history's first successful flight in a heavier-than-air machine. Four flights were made that day, the longest of them lasting 59 seconds at a top speed of 30 miles per hour.

And that is the chief reason why the British have not long since chased Mussolini's fighting ships up a series of coves in Italy's rockbound coasts and bombarded Rome with their 30-mile guns. The British Navy could have done exactly that the moment Mussolini began talking big, and could still do so—if Mussolini didn't have a large number of fighting planes in addition to his fighting ships.

It is the doubt that the battleship really is invulnerable to the airplane that has kept the British from taking up Mussolini's challenge to their power in the Mediterranean and smacking Mussolini down. That doubt has not been laid and will not be until the question is settled in a major war. Which is why we hope that book, The Influence of Air Power Upon History, won't be written for a long, long time.

STORY OF GUNPOWDER

We were wondering if the story of gunpowder would furnish any food for thought on the uncompleted story of the airplane in war.

Gunpowder, according to the best available evidence, was introduced to the Western World by Roger Bacon, the British scientist, whose life dates are believed to have been 1214–92. In those days, mass attacks by infantry, with close-packed soldiers, hacking at one another, were the accepted thing for warfare. The main difficulty was to catch an enemy who didn't want to stand and fight. Hannibal, for example, destroyed three Roman armies in mass engagements, but was then enticed up and down Italy in a 12-year war of attrition by the Roman general, Fabius, who had suddenly thought of guerilla warfare.

In the eighteenth century—500 years after Roger Bacon—the flintlock gun was invented; and the mass fight's doom was sealed. Believers in mass fights didn't realize it for a long time, however. They went on modifying but not abandoning the idea of the bayonet or cavalry charge (or both in concert) up to the early months of the World War.

German rifles mowed down charging masses of Austrians in 1866; British squares and British lines were bowled over by bushwhacking Boers in South Africa, 1899–1902. It was only out of the mass massacres of the early World War months that mankind finally learned the lesson that the bullet propelled by some explosive mixture has broken up mass-fighting tactics, probably for good and all.

PLENTY SHIPS, PLENTY PLANES

It's easy to say, as plenty of self-admitted experts are now saying, that the airplane is going to repeat the history of the flintlock and breechloader rifles and render all other present-day fighting mechanisms obsolete.

Maybe it is; but maybe it isn't. It is that doubt, insoluble in any way short of a major war with large numbers of airplanes and battleships fairly engaged to a show-down, which keeps the British lion walking and talking softly.

The moral for us seems clear enough. American military and naval experts don't know any more definitely than anybody else does whether the plane is the eventual conqueror of the battleship. But we do know that we have the national wealth to buy ourselves plenty of both.

The thing for us to do is to keep ourselves amply provided with both of these weapons so that when the show-down does come we shan't be found loaded up with the wrong weapon and shy of the right one.

Two ships for one.

Government Reorganization

EXTENSION OF REMARKS

OF

HON. LINDSAY C. WARREN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1939

EDITORIAL FROM THE CHRISTIAN SCIENCE MONITOR OF MARCH 1, 1939

Mr. WARREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of March 1 on the new reorganization bill:

[From the Christian Science Monitor of March 1, 1939]

A MINIMUM OF REORGANIZATION

The new administrative reorganization bill presented to the House of Representatives by JOHN J. COCHRAN, of Missouri, chairman of the Special Committee on Reorganization, represents, according to news summaries of it, the very least that should be accomplished at this time in simplifying the United States Government and improving its efficiency. Representative LINDSAY C. WARREN, of North Carolina, is very modest in his conciliatory statement that "this is all we need."

Perhaps it is. But apart from the substitution of a single administrator for the Civil Service Commission there were points of value in the Brownlow Commission's report about a Government personnel system. Abolition of the post of Comptroller General was one of the most seriously controverted points, and with much reason, yet the General Accounting Office procedure is not sacrosanct. A new Department of Public Welfare or of Public Works may not be necessary, but Congress is going to have to consider some orderly grouping of these functions.

All these troublesome points are passed over for the sake of harmony, and the essential element in the new bill is that it would authorize the President to initiate transfers or consolidations of bureaus, subject to a veto within 60 days by concurrent resolution of the two Houses of Congress. Even in the exercise of this power the President could not touch any of 16 establishments that are specifically exempted nor abolish any bureau.

Opponents of this plan argue that the initiative in such changes ought to lie with Congress, leaving the veto authority to the President. However, anyone acquainted with the deliberative process will recognize that unless reorganizations are studied out and launched by the executive branch of Government they are extremely unlikely ever to be started at all. The legislative branch is not only slow-moving, but its members are jealous of prestige and patronage involved in bureaus they have sponsored. If the newer congressional leadership is in earnest about wanting economy and efficiency, it should give this reorganization bill a chance to prove itself.

T. V. A. Activities

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1939

ARTICLE BY BOAKE CARTER

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Boake Carter:

CHEATING THE PUBLIC—T. V. A. COSTS YOU MONEY—AND COSTS MEN JOBS

Politics and a misguided effort to "get" the public utilities of the United States by means of the T. V. A. has done more to wreck the coal business, lost more miners their jobs, helped push the railroads closer to the wall than almost any single item in the last 6 years.

Had engineering research and scientific study been substituted for the punitive measure in the guise of T. V. A., millions of dollars now idle would be at work. And almost at least three industries would be more nearly prosperous instead of beseeching the Government for help.

The statements are sweeping. Let us try to prove them.

In 1890, when cheap water power through dams and hydroelectric plants was being developed, it took 12 pounds of coal to produce 1 kilowatt of electricity in a steam plant.

Scientific research in the next 50 years has brought such advancement that the average steam plant today consumes only one and a half pounds of coal to produce 1 kilowatt of electricity. Engineering research reduced this cost of manufacture seven-eighths.

Back in 1890 the reciprocating engine produced an average pressure of 180 pounds of steam. Today high-speed turbines perfect condensers, and superheat, develop 1,500 pounds pressure.

Thus, in the days when it took 12 pounds of coal to produce 1 kilowatt of electricity, the public utilities were justified in seeking free energy of water power to operate their investment. They did so by condemning large areas of land and building huge dams with hydroelectric plants.

Today there is a bitter argument between hydroelectric engineers, employed mostly by the Government, and the steam and boiler engineers of the private utilities as to which method costs the least.

The proof of the pudding lies in the fact that the private utilities, which have to make money through employing the most efficient engineering methods, have quit building dams and hydro plants. Instead they have gone to steam plants with high-speed turbines.

These companies must make money or quit. The Government schemes, no matter how unsound they may be, can be maintained at a loss. The taxpayer foots the bill.

Today it costs on an average of $80 capital investment per kilowatt-hour to build a good steam plant. It costs on an average of $250 to $300 capital investment per kilowatt-hour to build a good hydroelectric plant.

If both are established to be written off in 20 years, that means 5-percent depreciation of capital on the financing. On $300, this means $33 capital cost per year to be carried by the hydro plant. On the $80, it means $8.80 capital cost per year to be carried by the steam plant. The spread between the two is better than $24. Thus the steam plant has $24 to spare for the purchase of coal before even reaching the capital cost of the hydro plant.

Furthermore, in the matter of obsolescence—so great nowadays with the speed with which improvements are made—the cheaper cost plant can be made to obsolesce more quickly. Again, Nature dictates where a dam shall be located for a hydroelectric plant, but engineering efficiency tells you where to put the steam-power plant. One may decentralize with steam-power plants. One cannot decentralize hydroelectric plants and their dams.

Further, there is the question of Nature in other ways. Some seasons it may not rain as heavily as others. There may not be as much water behind the dams. Thus one has to cut down on the power produced by the hydroelectric plant and make up the deficiency with the steam plant.

And even if the costs of the two systems of producing power were identical and even, one with the other, it would be wrong to plunge headlong into vast hydroelectric dams. For to follow this course kills two other industries which need never be killed—the coal business and the railroads.

Yet, despite definite engineering trends away from hydroelectric plants among those companies which must make money or get out of business (which operate on efficiency, in other words), despite obvious disparity in capital costs, the Government has plunged wildly into spending billions for the construction of dams for power purposes from one end of the country to the other.

Were they low-cost dams primarily for irrigation and flood control, the matter would be different. The construction of dams for these purposes only, the best engineers in private business say, would cost the taxpayers one-fifth of what the Government has authorized be spent on dams to date.

But the dams and their hydroelectric plants are supposed to be yardsticks by which the public is to understand whether or not private utilities are cheating them on power costs. The public has been made the goat of a stupendous deception by the Government itself.

Social Security

EXTENSION OF REMARKS
OF
HON. MARTIN L. SWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1939

STATEMENT OF HON. MARTIN L. SWEENEY, OF OHIO, BEFORE THE COMMITTEE ON WAYS AND MEANS, FEBRUARY 10, 1939

Mr. SWEENEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the Committee on Ways and Means on February 10, 1939:

Mr. Chairman and members of the committee, at the outset I want to express to the committee my appreciation of the generous time accorded to the proponents of H. R. 2.

I have denominated this committee on scores of platforms throughout the country as the most responsible legislative committee in the world, the most powerful committee in the world. With all due respect to its members, I recognize also the political implications that arise from time to time. I believe every member of the committee is conscientious and wants to do the right thing. I think the members have their fingers on the pulse of the Nation and know what is going on in the hustings; they know the economic and social distress, and I believe every one of you wants to make the right approach to this very momentous problem.

In the last Congress many of us were advocates of H. R. 4199. It was a considerable group; it numbered 145 or 150 Members of Congress. We called upon this committee asking for a hearing. We thought we had a tentative agreement, but then we found we were refused the right of hearings. It seems almost unbelievable in a democracy that any committee would deny a considerable group, whether their legislation or proposed legislation be labeled sound or unsound, the right to be heard in their Congress.

It was mentioned by Mr. DINGELL that the advocates of this legislation said, "We do not expect to have any legislation. All we want is a hearing." Mr. DINGELL further stated the movement was down, so in order to stimulate a flow of dimes and quarters they wanted to have a hearing before the Ways and Means Committee.

I must take exception to that statement. In the past it has been my experience and the experience of many members of this committee to take cognizance of the fact that measures are discussed in committee for the purpose of developing an argument for or against the philosophy of certain legislation, even though the respective committees hearing the same knew full well the measures would not come before Congress during the session in which the committees sat. Witness the 44-hour week, and the 40-hour-week bill for postal employees, and the recent wage and hour legislation which was considered by the committee many months before reaching the floor for debate. Organizations and individuals came to Washington at their own expense and appeared before these respective committees to offer their testimony, knowing full well that the measures advocated would not be considered, within a reasonable time, by the Congress as a whole. Let us lay aside that sort of criticism and get down to brass tacks.

I am interested in old-age pensions, and I have been interested in that subject. I lay this background before the committee. Twenty-five years ago very few persons were talking old-age pensions in this country. Everybody was riding the wave of prosperity. An organization known as the Fraternal Order of Eagles pioneered in this field of social legislation. I was an officer of that organization, and took part in that activity. Later we were aided by the powerful American Federation of Labor. For years we urged the adoption of an old-age pension bill. We figuratively knocked at the doors of almost every State in the Union. We were repulsed at times and denied the right of a hearing because the opponents of old-age pension said it was socialistic. My good friend on this committee, Mr. JENKINS, the Congressman from Ohio, aided us in the fight in that State to bring about an old-age pension. In Ohio we had to resort to the initiative petition, which right we enjoyed by constitutional authority. In that manner we secured an old-age pension law for what it was worth. Under the obligation the State started out to raise the money to pay pensions. Up until the adoption of the Social Security Act the average pension paid a qualified annuitant in Ohio was less than $17 per month. Today, according to my information, it averages close to $25 per month.

To qualify in my State of Ohio the applicant must be 65 years of age, a resident of the State 15 years, and practically indigent to obtain benefits. There is a requirement that certain property rights in excess of $2,500 be turned over to the State before a pension can be had.

Mr. DISNEY. Will you restate that please? I did not get it.

Mr. SWEENEY. I repeat, you have to be practically indigent and cannot own any real property in excess of $2,500, and, in addition, insurance policies on the life of the annuitants must be turned over to the State before one is eligible for pension. It is clear to many of us that numbers of these annuitants could not get along on the small amount paid by the State as old-age pension. While it is better than institutional care, nevertheless, it is a tragedy on the old folks. The advent of the Social Security Act with its feature of matching funds, the annuitants of Ohio, Minnesota, Massachusetts, and other States, received an increase in the amount of their pensions.

Mr. MCCORMACK. Will the gentleman yield?

Mr. SWEENEY. Yes, Mr. Chairman; I will.

Mr. MCCORMACK. I see Mr. O'CONNOR is present. He will not be called before 1 o'clock.

Mr. O'CONNOR. May I ask if I will be called at 1 o'clock?

Mr. MCCORMACK. You are next on the list. We will recess from 1 o'clock until 2:30.

Mr. O'CONNOR. Then, if I cannot go on before 1 o'clock, I will be able to do so at 2:30, will I?

Mr. MCCORMACK. You will be permitted to go on following Congressman SWEENEY.

Mr. O'CONNOR. Thank you. I shall wait, however, to hear Mr. SWEENEY'S remarks.

Mr. SWEENEY. That amount to which I referred was brought up a little bit, but still it does not remedy the condition. It is too small entirely. We are asking the old folks, and I shall refer to them as old folks, who have given their bit to society, when they become 65 years of age to take a pittance of $25 or $30, and that seems to be the maximum amount in most States, out of which amount they have to clothe themselves, provide shelter, food, and the necessities of life. It just cannot be done under ordinary conditions. I repeat it is far better than the institutional care that was given the old folks. The reason I am before you today is to secure more for this class of people, so that in their declining years they may live in comfort during the short space of time God Almighty will allow them to remain on earth.

I am interested in H. R. 2, the so-called Townsend plan, because I believe the Townsend movement has made the Nation old-age-pension minded. Despite the criticism, despite the sniping, despite the chiselers that have gotten into the organization, the movement surges on. It is going to be a political factor, whether you know it or not, until the question is solved one way or the other by a vote on the floor of the Congress of the United States.

I have no doubt you men are politically minded. You watch the trend of events, politically speaking; you watched the change in the last Congress. I know in my own State the Townsend movement was the balance of power in many congressional districts. The issue was raised in the last elections that the Democratic members of the Ways and Means Committee refused to give the Townsendites or the advocates of H. R. 4199 a hearing before their Congress. That agitation will go on unless this committee takes its responsibility seriously, politically, and otherwise, and permits the Congress of the United States to have a roll-call vote, "Yes" or "No" putting every Member on record.

I know that our Republican friends are going to use that weapon. I know that the slogan for the Republican Party is going to be "Life begins in '40." That is their slogan. They have a right to tell the people of the Nation, if it be true, that a committee, the majority of which were members of the Democratic Party, refused to put this bill on the floor for consideration. I hope when the arguments are made for and against this bill at the time your committee goes into executive session, and the pressure on the committee is lifted, that you will coolly and calmly discuss this legislation, arriving at one conclusion, whether or not you are for the bill, that you will permit 150 Members of Congress, who are pledged to this bill, to record themselves one way or the other. Let the record show whether they are for the bill or not, or whether they are merely indulging in idle pretense as a vote-catching device in order to get them a seat in Congress.

I am not concerned with the criticism that comes before this committee and which has been injected into these hearings. The chairman of the committee, my old-time friend—and I am referring to the permanent chairman, although I include the acting chairman as my friend—read into the record the other day a circular which was distributed in his congressional district, some statement about the millennium arriving, that so much money would be allocated to qualified individuals, so on, and so forth, and "this bill will be enacted within 90 days," and that sort of thing.

I do not take seriously circulars or articles like that. I think the way to look at those things is in this way. It is like the salesman puffing his wares. The Democratic Party in national convention assembled and the Republican Party in national convention assembled time and time again put planks into their platforms that they never intended to fulfill. They were put in there as vote-getting devices; then, after the election is over, they forget about the pledges which they have made, the "Be it resolveds" and so on at the conventions.

Let us be charitable with this organization. It is through no fault of the principles of this organization that abuses have crept into it. I am not defending Dr. Townsend. He needs no defense. If I thought Dr. Townsend was guilty of turpitude or misfeasance or malfeasance in the handling of the affairs of this organization, I would be the first to criticize him, but it is the unanimous opinion of his followers and the press of America, despite the smear campaign brought about for political purposes a short time ago, despite the conviction of Dr. Townsend and his subsequent pardon by the President of the United States—I repeat, it is the unanimous opinion of his followers and most of the editorial comment in the country that he is sincere in this movement, that he rebels against existing social and economic conditions, and he is making his humble contribution in trying to remove the sordid state of affairs existing today.

In his organization they have had chiselers. But we have had them in the Democratic Party; they are in religious bodies; they are in every civic body—men who can say, "Fool these old people. Tell them, 'Your bill is coming up next week in Congress and it will pass within 30 to 60 days'," bringing new life and hope to a lot of sincere, decent people.

That we condemn. That Dr. Townsend condemns when it is brought to his attention.

But somehow the opponents of this movement like to make mountains out of a molehill and single out an isolated case where So-and-so said so-and-so, and "Do you believe in this?" and "Do you believe in that?"

I am for this bill as differentiated from H. R. 11 because I believe in the philosophy of it. I believe it is necessary through the medium of a transaction tax to pay these pensions as provided for in the bill; that is, the security for the aged. But if I thought it were an old-age pension bill only I would not support it. I believe it is the bill to bring about a restoration of the purchasing power. I am sure that every member of this commitee is striving to bring about the restoration of that purchasing power.

The acting chairman, Mr. MCCORMACK, made a very pertinent observation the other day. He said, "What is to become of the group between 35 and 45?" I do not pretend to be a tax expert. I do not pretend to be an economist. But, in my humble way, I see in this measure a means to an end, a device to bring about consumer purchasing power with the enforced-spending feature that will take out of gainful employment six or eight million people and leave their places open for those men between 35 and 45 years of age.

I do not say that it is a panacea or a cure for all ills, but, it is a start. Men of 40 years cannot get jobs today. I made that observation when the deficiency bill was up in the House. They cannot get jobs in this mass-production age of today. That is true in my community and it is true in other industrial centers. Modern machinery is displacing men in mass-production age that shouts: "Production! Production! Production!"

Men of 35 and less are picked because of their muscle and strength. It is seasonal work at best. The physical strain under which they work in those factories is so severe that many of those men fall by the wayside and die in 5 or 6 years.

That is a problem that we have to solve some day. With this measure or some similar measure passed by the Congress, with other measures, we may meet the problem of the machine age—the problem of unemployment. We may reach it by reducing the hours of labor to 30 hours a week, a 6-hour day, which is the philosophy now of the American Federation of Labor and of many other large groups. In this way we may bring about that degree of prosperity that we need, and we may be able to take care of this group referred to in the question of the gentleman from Massachusetts when he asked, "What is to become of them?"

And what is to become of the group below 35? What is to become of the group from 18 up to 35? I will not admit, and you will not admit that the C. C. C. camps, fine as they are, will take care of the situation. I believe it is the opinion of the majority of the Members of Congress and the people of the Nation that the establishment of the C. C. C. camps was the finest contribution made by the Roosevelt Administration to date. In the establishment of these camps we took hundreds of thousands of boys off of the road, who were wandering and thumbing rides from one end of the country to the other, eventually destined to end up in a life of delinquency and crime. I will not admit that the legacy of the American youth is a period of enlistment for employment in a C. C. C. camp. We do have to slowly approach the subject, and try to find a solution for this and similar problems through the medium of this bill and other measures. All of us know the problems of youth that we have to face today. Every man on this committee, every man and women in this room who is married and has children, lives for those children. They sweat and slave for them.

The towns, cities, counties, States, and the Nation help them to educate those children. We spend billions of dollars in the field of education and we provide the finest schools in the world from the standpoint of physical structure and educational curriculum. We supervise the health of the school children of America. We bring those children along up through the grade schools, through the high schools and the colleges, and thousands of them annually emerge from our educational institutions with their A. B., M. A., M. D., and Ph. D. degrees cum laude, as stated in the scholastic world. They emerge with their sheepskins in their hands, all dressed up with education and no place to go. That is the problem of the citizens of America today. You know it and I know it. These educated youngsters find it difficult to get even a pick-and-shovel job.

This measure will, to some degree, assist by getting money into circulation with the enforced spending feature. The people who will benefit by this legislation are without money today to go out and buy the things they need.

I believe the committee will approach this problem from the standpoint of doing what is best for the Nation. I believe the approach is to take this disturbing question—and I mean the politically disturbing question—once and for all to the floor, over there where Members who come down here to represent their respective constituencies may have the opportunity to vote like men, to stand up and vote "yes" or "no" on this bill or any other bill that this committee might report out with or without recommendation.

I believe that is the proper approach. Otherwise I see constant agitation for years to come in the field of social legislation.

It has been said that H. R. 2 if put into operation, will give us a pyramiding of taxes, and that that is a dangerous situation, but I want to call this to the attention of the committee, and I presume some of the older Members do recall in 1934 when the only opportunity came to present the so-called Townsend philosophy under H. R. 4199 as an amendment to the Social Security Act, the statement was referred to and put into the record of hearings had before the United States Senate Committee on Finance May 24, 1921, on the subject of a turn-over tax.

Mr. COOPER. You do not mean 1921, do you?

Mr. SWEENEY. Yes; I mean May 24, 1921, when a group appeared before the United States Senate Committee on Finance in behalf of a 1-percent turn-over tax. The tables that are incorporated in those hearings were presented by Mr. Meyer D. Rothschild, who represented the jewelry industry of America. He took commodities like sugar beets, livestock, wheat, pork, grease, cotton, raw hide, shoes, rubber, silk, and cotton and he proved the wisdom of that sort of tax referred to by the gentleman from Minnesota, who read from the record today as to a similar tax in France, known as the 1-percent turn-over or transaction tax, to raise funds for munition purposes for national defense.

Mr. Meyer D. Rothschild shows that where cotton turned over seven times and the finished product sold for $4.50 in cotton cloth, the tax is only 12.4 cents on that transaction of $4.50.

I am not unduly excited about the cry of inflation. I heard those arguments before. I appeared before the Ways and Means Committee in support of the payment of the adjusted-service certificates, or the bonus, as it was commonly called. This was several years ago. On that occasion I heard witnesses testify, "If we paid the sum of $2,400,000,000 in Treasury certificates, as was advocated by some of us, or in any other form of specie, it would throw us off the gold standard and we would have inflation of currency."

We did not go off the gold standard because of the payment of that bonus. We did not go to the bow-wows financially, as predicted. The credit of this country is secure. It is secure for a long time. I am not afraid of debt repudiation; I am not afraid of inflation. I belong to the school that favors reform of the monetary system. I believe in taking the control of the money system out of private hands and restoring it to Congress, where it constitutionally belongs. With the gold reserve on hand today, I believe we could issue two or three billion dollars of new currency without any danger to our financial structure.
